I am certain more actual enjoyment can be had in one day of this kind, than in many of the sultry dog days. Carry as little weight about you as is possible, a light corduroy suit, with large pockets to the coat for game, ammunition, lunch, etc. Do not cumber yourself with rubber boots to heat and draw your feet and fatigue you before your sport has scarcely begun. A good pair of leather boots, with a dressing of the water-proof "leather life," which is recommended by Forest and Stream, will keep your feet dry and comfortable. No water can get through it. These birds will often lead you into swampy places, but you may come out dry shod. The weight of your gun should not be more than seven or seven and one-quarter pounds, and as you may have to travel twenty or more miles in a day, the more comfortably one is prepared, the more comfort taken. As very many can say, woodcock and partridge are getting more and more scarce every year, and it is certain that these birds should be better protected by our game laws. They are pelted at both ends of their journey, north and south; are hardly given time to breed in New England. Even before the young are fully fledged some ambitious pot-hunter begins the slaughter. August being their moulting season, they are in poor condition; but wait till Sept. 1, or early frosts, and great enjoyment can be had. It is a disgrace to New England for her legislators to allow these birds to be shot before a proper time, and it is a pity that we have to trust to men to make game laws who have so little knowledge of the habits of our birds, and, too, the hotels who advertise prairie chickens and partridge out of season and the market men who buy out of season, are the greatest enemies to our game laws. Till these matters are looked after and the law enforced, New England must suffer—as it has in the past.—B. G.

Massachusetts.—East Orleans, Sept. 25.—The writer has gunned this beach pretty thoroughly from Chatham to Nauset for the past four weeks, and I have never seen birds so scarce and in such small bunches. A flock of twelve or fifteen yellow-legs is seldom seen, and the arrival of such creates quite a commotion among the gunners, and no large bags have been made, in fact none but the thoroughbreds who will stick to their blinds and decoys early and late, through thick and thin, have got anything like a decent bag, and by the way I wish to say that the "bird call" as advertised recently by Mr. Edwards is the best one that I have ever seen. I did not think it amounted to anything at first, but with a little practice it did pretty well, and now after using it a few weeks I can call any kind of a bird with it. It is very simple, and is always ready to do its duty, and one of them is enough for any kind of a bird. An old gunner here, upon hearing it, came to my blind and asked to see my whistle, saying it was the most natural he had ever heard. Ducks are arriving in fair numbers, and some pretty good bags have been made. A party of three Boston gunners killed twenty-five black ducks at one discharge of their guns, and teal are arriving in pretty good numbers. The prospect for quail shooting is grand. Ruffed grouse are not very plenty here.—C. D. S.

Maine Grouse and Woodcock.—Gardiner, Me., Sept. 24.—In the last number of the Forest and Stream I notice information is wanted by "J." where a man would be reasonably sure of good partridge and woodcock shooting in this section. They are quite plenty this year, though the season has not been favorable for their breeding. If he would like a guide I will be at leisure after Oct. 10, and will take him where there is plenty of game. Gray squirrels are very plenty. I shot twenty-two in two hours, including the time of walking from my house to the woods. The woods are full of game—partridge, woodcock, squirrel, rabbit and fox. Any further information will be cheerfully given.—I. H. Hodge.

ILLINOIS WILDFOWL.—Aurora, Ill., Sept. 28.—Prairie chicken shooting I think has been better than an average. There are a good many birds left for next year. There will not be many more shot this season. They are wild and rise out of range. Some of my friends report quail quite plenty. English snipe (*Scolopax wilsonii*) have begun to put in an appearance, but are not very plenty, owing, I presume, to its being so dry. Blue and green-winged teal are in some numbers, with a few young mallards, but then a person will have to know where to look to find them. I shot four young mallards last Wednesday, the first I have seen. By the way, it is about time to think of loading shells for the fall shooting, and while doing so a good many will want to know where they are going to look for good duck shooting. I will describe one place where a friend and myself spent a week of as good shooting as one would care to enjoy. It was on the Kankakee River above Momence, on west side, about twenty miles from the town. You will have to take your own tent with you. Can get a team to take you out, and if it is not a very wet fall, you will not require a boat. The best shooting is back from the river about a mile or so, that is during the morning and evening shooting, but in the middle of the day the river is the place. I would advise any one going there to take along a good rifle, and if it gets very blustery hire a team and driver and go to Little Beaver Lake. They will find a good many geese there, with some swan. The writer shot one while there, as fine a specimen as I ever saw. One will have no trouble in finding this lake, as by inquiring most any one that lives in that section can direct him to it. We took along two dozen decoys, and parties going there should do the same, although good shooting will be had without them. If this letter is not explicit enough I will take pleasure in answering any inquiries that are addressed to me.—L. A. HOYT.

NEW YORK.—Candor, Tioga County.—Ruffed grouse and woodcock never so scarce here; have been out several times, and seen none.—J. O. F.

INDIANA.—Indianapolis, Ind., Sept. 25.—We are all patiently waiting for Oct. 16—the 15th comes on Sunday. Prospects good.—S.

Camp Fire Flickerings.

"That reminds me."

THE story of the clergyman, the fish and the small boy told in your issue of Sept. 14, reminds me of an occasion when an Elizabeth, N. J., minister was disconcerted in a somewhat similar way. He was illustrating some point by the loading and discharge of a gun. Describing the process, he accompanied his words by a highly realistic pantomime performance, pouring into the muzzle of his imaginary gun first the powder, then a wad, the shot, and wads again "ramming her home" every time, then withdrawing the ramrod, he put on the cap, raised the gun to his shoulder, sighted along the barrels, and, turning suddenly to his audience, exclaimed, "And now, what do I do next?"

"Pull the trigger!" shouted a small boy in a front pew.

"I'll pull *your* trigger for you, you little wretch," said the disconcerted clergyman, dropping his arms and shaking his finger threateningly at the offending urchin.

Your story of the Hartford clergyman and the fish recalls an incident which once happened in a city less than a thousand miles from Pawtucket, R. I. There is nothing about fish nor game in it; if classified it would probably come under the head of the vegetable kingdom It was the young clergyman's first service in the church. In a front pew sat an elderly deacon. The minister gave out, among other notices, one of a meeting to be "held as usual on Wednesday evening." "You are mistaken," said the deacon, rising in his pew, "the meeting will be held on Thursday evening." "Ah, yes," said the young minister, in a loud voice to correct his error, "Thursday evening;" then *sub rose* and confidentially to the deacon, "Right, brother; I acknowledge the corn."

Not long afterward the congregation raised a liberal sum and sent the young man off to brush up in Europe, where your genial correspondent "Pisco" may perchance run across him.

"Talking of preachers," said Caleb Parker, "reminds me of a story they tell of Uncle Cephas Bascom, of North Haven. Uncle Cephas was a shoemaker, and he never went to sea much, only to anchor his skiff in the Narrows abreast of his house and catch a mess of scup, or to pole a load of salt hay from Sanquitt Island. But he used to visit his married daughter, in Tremont, and up there they knew he came from the seaboard, and they used to call him 'Captain Bascom.' So, one time when he was there, they had a Sabbath-school concert, and nothing would do but 'Captain Bascomb' must talk to the boys, and tell a sea-yarn, and draw a moral. Well, Uncle Cephas was rather pleased with his name of 'Captain Bascomb,' and he didn't like to go back on it, and so he flaxed round to get up something. It seems he had heard a summer boarder talk in Sabbath-school at Northhaven; he told how a poor boy minded his mother and then got to tend store, and then keep store himself, and then he jumped it on them: 'That poor boy,' says he, 'now stands before you.' So Uncle Cephas thought him up a similar yarn. Well, he had never spoke in meeting before, and he hemmed and hawed some, but he got on quite well while he was telling about a certain poor boy, and all that, and how the boy, when he grew up, was out at sea in an open boat, and saw a great swordfish making for the boat Hail Columbia, and bound to stave right through her and sink her; and how this man he took an oar and give it a swing and broke the critter's sword square off; and then Uncle Cephas—he'd begun to get a little flustered—he stopped short, and waved his arms, and, says he, 'Boys, what do you think! That swordfish now stands before you.' I call'ate that brought the house down."—*October Century.*

DOGSKIN JACKETS, windproof, flannel lined, pliable and indestructible, are imported and manufactured at Oak Hall, where sales last season were nearly one thousand at retail. This season Oak Hall has manufactured largely for the trade, and there is no knowing how many will be sold. One thing is certain, a dogskin jacket is indispensable to a sportsman and to all who drive or are exposed to the weather.—*Adv.*

SOMETHING THAT EVERY SPORTSMAN NEEDS.—One of the Eclipse pocket re-cappers, de-cappers, loaders, etc., manufactured by C. L. MORSE & CO., Hamden, Conn. See advertisement.—*Adv.*

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

It may be laid down as a position which will seldom deceive, that when a man cannot bear his own company, there is something wrong.—*Dr. Johnson.*

FOREST AND STREAM ANGLERS' TOURNAMENT.

Notice of the first annual FOREST AND STREAM Anglers' Tournament will be found in our editorial columns.

THE TILEFISH IS NOT FOUND.

OUR readers will remember that the tilefish, *Lophiolatilus chamæleonticeps*, which was a newly discovered food fish dug up in great quantities in deep water by the U. S. Fish Commission, suffered severely last year from some unknown cause. The miles on miles of dead fish reported by incoming vessels were supposed to be largely composed of this fish. It was a question whether the species was exterminated or not, and if not, then the fishermen should be learned to take them for market and the people should become familiar with them. With this end in view, Mr. Blackford chartered a vessel for Prof. Baird and they went in search of the tilefish. Although this fish was not found they discovered a new species. Mr. Barnet Philips of the editorial staff of the N. Y. *Times* and secretary of the American Fishcultural Association, accompanied the expedition and gives the following account of his trip, dated Gloucester, Mass. Sept. 26:

Take a little craft of forty-five tons, sail for some 120 miles out into the Atlantic, and with a good southwesterly breeze the green waters will roll, and the vessel will have the liveliest of motions. Sometimes she may duck her bowsprit under, or her boom may graze the crest of a surging sea; but staunch she is and trim, and if, as in that poetical language which sailors use, "she is in good tune"—ballast all right—and is not too low by the head, she will ride along most gallantly, and despite the heaving seas and their impact will, as she spins out her eight knots, be as safe as the biggest ship that ever sailed. Just such a craft as this is the Josie Reeves, a well-known smack, that has made her weekly trips all through the summer from the lobster grounds of Menemsha Bight, on the Vineyard, to Fulton Market. Because Capt. Redmond presented one of the best types of the American fisherman, and was master of the Josie Reeves, captain and smack was chartered by Mr. E. G. Blackford for the United States Fish Commission, to take a trip off the coast in search of the tilefish. The little expedition was under the direction of Capt. J. W. Collins, attached to the United States Fish Commission. This officer, who for many years has had in charge fishing vessels going out of Gloucester in search of halibut and cod, is absolutely familiar with all kinds of fishing gear, the methods of securing fish, and from his thorough practical acquaintance with the details of this perilous business is singularly fitted for the position he occupies. A man of this kind must be able to take the wheel, be ready for any emergency, and at the same time possess a very considerable amount of scientific knowledge in regard to the various kinds of fish he catches. At the Berlin Fish Exhibition Capt. Collins was one of our commissioners, and visited the German and English coasts in order to understand their various methods of fishing.

We left Greenport, L. I., on the 19th, and it was just before sundown that, with a pleasant breeze, all sails set, the Josie Reeves slid through the water, and by 8 o'clock, with an increasing wind, Montauk Point was passed, and keeping well clear of Shag-a-wam Reef, bowling merrily along, we made out for the sea, steering well eastward at first, and then working southerly.

That the tilefish had been very abundant before in exactly the localities where the dead fish were found was very certain, because the Fish Hawk, the steamer attached to the commission, rarely went to these tile-fish grounds without taking quite a number. But this year the Fish Hawk, having gone to the same places, could not find any, if, then, the United States Fish Commission could not find the tilefish this summer, would the Josie Reeves be more fortunate? Used to the business of trawling, with a thoroughly seaworthy boat, ably commanded, with a good and willing crew, provided with the most perfect apparatus, having an exact knowledge of where the ground was situated, having on record all the localities where the fish had been found in 1879, 1880, and 1881, the chances were that a load of tilefish would be secured. Capt. Kirby, in May, 1879, had secured on only a part of a single trawl 2,500 pounds of the fish. On Thursday, with a whole-sail breeze, the Josie Reeves arrived at the exact locality. By observation, we were at 40.03deg. 70.28min. west, and by dead reckoning and careful soundings just where the tilefish should abound. The soundings are of a somewhat peculiar character. The water south of Long Island shallows very slowly at first, with a gradual slope, somewhat more than a fathom to the mile, until sixty-eight or seventy fathoms are met, when, all of a sudden, down goes the sea bottom, and from 140 to 200 fathoms are struck. Following this ridge, which extends some 100 miles south of Long Island, on the deep soundings, trending somewhat irregularly to the southward, the fishing was done. Take a lead of eighteen pounds and plumb the depths some 150 fathoms and try to get it up the 900 feet, and with the weight of water it is a good half-hour of work.

Being in the exact locality, the trawls, which had been baited early in the morning, were made ready.

It is time now to haul up the trawls. The dory is lowered, the two men in oilers and heavy boots take flying leaps into the boat, and, with a few vigorous strokes of the oars, are fast to the buoy keg. Then the strain and pull begins. The two men haul all they can. As the dory rises with the wave crest they take advantage of the natural heave, and let go just when they would be hauled overboard. Inch by inch they fight for the mastery. At last the first anchor is up, put in the boat, and they are running over the ground line which has the hooks on it. We put in close to them. A reward has been offered for the first tilefish. We see from the jumping deck of the Josie Reeves an occasional silvery-looking fish come from the hooks, but the golden gleam of the tilefish is not here. These are commonplace hake. All day the men set their trawls—two sets of them at a time—and work with the vim of donkey engines, and there is a never a *Lophiolatilus*. Capt. Redmond is in one of the dories. As he pulls in at nightfall he says: "I haven't a tilefish, nothing but hake; but here are some handsome fish. I never saw their like before. Wouldn't Blackford like to have one? Red as can be, and here they are," and four beautiful red fish, some smaller than a blackfish, some very much larger, are tossed on the deck. If we have not found the tilefish, maybe we have stumbled on something else. Capt. Collins examines them carefully. He has never seen the like before. It is a very beautiful fish, with warm red lustre and black and cream-colored mottlings. It looks faintly in general build like *Tautoga onitis*, but it is a lustier fish, and its pectorals are blood red and of very great breadth and sweep. Have we hit the duck and missed the drake? to commit an ichthyological bull. Still, we had hoped for the tilefish, but unlike the colored fisherman, who, when fishing for catfies, caught a striped bass and was disgusted, we are not without hope.

The weather still continuing fine, we prepared for another day's trawling. Everything being made snug for the night, we went westward, making considerable southing. For two more days we fished, persistently, indefatigably. On Friday we took some dozen more of these handsome red fish, some very much larger than the first, but of *Lophiolatilus* not a sign. Of hake there were plenty with skates galore, and dogfish, and a *Lophius*, too, the ugliest of all fish, that animated carpetbag.

Three days were we at it. It might blow all it pleased; so that the small boats could be worked the men were willing. But the tilefish would not come. Then we looked again at the red fish. They had been, with the whole of the catch, put on ice. They looked so tempting. The specimen misers of the Fish Commission might want them all to stow away in alcohol. What if we should brave them? We were at sea, beyond the chance of a telegraphic dispatch. Then there was a member of the Ichthyophagous aboard. That red fish had to be eaten. What was a dry scientific jumble of vomers, palatines, snouts, opercles, dorsals, anals, scales, to him? There never would come such a chance again. The fish might never be caught again. To Capt. Collins might accrue the honor of having discovered a new fish, but to the member of the Ichthyophagous would come the delight of being the first human being who should eat it. The proposition was made by the gustatory iconoclast "to have just one fried," and he did it in cold blood. Capt. Collins, touched perhaps by the eloquent appeal of the fish-eater, consented, and the cook had two of the fish given him. At night it was eaten, and proved to be the most delicious of fish, in fact, a fish which every gourmand and epicure would want to taste and tell about. It had a firm flesh, yet it was crisp, with a delicate, crabby flavor. On Saturday, the 23d of September, after having fished all day, the seas increasing somewhat and the sky to windward looking angry, the barometer falling, it was thought wiser to seek a harbor and so close the cruise. Specimens having been secured, as instructions had been given to be both general and special in collecting—everything, in fact, found in God's great seas, from a whale to a tiny parasite, being within the requirements of the United States Fish Commission—at sundown we took a northeasterly course and made for Block Island.

It blew a fresh breeze, and the Josie Reeves made Block Island on Sunday at 3 A. M., the light showing clear some ten miles west. By daybreak the long range of small islands forming the right-hand side breakwater of Buzzard's Bay was made, and by 10, just as thick weather was threatening, the anchor was dropped at Wood's Hole, within ten yards of the Fish Hawk.

The particular fish having been handed over to the ichthyologists of the commission, it was declared to be a new member of the family of *Scorpena*, first described by Jordan in 1880. Such of the *Scorpena* as have been before described have been only some three inches in length. The fish taken in this cruise are over a foot in length. There are differences in the markings, and very probably on examination some other specific variations will be discoverable.*

"Are we to be forgiven for having eaten two of these fish?" we inquired rather anxiously of the Commissioner.

"Oh, certainly; you did precisely right. Scientific research is one thing, but to turn what we may find into use is the great practical bent of the Fish Commission. I believe I can congratulate Capt. Collins on having found what I believe to be a new fish, and what is more, to have been among the first to eat it, and if there were only enough of them, I should very much like to try one too; but I must send the best of the fish at once to Washington to have casts of them, and the rest are now in alchohol and will form material for careful study."

As to why the *Lophiolatilus* was not caught on the trip of the Josie Reeves we are not prepared to state. As to what killed the fish, or whether all the fish were destroyed this year, no one can hazard an opinion. The solution of these curious problems will require much additional study.

* Prof. Goode has since identified the fish as *Scorpæna dactylopterus*.

THE HENSHALL ROD.

I HAVE read with no little interest the numerous essays on fishing rods, and wonder if that subject will be settled at all. The only solution that I can see to the problem is that every angler use just the kind, pattern, size, length, weight and material of rod that he likes best; then don't let anybody disparage him about his rod and thus destroy his happiness. His own way suits him best.

When in Florida last winter with my friend Dr. Henshall, I had only one rod. It was what he styled the "coming bass rod"—with ash butt and lance-wood second joint and tip. I think it weighs about eight ounces, but have not weighed it. I used that rod all the time while there, and have it now in as good condition as the day I got it, nor did I use but one tip during the time. This being the first and only jointed rod that I ever had or used, therefore would not be a proper critic as to light or heavy rods, as we at the South always, "'fo 'mancipation," used cane poles without reels. As to the holding qualities of this rod, its "give and take," its perpetual elasticity, I don't think can be surpassed on earth.

The bass that we took in that country are simply enormous, and an eight-ounce rod that will master those eight to ten-pound fellows is certainly good enough for the most obstinate stickler. I thought that if this rod was a fraction stiffer it would be better for such large bass, but for anything under six-pound bass I would not have it changed. A half hour is too long to fight one bass, and so if the rod was a third stiffer it would curtail the fight say to twenty minutes or fifteen.

One evening I was alone on a beautiful stream in my canvas boat. I had half grown "bream" for bait, which were so heavy (eight-ounce bait) that I could cast them only thirty or forty feet, yet I took seven bass, of which the smallest weighed four pounds and the largest ten pounds; average

size seven pounds, the four-pound one being the only small one in the lot. I was three hours landing these fish, thus allowing half an hour to the fish, from two o'clock to five, afternoon. The "flexors" of my arm were sore for several days, and the generalship that I displayed with this delicate tackle on those monstrous bass should have been praiseworthy had some one been there to have witnessed it besides myself. I was as sorry for the poor little rod at times as though it was a human being.

The Doctor used a heavier rod than I did and of course stiffer, and he had less trouble in landing his fish; but then I doubt if he had as much sport as I had, for whenever I "tackled" a nine-pounder or the like, I had all I wanted to keep rod and tackle from jeopardy. But in all the bass fishing in Florida with that little eight-ounce rod and a little silk line the size of three horse hairs, I never lost a fish, parted a line or broke a hook but once, when I had an old half rotted line, a seven or nine pound bass struck just as the line got kinked on the reel and snapped it.

When I go to Florida again I want a rod, say one-third or half stiffer for bass, but no heavier in weight, or at all events not much, for an ounce or two will tell on your nerves in casting the minnow a half day "*à la* Henshall," the which method I think above all the *crème de la crème* of angling. Get the Doctor's "Book of the Bass" and take lessons on casting the minnow, and you will fish no other way afterward. It is worth the price of the book ten times to learn this one lesson. Get a good reel and put it before the hand. The rod that I have has the reel seat behind the hand, and the first bass that I took in Florida—a five-pound one—came near cutting my finger off with the line. I then took the reel off, placed it above the hand, and lashed it on with a string. I had no more trouble afterward. I don't see the sense of a reel behind the hand, or where the idea ever came from. It came near ruining my finger in the first attempt, and I believe if the fellow that first advocated a reel behind the hand had been in that boat with me as that red-hot line was sizzing through my fingers, and I couldn't turn loose, I would have been tempted to give him the butt of my rod instead of the retreating bass. C. L. JORDAN.

WILLIS, TEXAS, Sept. 24.

MAINE NOTES.

THE present season, now so near at a close, has been a successful one in this region for trout and salmon fishing.

More anglers and tourists have visited Moosehead Lake than ever before. A new and elegant house, "Lake Hebron Hotel," is being erected at this place, which will make the summer travel a specialty.

Ship Pond, or Lake Onoway, Long Pond, Greenwood, Bear, Benson, Spectacle, Monson, the Twin, or two Doughty ponds, Grindstone and twenty other beautiful sheets of water, are accessible from this village besides our own, Hebron, three and one-half miles in length, upon the shore of which is the new hotel.

Everyone of these abound with spotted and lake trout, while Onoway and Long Pond have land-locked salmon. Hundreds have visited the former the present summer.

The whole of Northern Maine is rapidly becoming a Mecca for the tourist, angler and lover of nature. Our people will eventually derive a great deal of material benefit from this influx of visitors from the city and mart if they sustain the enforcement of our wholesome protective laws.

The greatest evil that we now have to contend with is the shipment and transportation of trout out of the State in the months of April, May and June, which can easily be done since the iron horse has penetrated these forests and came into close proximity to these resorts.

It is estimated that more than ten tons of trout were shipped to Boston from Moosehead Lake last spring by poachers from neighboring towns.

Every sportsman in Maine and all who are interested in the progress and welfare of our State ought to unite and work upon this subject until our Legislature enacts a law to prevent this wholesale slaughter of trout. We hope the many readers of your valuable journal in the Pine Tree State will each consider himself bound to labor with his own member of that body in the interest of this and similar matters. J. F. S.

MONSON, Me., Sept. 25.

THE MENHADEN QUESTION.

THE subject of the menhaden fisheries, though more than once treated in these columns, is of too great importance, both commercially and economically, to be permitted to drop out of notice. The plain facts are that during the last few years the menhaden fisheries have been gradually assuming greater and greater proportions, till now the capital invested is not less than $5,000,000, and the number of hands engaged from 5,000 to 6,000, while it employes some 90 steamships and 200 sailing vessels. Its products in oil and guano amount to millions annually, and these products the country cannot afford to, and will not, if possible, want. But concurrently with the development of this industry there has been a falling off all along the coasts frequented by the menhaden fishers, of our valuable food fisheries. Interested parties have denied the necessary connection between these facts, and have challenged the native fishermen to prove that the one fishery interferes with the other; but so long as we have the well established and glaring fact that as the one industry has persistently grown, the other has steadily declined—that precisely as the menhaden fishers appear on a part of the coast, the food fishes, as bluefish, striped bass, weakfish, etc., disappear—ordinary persons can scarcely be blamed for concluding that the continued progress of the one industry, as at present pursued, appears incompatible with the profitable prosecution of the other. It is, therefore, scarcely too much to say that unless some modification in the mode of prosecuting the new enterprise can be devised, our coast food fisheries are in danger of collapse, while an important, or rather we may say an essential, element of our daily food will pass out of the reach of persons of moderate means.

There is another aspect of this question not unworthy of notice. Till this new industry was so extensively followed, our bays and sounds along the New Jersey coast were stored with bluefish, weakfish, and other food fishes, affording excellent sport to the amateur fisherman. Many a toil and desk-worn disciple of Izaak Walton was thus allured from the city to spend an occasional day on our health-giving coast, greatly to his own benefit, mentally and physically, as well as to the advantage of hotel-keepers, boat-hirers, and many others. But our marine inlets are becoming depleted of their finny tenants, and our city sportsmen are beginning to weary of fishing in tenantless waters, and are disappearing accordingly. Thus a good round sum of money threatens to be lost annually to our coast.

We are not oblivious to the fact that the menhaden fishery has stimulated industry and circulated money in localities—Tuckerton, for example—where such stimulation was much needed, and in recognition of this fact we are not prepared to join our voice to those which call for absolute repression of the industry. We think it a case for thoughtful legislative regulation, based on a careful collection and collation of facts. Elsewhere—in Loch Fyne, Scotland, for example—it has been found possible by such legislation to reconcile the interests of rival fisheries quite as conflicting as these in hand, and we have perfect faith that whatever has been effected elsewhere, Americans are competent to accomplish here. One thing appears clear: the Senate committee, to whom the subject has been referred, should give the New Jersey fishermen a better opportunity to be heard than they have yet been afforded. The investigation was prompted by a bill introduced by Senator Sewell, and the constituents of that gentleman should have abundant opportunity to present their case.—*The Coast Pilot.*

THE COLUMBIA SALMON WHEEL.

"BARRELS are plenty this morning, captain. This is the third we have met during the last twenty minutes. Where do they come from?"

It was Captain John H. Wolf, the veteran master of the Columbia River steamer Wide West, which affords a much pleasanter journey than the cars for Bonneville to the Dalles [Oregon].

"Well, sir," said the captain in reply, "they come from the Cascades. If you should examine any one of them you might be surprised. You wouldn't imagine, would you, that those barrels, though empty, carry a more valuable cargo under than most casks do in them? Those barrels are buoys. They sustain each about 200 pounds weight of salmon, alive, strung through the eyes, on their way to the canneries down the river. There they have little steam launches which pick up every one and tow them in."

"How are so many fish caught? I haven't noticed any nets to-day."

"Nets are of no account now. Go and see the Snail," said the captain, as he bent over and strung the slowing bell for the Dalles.

Some time after I saw the "Snail," and a most ingenious, successful, detestable engine of destruction it was. The owner had admirably planted it just above the Upper Cascades, on the north bank of the river, the south bank being at that point almost impassable to the fish. It was placed just where the swift edge of the current makes a most inviting eddy, through which the salmon must naturally "run" on their way up-stream. Here the current was about eight feet deep. The salmon never swim lower than four feet below the surface. Erected over what would be the entire width of the "run" was a huge frame. Suspended within this an immense wheel revolved, so adjusted on pulleys as to rise and fall with the changing depth of water. Upon the spokes or arms of this wheel, eight in number, were fastened as many wire nets, each thirty feet in diameter, loose and baggy and movable, resembling in appearance the pouch of a pelican. The current itself is the force that turns the wheel like an undershot. Very slowly its goes around. The great scoop-nets spread lazily through the water, one after another, at just the depth where they are most fatal. Their arms almost pause and float motionless through the stream. But, though slowly, the great wheel, called from this motion the "Snail," does move and with just the right tardiness, for as the nets emerge from the water they are so filled with the struggling prey that Mr. Williams, owner of one of the wheels, pronounced 800 an average amount. At the proper angle above, the net is turned upside down. Its contents are dumped along the arm of the wheel to what might be termed its hub, striking which they rebound along a trough to the bank. It is a stirring but cruel sight, for there are many small and unmarketable fish in every "haul." The theory is that these are returned to the water and live, but it is like the "returns of the killed and wounded" after a battle—so stunned and maimed are they that but few survive. The wheel presents a busy scene, and the profits must be enormous, for the simple contrivance costs but about $400, and requires but half-a-dozen attendants. There are four of these wheels on the river, and a gentleman engaged in the fishing business informed me that the calculation was they caught about half the salmon that go up. There is a wheel on Bradford's Island, above Bonneville, the work of which has become so notorious (not merely killing merchantable fish, but in so doing destroying a dozen times as many of a size as yet too small for commerce) that the public press has demanded its suppression. But all these wheels, as has been said, are "the production of a brain which aims to live without work." Probably from 2,500 to 8,000 salmon (for proprietors of the wheels are very chary about giving actual figures), large and small, are caught every hour, night and day, of the week, save from Saturday to Sunday night. Compute the amount. I know of one actual catch of 6,400 salmon in a day—large fish, suitable for the canneries. An experienced fisherman stated it as the result of his observation that about one in ten of those caught were used. Even of the number used, packed, and sent down in barrels, one wheel kept the large cannery at Warrendale busy all through the season, and then the cannery couldn't take care of all.

Looking at the descending stream of half-dead fish literally "broken on the wheel," I could not but regard the question for a moment in the light of an angler and an economist. I remembered the half-remorseful tone (as if the speaker thought of the many laden baskets he had brought from the Silver Bow) with which, at Fort Missoula three months ago, Lieutenant Fremont said, "That's a killing fly," as he handed me a little, hairy, fuzzy, artificial coleopteron with brown folded wings. I remembered, too, the time when, a month after, Captain George J. Ainsworth and I were floating for a summer afternoon over one of the transparent lakes that half surround his beautiful retreat near Tacoma. The trout had responded lazily to our trolling lines, and something like a dozen lay in the bow of the boat as we stopped for a moment in the shadow of some giant firs where the water lay dark and deep and still beneath the long, floating lilies.

"In my country," said I energetically, "we would just drop anchor here, whip out pole and line, and with grasshopper or angle-worm catch half a boat land between now and night."

"So we could here," replied the captain, "but that wouldn't be fishing;" and the young but veteran disciple of good Izaak rowed softly but hastily away from the too tempting precincts. I wondered what these gentlemen, devoted fishermen, keen but just, would have said, could they have stood by my side and witnessed this wholesale destruction of a fish nobler than the trout. From a point of view less sentimental, it seemed to me that not only to the sportsman's instinct of fair play but even to the naturalist's foresight for the continuance of the species, that wheel was a spectacle alike revolting. In the contest between animal and man, it is so inevitable that constant victory must be with the latter, that in all civilized communities some safeguard against the capacity of lawless individuals has been provided. And yet, for over two years these wheels have been permitted to do their work, until, mainly through its evil results, the price of salmon in this market has been reduced more than fifty per cent. Of what use is it to fine a fisherman twenty-five dollars if he traps a fish or uses a bit of drug on his bait or berry on his hook, while such wholesale destruction as this is allowed? I remember at Big Horn Tunnel, the first night we were in camp, an officer of the company of United States troops stationed there torpedoed the Yellowstone and caught half a dozen stunned trout for our supper. The act is punishable with a fine of not less than $100 here, and yet the Columbia on fire with exploding cartridges of giant powder or dynamite all day could not equal a single hour's work with the "snail." The fact is, the Columbia River is governed by a fish law, written before this mechanism was heard of—a law made for nets. Better that immunity be granted them all than that these machines, compared with which a gillnet or seine is but an angling-line, should be permitted to ply their trade year by year from April until August.

Bad as all this is, the worst result of the salmon-wheels is found in the ingenious imitations and wholesale slaughterpens, more glaringly offensive to the spirit of the law, which they have brought into existence. To understand these properly the reader must be reminded that the habit and habitat of the salmon in these waters have been so thoroughly studied that they are now fully known. The salmon, like the shad in the East, is a creature of regular migrations, accurately described in treatises; so that not only every angler but every schoolboy knows how the fish acts and lives, and where he is at any month of the year. It is well understood that after the subsidence of the high water during the last week in July and the first week or two of August, the latercoming fish, heavy with spawn, leave the sea and come up into the river to hatch. With every ascending tide numbers of sea fish follow for the eggs. The time of the fish is too far gone to admit of a long ascent of the river, and the spawn left on the sands near the mouth may be reckoned as almost a total loss. The earlier and stronger fish ascend the Columbia to the Snake River and the numberless inflowing streams in the greatest number during March and April. They keep close to the bank of the river and turn instinctively into its tributaries. Now, at Shearer's Bridge, on the Deschutes River, beyond the Dalles, the stream has been dammed, and the fish are forced, having entered it, into a canal; so that all the fish that enter the outside shoot of the river are literally flumed. Again, across the entire mouth of Spokane River the Indians have built a salmon trap, a solid network of willow twigs, which leaves literally no chance of escape.

Is it not Thoreau who writes what might be called the elegy of the shad—how he ascends the Connecticut year by year with watery dreams of his impending doom? Some such pathetic persistence marks the annual begira of the salmon at its propagating season, though in the case of the latter there is not the wise legislation of the East by which the fish's greatest natural enemy protects him against himself. I do not mean to say that there is no thought given to this subject, no agitation of it. There is much talk in the newspapers and among the more intelligent fishermen about hatcheries and needed alterations in the existing laws. It is seen that more of the heavier and stronger fish must be allowed to go up the river or the salmon product will inevitably decline. But this is attending to the spigot merely. The legislation is not judicious. Its execution is not firm. A tramp is forbidden to cast a bait after August. A fisherman may not drift his net on Sunday. Meanwhile, day and night, the "barbarous and murderous" (I am using an intelligent fisherman's phrase) "snail" wheel is kept going and the salmon are literally corralled by millions in the very haunts where they go to bring forth their kind. Meanwhile, too, all along the Sound to Alaska, the larger part of the fish so plentifully caught is wasted, just as the buffalo were in Montana, and the tendency is to the same result—extinction. What will become of an industry which supports 10,000 men when the price of its product has fallen three-fourths during the past few years? It is just so with timber-cutting and burning. Whole areas are denuded as if the supply was illimitable. So prodigal is this rich country in its best resources.—*Columbia River Correspondence of the Evening Post.*

A CURIOUS FISH.—Assumption, La.—I, to-day, send by express one small package containing a few fishes preserved in alcohol, and hope that you will be kind enough to let me know what they are, as nobody around here knows them. For the last five years these fishes run up Bayou Lafourche during low water and can be caught by millions. They apparently come from the Gulf of Mexico, and go into the Mississippi River, and never come down stream again. I live on the Bayou seven miles from the Mississippi. Said Bayou is an outlet of the river, as you know, and empties into the Gulf. The fish sent you run up stream during three or four days (night and day), and then disappear to reappear at about the same time the following year, always during low water.—P. E. D. [These singular flat-headed little fish are called by Prof. Jordan *Dormitator maculatus* (Bloch), Jordan and Gill, fam. *Gobiidæ*. They seem to have no common name. They are a common brackish water fish of the tropics, but according to Prof. Jordan, not before recorded from Louisiana.

BOAT-FISHING VERSUS WADING.—In trout-fishing there is no sport like wading the stream and casting your fly into the pools. It is so far ahead of sitting in a boat and whipping the shores or spring holes for trout that they are not to be spoken of in the same day. Even in fishing for black bass it is more enjoyment to walk along the bank of a stream than to be cramped up in a boat until one's legs are stiff and numb. These thoughts occurred to me after a day's black bass fishing on Greenwood Lake, where most all the fishing is done from boats. Three days of it was enough for me, and the dead feeling did not leave my legs for nearly two days afterward. I was surprised to note that Mr. Mather, in one of his "Adirondack Survey Notes," prefers boat-fishing to any other, and yet he calls shooting deer from a boat "lazy sport."—WADER.

WEAKFISH AND KINGFISH AT LONG BEACH.—I was surprised on hearing some clapper rails cackling while I was fishing at Long Beach, three weeks ago. There are no accommodations there now except the bridge-man's shanty; and if one cares to rough it he will have a splendid opportunity there. I started last Friday thinking the storm would bring a high tide; concluded to try the mud-hens or clapper rail in the afternoon and fish the next morning when the tide was low. I got into the boat with a man to push me; we went in the high reeds and found that there was not enough water to push, so we took the small creeks. We put up five birds on that meadow and killed four, the other was hit hard but got away. The tide was now dropping so we gave it up for the night as we were all wet through, the rain coming down in torrents. I went to the bridge-man's cabin, that being the only place where I could get a bed for the night, as the hotel was closed for the winter. I felt chilled with the wetting but the bridge-man's son, a youth of fourteen, soon had a fire kindled, so I borrowed an old pair of dry pants and a coat. Our hot coffee seemed the best coffee I ever tasted. I do not care much for eels but I think I was ready to eat anything that evening. As the moon was showing through the clouds I concluded to fish for a couple of hours as they told me the weakfish and kingfish bit at night. I pulled out into the channel and fished in five different places but it seemed that there was nothing but sea spiders, and I soon had a dozen of those ugly crabs in the boat; I then caught a small eel and became disgusted. I pulled for the shore, and on reaching the cabin I found it full of smoke; they were burning sage to drive out the gnats and mosquitoes. In the night I suddenly became conscious of a number of large things walking all over me. I woke up the bridge-man who was snoring away on the other bed, he quieted my fears by assuring me that they were only mice and that they would not hurt me. I reasoned if a man and a boy slept there every night and the mice did not eat them up that I might safely sleep one night. I always make it a point to accommodate myself to the surrounding circumstances, no matter what they are. The next morning, at five o'clock, I took the boat with my fishing lines and soft crabs for bait and went up stream about one hundred yards, opposite a large creek, with a half tide running out began fishing, and for two hours I had rare sport. I captured eleven weakfish weighing from one and a half to three pounds, I lost three or four, and one large one that I held too strong broke a three-ply swell and carried off the hook. I then went in to breakfast and came back again and fished until 2. P. M., taking five more. As the tide was now nearly full, I went out to try the mud-hens again, I only killed two more. I think for good sport there are few places within an hour's ride of New York to compete with Long Beach, as the kingfish and weakfish are both a nice game fish, and a large one will give a man a good five minutes' play to land.—JAMES ALBERT (New York).

THE GASPER-GOU.—Indiana University, Bloomington, Ind., Sept. 23.—In response to the appeals directed by your correspondent "Byrne" and others to the Eastern "fish sharps," I tell what I know about the "gasper-gou." I have collected specimens of him in Louisiana and Texas, and I am unable to see that he differs in any technical way from the animal called "sheepshead" in the Great lakes, and "white perch" "drum," "grunter" and "thunder pumper" in the Western rivers. This fish was first described by Rafinesque in 1818 as *Aplodinotus grunniens*, and this name of course it must keep, although we have adopted Professor Gill's correction of the spelling of *Aplodinotus* to *Haploidonotus* (*haploidos*, cloaked; *notos*, back). Later, Rafinesque changed the name to *Amblodon grunniens*, a thing he had no (scientific) right to do. Some years later the fish was called "*Corvina oscula*." A single specimen, apparently abnormal and distorted, and now lost, was also called the "malasheganay" or "*Corvina richardsonii*," and this last fish was said to be abundant in Lake Huron, and to be good eating. These statements were, however, somewhat premature, as the only specimen of "malasheganay" ever known was not eaten, but stuffed by the discoverer. If, as we think, there is but one species of this type, its name is *Haploidonotus* (or *Aplodinotus*) *grunniens*. It seems to be certain that in the Great Lakes this fish, under the name of "sheepshead," is absolutely worthless; the flesh is tough, ill-scented, and often infested by worms. In the Ohio and upper Mississippi, as "white perch," the young are passable panfish, not very tender and with a sort of muddy flavor, but still readily saleable. The old fish, as "croaker," "drum," "grunter" or "thunder-pumper," are coarse and poor. Further south, as "drum," or, in Louisiana and Texas, as "gasper-gou," the young fish are well liked, either because really better than further north, or because other fish are poorer. This Southern "gasper-gou" was considered by Girard a different species, under the name of *Amblodon neglectus*. If really different, it should be called "*Haploidonotus neglectus*," but we have thus far failed to discover any positive points of difference.—DAVID S. JORDAN.

A GAME PROTECTOR IN BROOKLYN.—We learn that Mr. John S. Collett, one of the New York State game protectors, formerly of Albany county, has removed to Brooklyn. Mr. Collett has begun by paying attention to violators of the lobster law, and has named several men who have had lobsters for sale under ten and a half inches (exclusive of claws), and will keep a close watch on the markets of New York, which, if closed to the sale of game and fish out of season, will do much to protect other parts of the State from their illegal capture. Mr. Collett's address is 391 Fifth street, Brooklyn.

ILLEGAL SALMON FISHING IN MAINE.—The Calais *Times* says the destruction of salmon at Salmon Falls, at the cotton mill dam, Calais, is deplorable. No fishway has yet been provided by the corporation and the salmon gather under the rolling dam and attempt to pass through the water that falls over the top of that structure, and in doing so fall back and are stunned by falling across logs and ledges. Men and boys, not satisfied with netting these fish, now arm themselves with pitchforks and spear them. All this is done in defiance of State laws.

CATFISH AND SALMON SPAWN.—It has been discovered, says the *New Era*, of Benecia, Cal., that almost all catfish taken from streams where salmon are in the habit of depositing their spawn are full of such spawn. It is therefore apprehended that the destruction of salmon is inevitable, unless extraordinary efforts be made to get rid of the catfish. While the species of catfish introduced into California waters is very prolific, it seems to be by no means a favorite with the people.

ENORMOUS RUNS OF SALMON.—The well-authenticated stories of the enormous runs of salmon up the rivers of the Pacific coast of North America seem to be so different from the experience of most people that they are difficult to believe. We have seen them so thick that a spear could not be thrown in the river without striking a salmon; but we can truly say that we never had so vivid a picture of swarms of fish until we this week received a photograph of a scene on one of the rivers from our old friend and correspondent, "Mowitch," who says: "I believe this is one of the first attempts to obtain photos of fish in their native element." It is a stereoscopic view taken, as is written on the back of it, "August, 1882. Fish shown are the suckeye of Frazer's River, or blue back of Columbia River, *Oncorhynchus nerka*, Walb. Gill and Jordan. Gordon Creek is a small tributary of Frazer, about one and a half miles below the town of Yale, B. C. It has no peculiarities differing from, or advantages over, countless streams emptying into Frazer River, and the number of fish to be found in it is probably no greater than in others of equal size. The fish not being in a quiet state, together with the glare of the sun, renders their outlines in some cases indistinct; still the artist has been singularly happy in producing a photograph which is altogether unique." The foregoing remarks of "Mowitch" are true. We had no idea that rapidly moving fish could be photographed at all, especially in a river. In some places they are shown to be three deep, and doubtless there were more below, while the surface is as thickly strewn with them as it is possible to be. We can now almost believe the old California story of walking across the river dry shod on the backs of the salmon.

THE SPADEFISH.—Little Rock, Ark., Sept. 25.—I notice in your last issue an account of the spadefish. They are quite numerous in the lakes in this vicinity, where they are known as "shovel-bill catfish." Their average weight is about thirty pounds, though I have seen some that were very much larger. They have no scales, resemble catfish somewhat, but the upper jaw projects ten or twelve inches. The mouth is at the lower end of the shovel and is toothless. Only a short time ago I saw a wagon-load of them for sale on the streets. The negroes consider them a great delicacy. I cannot tell you how they are caught. I have fished in lakes said to be full of them, but never caught one, probably because I was fishing for game fish. From their general appearance I think they could be caught with worms or soft bait near the bottom.—FISHERMAN.

TROUT MURDER.—The Helena, Montana, *Herald*, under date of Sept. 18, reports: "The employes on the Northern Pacific Railroad are killing trout by the use of explosives. One of the most famous and best stocked trout streams between Deer Lodge and Missoula is Whiteside. Last Sunday our informant was about to review his experience of former years and drop a line, with a fly attached, in a certain pool of the stream flowing through Mr. Whiteside's ranch, but was told by Mr. W. that the attempt would be futile, because that morning some N. P. R. R. men had taken in a basket full of fish, using cartridges. The practice is in violation of Territorial laws; is a shame and injures one of the great attractions for tourists in Montana. Let some action be taken by interested parties in this matter at once."

Fisheulture.

FISH COMMISSIONERS.

WE present the following list of the different Commissioners on Fisheries for the Provinces, States and Territories of North America, corrected by correspondence to date. A few changes will be found since our last list (September 29, 1881), and one more State (Delaware) has awakened to the importance of fisheulture as a State industry and appointed a commission. The following will be found correct to date:

DOMINION OF CANADA—
W. F. Whitcher, Commissioner, Ottawa, Ontario.

PROVINCE OF NEW BRUNSWICK—
W. H. Venning, Inspector of Fisheries, St. John.

PROVINCE OF NOVA SCOTIA—
W. H. Rogers, Inspector, Amherst.

PROVINCE OF PRINCE EDWARD ISLAND—
J. H. Duvar, Inspector, Alberton.

PROVINCE OF BRITISH COLUMBIA—
A. C. Anderson, Victoria.

THE UNITED STATES—
Prof. Spencer F. Baird, Washington, D. C.

ALABAMA—
C. S. G. Doster, Prattville.
D. B. Huntley, Courtland.

ARIZONA—
John J. Gosper, Prescott.
Richard Rule, Tombstone.
Dr. J. H. Taggart, (Business Manager) Yuma.

ARKANSAS—
John E. Reardon, Little Rock.
James H. Hornibrook, Little Rock.
H. H. Rottaken, Little Rock.

CALIFORNIA—
S. R. Throckmorton, San Francisco.
J. D. Farwell, Niles, Alameda county.
W. W. Traylor, San Francisco.

COLORADO—
Wilson E. Sisty, Idaho Springs.

CONNECTICUT—
Dr. Wm. M. Hudson, Hartford.
Robert G. Pike, Middletown.
George N. Woodruff, Sherman.

DELAWARE—
Enoch Moore, Jr., Wilmington.

GEORGIA—
J. T. Henderson (Commissioner of Agriculture and *ex-officio* Commissioner of Fish and Fisheries), Atlanta.
Dr. H. H. Cary (Supt.), La Grange.

ILLINOIS—
N. K. Fairbank, President, Chicago.
S. P. Bartlett, Quincy.
S. P. McDoel, Aurora.

INDIANA—
Calvin Fletcher, Spencer, Owen county.

IOWA—
B. F. Shaw, Anamosa.
A. A. Mosher (Assistant), Spirit Lake.

KANSAS—
Hon. D. B. Long, Ellsworth.

KENTUCKY—
Wm. Griffith, President, Louisville.
Hon. John A. Steele, Versailles.
Dr. Wm. Van Antwerp, Mount Sterling.
A. H. Goble, Catlettsburg.
Hon. C. J. Walton, Munfordville.
Dr. S. W. Coombs, Bowling Green.
John B. Walker, Madisonville.
P. H. Darby, Princeton.
Hon. J. M. Chambers, Independence, Kenton county.
W. C. Price, Danville.

MAINE—
E. M. Stilwell, Bangor.
Henry O. Stanley, Dixfield.

MARYLAND—
Thomas Hughlett, Easton.
G. W. Delawder, Oakland.

MASSACHUSETTS—
E. A. Brackett, Winchester.
Asa French, South Braintree.
F. W. Putnam, Cambridge.

MICHIGAN—
Eli R. Miller, Richland.
A. J. Kellogg, Detroit.
Dr. J. C. Parker, Grand Rapids.

MINNESOTA—
1st District—Daniel Cameron, La Crescent.
2d District—Dr. William M. Sweney, Red Wing.
3d District—Dr. Robert Ormsby Sweeny, St. Paul.
4th District—No appointment until January.
5th District—No appointment until January.

MISSOURI—
Dr. J. G. W. Steedman, Chairman, 2803 Pine street, St. Louis.
John Reid, Lexington, Lafayette county.
Dr. J. S. Logan, St. Joseph.

NEBRASKA—
W. L. May, Fremont.
R. R. Livingston, Plattsmouth.
B. E. B. Kennedy, Omaha.

NEVADA—
Hon. Hubb G. Parker, Carson City.

NEW HAMPSHIRE—
Edward Spalding, Nashua.
Luther Hayes, Milton.
Albina H. Powers, Grantham.

NEW JERSEY—
Dr. Benjamin P. Howell, Woodbury.
Maj. Edward J. Anderson, Trenton.
Theodore Morford, Newton.

NEW YORK—
Hon. R. Barnwell Roosevelt, 76 Chambers street, New York.
Edward M. Smith, Rochester.
Richard U. Sherman, New Hartford, Oneida county.
Eugene G. Blackford (Fulton Market, New York city), 809 Bedford avenue, Brooklyn.

NORTH CAROLINA—
S. G. Worth, Raleigh.

OHIO—
Col. L. A. Harris, President, Cincinnati.
Charles W. Bond, Treasurer, Toledo.
Halsey C. Post, Secretary, Sandusky.

PENNSYLVANIA—
Hon. H. J. Reeder, Easton.
Hon. B. L. Hewit, Hollidaysburg.
James Duffy, Marietta.
John Hummel, Selinsgrove.
Robert Dalzell, Pittsburgh.
G. M. Miller, Wilkesbarre.

RHODE ISLAND—
Alfred A. Reed, Providence.
Newton Dexter, Providence.
John H. Barden, Rockland.

SOUTH CAROLINA—
A. P. Butler, Commissioner of Agriculture and *ex-officio* of Fish and Fisheries, Columbia.
C. J. Huske, Superintendent, Columbia.

TENNESSEE—
W. W. McDowell, Memphis.
H. H. Sneed, Chattanooga.
Edward D. Hicks, Nashville.

TEXAS—
R. R. Robertson, Austin.

UTAH—
No appointment since the death of Prof. J. L. Barfoot in April last.

VERMONT—
Hiram A. Cutting, Lunenburg, Essex county.
Herbert Brainerd, St. Albans.

VIRGINIA—
Col. M. McDonald, Berryville.

WEST VIRGINIA—
Henry B. Miller, President, Wheeling.
C. S. White, Secretary, Romney.
N. M. Lowry, Hinton.

WISCONSIN—
The Governor, *ex-officio*, Madison.
Philo Dunning, President, Madison.
C. L. Valentine, Secretary and Treasurer, Janesville.
J. V. Jones, Oshkosh.
John F. Antisdel, Milwaukee.
Mark Douglas, Melrose.
Christopher Hutchinson, Beetown.

WYOMING TERRITORY—
Dr. M. C. Barkwell, Chairman and Superintendent, Cheyenne.
Otto Gramm, Secretary, Laramie.
Hon. N. L. Andrews, Johnson county.
Hon. E. W. Bennet, Carbon county.
Hon. P. J. Downs, Uinta county.
Hon. T. W. Quinn, Sweetwater county.

THE SUCCESSFUL PROPAGATION OF CODFISH—The operations of the United States Fish Commission, in the direction of the fish hatching and other experiments, are being at present carried on at Woods Holl, where the work has been done for a couple of years past. Previous to that time hatching operations for codfish were carried on at Gloucester, and millions of young codfish were set free there. Vast numbers have also been let loose into the ocean from the hatching rocks at Woods Holl. Since this work has been done, but little, if anything, has been seen of the cod small fry, till now the fishermen report vast multitudes of little codfish, from four to ten inches in length, in the mouth of the Piscataqua River and vicinity at Portsmouth. Since these little fish are strangers in that vicinity, it is believed by those interested that they are "Prof. Baird's fish," or, in other words, that they are the first visible results of the codfish hatching experiment of the government under Prof. Baird's direction. It is believed, and not without good reason, that the little cod off the Portsmouth shore were really hatched in the government boxes at Gloucester and Woods Holl, and that they have drifted northward along the shore in their natural emigrations toward colder waters. Should such prove to be the true state of the case, it certainly is a most happy result, and

may be the first step toward again stocking the waters from Cape Cod to the Bay of Fundy with millions of codfish, as they once were, before the fisherman, in his search after food and profit, had so nearly robbed this part of the Atlantic shore of its rich treasury of food fish. If it has been discovered that the supply of codfish near our shore can be kept up by artificial propagation, the importance of what is known as the shore fishery, which has grown in fifty years from a few cargoes in winter to sell frozen to 20,000,000 pounds at this port alone last year, can be doubled again in a few years, the government has been well paid, and Prof. Baird has done a noble work.—*Belfast, (Me.) Republican Journal.*

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORDFISH.

BY G. BROWN GOODE.

[CONTINUED.]

THE CAPTURE OF THE SWORDFISH IN THE MEDITERRANEAN.

M. VICTOR MEUNIER, in his treatise "Les Grandes Pêches," p. 141, describes the various methods formerly and at present in use in the fisheries in the Mediterranean. The Greeks were accustomed to use boats with projecting bows, modeled to resemble a swordfish, and painted with its peculiar colors. This the unsuspecting fish would approach, thinking to meet one of its own kind. The fishermen, taking advantage of the mistake, would pierce it through and through with their lances. Although surprised, the swordfish would defend itself with vigor, striking the treacherous boat with its sword and endangering its safety, while the fishermen strove to seize it by the head and, if possible, to cut off its sword. Having overcome their captive, they would fasten it behind their boat and carry it ashore. Oppian compared this method of fishing to a military stratagem. This ruse was known also to the Romans, and in their time the swordfishery was one of the most important. They also captured these fish in *madragues*, in which they were easily entangled while pursuing tunnies and other fishes of the mackerel tribe. "Although he is able to break the nets," said Oppian, "he shrinks from it; he fears some snare, and his timidity counsels him ill; he ends by remaining a prisoner within the ring of the net, and becomes the prey of the fishermen, who with united effort drag him to the shore." This does not always occur, to be sure, for often, to the grief of his would-be captors, he breaks the walls of his sepulcher, liberating also the other fishes buried with him.

There is at the present day a fishery in the Straits of Messina, continuing on the Calabrian shore from the middle of April to the latter part of June; on the Sicilian shore from the first of July to the end of September. The Calabrian fish appear to approach by the Pharos, the Sicilian ones by the southern entrance of the straits. This summer fishery has for its object the capture of the large fish, which are killed with a lance. The boats used are about 18 feet long, 4 feet deep, and broader at the stern than at the bow. There is a single mast, 17 feet high, surmounted by a brace of a curved form, intended to support the lookout, who gains access to it by steps fastened to the mast. The lookout from this elevated station views the movements of the fish, and by voice or gesture directs the movements of the oarsmen. At the proper time he descends, and standing on a narrow thwart amidships he aids the waist oarsmen and performs the office of steersman.

At the bow stands the man who strikes the fish. His lance is about 12 feet long, with an iron head, which, from the vague description of Meunier, appears to resemble closely the American lily-iron. This is detachable, and to it is fastened a line as thick as one's little finger and 600 feet long (200 meters).

Two guards are also stationed on the shore. On the Calabrian coast they climb upon high rocks and cliffs; on the opposite shore, where there are none, they stand on a tower, built expressly for this purpose, about 800 feet in height.

"Everything being arranged," says Spallanzani, "they hold the order of the fishery. When the two watchmen perched upon the tops of the rocks or of the mast judge that a swordfish approaches from afar, by the change in the color of the water, at the surface of which he swims, they signal with the hand to the fishermen, who row toward it with their boats, and they do not cease to cry out and to make signs until the other lookout on the mast of the boat has perceived the fish and follows it with his eye. At the voice of the latter the boat veers now to the right, now to the left, until the lancer, standing at the bow, weapon in hand, catches sight of the fish. Now the lookout descends from his mast, stations himself among the oarsmen, and directs their movements in accordance with signals given him by the lancer; he, seizing a favorable opportunity, strikes the fish, often at the distance of 10 feet. Immediately he slackens out the rope, which he holds in his hands, while the boat, with the force of all its oars, follows the wounded fish until he has expended all his strength. Then he rises to the surface; the fishermen, approaching, fasten to him with an iron hook and carry him to the shore. Sometimes the fish, turning from his wound, strikes the boat and pierces it with his sword, so the fishermen stand on their guard, especially if the animal is large and active."

The young fish are captured in nets about 300 feet long, called *palimadaras*. These are stretched between two boats with lateen sails, moving along, entangling in their meshes everything which they touch. Spallanzani protested vehemently against this fishery. It is carried on from October to March.

Oppian describes a method of capture used in the Mediterranean. A bait was fastened with a sliding noose to the line at a distance above the naked hook, and the whole was so contrived that when the swordfish seized the bait with its mouth the hook seized it from behind with great force. This story is declared by writers of the present day to have been fanciful and without foundation.

I am indebted to Mr. Frederick W. True for the following translation from Prof. Adolfo Targioni Tozzetti's essay on "The Fisheries of Italy," published in 1870 (35), which gives briefly a description of the methods now employed in the vicinity of Messina and elsewhere on the Italian coast (36):

"Swordfish are taken from time to time, together with the tunnies, in the *tonnare* (37); but hook-and-line and gill-net fisheries are also carried on, the methods of which we may describe somewhat at length.

"These very distinct fisheries are prosecuted—one by day the other by night. The former is carried on by means of peculiarly constructed nets called *palamitare;* the latter by the use of harpoons, or *draffmiere*, as they are called. The harpoon fishery is prosecuted in the Straits of Messina, on the coasts of Calabria and Sicily, and among the Eolian Islands.

"The fish appear earliest along the coasts of Calabria, between Givia, Tauro, Palmi, Bagnara, and Scilla, and hence it is in these localities that the fishery first begins. It is prosecuted later in the season on the Sicilian coast, between S. Teresa al Faro, Gazzi, Salvatore dei Greci, and Capo Faloro.

"The net fishery on the Calabrian coast is carried on most extensively between Palmi and Scilla, the harpoon fishery between Palmi and Capo delle Volpi. On the Sicilian coast nets are principally between S. Teresa and Gazzi, but between Salvatore die Greci and Capo Peloro, where the management of nets would be very difficult on account of the deep water and rapid currents, the harpoon fishery prevails.

"The season of the regular fishery in Calabria extends from the middle of April to the end of June, and in Sicily from the middle of July to the middle of August. The capture of young swordfish, however, continues to increase long after this time, the season often extending to the middle of October Fish weighing little more than a single kilogram are frequently taken, and the practice, therefore, has been strongly censured. In the latter part of October both adult and young fish disappear, retreating, as many suppose, to the depths of the ocean. They reappear in spring, prior to spawning time, and remain on the fishing grounds throughout the entire season.

"Fisheries are also carried on, but with more or less irregularity, among the Liparian Islands, near Tropea, in Calabria, in the tunny-nets of Nulazzo, Alliveri and S. Giorgio, near Patti, and in the waters of Sardinia.

"The fishery on the Sicilian and Calabrian coasts is prosecuted at certain fixed stations. At some of the stations, such as station 25, in Calabria, net and harpoon are carried on with equal success; but at others, as for instance at station 21, in Sicily, only the harpoon fishery is prosecuted, and at others, again, as at station 20, the net fishery alone prospers.

"The stations are occupied by the gangs (*poste*) of fishermen. The conformation of some portions of the coast of Calabria is such that the day fishery with nets cannot be carried on, and at these points each gang comprises two boats, or feluccase, of from 10 to 16 tons, two skiffs for each felucca, and one additional skiff used in carrying on communication between the boats.

"The *palamitara* is set from time to time, and at each station is fitted up in the manner deemed most suitable by the fishermen. It is made of strong hemp twine, and is hung to two ropes, the upper being buoyed by cork floats, and the lower weighted with leads. The length of the net varies between 600 and 800 meters, the breadth is 16 meters, and the area 14,000 to 15,000 meters, more or less, according to the depth of water, which on these coasts varies between 40 and 600 meters; the mesh measures about 17 centimeters far. Each end of the upper rope is tied to a large cork buoy, to which a bell is attached, which sounds with every motion of the net.

"By these arrangements the net has sufficient play, so that it is not liable to injury by the sea. At the same time, when a fish strikes the net and is gilled, the more it struggles to get free the more it becomes entangled. In the mean time the ringing of the bell gives the fishermen the signal that a fish is captured, and they hasten to free the net and set it again.

"The methods of the harpoon fishery is very different. Two watchmen are employed, one having his station on the cliffs overlooking the water, and the other at the masthead of the felucca. The mast of the felucca is usually 20 or more meters in height, and the watchman climbs to his station by means of a rope ladder. The watchman on the cliffs scans the sea far and near, and when he perceives a swordfish gives the signal to a lookout, called fariere, foriere, or foliere, standing at the mast head of some one of the boats, or *foutro*, at the station.

"The watchman indicates the movements of the fish by certain signals. For instance, he strikes his right leg when that the fish goes yonder, or toward Il Faro; or *'ra jusu*', he goes down, that is, toward Messina; or *'ra forra*', he goes out, or toward Levante; or sometimes *'ra vlerra*', meaning that the fish is swimming toward the shore.

"The lookout, at first obeying these signals, and then relying on his own observation, guides the *foutro* toward the fish. When the boat has approached sufficiently near, the harpooner strikes the fish with his *draffmiera*, or harpoon.

"The *draffmiera* consists of a wooden staff 12 feet long, furnished with an iron 7 inches in length. The iron has two wings, and is constructed in such a manner that when it strikes the fish the point enters the flesh and the wings spread in the wound (38). A rope, or *protese*, often 600 feet or more in length, is fastened to the harpoon head, so that it may be recovered when the fish, weakened by loss of blood, is captured and brought into the boat.

"A short warp is tied to the staff of the harpoon, by which when the head is detached it is brought back into the boat. After the fish is struck, the *foutro* puts back to the station, leaving the chase and capture of the wounded fish to a second boat. Usually he is easily captured, but sometimes by dashing against the boat or by other movements he manages to free himself and make his escape.

"A fishery very similar to that carried on at the present time was described by Polibius, according to Strabo, more than two thousand years ago. The account of the fishery at Messina given by Oppian (39) is somewhat fanciful and inaccurate, but in the last century Spallanzani gave a more strictly technical description of it (40). Recently the fishery has been accurately described in elegant Latin verse by Vetrioli (41).

[TO BE CONCLUDED.]

Answers to Correspondents.

A. P. F., Lancaster, Pa.—We know of no Newfoundland puppies for sale.

TRUTHFUL JAMES, New York Post Office.—Please send your name to this office.

L. H. H., Schooley's, N. J.—We make no charge for registry of names claimed, sales, etc. For proper form, see notice at head of Kennel Notes. For cost of advertising, see first page. The gentleman you mention at one time owned well-bred beagles.

C. V. V. S., Tarrytown, N. Y.—Can you tell me anything of the cocker Toby. I wish to know his winnings. I think he won in 1877, or a year or two later? Ans. Toby won 1st at New York in 1879. He was imported in 1877, we think.

W., Trenton, N. J.—1. What is considered the best book on the dog, their points, breeding, &c.? 2. Where can I purchase the Kennel Club stud book of this country, and price of same? Ans. 1. "The Dogs of Great Britain, America and other Countries." Price $2.50. We can furnish it. 2. Write to David Bryson, Memphis, Tenn. Price, $2.

W. M. R., Kansas City, Mo.—1. What should be the color of a well-bred Irish setter? 2. Is white allowable in such a dog? 3. At what age should training commence? 4. How can I polish a pair of ordinary deer antlers? Ans. 1. A rich blood-red. 2. A little white on neck, breast and toes is admissible. 3. As early as possible. 4. Use the end of a soft pine stick.

J. J. McK., Houston, Texas.—Is it injurious to feed a puppy on cooked beef? Ans. We prefer a diet of well-cooked corn and oatmeal mixed with vegetables, which must also be well cooked. This, with plenty of milk, we believe produces the best results in puppies. Well-cooked beef, in small quantities, we do not consider injurious; we often use it for a change, but would not recommend it for a regular diet.

DAN, Bellows Falls, Vt.—1. Can beagle hounds be trained alone without using another dog with them, and, if so, what would be the probable length of time necessary to get one in trim? 2. Will a dog whelped in April be too young to commence running this season for rabbits? 3. Has the color anything to do with a dog's hunting qualities? 4. Can you give me the address of any one who has trained beagles for sale? Ans. 1. Yes; but it is better to run them with an old dog. The time necessary to train varies with their intelligence and natural hunting qualities. 2. Not if worked carefully. 3. No. 4. Consult our advertising columns.

F. C., Jr., Princeton, N. J.—Did an Irish setter named Socks ever win a prize at Baltimore or any bench show. Can you give his pedigree and name of present owner? Ans. Socks won first in the native Irish class at Baltimore in 1877. All that we can learn of his pedigree is that he was out of Miles' Jule, she by Rodman's Dash, out of Rodman's Emma. Socks is probably dead; as he was whelped in 1872.

The Kennel.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

April 3, 4, 5 and 6, 1882. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17.—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 834, New York, Secretary.

December 4.—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11.—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

FOOD FOR PUPPIES.

EVERY sportsman has had more or less experience in breeding, or rearing, dogs—taking it for granted that every sportsman, be he shooter or fisher, is a lover of the dog as a helper, friend and companion.

A well-bred puppy is a very delicate piece of handiwork, the organization of which is akin to that of a sensitive young child, and while left very much to nature should not lack the oversight and judicious care of its owner or guardian. All this for a preface and now for a few words to the point. While more of an angler than a shooter I must confess to the tenderness I have for a good field dog, or for a good dog of any breed that men most affect. I have had a little experience in breeding and rearing puppies, but my latest has proven a wretched failure. Not long since I took a very decided fancy to have a beagle hound, and when the puppy (of the best imported sire and dam) was six weeks old I took him home and with care and pride began to mark his development. At the start I fed him on boiled cow's milk, on broth, on puddings (corn and oat meal) and scarcely a scrap or morsel of solid meat for the first three weeks. Worms made their appearance, the common maw worm (*Arcaris vermicularis*) and the long round worm (*Arcaris lumbricoides*) and I resorted to santonine and areca nut, the doses followed by a cathartic, carefully measured and administered alternately. Of course the little thing did not thrive very fast under these circumstances, and his appetite began to be capricious and very soon he seemed to eat anything but plain meat. I consulted the breeder (a careful, honest and reputable gentleman whose kennel is known everywhere) and he said "give him meat." For long I hesitated and, at length, against my judgment and all past experience, I gave him cooked meat every day, often twice, but never a surfeit. Once in a while I would skip a meal, or starve him into eating milk, or broth. One day when out for an airing, an incipient fit startled me and I grew grave and cautious. The worms, for nearly a fortnight, had not shown themselves, and I thought the worst was over, when one morning the long round worms were discharged in considerable force and in less than four hours the handsome puppy was dead, and his little grave in the orchard dims my eyes every time I looked thitherward.

Will some reader please express his views upon this subject? With my past and late experience to guide me, I reserve the right to hold to my own opinion that solid meat is not good for young puppies and that they should only have a suggestion of it merely previous to the period of dentition, or, better still, the age of six months. Are hounds, and especially beagles, peculiarly hard to rear? O. W. R.

THE COLOR OF THE NEWFOUNDLAND.

I HAVE lately seen in a contemporary a protest from a well-known and very successful breeder of Newfoundlands against the success that sometimes attends black and white dogs when exhibited against black dogs of the same breed. The writer adds that, as the black and white color is supposed to point to some cross in the breed, it must certainly be a mistake to prefer them to black dogs in a class set apart for Newfoundlands. I question, however, whether black and white is not, after all, the more usual color of the breed, and I certainly do not think that the presence of white should be in any way a cause for suspicion.

It is well known by old owners of Newfoundlands that the more common color of imported dogs was black and white, or brown, or even gray and white, and the black and white color is supposed to point to some cross in the breed, it must certainly be a mistake to prefer them to black dogs in a class set apart for Newfoundlands. I question, however, whether black and white is not, after all, the more usual color of the breed, and I certainly do not think that the presence of white should be in any way a cause for suspicion.

It is well known by old owners of Newfoundlands that the more common color of imported dogs was black and white, or brown, or even gray and white, and the black and white color. A white tip to the tail, a large white breast, and frequently white on the head, was the usual marking of a dog imported from Newfoundland fifty or sixty years ago. In the famous picture by Ward, entitled "Disputing the Prize," and painted early in the century, we find the two Newfoundland pups are represented as black and white, the upper one marked as in Landseer's "Member of the Royal Humane Society," while the lower one has four white gaiters, and white on the head, breast, and shoulders, and tip of the tail. Then there was Neptune, the dog owned by the York mail coachman in 1820, who is said to have been marked like the upper pup in Ward's picture, and who was whelped on board the ship that was importing his dam from Newfoundland.

Earlier again in the list we have Lord Byron's Boatswain, immortalized by the epitaph over his grave, which tells us that he "was born in Newfoundland, May, 1803." This dog had white on the head, on the back, and on the tail. If more proof were wanting of the presence of much white in pure Newfoundlands, I think my Nelson is a good example, for his pedigree dates back on one side to celebrated black prize winners, while on the other side he came from imported stock. He is marked precisely as the dog in Landseer's picture, and, as if to show that his color was no accident, he reproduces himself exactly in color and marking in Trafalgar, whom he got out of a jet black bitch with a white star. No doubt when, nearly a century ago, the Newfoundland was first imported, the black color and nearly black was much preferred, though this was only so because for sporting purposes black with much white was too conspicuous, and likely to attract attention. In support of this we find in breeding, even from almost entirely black dogs, that some, or perhaps all of the pups have white toes, breasts, or tips to the tail, and sometime only white hairs on the bottom of the feet; and this is inherited from their ancestors years back, since a small white marking was not objected to even by sportsmen, as it was unlikely to be seen sufficiently to disturb game, though when we remember that in the last century very few people were allowed the privilege of sporting, and that very few of these could kill a bird on the wing, we shall see how necessary it was to have nothing at all likely to disturb and put up the birds. Hence, I believe, arises the preference for black or nearly black Newfoundlands, and to the Kennel Club is due all honor for having provided a class for other than black

Newfoundlands, thus giving black and white, bronze, and even gray dogs a chance, and preserving much pure Newfoundland blood that might otherwise have been lost or neglected as useless. But the appearance of some white on the pure Newfoundland is so persistent that that alone should secure some respect to those that are black and white, and even should make us look very closely into a dog that appears to be all black, for such may perhaps in reality have some cross. If we look at the modern champions of our black Newfoundlands, we find Mr. Nichols's Nelson with white toes, and Joe Sadler has a large white breast and white on the soles of his feet.

With these facts before us, it certainly seems unreasonable to object to a black and white dog in a class set apart for Newfoundlands, and if any objection could be made, it would seem more correct to object to an entirely black dog in such a class.

I think, too, that our knowledge of the reasons for the prejudice in favor of black dogs should lead us to the following conclusions: (1) That in a class set apart for black Newfoundlands white marks should not disqualify, unless they are so large, or so placed as to be very conspicuous, and likely to attract immediate attention from a reasonable distance. (2) That in a class set apart for other than black Newfoundlands the first thing to be valued should be undoubted character, and then, though a long way afterward, the regularity and beauty of the markings. (3) That in a class open mostly to Newfoundlands, a black and white dog should certainly be considered as pure as a black dog of equal character, though the preference for color must always be a matter of opinion.

Though most of our flat-coated retrievers owe their good qualities to the selection of black in their Newfoundland ancestors, yet it would seem an open question whether the true interests of the breed were best cared for when preference was given to color in the place of type, symmetry and proportion.—*Henry R. Farquharson, in Kennel Gazette.*

LOUISIANA FIELD TRIALS.

Editor Forest and Stream:

Quail reports from Opelousas, La., where the New Orleans Gun Club field trials will be held in December next, are most encouraging, an unusual large crop of birds having been hatched out and reared. Mr. J. W. Jackson, living there, has secured the best fields over which to run the trials, and will see that the game therein is most scrupulously guarded and preserved for the occasion. Your readers may rest assured that birds will abound in such goodly numbers that "heats" between the dogs will be of short duration. A large number of dogs owned in Louisiana will be entered, and we expect a dozen or more from our neighboring States, and perhaps a few from Grand Junction. The prizes offered are quite liberal, and the entrance fee of five dollars to each stake is as low as any one could wish. An effort will be made to procure excursion tickets from Grand Junction to Opelousas and return at satisfactory rates. Excellent board in the town can be had at various hotels at most reasonable prices, while a day's ride on the back of an "Attakapas" pony can be had for a mere song.

I often see inquiries in your valuable journal as to good hunting grounds for quail, chicken, duck, snipe, etc. To such I would say, visit this land made famous by the poet Longfellow. It is only within a year that the railroads have made this section accessible to hunters from New Orleans; and such hunting! Marshlands, woodlands, and rolling prairies abound in game of all kinds and varieties, and in such quantities that the merest novice with dog and gun is certain to find a surfeit. In the midst of this hunter's paradise we have located our field trial grounds. A cordial invitation is extended our Eastern friends to join us thereon, and after participating in the trials prolong their stay sufficiently to make the surplus game in the vicinity.

* * *

NEW ORLEANS, LA., Sept. 19.

DOG LARCENY.—The following extracts are from the opinion of Judge Earl, sustaining the conviction of the dog thief, Mullaley, whose case was reported in our issue of November 24, 1881. Mullaley, it will be remembered, stole a dog of less value than $25, for which he was convicted, and thereupon carried the case to the Court of Appeals, claiming that stealing a dog is not larceny. The Court did not agree with him and affirmed the conviction. We quote the following from the opinion: "The reason generally assigned by common law writers for this rule as to stealing dogs is the baseness of their nature and the fact that they were kept for the mere whim and pleasure of their owners. When we call to mind the small spaniel who saved the life of William of Orange and thus probably changed the current of modern history (2 Motley's Dutch Republic, 398), and the faithful St. Bernards which, after a storm has swept over the crests and sides of the Alps, start out in search of lost travelers, the claim that the nature of the dog is essentially base, and that he should be left a prey to every vagabond who chooses to steal him, will not now receive ready assent. In nearly every household in the land can be found chattels kept for the mere whim and pleasure of the owner, a source of solace after serious labor, exercising a refining and elevating influence, and yet they are as much under the protection of the law as chattels purely useful and absolutely essential. The common law rule was extended to the animal that can scarcely be said to have a sound basis to rest on. While it was not larceny to steal a dog, it was larceny to steal the skin of a dead dog, and to steal many animals of less account than dogs. Lord Coke in his institutes cited above, said: 'Of some things that be *feræ naturæ*, being reclaimed, felony may be committed in respect of their noble and generous nature and courage serving *ob vitæ solatium* of princes and of noble and generous persons to make titter for great employments, as all kinds of falcons and other hawks, if the party that steals them know they be reclaimed. In the reign of William I., it was made grand larceny to steal a chattle valued at twelve pence or upwards, and grand larceny was punishable by death; and one reason hinted at by Lord Coke for holding that it was not larceny to steal dogs was that it was not fit that 'a person should die for them;' and yet those ancient law-givers thought it not unfit that a person should die for stealing a tame hawk or falcon. The artificial reasoning upon which these rules are based are wholly inapplicable to modern society. *Tempora mutantur et leges mutantur in illis.* Large amounts of money are now invested in dogs, and they are largely the subject of trade and traffic. In many ways they are put to useful service, and so far as pertains to their ownership as personal property, they possess all the attributes of other personal property."

EASTERN FIELD TRIALS CLUB.—There will be an important meeting of the Eastern Field Trials Club at Del monico's, 212 Fifth avenue, at 8 o'clock Tuesday evening Oct. 10. All members should be present, as judges for the coming trials are to be selected, and other business of importance will come before the meeting. The indications are that the coming trials at High Point will prove a great success. A large number of dogs will compete, and we have advice that birds are very plenty on the preserved grounds. We shall possibly be able to announce the judges next week. Mr. John G. Heckscher offers a cup, value $100, for the dog showing the best natural field qualities, irrespective of training, run at the trials. Several other valuable special prizes will probably be offered, of which notice will be given as soon as we learn the particulars.

SALE OF FIRE-FLY.—Dr. E. Wilson, of New York, has purchased of Mr. W. H. Pierce the well-known red Irish bitch Fire-Fly, and will take her to Cuba for field use the coming winter. She is in whelp to Mr. Pierce's Larry.

THE ESSEX COUNTY (N. J.) HUNT will this week commence their seventh season of fox hunting. The following are the meets for October, viz: Saturday, October 7, 4 P. M., at the kennels, near Llewellyn Park; Wednesday, October 11, 4 P. M., Watsessing Station; Saturday, October 14, 3 P. M., Bloomfield; Wednesday, October 18, 3:30 P. M., Ridgewood Station; Saturday, October 21, 3:30 P. M., Mansion House, Montclair; Wednesday, October 25, 3:30 P. M., Verona; Saturday, October 28, 3:30 P. M., St. Cloud.

BENCH SHOW AT DENVER, COLORADO.—The State Industrial Association, of Colorado, at their coming fair, to be held at Denver, will have a bench show in connection therewith, on October 5 and 6. The prize list includes fortythree classes of dogs. About $100 in cash and quite a number of special prizes are offered. The entries close on Thursday, October 5, at 12 M.

EAGLE ROCK KENNELS.—Mr. W. F. Duerr, of Orange, N. J., claims the name of Eagle Rock Kennel for his kennels. He will breed pointers exclusively, from stock by Sensation out of his Gipsey.

KENNEL MANAGEMENT.

E. E. S., Boiling Springs, Pa.—I have a bitch about three months old that I would like to have spayed. Would it impair her hunting qualities? Ans. We have never known of an entirely successful case of spaying and would not advise that it be done.

RAZOR, Wrightsville, Pa.—Your dog undoubtedly has worms. Give her upon an empty stomach a dose of finely powdered areca nut, two grains for each pound of her weight. Follow this in two to four hours with a dose of castor oil. She will probably outgrow her timidity with age and gentle usage.

D. C. S., Dundee, N. Y.—What shall I use to kill lice on my dogs? something that will not injure the dog or his coat. Ans. Tie up in a piece of muslin two ounces of quassia wood chips and suspend them for two hours in a pail of water, occasionally stirring it. Use this to wash the dog, with plenty of soap, rinsing off with clear water.

J. N. C., Newburyport.—1. What is the best food to give a dog during the hunting season? 2. Is a dog (setter) 14 months old likely to be injured by hunting over grass occupied by a bull? Is it advisable to let a dog retrieve the first year? Ans. 1. Table scraps and well cooked corn meal mixed with vegetables and meat. 2. Yes. 3. No.

C. M. G., Minneapolis, Minn.—Please give prescription for red mange. Ans. Wash the animal thoroughly with strong soft soap suds, using warm water; apply the following, rubbing it well in: Sublimed sulphur one dram, balsam of Peru one dram, lard two ounces. Apply this for three successive days, on the fourth day repeat the warm bath. Repeat this treatment at the end of a week if a cure is not effected.

H. B., Titusville, Pa.—My cocker dog, eight years old, has always been well, but this summer his right ear has swollen, appearing like a large bli ter. I cut it open twice, letting out blood and water. It is now swelling again, what shall I do for it? Ans. Cut it open the entire length of the blister, commencing at the top, slightly press the ear to get out all the matter and syringe out thoroughly with a weak solution of carbolic acid, and wash twice a day with water as hot as you can bear your hand in, to which a little vinegar has been added.

F. D. McC., Chattanooga, Tenn.—I have a fine red Irish setter about a year old. He is suffering from what seem to be warts. They are all over his head, ears and chops, and one the worst one, on the inside of the lid of his right eye. He suffers very much, and I fear will lose sight of the eye. Have had doctors examine him, but no one seems to know what it is. Can you inform me and suggest a cure? Ans. Cut off the wart in the eye with a pair of scissors, touch the others twice a day with caustic and they will probably disappear in a few weeks.

G. B., Morrisburg, Ont.—I have a liver and white spaniel dog one year old. Have had him out three times; he puts up partridges all right and hunts by scent for them, but he is silent, will not tongue or bark. He is death on chickens and cats, and barks at a cat in a tree first rate. Please let me know how to induce him to give tongue when he starts a partridge. Ans. Learn him to "speak" for a bit of something to eat. This you can readily do when he is hungry. You will then have no trouble in learning him to give tongue if you give him the order at every rise.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Dam, with her sire and dam.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Viper. By Mr. E. Leyer, Philadelphia, Pa., for black and tan terrier dog, whelped March 22, 1882, by his Vorrigera out of Lily II.

Royal Emblem. By Mr. Jerry W. Rothera, Simcoe, Ont., for tawny, brindle and white St. Bernard dogs, whelped July 29, 1882, by his Prism (champion Hector—champion Amy) out of his imported Novice.

Lady Superior. By Mr. Fred W. Rothera, Simcoe, Ont., for ornamis, tawny and white St. Bernard bitch, whelped August 9, 1882, By Mr. Smith's Rollo out of owner's imported Lady Abbess (Hero—Lottie).

"SOMETHING NEW."—Photographs of the crowned heads of the world, finest assortment of Mrs. Langtry, and all the other English beauties, and also all actresses and other celebrities. CHARLES L. RITZMANN, 943 Broadway, New York City.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

CREEDMOOR, Sept. 27.—The Rapidity Match was shot to-day, with a liberal list of entries. The match is open to all comers, 200 yds. any rifle with open sights, magazine guns to be used as single loaders. Competitors must take to the firing point not exceeding twenty cartridges. Re-entries allowed to the extent that time will permit. At sound of the bugle each competitors opens fire at his own target, and continues loading and firing until the bugle again sounds (sixty seconds after first signal). A deduction of 5 points will be imposed for 1st.—Each shot fired before the first signal. 2d—For each shot fired after the second signal. 3d—For each shot signaled on his target in excess of twenty. Triggers will be tested at the firing point. The leading scores were:

	Bullseyes	Centers	Inners	Outers	Total
G E Albee (a)	2	8	4	4	62
M W Bull (a)	—	5	7	3	47
S A Day (b)	—	3	8	3	45

BOSTON, Sept. 28.—At Walnut Hill this afternoon members of the Boston Press Rifle Association gathered for the annual contest. There was a large number of newspaper men present and the best of feeling prevailed. At 1 o'clock Mr. Charles P. Tower, the executive officer, called the company to order and stated that before commencing the team contest a volley would be fired in respect to the memory of the late George C. Dupee, who during life took a great interest in the association. The volley having been fired the team shooting took place with the following result:

Globe	190	Transcript	173½
Post	178	Advertiser	171
Herald	176	Star	109

The conditions of the team match were 200yds., off hand; rounds, 10 per man for a prize; trophy heretofore to be won 3 times, and must be won three times before owned, and for four sets of medals, five of each kind. The scores for the winning team of gold; for the second team of silver; for the third team of bronze, and for the team making the lowest score, leather.

An individual match at 200yds. followed, the leading scores being:

BOSTON, Sept. 30.—This was a remarkably fine day for shooting and was taken advantage of by a very large number of the lovers of the sport. Contrary to the past few shoots, some very fine scores were made. There was quite a breeze on hand, and the friendly clouds hid the sun from view. The noted performances of the day were 14 consecutive bullseye shots into a 3½in. circle, by Mr. Rabbeth, and a clean score of 10 consecutive tens, a feat which is seldom accomplished, especially in matches.

‖ UNEQUAL HANDICAPS.—*Editor Forest and Stream:* I would like to call your attention to a fact and ask an opinion. Would it be the right thing for any association claiming to be "national," to show a "fair field and no favor" in its games or competitions. I fancy your reply to be "certainly." Now the fact. The National Rifle Association in its fall matches, showed favor to the rifles that the New York troops are armed with, by allowing a possible total of 20 points in five shots at the 500 yards Creedmoor target in the mid-range continuous match, these figures could not be reached by armed members of the National Guard from other States, five bulls eyes for them was a total of but 25 points, but the N. Y. Rifle, or the arm adopted by the State of New York, could count 36, perhaps it was the desire of this "National" Association to keep as many prizes to "our boys" as they could; if so their success was ample.—GUARDSMAN.

WORCESTER, Mass., Sept. 28.—The Worcester Rifle Association met at Pine Grove Range to-day. It was the final meeting in the first series of prize matches. There was a large attendance. The interest is on the increase. The prizes won are to be paid Thursday next, when the second series begins. There was a squad present of Worcester Light Infantry, Company C, Second Regiment, Mass., V. M. The following are the records for the last of the first series, distance 200yds., off-hand, which is followed by a list of the winners, and other scores which have been made:

THE FORT LEAVENWORTH COMPETITION.—The great Army competition in the Division of the Missouri came to a conclusion on the 27th inst., and the team of twelve with their scores are given below:

1. Lieut. J. M. F. Partello, Fifth Infantry.....245
2. Sergt. Osborne, Eighth Cavalry.....245
3. Sergt. James, Eighth Cavalry.....244
4. Capt. Ellis, Thirteenth Infantry.....243
5. Private Weagraff, Fourteenth Infantry.....238
6. Lieut. Berrian, Fourth Infantry.....235
7. Corp. Gordon, Ninth Infantry.....234
8. Sergt. Bentley, Seventeenth Infantry.....232
9. Private Preston, Fourth Cavalry.....232
10. Corp. Fosdick, Eleventh Infantry.....232
11. Private Nihill, Fifth Cavalry.....231
12. Sergt. Eberle, Nineteenth Infantry.....231

Lieut. Partello is the winner of the gold medal in this contest, which is an exceedingly handsome one, and was made at the United States Mint in Philadelphia. He also won the gold medal on the 24th of August last in the Army competition at St. Paul Minn., and bids fair to carry off the one which is to be shot for in October of this year at Fort Leavenworth, Kan. General Sheridan presented the trophy in person, and Mrs. Sheridan advanced from among the spectators where she was sitting and gracefully pinned it to the lieutenant's coat.

The preliminary contest began on September 12 and ended on the evening of the 27th inst., and the total points made by the first twelve marksmen are as follows:

1. Lieut. Partello, Fifth Infantry	1,032
2. Private Weagraff, Fourteenth Infantry	1,043
3. Private Elwell, Seventeenth Infantry	1,024
4. Capt. Rogers, Thirteenth Infantry	1,023
5. Capt. Ellis, Thirteenth Infantry	1,022
6. Sergt. Osborne, Eighth Cavalry	1,019
7. Sergt. Cudworth, Twentieth Infantry	1,016
8. Sergt. Stanton, Seventh Infantry	1,015
9. Sergt. James, Eighth Cavalry	1,013
10. Corp. Fosdick, Eleventh Infantry	1,011
11. Sergt. Eberle, Nineteenth Infantry	1,010
12. Lieut. Buck, Thirteenth Infantry	1,004

NEW ORLEANS, Sept. 24.—To-day there was another shoot for the Hill trophy at the West End. The 500yds. range not yet being completed, two series of 20byds. were made. Weiss, of the Louisiana Field Artillery, claims that the likeness of his first two shots was due to a mistake in standing with the marker.

ALBANY, Sept. 29.—The competition at Rensselaerwyck having been suspended during the past month were resumed with the seventh competition at the Capt. Albert Gallup range to-day, matches at 200yds. off-hand. The day and weather conditions were fine, and the recess did not seem to effect the men, as they readily found the bullseye and kept it without any serious breaks. The first and second places in the Daly match having been captured in the previous competitions, a percentage of the entrance money is paid to competitors making first and second scores. The third and fourth places still remain and considerable skill is exhibited by the marksmen to get third and fourth places. However, the scores are first class, and so far no man has shot off out of the fifty has been able to get a place. Yesterday was no exception to the rule, the leading score being a string of ten bullseyes. The scores were as follows:

Captain John Daly Match—500 Yards.

W. T. Reinick, Bal. S.	5	5	5	5	5	5	5	5	5	5—50
James J. Miles, R. M.	*4	4	4	4	5	5	5	4	5	5—49
Wm. E. Fitch, R. C.	5	5	4	5	5	5	5	5	4	5—48
L. Geiger, R. S.	4	5	5	5	5	5	5	5	5	4—48
R. R. Speiman, Jr., Bal. S.	5	4	5	5	5	4	5	5	5	4—47
J. H. Wood, S. M.	4	5	4	2	4	4	5	4	5	5—42
A. Donnor, Bal. S.	5	5	4	5	4	4	5	4	4	4—44
John L. Babcock, R. M.	*4	2	3	5	3	3	5	4	4	3—36

* Allowance to military rifles.

The 500 yards off hand match followed. There were not so many entries as in the previous match, as few of the marksmen care to try their skill in an off hand match at that distance. The leading scores were very good, though none of the competitors escaped an outer. The scores were as follows:

	500 Yards Off Hand Match.										
James L. Miles, Bal. S.				4	5	2	5	5	5	4—30	
Wm. E. Fitch, Bal. S.				5	5	4	1	5	5	5—29	
Andrew Donnor, R. M.			*2	3	2	4	5	4	4	5—29	
Wm. T. Reinick, Bal. S.				5	4	2	3	4	3	4—25	

* Allowance to military rifles.

THE TRAP.

THE MASSACHUSETTS STATE GLASS BALL ASSOCIATION will hold a grand fall tournament at the Grounds of the Malden Gun Club, Wellington, on Saturday, Oct. 7. There will be ten matches, seven of them individual contests, one two-man and one three-man team competitions, and a novelty match, in which latter one bird and one ball will be thrown up at the same time (five pairs). The individual matches are at balls or birds, five of them at seven "singles," and two at five pairs, and the team contests are at seven single balls (in the two-man team match), and birds (in the three-man match). There will be no restrictions whatever in the make-up of teams, and all the competitions, both team and single, will be open to all comers. There will be close shooting in all the events; purses will be divided into 40, 30, 20 and 10 per cent.; all ties will be decided at three birds or balls, except in double shooting, when it will be at two pairs, and the last match will be called at 10 A. M. promptly. There will be no postponement. The committee of arrangements for the tournament is as follows: H. H. Francis, Randolph; Frank T. Noble, Boston; Albert Keating, Quincy; John Buffum, Boston, G. J. Rugg, Worcester; L. Arnold, Attleboro and T. H. Hall, Fall River.

LONG ISLAND SHOOTERS.—The first of a series of pigeon shooting matches between the Furman Island Club, of Brooklyn, and the Glenmore Club, of East New York, took place on the afternoon of Sept. 28, on the former's ground, on Newtown Creek, with the following result:

Furman Island.		Glenmore.	
H Carrick	1111101111—9	Geo Forbell	1111111101—9
J Evans	1111111101—9	S Livingston	1111110001—7
C Curtis	0111111010— 7	H Bookman	1111010100—6

E I Baker	1111110011— 7	John Miller	1111111011—9
A J Metcalf	1111111111—10	E H Madison	1111101011—8
Total	79	Total	67

WHITESTONE GUN CLUB.—Whitestone, L. I., Sept. 30, 1882. The fifth and final match for the silver goblet, possessing the championship of the club for 1882 was held yesterday, 29th inst., with seven men at the trap. Owing to the high wind prevailing at the time of the match, the scores were not as good as usual. The cup becomes the property of the one winning it the greater number of times. Previous to this contest the score stood: two matches in favor of Smith, one for Hoffman, and one for Simonds. A second prize, consisting of a subscription to FOREST AND STREAM, and a third prize, a case of loading implements, were offered. The conditions: Ten clay pigeons, 18yds. rise, club rules:

A C Wilmerding	0	1	0	0	1	1	1	1	1	1—7
H DeWitt Smith	1	0	0	0	0	1	1	1	1	1—6
Martin Hoffman	0	1	0	0	0	1	1	1	1	1—6
Fred G Moore	0	0	1	0	0	1	0	1	0	1—5
O H Simonds	0	0	1	1	0	1	0	0	1	0—4
F R Perry	0	0	0	1	0	0	1	0	1	0—3
William Wallace	0	1	0	0	0	1	0	0	0	1—3

Wilmerding won the cup, Smith the second prize, and Hoffman third. Cup and prize reverts to Smith, he having won it twice (the greater number of times).

THE FALL RIVER GUN CLUB held its thirteenth match for silver cup to-day (Sept. 14) and resulted in W. H. Sheldon, winning the cup for the third time. The following scores were made.

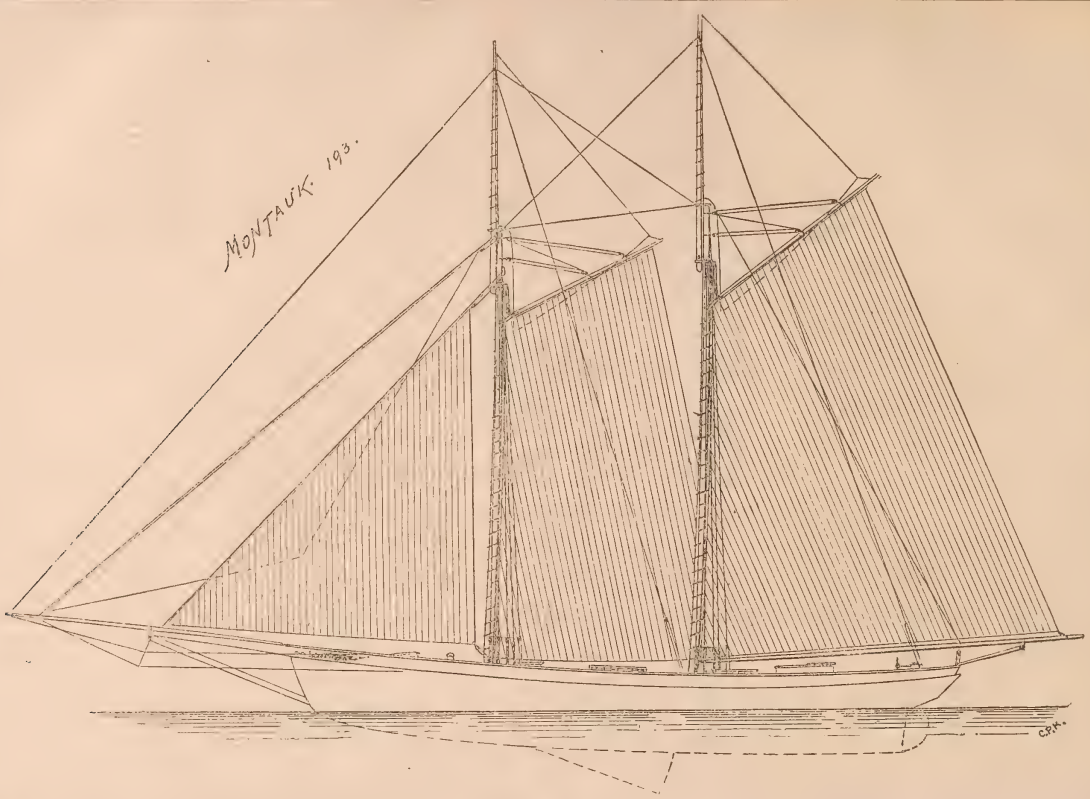
	Balls.		Clay Pigeons.	
Sheldon	11111	11110	10110	11111—17
Valentine	11111	01111	10100	11111—16
"Jackson"	01100	10110	01000	11001— 9
Buffinton	01100	11100	10011	w. — 8

The club badge was then contested for with the following results. Twenty balls, eighteen yards rise:

Sheldon	11111	01101	10111	11111—17
Valentine	11111	10111	11001	11110—16
Buffinton	01111	11111	11001	11110—16
"Jackson"	01011	01110	01110	10111—13

Sept. 28.—The fourteenth competition for silver cup resulted in a victory for W. H. Sheldon for the fourth time, and if Mr. Sheldon succeeds in winning once more, it becomes his property. The following were the scores:

	Balls.		Clay Pigeons.	
Sheldon	11111	11111	11001	11011—17
Valentine	01001	01111	10011	11111—14
"Jackson"	11000	11111	10100	10101—13
Hall	11110	11011	11010	00001—12



Match for Club Badge—20 balls; 18yds. rise.

Hall	11011	11110	11011	10111—16
"Jackson"	11111	01111	10111	11111—18
Valentine	11011	11001	10100	00101—11
Wood	00000	01100	00010	11111— 8
Sheldon	01111	11111	w.	— 9

T. S. H.

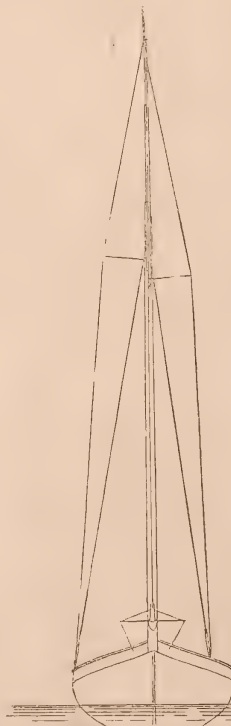
VICKSBURG, Miss., Sept. 27.—Our club, "The Vicksburg Gun Club," desires it to be known, by publication in the far-reaching FOREST AND STREAM, that its members can show a fair score at the trap, and I therefore append the score of the last shoot of the season. Conditions, 30 clay balls, 18yds. rise:

| | | | | | | | | | |

Yachting and Canoeing.

SCHOONERS OF THE DAY.

CONTINUING the review of the principal types of schooners from page 116 we come to the consideration of individual peculiarities of shoal and wide, deep and wide, and deep and narrow models. An important thing in dealing with any such subject is not to overlook the fact that we judge everything only by comparison, and that what may seem one thing when compared to a certain standard will appear the reverse when referred to some other. It is altogether too common to condemn some vessel as being very narrow simply because the critic happens to be brought up to something wider. Again this or that vessel is characterized as a deep one with only flat floored boats in mind, whereas she may really be quite shoal in proportion to some other type. A birdseye view of the whole field of design always affords the safest opportunity for drawing sound conclusions and to enable the reader to follow these remarks understandingly we produced in our issue of Sept. 7 the midship sections of Halcyon, Montauk and Miranda, these three covering all principles of design from one extreme to the other. Vessels may differ more or less from them, but all can be referred to one of these three grand divisions. Anything falling between these examples will partake of the qualities of the inclosing types, following one type to a greater or less degree as she is more or less allied thereto in likeness. Thus a boat still flatter and wider than Halcyon would exhibit the qualities of that schooner to an extreme, while a yacht whose design lies half way between Halcyon and Montauk, or Montauk and Miranda, would represent a compromise between the two.



There is another caution which should be ever present when comparing different yachts. Too much stress by far is laid upon figures and much deception is the consequence. Form should be uppermost in the mind, figures are but faint representatives and cannot take the place of form. We hear for example that A has 14ft. of beam in his yacht, and B 15, then jump to the conclusion that B is one foot better off, has that much more room to floor, bertus and deck with a corresponding increase of power and sail. This may be the case, but very seldom is. In spite of his extra beam B may for all practical purposes have the narrower boat of the two. A trifle more flare to topsides may represent the difference between 14 and 15ft., yet the apparently beamier boat may have a sharper angle of deadrise and possibly not the depth of the other and therefore possess less beam below, narrower floor and berths and even less power and displacement as illustrated in sketch No. 1, reversing, in fact, the story told by figures alone without a consideration of form. Practically the beam of a boat cannot be estimated by the maximum measurement athwartship, but rather by the average throughout, and this not only in reference to the midship section but also to fore and aft shape. A long-sided, broad-sterned boat of 14ft. offers really more available beam than a 15ft. bulge in the center, narrow quarters and fine ends.

Exactly the same applies to depth. The hold of one as usually measured from underside of deck to top of keel amidships may be greater than in another, yet owing to dead rise of floors, clean run and rise forward to the stepping line the useful depth may be less than in another, carrying a lower bilge along for a greater distance fore and aft. With regard to length much the same can be said. A rocker bottom, cut up forward and with clipper stem, raking post and long fantail, will represent in figures a greater length, but practically may be shorter than a boat with the length more evenly distributed throughout, but marking less on a tape line or by some clumsy averaging process as "mean length." The importance of the foregoing cannot be overrated if we are to have clear conceptions in naval design, and we lay some stress upon this, as it is all too common, even among critics of some pretention, to decide summarily on the strength of figures only, regardless of form and the deceptive nature of the figures accepted in proof of an idea or fancy.

A great deal, for example, has been said of late concerning boats, both deep and beamy, a style supposed to be exemplified in Montauk and her kind. Conclusions of a doubtful nature are curtly arrived at in this wise. Montauk is a deep boat and has 25.3ft. beam on 94.75ft. load line, about three and three-quarter beams to the length. She is, therefore, both wide and deep, and her success stands proof of the correctness of a new-fangled theory. Now figures might lead to such an assertion, but raw figures in this case tell only half the story, and tell it wrong at that. A due amount of attention bestowed upon Montauk's form shows that no such problem has been solved in her at all, bearing in mind what has just gone before.

This will appear plainer by reference to the annexed cut, No. 2. Both sections A and B will, by figures appear like in beam and depth, yet A only possesses in reality great beam and depth, while B has what we may term a fictitiously great beam, her practical beam being what she *averages* from rail to garboard. This is quite moderate in the sketch compared to that of A and illustrates how little dependence or meaning can be placed in figures. Though alike for A and B they fail altogether to convey the actual relation between the "working beams" of the two sections.

Exactly the same deception is practised by the figures indicating depth. By them both sections are the same, yet the average of A far

exceeds that of B. How little mere figures convey in this respect may be gathered from a third sketch. Thus, by figures, we should take B to be the deeper boat of the two, and much would be written and wise theories be drawn from the performance of the very deep boat B, while A would be held up as an example of the opposite type, when in truth the contrary represents the real state of affairs, A being, in spite of figures, the deeper for practical purposes and from the standpoint of a naval architect, because that section will *average* more depth than the other. When an honest comparison is to be instituted between boats, and a theory is to be derived therefrom, something more than figures must be taken into account, and that something is form. Leave that out of the question and the theory is a skeleton without vitals, and a structure built upon quicksand.

By turning to the illustrations in our issue of September 7, we have an actual application of the above before us. The schooner Halcyon is, in fact as well as figures, a model of great beam. Her width is not fictitious; it is carried down in a plumb side, a low, short bilge, and rather flat floor. Her section approaches that of a rectangle, and possesses for that reason the features imparted to it by its extreme dimensions. On the other hand, the section of the Montauk does not fulfil the same demands in as great a degree on account of her flaring side, slow bilge and hollow floor; and in her case extreme dimensions would lead us into a more serious error in consequence, as those dimensions would imply a circumscribed rectangle from which the Montauk has departed to a greater extent than the Halycon; while Montauk's great beam measures only the width of her deck, that of Halycon measures more nearly the boat. In the first case the figure is fictitious altogether, in the second it is more in accord with fact. Halycon, with 79.3ft. load line, has 23.5ft. beam, a proportion represented by 3.37. Montauk, with 94.75ft. load line, has 25.3ft. beam, or in the proportion of 3.74; apparently only a trifle less beam than the very wide example, Halycon. If now we average their widths to get at a more definite result, a much greater divergence will become apparent. This average we obtain by adding the beams at various depths and dividing by their number. In Halycon we find the average to be 17ft. 1in., and in Montauk 16ft. 8in., or actually *less* than in Halycon, without even considering the difference in length of the yachts. But Halycon is 79.3ft. long; the proportion between that, and her mean beam is 4.85. Montauk is 94.75ft. long, and the proportion between that and her mean beam is 5.69. Turning these into decimals, we have for Halcyon, 10.215, and for Montauk 0.176. That is to say, the mean beam of Halcyon is about *one-quarter* greater than that of her big sister. In other words, a Halcyon of the same length as the Montauk would have about 20ft. 10in. beam, whereas Montauk has but 16ft. 8in. This, then, shows the true relation between the "working-beams" of the two boats. It has been said that Montauk is a very beamy boat. We have shown this to be deception played by figures. As a matter of fact, compared to the beamy American schooner, the Montauk is a boat of *small* beam.

Let us now turn to depth. Montauk has been called a deep schooner. Whether she really is or not the following will tell. Halcyon has 7.6ft. deck to rabbet on 79.3ft. length, a proportion of 0.096. Montauk has 10ft. hold on 94.75 ft. load line, a proportion of 1.105 or only *one-eleventh* more. Not a very great deal, remembering the extremely shoal type of which Halcyon is a representative. But this is only a comparison of figures. What relation have their average depths, the depths of the boats viewed as bodies rather than the mere tape-line dimensions taken at an extreme and exceptional point in the hull? How do their mean depths compare? Proceeding as before, measuring the depths amidship at a number of points athwartships, and dividing by that number for a mean, we find Halcyon to have an average of 6.166ft., and Montauk just 8ft. Referred to length Halcyon's mean depth is expressed by the decimal 0.078, and that of Montauk by 0.084. In body the latter proves to be only *one-thirteenth* deeper. Whether such a trifling distinction justifies calling one a shoal and the other a deep boat by contrast the reader can answer for himself.

Summarizing the foregoing, we conclude that as opposed to the orthodox flat, wide American type, Montauk must be deemed a narrower boat with small increase in depth in point of fact, whatever deception bare figures may present in contradiction.

The real position of vessels of her kind in the analysis of type can be clearly assigned by following a similar train of thoughts, with the antipodes of Halcyon as a basis. For this purpose we have selected the well-known British schooner Miranda, the famous Harvey flyer, who has awed all schooners off the course in British waters and given cutters a lively bout to windward upon many an occasion. The diagram on page 116 shows that her beam, though considerably less than that of Montauk, will average much better and reduce the difference exhibited by figures taken at the extreme points, because she carries her beam well up and down, while the American craft is all flare. Thus compared to length we found the ratio of Montauk's extreme beam to be 0.267, while that of the British vessel is 18.8 divided by 92.5, or 0.203, indicating apparently one-quarter less. This difference becomes materially reduced, however, when form is allowed the influence it should have in our conclusions. The ratio of Montauk's mean beam ascertained above is 0.176. For Miranda we find it by the same method 0.143, the lowest width being taken 3ft. up from bottom of keel. The difference between these is 0.033, or between one-fifth and one-sixth less beam than Montauk instead of one-quarter as derived from the bald figures, or, to put it in a plainer way, while figures lead us to suppose a difference of 0.24 in the beams of the two yachts, the average of their bodies shows only 0.19. We are aware that this has been obtained only from a consideration of midship sections and not from the whole bodies, so that the result might need modification according as one yacht is fuller fore and aft than the other, but we can accept the midship sections as general indices of type to avoid further complication which would on the whole not affect these deductions. Stated in a general way then, although figures indicate Miranda's beam to be a quarter less in proportion to length than Montauk's, it is in reality only a fifth less.

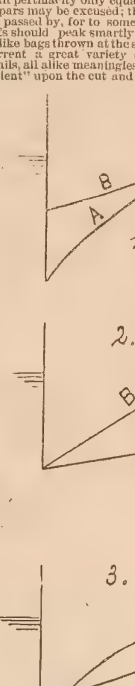
With regard to depth, the ratio for Montauk is 0.105 and for Miranda (by Lloyds) 12.6ft. divided by 92.5, or 0.136, so far as figures go. But by the plan of averaging, the proportions are for Montauk 0.084 and for Miranda (mean depth 9.85) 0.106. Now by extreme figures the difference in depth appears as 0.031 (0.136 less 0.105); that is, Miranda had relatively 0.295 more depth than the American schooner. But by a comparison of mean depths the difference is 0.106 less 0.084 or 0.022, which bears to Montauk's mean the relation expressed by the decimal 0.262. In other words mean depth reduces the excess of

Miranda from 0.295 to 0.263, a little over one-fourth more than Montauk. We need not look far for an explanation hereto. The reduction arises from the hollow floor of the Miranda which naturally makes her average depth rather less than when gauged by a type line at the center only. Montauk's floor being nearer a straight line does not reduce her mean depth to the same extent. In spite of this modification the mean depth of Miranda is so much in excess of that of Montauk, (106 to 84), that the latter cannot by any means be called a deep vessel. Summing up this second chapter in our analysis, we find that as opposed to the modern English schooner Montauk is a wider but shoaler boat. The above leads then to this final deduction, compared to the flat, beamy type illustrated by Halcyon the Montauk is narrower but deeper. Compared to the really narrower, deep type, illustrated by Miranda, the Montauk is wider but shoaler.

In general, therefore, the Montauk's model, viewed as a body, lies half way between the extremes. What she saves on beam over the orthodox American style, she has added to her depth. What she saves in depth over the modern English she has added to her beam. The Montauk is therefore a representative of the "medium type," possessing moderate depth and moderate beam. She is *not* a vessel both deep and broad, and cannot properly be accepted as evidence that such a combination is possible with good results and consistent with speed.

Such a combination cannot be successful. It is in direct opposition to experience and naval science. By the jugglery of barren figures a fast vessel may seem to be both deep and broad. In point of volume she cannot be without dropping to the level of a gas-tank in her performance.

As a very fine example of the "medium type," we this week offer general plans of the Montauk drawn to scale, which, with the following description will be found useful in view of the increasing favor with which such a material modification into the old order of things is now being received by the public. Future experience will no doubt lead to still further changes to meet wants not quite accomplished in the Montauk, and the directions in which beneficial changes are to be sought, we will point out upon another occasion.



The Montauk was modeled by "Phil." Elsworth, of Bayonne, N. J., upon ideas found to work well on a smaller scale, as in the sloops Elephant and Fanita. What we find most commendable in those boats is their perfect fairness and the unity pervading all portions of their hulls. Each part belongs to the rest, and there is a notable absence of abrupt twists or turns, bulges or swells. The eye resting upon such hulls can detect no special spot as the beginning or end of anything, for curves and volumes melt with an imperceptible change one into the other in such a soft way that starting at the cutwater instinctively the eye sweeps the whole broadside at a glance, not stopping till it runs off at the counter, convincing the mind that the form must be grasped as a whole or not at all. One might look and look yet never get over weary at such "eye sweetness" as possessed by one of these Elsworth models. There is about them an enchanting voluptuousness of form which appeals with a "look at me again" as artist's eye finds irresistible. Apart altogether from the matter of dimensions, type, or rig, the very fairness of a boat from his hands insures an advantage of no little account in contributing to the decision of a race, and much of the success of his boats we attribute to that in particular more than to any virtues inherent in the type adopted. Nine yachts out of ten are abortions for want of fairness as a whole, and no matter how excellent their general features may be, without fairness of body throughout they cannot hope to make a match with another craft perfect in that respect however inferior in regard to type. Fairness first, the rest afterward, and fairness the Elsworth boats have to such a marked degree that the merits other boats may possess are completely overshadowed just for lack of equality in this one and all important particular.

Clothe large displacement and power in a fair form of limited skin and you have at once a combination hard to beat under ordinary circumstances. Only when driven at a high rate, or when in a sea would the question of mould and type crop to the surface. Simple as this requisite for speed in moderate weather may seem, it can be found only in very few schooners in our fleet. And when it comes to pile-driving to windward, not the Elsworth yacht, if not to our liking in type, has at least as good and probably better lines with larger displacements than most her fast sisters this side of the Atlantic. If she is not over close-winded, if her head and fine ends try her sorely at a gamy pitch and toss, and her light draft and tall rig chop her off to leeward with every lurch, if her huge sticks do threaten to open her sides, or go over forward for want of proper staying, she is in all this no worse than any of the rest, but better provided with stouter rigging and backstays, English fashion. She is sharp as a knife with moderate hollow about the entrance, but more down below. Above her lines are nearly straight, and there is next to no roundish flare so common in the orthodox productions. Her midships is peculiar, something after the fashion of the old America, with topsides tumbling home, but the bilge is cut in very long radius; in fact, it is all a long, slow bilge from rail to some distance below the line of floatation, "then straitish about the lower buttocks, with just the faintest hollow on the floors, which disappears quickly as they run up fore and aft. The forebody below water-line is a series of triangles, the dead rise steadily increasing, and the round and flare of the bilge amidships diminishing rapidly as it rises, to melt away completely in the rail. Aft the lines fall gracefully to the stepping line, but preserve the same angle of rise well up in the after body where the angle is made to meet the drawing in of the quarters. The whole side is bold, and nowhere has useful bulk been sacrificed to fanciful notions about "lines." From the nature of her sections we judge Montauk to be a perfect specimen of wave-line areas, and that her wetted surface is a minimum is guaranteed by her general conformation. In sheer she is as handsome as such a boat can be made. It does not appear in relief as quick as shown on the accompanying plan, or objection might justly be made. But it is well known to naval architects that rather more than acceptable must be struck in on a flat projection to produce just the effect desired in relief. It is no easy matter to give just the proper sheer, and when we say that nearly all our schooners are faulty in this respect, it is no more than any person of taste is prepared to acknowledge. The Montauk is the happy exception, and among a score of yachts at anchor off Staten Island she stands out as the finished work of an artist among the commonplace fresh about her. The cutwater is of the pilot-boat variety and dictated, we imagine, by a stubborn fancy for pilot-boat models somewhere in mind of like fancy, new to prevailing notions, perhaps, but withal in full accord and harmony with the design, and for that reason handsome.

Aft, the blight of length measurement—and possibly the ghost of "measuring girth"—still lingering in the minds of designers, has, we would seem to have exercised its evil influence in the production of a "docked tail" discontinuation. The beauty of carrying out the lines to their natural termination in a light, dainty fantail ending in the graceful clipper-board seen in the cutter, the room on deck thereby gained—this has all been cut short and sacrificed to the nonsense of measurement committees who have decreed that a couple of feet of such finish are as good as one foot in the body, and must pay accordingly. Some day such creeds will be thrown overboard among intelligent persons and then will the Montauks sustain a shock to their prospects. Of the yachts than the bob tail mixture now affected, a cross—and, in unskilled hands, a most ungainly one, too—between two pure breeds, the cutter and George Steer's immortal clipper. But how to weather on length rule seems was the trial Elsworth had to face, and with that in mind, it would be difficult to solve more acceptably the riddle how to cut a boat short without making her stumpy. It was a fortunate thing for Montauk's owner that the eye responsible for her fashioning had likewise the charge of her building from mould left up. Seldom it is that a design is laid down correctly. Frames will be bent, the moulds adds to the error, and by the time the frames are up and knocked into the plumb, shored and braced, ten to one the deviation from the original intentions is to be measured by a good many inches, and the vessel launched is as like the design as a counterfeit coin is like a genuine coin. To secure the modeler's individuality in the completed structure, he should be on hand to skipper the job from first to last, for what escapes his eye ought not to be worth while fussing over. If, so it was that Montauk's conception in design, was launched in fairness, with the double guarantee of the designer's faultless eye and the draughting talent of Mr. John G. Prague's architectural office, the original model having been laid down on paper and faired over again by curve and batten with the utmost vigilance and care.

And now that we come to rig our ardor dampens. There was a galley, a big one, in the way, and so—all for the galley, most important factor in the design—the centerboard had to go aft, whether it ought to or no, for the galley it had to be just so big, it had to fit in just there, it could not be shifted, it could not shrink, there it was to be and so the insignificant weatherly attachment shuak aft. We have never seen that galley. When we do it will be with respect and awe. A galley that can bounce a board clear into the after cabin and drive the mainmast through is the kind of a galley for which our admiration. The diameter of that nourishing institution having been irrevocably determined after due consultation with the stars, there was nothing else left but to shove the board aft and the mainmast with it. So it came to pass that Montauk suffers from a hopelessly ugly, odd-fashioned and faulty rig, for which, upon some critical occasion, she will have to pay dearly. All for that galley. The foremast is too far aft, the drift between the two spars too great and the jib an abominable bag with which to clip things so wondrously fine as we know Miranda can do. Not that we blame those responsible for the out of her sails. Given the spars and their position and the rig is not as ugly as it might be, though lacking in style and smartness. But the single jib—well, it is childish. A remnant of the little sailboat, of the toy we see in the shop window, a reminder that once we all were young and sailed in little boats, and they had single jibs, and in our youthful minds were all but perfection.

The Darwinian theory propounds occasional relapses in man. May not this jib of Montauk be a revival of the little sloop of yore? Not only is the jib inefficient, but the sailor views with great disfavor this hanging of the whole rig to bowsprit end and bobstay. A forestay and double head sail would have made things more seamanlike, more mechanical, snugger and faster. A division of the motive of double head sail is fortunately no longer necessary. Innumerable practical tests and experiences have justified our crusade against such a lubber's contrivance as Montauk sports, and not a single instance is on record where double head sail, when properly applied, has been found less speedy or less weatherly than the ancient apron river arrangement originally intended for stump bowsprits only, but since then adhered to in spite of changed proportions and enlarged demands with pertinacity only equalled by its absurdity. The position of the spars may be excused; that galley did it. The cut of the sails may be passed by, for to some extent it is a matter of taste whether gaffs should peak smartly and alike or whether the sails should look like bags thrown at the ship and accidentally caught. There are also current a great variety of unstable theories about the "draft" of sails, all alike meaningless, but exercising much influence with the "talent" upon the cut and sit.

Possibly some of Montauk's ungainliness in rig—to our eyes at least—is to be ascribed to some deeply hidden mystery in "draft." But a single jib and no forestay on so large a vessel is without the pale of ought but our severest condemnation. It is without one good reason. Its supposed superiority—we cannot imagine in what respect—is mythical. It is the idle gossip we hear passed from mouth to mouth until mere repetition gives it a veneering of sense. We hope Montauk will shift to a more sailorlike arrangement before she pitches the sticks over her bows, or before she meets a genuine windjammer over her tonnage, though with the company she finds this side of the Atlantic even her present unhappy rig seems good enough to keep her to the fore. Should she ever be tried high the truth of these remarks might receive an unwelcome illustration.

In build and fittings Montauk is a long way ahead of usual American practice, especially with regard to lower rigging, iron work and miscellaneous outfit, most of which bears something like reasonable proportions between strength and strain. Material and fastenings of hull would hardly rate her high at Lloyds, but few American yachts is less class at all. Throughout this schooner one thing is noticeable. She has been turned out upon definite preconcieved detail plans, and but little has been left to the happy-go-lucky shiftlessness still so characteristic of yacht work in America. When built she was finished, and botching and doctoring have had no place in her log.

BOATS THAT WILL NOT SINK.

Editor Forest and Stream:

My reason for asking you to publish what follows is that I am in receipt of letters from readers of your paper requesting me to state why the nonpareil sharpie will not sink. I will briefly say, that on carefully and practically testing the matter. I find that the above named 28ft. sharpie will easily float 4,837½ pounds of stone when she is filled with water, and that this is accomplished entirely by the buoyancy of the wood of which she is built, without assistance of confined air or any kind of float. The ballast required for this boat is less than one ton, and nobody can sink her without adding other weight, when she is in cruising trim.

THOMAS CLAPHAM.

ROSLYN, L. I.

NEW SCHOONER.—Mr. A. Cary Smith has finished the design for Vice-Com. Henry S. Hovey, E. Y. C., and the schooner is now being laid down at Pollon's, in Brooklyn. Over all, 109ft.; on the line, 85ft.; beam, 22ft. 6in.; draught, 12ft.; least freeboard, 3ft. 6in. Elegant lead on keel. The latter will be 15in. sided and 17in. moulded, nearly as wide on the bottom as on top. In many respects this new schooner is an advance upon old ideas. She is to be a seagoing cruiser, and her moderate beam and good depth will insure ease and snug rig. The main-mast is to be well forward, right over the centre of buoyancy, and in head rig she will resemble Norma. Deck plank will be laid straight fore and aft, and main saloon is located amidships, affording better arrangement down below. Frames will be 8in. sided and 8in. moulded at keel, and 5x5 at head. Their heels will be boxed into the keel, the floors being of wrought iron, secured to keel and futtocks by through bolts, a much superior plan to crooks and spikes. Walls of 3in. oak and plank of yellow pine in long lengths. Composition fastenings and treenail work. The floor-beams will be heavy and have fore and aft stringer over the ends and iron tie-posts at the bulk-heads between decks and from floor to keel.

TEASER—BROTHERS.—A match between these two cats was sailed in the harbor Sept. 28 in a fresh northeaster. The Brothers, Wm. Murphy, of Communipaw, owner, is 18ft. 4in. long, and the Teaser, Jas. A. Relyea, of Jersey City, owner, is 18ft. long, receiving an allowance of twenty seconds over the fifteen mile course from off Communipaw, passing between Ellis' and Bedloe's Islands, to and around Fort Lafayette and return. Stakes $250 a side. Brooklyn Y. R. rules. Tide was last of the ebb. Both yachts had reefs turned in. Brother got outside but shortly after split her tiller flying into the wind, her competitor taking the lead. Brothers failed the stick and went again to the fore when near the turn, and kept her lead in the exciting windward work home, winning in 2h. 23m., Teaser, 3m. 40s. later by corrected time. The latter is anxious for another trial. Ira Smith tooled the winner and Teaser was skippered by her owner.

CHAIN OUT.—Three times the depth of water for ordinary weather is a fair scope; five times in strong winds, and the longer the better in heavy weather. Chains should always be marked, so that the amount of chain out can be told in the dark. Copper wire rings around the links is a good way.

ALBANY Y. C.—SEPT. 27.

Editor Forest and Stream:

The ninth annual regatta of Albany Y. C. was sailed Sept. 27 on the club course from the city to Pard Rock light and return, a distance of fourteen miles. The prizes were a solid silver cup presented by Com. Wm. W. Grey, one by Vice-Com. A. Van Rooney, a set of signal lights, a pair of marine glasses, and an ensign and an anchor and cable presented by the club. Following the advice so often given in your columns, this year the regatta committee decided to start the boats from an anchor. This is an innovation for these waters, but it has been found to work so satisfactorily to all concerned that it is safe to predict its continuance in future regattas. As you will see by the inclosed list, eighteen boats were entered and all started but three. The interest of club members and the public was centered mainly in the first and second classes. In the second class on account of the number of boats entered, which had each its admirers and partisans, but chiefly in the first class, where the local rivalry between Albany and Troy has for years been very intense.

The sun shone brightly, the wind blew a nice topsail breeze from the north, and the yachts danced merrily over the line as the gun was fired at 10:25 to start the second and third class boats, and ten minutes later the first class boats started. The boats crossed pretty evenly, and with topsails set and spinnakers drawing finely, they sped away before the wind. The Artful Dodger and Coquette rounded the stake boat first, followed closely by the Cynthia and Breeze, who became entangled with the smaller boats, while the Sans Souci, which reached the stake boat third, was enabled to round and head for home about twelve minutes before her rivals. The Cynthia finally got clear of the other boats and started for the finish apparently a hopeless distance in the rear, but long before home was reached she had overhauled the leading boats, and crossed the line a winner by fifty-five seconds, corrected time. The Artful Dodger, in the second class, finished 1min, 17sec. ahead of the Albani, but was beaten by her on corrected time by 1min. 13sec.

The steam-yacht Carrie Ward accompanied the fleet, carrying the judges, time-keepers, and friends of the members. The judges were, W. Stone Smith, of Troy, and H. A. Glassford, of Albany.

Summary is appended:

FIRST CLASS SLOOPS.

	Length.	
	ft. in.	
Mabelle, F. O. Alsop, Troy, N. Y.	29 3	
Cynthia, B. Guardenier, A. Y. C.	29 0	1st prize.
Sans Souci, S. S. Y. C., Lansingburgh	27 3	2d prize.
Mary Alice, J. A. Fleet, Albany	25 1	

SECOND CLASS.

Breeze, sloop, A. Albers, A. Y. C.	21 0	
Artful Dodger, sloop, H. Riley, A. Y. C.	23 6	2d prize.
Coquette, sloop, Bulbeck & Grey, A. Y. C.	22 4	
Albani, sloop, J. D. Brooks, A. Y. C.	21 0	1st prize.
Anne Bell, cat, W. Mellus, A. Y. C.	21 0	
Nina, cat, A. Dingard, A. Y. C.	21 0	
Spray, sloop, C. Conklin, Catskill	18 9	
Bessie, cat, Clem Fonda, Lansingburgh	18 8	
Coral, cat, Kirkkamp & B., Albany	18 3	

THIRD CLASS CATS.

Gypsy, sloop, Jas. Van Hagen, Lansingburgh	17 6	1st prize.
Dart, F. D. Weidman, Albany	16 7	
G. W. Blanchard, George DuBois, Albany	14 7	
Carrie, J. E. Smith, Albany		
Addie, sloop, C. O. Jones, Troy		2d prize.

A. ALBERS, Secretary, A. Y. C.

ROYAL NOVA SCOTIA YACHT SQUADRON.—The three-ton match was sailed Saturday, September 23, in light southerly breeze in Halifax harbor. Start was made at 2:30 P. M., and the yachts went over in the following order: Mariquita, yawl, W. Wallace; Miranda, sloop, R. J. Wills; Velenar, cutter, F. C. Sumichrast; and Mascot, sloop, H. M. Wylde. Mariquita led to Dartmouth ferry buoy, but on the lead to Port Clarence mark fell back into third place. Miranda, which had the lead for a short time, had to yield it to Velenar, the latter working out to windward in true cutter fashion, and coming in an easy winner. The finish was: Velenar, 4:41:55; Miranda, 4:45:45; Mariquita, 4:50:30. Velenar allowed Miranda 9m., and Mariquita 2m. 56s., Velenar by 3m. 56s. off Miranda, which secured second prize by 2m. 18s. from Mariquita.

DETAILS OF SHARPIE.—The following are the specifications of a 28ft. yacht sharpie, built over all 30ft.; ring beam 9ft. 3in. on bottom and 7ft. on top. Depth at bow 3ft. 2in.; depth amidships 2ft. 4in.; depth amidships 6ft. 3in., round stern; centerboard 10½ft. long and 5ft. wide at after end. Cockpit 3ft. long, yellow pine grating on floor; bulkheads of black walnut and ash. Foremast 38ft. long; mainmast 35ft. long, 6in. diameter at partners, 11in. at head. Sheaves in masthead for halliards. Racing foresail with 10ft. club, working foresail with 5ft. club, also used as racing mainsail. Steps filled with brass collars, extra step for working with one sail only. Awning, oil skin coat for cruising, brass portholes; forepeak 4ft. 7in. wide, 6ft. long, 3ft. high. Lockers in stern. Gear as necessary.

FANCY—CRUISER.—A match between these two cats was sailed Oct. 2 over a straightaway course from Lareinont harbor through Hell Gate to the Seawanhaka Basin on Long Island. Cruiser is owned by Mr. A. B. Alley, and is 20ft. 10in. long, while Fancy has often figured in these columns as the property of Mr. F. Grant, of Boston. She is 20ft. 3in. long, and has a record of nearly forty wins to her credit. Two matches have already been sailed this season, each boat winning once, and this last passage was to be the sail off for the season, the prize being a $100 cup. Cruiser made the run in 6:36:40; Fancy in 6:41:29. Corrected times, 6:36:40, and 6:38:52, the Cruiser, therefore, winning by 2m. 12s. Distance about 20 miles.

SAN FRANCISCO YACHTING.—The second annual mosquito regatta, under the auspices of the S. F. Y. C., was sailed Sept. 23, open to launches 25ft. and under 30ft. Winners as follows: Class No. 1—First prize, Captain Sennett, sailed by himself; second, Faught-a-ballagh; third, John Kendall. Class No. 2—First prize, Lark; second, Con O'Connor of Lake Merritt; third, Squiboh. Class No. 3—First prize, Carrie; second, Fleetwing; third, Blackbird; fourth, Sadie. Class No. 4—First prize, Fawn; second, Flirt, of Goat Island. Class No. 5—First prize, Thetis; second, Flirt. The prizes ranged from a silver pitcher down to a variety of small articles.

IN PROSPECT.—The Seawanhaka Corinthian Y. C. proposes a series of three matches towards the close of the month. It is probable that the cutters Valkyr, Oriva and Bedouin, and sloops Gracie and Fanny will take part, and it is hoped that the imported cutter Maggie may be induced to make the passage from Boston to meet the Vixen upon the occasion. One match will be over the New York Y. C. course, one twenty miles to windward or to leeward and return outside the Hook, and the third over some triangular course at sea.

TORONTO CANOE CLUB.—A paddling race took place Friday last over a one mile course between the new Jumbo, 18ft. by 24in., just built for Mr. M. F. Johnston by Richard Jenkins, of Toronto, and Mr. S. L. Hicks's Shooter, 14ft. by 24in. Jumbo won, of course, and Mr. Johnston runs down the Paddling champion cup. An attempt was made on Saturday to race the sailing canoes for the Toronto challenge cup. Six started, and Mr. Tyson's Isabel took the lead, but the race could not be finished. Mr. Tyson's Isabel will hold the cup till next season.

MAHOGANY STAIN.—For a dark mahogany boil together a gallon of water, half a pound of madder and two ounces of logwood. When the mould is dry, after washing over with the hot liquid, go over again with a solution of two drachms of verdigris in a quart of water. For light mahogany color wash with diluted nitrous acid, and when dry use the following: Dragon's blood, four ounces; soda, one ounce; spirits of wine, three pints. Apply when well dissolved.

ALBANY YACHT CLUB.—The annual match of the club was sailed Sept. 27, over a thirteen mile course. Winners as follows: First Class—First prize, Cynthia, Albany; second, Sans Soucie, Lansingburgh; second class—First prize, Albany; second prize, Artful Dodger, Albany. Third class—First prize, Gypsy, Troy; second prize, Addi, Troy.

PROPOSED MATCH.—Dr. J. G. Barron is anxious to match his sloop Wave against some flyer before the season closes, and Mr. Franklin Beams proposes to meet him with the Elephant for a $250 cup, ten miles to windward and return, Atlantic Y. C. rules to govern. We hope something may come of this.

Messrs. Wm. Read & Sons, 13 Faneuil Hall Square, Boston, Mass., are constantly receiving large invoices of Wm. & O. Scott & Son's Hammerless and Hammer Guns. Every gun is warranted in shooting and sent on trial if desired. See advertisement elsewhere.—*Adv.*

See E. G. Koenig's advertisement of target rifle.—*Adv.*

The Parker Gun.

Again Victorious at the late Exposition at

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 300 competitors. For further particulars see illustrated circular, or apply to the office of the Company,

31 Wall Street, New York City, N. Y.

The Colt Club Gun.

It should be remembered that while we are the chief distributors of the regular Colt Guns, we are sole agents in New York for the Colt Club Guns. The marvelous performance of these guns in pigeon and glass ball trap shooting is so well known that no word of commendation is necessary. Every genuine Colt Club Gun has the rubber heel plate with the words "The Club Gun" around a circle, within which appears the rampant colt beautifully embossed. We are also agents for the new Harrington & Richardson Hammerless Guns, which at about half the cost surpass all imported hammerless guns. Address

P. O. Box 1114. H. & D. FOLSOM, 15 Murray St., New York.

JUST LOOK!

This Rifle sent to any address on receipt of $8.00, by post office money order or in registered letter. A capital rifle for target practice and killing small game, also for shooting cats, dogs, rats, &c. Not liable to get out of order. Shoots very accurate, barrel being of steel and well rifled, with fine walnut pistol grip stock, and **Remington Action.** Latest improved rifle in the market. Will shoot a 22-caliber or the Flobert Noiseless Cartridges. Warranted to give satisfaction. Cartridges for above rifle $2 per 1,000, or 25cts. per 100. Lowest retail prices given to customers for Smith & Wesson's, Remington and Colt's Revolvers, Rifles, and a great variety of Sporting Goods. Remington's Single Breech-Loading Shotgun for $10.00. Get my prices for goods before purchasing elsewhere.

BRENTANO'S, Union Square, N. Y.

THE PITTSBURGH FIRE ARMS CO.

Would call attention to their new double

Hammerless Breech-Loading Gun.

This new gun is made under the Anson & Deely patent with automatic safety bolt, so constructed that the triggers are effectively bolted whenever the lever is moved to open or close the gun, thus preventing any possibility of accidental or premature discharge.

The breech action is top lever, double bolt, with Westley Richards' extension rib, making the strongest possible breech fastening. The barrels are of fine Damascus, choke-bored on the most approved system for close, hard shooting. The stocks are English walnut, with pistol grip and horn butt plate. The fore ends are made with the Deely & Edge patent snap fastening. The frame and guard handsomely engraved and case hardened. The proportion and symmetry of the gun is perfect.

In placing this hammerless gun on the market, we shall deal direct with sportsmen, and no trade discount or deviation in prices will be made UNDER ANY CIRCUMSTANCES. The quality of material and finish is equal to any other gun in the market selling for $200.

PRICES:

12, 14 and 16 Bores, - - - - - - $135 00 10 Bores, - - - - - - - - - - $140 00

PLEASE NOTE.—This gun has no outside lock to weaken the stock and frame as is the case with nearly all other hammerless guns.

We will send one of these guns to any responsible party, giving privilege of two days for examination and trial on receipt of $5, as a guarantee for express charges.

Enclose stamp for new 48-page illustrated catalogue, containing descriptions and prices of all new and useful improvements in guns, rifles, revolvers, implements, &c.

PITTSBURGH FIRE ARMS CO.

Pittsburgh, Pa.

WILLIAM READ & SONS.

DEALERS IN FINE GUNS, 13 FANEUIL HALL SQUARE, BOSTON.

AGENTS FOR

W. & C. SCOTT & SON.

Furnished by us to Capt. Bogardus who for years has used none other than the SCOTT GUN, and won with it the championship of the World.

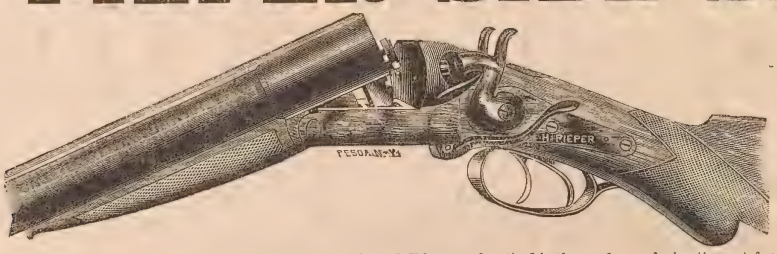
None genuine unless bearing the full address, W. & C. SCOTT & SON.

Their New Gun.

$85.00 With Latest Improvements.

Description.—Top snap, double bolt, extension rib, pistol stock, rebounding locks, snap fore stock, large solid strikers, low hammers when cocked, horn butt plate, Damascus barrels, choke bored. 20-bores, 5½ to 6lbs.; 16-bores, 6¼ to 7lbs.; 12-bores, 7 to 9lbs.; 10-bores, 8 to 11lbs.

To meet a want for a really fine, good breech-loader at a medium cost, Messrs. Scott & Son have now put this gun into the market at above price (a great reduction from the figure such quality has hitherto been offered at), and the demand thus far shows that it is thoroughly appreciated.



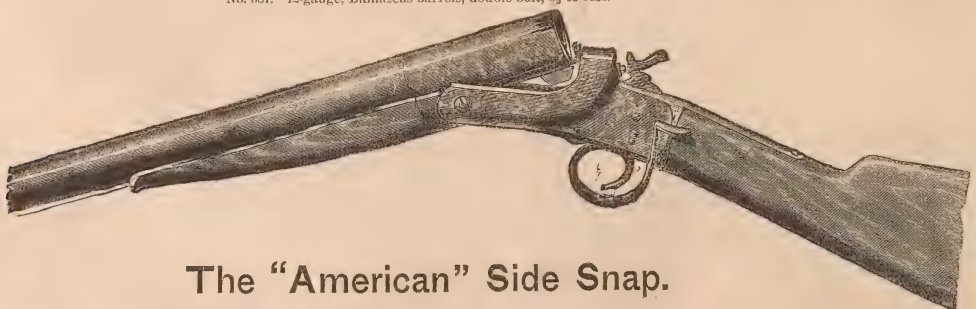
Every Gun Warranted in Shooting and Sent on Trial.

Scott's Hammerless, with Crystal Apertures and Block Safety Attachmemt, All Sizes, Constantly in Stock.

If to be sent C. O. D. on trial, inclose in every case $3.00 as a deposit for expressage in case gun is not taken, which, if too much, we will return the difference. If you send whole amount with order, we will include at no charge, a waterproof gun case; and if gun does not suit on receipt, you can exchange, or we will return your money on return of gun, less expressage. Hence there is no risk in inclosing whole amount.

SEND STAMP FOR OUR GUN CIRCULARS AND SECOND-HAND LIST.

THE PIEPER SIDE SNAP.



This Gun is made by the *same manufacturer* and on the *same system* as the now celebrated **Diana,** advertised in these columns during the past four weeks. (Orders for the Diana's have come in so rapidly that the factory cannot keep pace with them). One reason they give so much satisfaction is that by this system every gun shoots to center, and shoots just where you hold it. Dealers are asked continually for a good, cheap gun, one that they can recommend. The Pieper Side Snap is the only gun that will fill the bill. Barrels are fine twist, locks are steel, rebounding and good quality, stock is oiled, finest walnut, pistol grip, butt plate rubber, patent fore end.

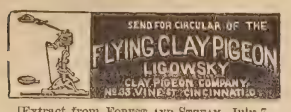
What Our Customers Say About Them.—"It is the best cheap gun I ever saw."—Thos. Golcher, Philadelphia. "They sell beyond my expectations."—W. H. Colvert, Beloit, Wis. "Every gun sold has given the best satisfaction."—D. T. Seeley, Bradford, Pa. "Have sold the twelve received; send twelve more at once."—E. T. Allen, San Francisco. "I have always been opposed to selling cheap guns that haven't given satisfaction, but the Pieper Side Snap suits me."—F. P. Taylor, Chicago. Numerous others of the same purport.

Samples sent without solicitation have resulted in large orders. *In fact there is no other gun in the market that can compare with it.*

Price List:

No. 586.	12-gauge, fine twist barrels, 8¼ to 9lbs.,	$30 00
No. 586.	10-gauge, " " " 9 to 9½lbs.,	30 00
No. 587.	12-gauge, Damascus barrels, double bolt, 8½ to 9lbs.	35 00

The "American" Side Snap.



The reinfore breech and joint lump are one solid piece of case-hardened iron, fine twist barrel, case-hardened mountings, rebounding locks, oiled walnut stock and fore end. These guns are made by C. S. Shattuck, Hatfield, Mass., and are choke-bored by the "Shattuck Process," which gives the most remarkable results.

Price, 12-gauge, 30 and 32in. Barrels, $14.00.

Sole Agents, SCHOVERLING, DALY & GALES, 84 and 86 Chambers Street, New York.

Agents, Importers and Jobbers of all kinds of Guns, Pistols and Gun Goods.

We sell at Wholesale only. If your local dealer does not have the above goods in stock, get him to order them for you.

[Extract from FOREST AND STREAM, July 7, 1881, p. 444.]

* * * This flight so nearly resembles the actual motion of birds that the Clay Pigeons afford excellent practice for wing shooting. We commend all sportsmen to test its merits. * * *

Discontinuation
—OF—
"THE BLUE STAR KENNEL,"
—OR—
THE COCKER SPANIEL KENNEL,
FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,4t

FOR SALE.—FIVE THOROUGHBRED IRISH setter pups, ten weeks old. Inquire of CAPT. G. W. DICKINSON, Saybrook, Conn. sept21,3t

Sportsmen's Goods.

THE BEST

DOGSKIN LEATHER JACKETS

AND

"BOSTON SHOOTING SUIT."

Dogskin Leather Jackets, windproof, flannel-lined, pliable, durable, indespensible! We are importers and manufacturers, and can supply the very best leather jacket or vest that is made.

Last season we sold nearly one thousand jackets at retail alone. This season we have manufactured very largely *to supply the trade.* Send for samples of material and special circular, with rule for self-measure. These leather jackets and vests are supplied in either *black or tan colors.* To all who are exposed to the inclemency of the weather, to sportsmen, drivers, brakemen and professional men, they are highly to be recommended!

The "BOSTON SHOOTING SUIT," which is shown in our illustration, is the standard suit for sportsmen in America. It is made from waterproofed duck, and is practically indestructible.

Special circulars descriptive of this suit, with samples, can be had by any one who sends address.

EDMOND REDMOND,

Rochester, N. Y.

Climax Gun Cleaner.

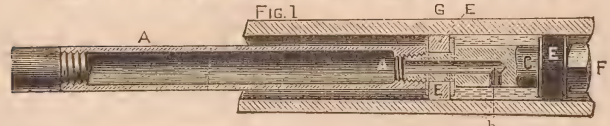

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "chub" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR.

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

NOTWITHSTANDING THAT THE FOREST AND STREAM has been permanently enlarged to twenty-eight pages, the subscription price remains the same as before.

THE TEAM CAPTAIN'S REPORT.

IN another column we give the views of Col. Bodine upon the late International Match. As captain of the defeated team he is in a position to speak understandingly of the situation, and in some respects his conclusions are well founded. He coincides with the views held in the FOREST AND STREAM, that the defeat was one of arms rather than of men. The ammunition and the rifle were not properly mated, and with an unreliable arm all attempts to make a good working team were futile. The report of the statuesque Colonel is worth careful consideration, for it contains the conclusions of one who has won distinction as a long-range shot and who has had opportunities to appreciate all the difficulties through which the last team passed, and to most keenly see what a great task is before us in the match of 1883. He does not take a very buoyant view of that contest, and there certainly is little at present to indicate anything but a repetition of the defeat of 1882.

Much of the report of the team captain is taken up with confessions of bad management. The unpleasant incident of the day before the match is revived in what seems to us an entirely unnecessary fashion. The report brings out in a strong light the entirely experimental character of the shooting on the American side. It does not appear that all the preliminary practice was anything more than a series of tests of ammunition, rifles, sights, positions, etc., on the part of the members of the American team, and then over all the captain came in with additional doses of advice, until it is a wonder that any sort of a score whatever was made.

The matter of coaching a military team receives a curious remark at the pen of Col. Bodine. He gives it as his conclusion that coaching a military team is a delusion, and then confesses that he merely "went through the motions" of coaching to hoodwink the public into the belief that some sort of preparation was under way. This is certainly refreshing after all that has been said on this point of team drill, and by the Colonel himself. Because British teams do not enjoy a system of team drill is no reason that the American team could not employ it to advantage. No team among the number of small-bore squads defeated by the Americans in past years have shown any conception of what benefits could be gained from effective team work. Of course that was in small-bore long-range work, but the report of Col. Bodine does not clearly point out wherein military shooting differs so much from the other styles of shooting that the team system cannot be transferred. With guns shooting in some sort of uniform style, mutual help can be extended from one member of a team to another. The records of the team then become valuable as guides for future shooting; but with men changing their powder charges from day to day, it is no wonder that Col. Bodine jumped to the erroneous conclusion that coaching was a useless endeavor. No doubt the coaching attempted for the recent American team was effort thrown away. But it is nonsense to suppose for a moment that a military team may not be so accustomed to shoot together, that from the first shot to the last each may serve as a help to the others.

The report hits a point of consequence when it advocates the appointive rather than competitive style of selection. It is easy for a committee to make up a team from among the best known shots of the country, and such a team would in all probability be a stronger working body than the haphazard group gathered by an all-comer's contest.

The Colonel lays special stress on the necessity of immediate steps for the organization of the team for next year, and of the need of hard work in the getting up of rifles for the match. He speaks of postponement, but that is out of the question, nor will it be thought wise, as he suggests, for us to go to the British armorers to secure weapons for 1883. If our National Rifle Association directors wish to really encourage rifle practice and the promotion of good shooting in America, they can find a few experts who are able to make the special gun needed for the match of next year. To secure the weapon will require the expenditure of money, however, but if there is a further dependence upon the voluntary efforts of the well-known armorers, it is not at all unlikely that next spring will see the same chapter of experimenting, groping, miscalculation and ultimate defeat.

THE FOREST AND STREAM ANGLERS' TOURNAMENT *will be held in the Central Park, Oct. 19. See notices on pages 202 and 209. A cordial invitation is extended to every reader of this journal to be present as a participant or spectator.*

NON-RESIDENTS IN NEW JERSEY.

THE correspondence published in this journal between the two New Jersey game protective societies has directed public attention to these organizations and their methods of work. The peculiarity of these methods consists in the discrimination enforced against non-resident sportsmen. The authority for such discrimination is derived from special legislation, which, like all legislation of the kind, may be odious to those whom it does not directly benefit. Without calling into question the acknowledged good motives of the gentlemen who organized these societies, or the results which may have been attained, we apprehend that the legislation under which they act is a legitimate subject of examination, for approval or criticism.

The regulation imposing a tax upon the guns of non-residents in New Jersey is not found among the statutes of the State; it is one of the by-laws of a society. The act of the Senate and General Assembly of the State of New Jersey incorporating the West Jersey Game Protective Society provides that it shall be unlawful for non-residents to hunt within certain counties "without complying with the by-laws of this game protective society," and penalties are prescribed for non-compliance. This is certainly a most extraordinary enactment, for, first, the by-laws of any society can, in the very nature of things, govern nobody except the members of that organization, nor, secondly, can there rightly be any penalty for the infringement of those by-laws, save such penalty as may be provided and enforced by the society itself. But this act not only declares non-members of the West Jersey G. P. S. subject to the regulations of that society, but it further provides that certain individuals, who may not obey the rules of a society of which they are not members, shall for such disobedience be fined, or by the machinery of the State dragged to jail. Such unusual powers having been granted it, the society adopts this by-law for the government of those who are not its members:

"Any person or persons, non-residents of this State, wishing to kill, destroy, hunt, or take, at any time, any game as provided for in the seventh section of the 'Act incorporating this society,' shall first become members of this society, by payment of the membership fee to the secretary, receiving a certificate of membership, signed by the president and secretary and sealed with the corporate seal of said society."

By this peculiar combination of State-and-society legislation the system for the West Jersey G. P. S.'s imposition of a tax upon the non-resident is complete. The latter pays his license fee and shoots unmolested, or else he does not pay, and is in consequence fined or thrown into jail. Putting aside altogether any consideration of the constitutionality of all this, there can be no question as to its legality.

With regard to the arrests of non-residents by the New Jersey Game and Fish Protective Society, however, the case appears to be different; their arrests, so far as we understand them, are not even legal, much less, then, constitutional. This society is organized under a general act, similar in its non-resident provisions to the act of incorporation of the West Jersey society; it declares it unlawful for non-residents to shoot in the State of New Jersey "without complying with the by-laws of the game protective societies," etc. If, now, the New Jersey G. F. P. S. had adopted a by-law like that of the West Jersey G. P. S., or a similar one, prescribing that non-residents desiring to hunt in that State should first become members of the society and pay a fee, then, clearly, the tax system would be complete in this case also, and non-residents not complying with this by-law might legally be arrested. But, as a matter of fact, the by-laws of the West Jersey G. P. S. nowhere contain any such rule. No obligation whatever is placed upon the non-resident sportsman to take out a certificate of membership before he shoots; whether or not he shall do so is with him purely voluntary. We are at a loss to see, then, how their arrests of non-residents, simply for the atrocious crime of dwelling without the limits of the State of New Jersey, can be otherwise than illegal, harsh, and oppressive. If it can be shown that they are not so illegal, certainly the officers of the society owe it to themselves not less than to the public to make this clear.

We have said that the New Jersey non-resident discriminations are odious to those who are not benefited by them. The disfavor with which a law may be regarded is not of necessity any proof that the law itself is inherently wrong. One very general objection, however, namely, that of unconstitutionality, strenuously urged against this New Jersey system, is worthy of consideration. If these laws are unconstitutional they cannot and ought not to be defended. The doctrine that "they may be unconstitutional, but they protect the game, and so they are all right" is not good doctrine; on the contrary they are all wrong. The end cannot justify the means. No one holds in higher estimation than we do the importance of legal game protection, but of unmeasurably more account we hold it to maintain the constitutional right of the humblest citizen. Game is one thing, justice another. Better that the deer and the quail and the grouse should be exterminated than that men should be subjected to the indignity and wrong of illegal arrests.

We do not propose to discuss the merits or demerits of these New Jersey laws. We advert to them only because it is desirable that they should be discussed and determined in the proper manner, and an opportunity to do this appears now to have arisen. If as a result of the Welsh case it shall appear that non-resident members of the New Jersey G. F. P. S., who are not also members of the West Jersey G. P. S., have, on the territory of the latter, only the rights accorded to all other non-residents, then the New Jersey G. F. P. S. can enforce its claims in behalf of its members only by taking the case up to a higher court and obtaining a decision that all these non-resident discriminations are unconstitutional.

It will be purely optional, of course, with the contesting parties to take this case up or to drop it, but it will be a pity, now that this opportunity is presented, not to improve it. Whatever be the final decision, the interests of legitimate game protection will in no wise suffer. There will still be left abundant constitutional methods of enforcing the game laws; whenever there are not, the game had better be allowed to perish.

EASTERN FIELD TRIALS.—At a meeting of the Eastern Field Trials Club, held at Delmonico's on Tuesday evening, October 10, the following gentlemen were selected to act as judges at the coming trials at High Point: Col. James Gordon, Lochinvar, Miss.; Mr. J. J. Snellenburg, New Brighton, Pa., and Mr. Joseph H. Dew, Columbia, Tenn. The club decided that no owner nor handler who has worked any dogs within a radius of eight miles of High Point shall be allowed to compete at the trials on penalty of being debarred.

THE ANGLERS' TOURNAMENT.

NEVER before has there been so much enthusiasm over a casting tournament as now exists in regard to the coming First Annual FOREST AND STREAM Anglers' Tournament. Inquiries pour in regarding it, and many prizes have been given by gentlemen who take interest in angling as a fine art. Should the weather be fine on the 19th, there will be a large attendance of ladies and gentlemen to witness the contests. From the number of persons who have already mentioned their intention of entering the different classes, it is a question if the programme can be carried out in one day. The rules which the Committee of Arrangements have formulated, and which we again publish in another column, are such as in their judgment seem best and fair for all.

An objection has been raised that the rules do not contain a clause requiring the line to be recovered after casting. This clause, which has been inserted in the rules of other tournaments, was considered unnecessary, for the reason that the recovering is not of use, and therefore the rule was intentionally left out. It was said that one who made a long cast could certainly get his line behind him if he wished, and that with the use of automatic reels it was impossible for judges to determine whether he did so fairly or not.

The prize list, as published below, represents a value of over seven hundred and eighty dollars ($780.00), not one article of which is valued at a fraction beyond its retail price. The FOREST AND STREAM prize is a solid coin silver flower, fruit, or punch bowl, with gold lining. It is of hammered silver with appropriate ornaments and inscription. This, it will be seen, is placed in the class arranged for those who have never cast before in public, the class which the tournament is especially designed to encourage, and it will prove a most acceptable trophy to an amateur.

The contests in fly casting will be judged by a standard including distance, delicacy and accuracy. The committee have substituted the word "delicacy" for that of "style," as some persons have construed the latter to mean the grace of the caster. In these contests "delicacy" will be construed to mean only the manner in which the line and flies fall upon the water.

The first contest will be called exactly at 11 A. M. Thursday, October 19, and the others will follow in as quick succession as possible, and it is hoped to conclude the tournament in one day if possible. The following order will be observed:

1. The two light-rod contests.
2. The Nichols contest.
3. Fly casting—Class A.
4. Light bass casting.
5. Fly casting—Class B.
6. Heavy bass casting.
7. Salmon casting.
8. Fly casting—Class C.

THE PRIZE LIST.

Light Rod Contests.

CLASS A.—Open to all; entrance fee $3. This prize is to be cast for with rods of 5½ ounces in weight or less, made with ferules and reel bands, and of two or more pieces, rods to be not longer than ten nor shorter than nine feet; six to nine feet leaders with two flies.

A split bamboo "Catskill" rod, reel and line, given by Wm. Mills & Son, 7 Warren street, New York	$50 00
Members South Side Sportsman's Club, cash	25 00
One year's subscription to FOREST AND STREAM	4 00

CLASS B.—Entrance fee $3. To be cast for with full mounted rods of two or more pieces, with metal reel bands, weighing not more than 4½ ounces; leaders to be six to nine feet with two flies.

Members South Side Sportsman's Club, cash	$25 00
William Mitchell, rod maker, 26 Vandam street, New York, offers a three-piece fly rod, duplicate joint and three tips, 4¼ ounces weight, or similar rod with metal reel plate one ounce heavier, if winner prefers; value	30 00
One year's subscription to FOREST AND STREAM	4 00

The B. F. Nichols Contest.

Open to all. Each contestant to use the same rod, reel and line which will be furnished. (Rod 10ft. long and weighing about 6¼oz.) Each competitor will be allowed three minutes practice with the rod before casting. The scale of points in this class will be: distance, accuracy and delicacy, thirty-three each. The line must be retrieved after each cast. All the prizes are donated by B. F. Nichols, manufacturer, 153 Milk street, Boston, and all in grooved wood cases.

1. Split bamboo salmon rod, 10½ft., 27½oz., with two tips, German silver mountings, ($12.00). Also one split bamboo trout rod, 10ft., 7¼oz., German silver mountings, value $20.00. Total $60 00
2. Split bamboo trout rod, 11ft., 8¼oz., German silver mountings, two tips, $20.00. Also one similar rod, 10ft., 7¼oz., $30.00 ..... 40 00
3. Split bamboo fly rod, 11ft., 8½oz., two tips, German silver mountings 20 00

Single-Handed Fly Casting.

CLASS A.—Open to those who have never cast in any tournament or who have no public record of casting sixty feet. Entrance fee three dollars. The winner to have choice of the following prizes and the other contestants to choose from the remainder in their respective orders of merit:

FOREST AND STREAM offers a hammered coin silver gold-lined bowl, value	$125 00
Members of the South Side Sportsman's Club offer cash	50 00
James Ramsbottom, Baldwin's, L. I., a split-bamboo fly rod with reel, reel case, and water-proof silk line	35 00
Wakeman Holberton, 65 Fulton street, card of copy of Standard Trout Flies, colored by hand, in frame	10 00
One year's subscription to FOREST AND STREAM	4 00

CLASS B.—Open to all who have never won a *first* prize at this or any other similar contest. Entrance fee $3. The winners to have choice of the following prizes in the order of their awards:

"Game Fishes of the United States," plates by S. A. Kilbourn, and text by G. Brown Goode, presented by Charles Scribner's Sons, New York	$50 00
Split bamboo fly rod, presented by Mr. Fred Malleson, 136 First street, Brooklyn, N. Y.	25 00
One portable "Stranahan" canvas boat, seat and oars complete, presented by Frank Holmes, Chagrin Falls, O.	20 00
Copy of "Fyshe and Fishing," by Dame Juliana Berners (American edition)	1 50
One year's subscription to FOREST AND STREAM	4 00

CLASS C (champion class).—Open to all. Entrance fee, $3.

E. G. Blackford, Fulton Market, New York, cash	$25 00
Revolver, .32 cal., presented by Messrs. J. P. Lovell & Sons, Boston, Mass.	value not given
One year's subscription to FOREST AND STREAM	4 00
"Book of the Black Bass," by Dr. J. A. Henshall, presented by Robert Clarke & Co., publishers, Cincinnati, O.	3 00

Salmon Casting.

Open to all. Entrance fee, $3.

A finely finished, German silver mounted, hexagonal split-bamboo salmon rod, presented by Conroy & Bissett, 65 Fulton street, New York	$50 00
One year's subscription to FOREST AND STREAM	4 00

Striped Bass Casting.

CLASS A.—Open to all, under the rules applying to heavy bass casting. Entrance fee $3.

Split bamboo "Newport" bass rod, with agate tip and rubber handle, donated by Fred. Malleson, 136 First street, Brooklyn	$40 00
"The American Anglers' Book," by Thad. Norris, presented by Porter & Coates, Philadelphia	5 50
One year's subscription to FOREST AND STREAM	4 00
"Canoe and Camera," by Thomas Sedgwick Steele, Hartford, Conn., from the author	1 50

CLASS B.—Open to all persons, under the rules applying to light bass casting. Entrance fee $3.

"Remington" sewing-machine, with four drawers, hemmer, etc., complete, presented by Martin B. Brown, New York	$55 00
One year's subscription to FOREST AND STREAM	4 00
"Paddle and Portage," by Thomas Sedgwick Steele, Hartford, Conn., from the author	1 50

GEORGE R. PHELAN.

TO note the death of a contributor to the FOREST AND STREAM, is but to discharge an obligation which is owed to its readers. This would be the coldest and most perfunctory of all performances of duty, did it not also carry with it the privilege of adding a word of tribute to the memory of the departed. It is with the sincerest sorrow that we announce the death of George R. Phelan, the author of the series of "Great Swamp" sketches published in this journal, under the fanciful *nom de plume* of "A. Mule."

We have before this referred to the many peculiarly pleasant friendships which it has been our privilege to form with correspondents of FOREST AND STREAM. Not least among them did we value that of George R. Phelan. For his untimely death we feel that grief which least readily expresses itself in printed words and sentences.

Few persons outside of this office can appreciate from what a diversity of men and variety of circumstances come the letters and sketches published from week to week in this journal. The stories of "The Great Swamp" were sent to us from the sick room of an invalid; they were written—so their author told us—to while away the weary hours, and that in their composition the pain which was racking the worn frame might be for the moment forgotten. Mr. Phelan's personal letters stamped their author as a singularly gifted man, and they had about them an undefinable charm which at once won the heart. In them were the strangely intermingled hope and despair of a man prostrated with an incurable disease, and running through them all was a vein of cheerfulness that told how brave was the heart engaged in the unequal conflict. We cannot forbear to quote this pathetic ending of one of these letters written a few days before his death:

"...The trifles sent have been written during the most distressing cough and pain. ...I send what I have on hand. I am really too ill to write at all, and both Secretary of Interior and Surgeon General (private officials of my own) have forbidden further attempts.

"Thus ends a sportsman's life. One by one all have dropped, and after descending from the gun to the Faber, I have to drop *that* from a nerveless grasp. Good night."

From the Memphis *Appeal* of Sept. 26, we take the following notice:

After a brave struggle of many years with consumption, the enemy which never fails to conquer, and after much suffering and long hovering between hope and despair, George R. Phelan died at his residence, in this city, on Sunday morning last. His death was not unexpected, as nothing but his iron will and resolute determination have kept him alive for the past three months. The deceased was born at Tuscaloosa, Ala., and was about thirty-five years of age. He descended from the first families of the South. His father was the late James Phelan, of this city, a senator in the Confederate Congress, and his mother was a Miss Moore, a member of one of the oldest, most talented and highly respectable families of Alabama. It is impossible to give a correct analysis of the genius and character of this man. He had grand aspirations, and his life, from his boyhood up to six months ago, when he returned home to die, is full of adventure and romance. Of Irish descent on his father's side, his young brave heart deeply sympathized with the wrongs of Ireland, and when a boy he stole away to Ireland and was prominent in organizing the Fenian movement. He crossed the ocean twice before he reached his majority, and in the hope of restoring his shattered health he exiled himself amid the wilds of Texas, Mexico and Colorado. George R. Phelan was composed of the stuff of which heroes are made. He was the very incarnation of perseverance. With iron resolution, he set his aim before him, and no difficulty could discourage him. His life was almost a continuous living tragedy in its fierce fight with disease. Nothing but his strong will kept alive the weak and emaciated body. He had the qualities of a commander, and would have been great in perilous times, for what would have been to other men depression, would have been to him inspiration. He was fearless and aggressive, and a strong man as the leader of any cause. His mind was brilliant, his fancy was fervid, he was eloquent and forcible as a speaker, and as a writer he had but few superiors. The artistic delineation of his nomenclature; his arrangement of words; his construction of sentences, the darting fierceness with which he shot his satire, ridicule and arguments in his communications to the public always attracted attention. He had great fertility of imagination, and with a natural talent for study he never knew the cruel necessity of forsaking his favorite pursuits to earn a livelihood. Moved by a restless desire to know everything, he had ample leisure to explore any branch of human inquiry which might allure him. His mind was enriched by foreign travels, and to other rare gifts was added a wonderful memory, which made his mind a vast treasure house in which were stored rare gems, original ideas, other men's thoughts, and the bric-a-brac of the literature of other nations. Had he been blessed with perfect health he would have easily placed his name in the pantheon of fame. The constant gnawing of disease often made him irascible, but he bore his extraordinary sufferings with more than usual fortitude. It is a melancholy thing to see one so gifted have a life so brief. He was an accomplished lawyer, and but for the loss of his health he would have been eminent in his profession. We knew him well and loved him with the tenderness of a father, and deeply sympathize with the wife and children whom he loved so tenderly.

The Sportsman Tourist.

"NUTMEGGERS" ON THE OTTAWA.

ON Monday, Sept. 18, a party of four males might have been seen boarding a northward bound train near the western boundary of Connecticut. They were middle-aged men, dressed throughout in coarse, heavy clothing, blue flannel shirts, etc. Each carried a rifle and knapsack and numerous small packages, from which peeped hatchets, hunting-knives, etc. Their parting with friends at the railroad station would have led one to believe that they were entering upon an expedition of several weeks' duration. They were, in fact, business men from Connecticut, just starting out on a hunting and sporting trip up through northern Ontario by way of the Ottawa River and its tributaries. They seemed to be bent on having a capital time. Being one of the party and also a reader of the FOREST AND STREAM, I knew that you would like to have me report their trip for your columns, and have decided that I would do so without that fact being known to the others, for I knew just what troubls the war correspondents reporting General Wolseley's campaign in Egypt had experienced, and I didn't propose to be bluffed off in the way they were. Consider me, then, as a special reporter on this expedition for the FOREST AND STREAM; and you may depend upon it that I shall send you each week a straightforward, truthful account of this expedition, without fear or favor of any man.

Connecticut, like most of the seaboard States, being of late years principally adapted to the production of barn swallows and malaria, my comrades are in the habit of taking about a month's vacation every fall for health and pleasure—far away from business cares and civilization's requirements—one year to the pine forests of Northern Michigan, another to the attractive mountains and lakes of Maine, or to the gamy forests of Ontario. One of the number has, in his experience, captured and slain seventeen bears, three moose, fifty-two deer, six caribou and innumerable otter, beaver and smaller animals. The route marked out for this trip was via Albany, Montreal and Ottawa to the terminus of the Canadian Pacific Railway, which, at this date, has been pushed up into the wilderness 350 miles beyond Montreal. This route was changed somewhat by crossing the St. Lawrence River at Brockville.

Wednesday morning found us at Renfrew, an intermediate station near the Mattawaska River. Here we chartered a three-seated wagon, and with John Scott as driver and guide, we headed toward Ferguson Lake, twenty-five miles west, where we propose having a few days' sport with deer before continuing our journey up the Ottawa. Six hours of pretty rough traveling brought us in sight of the lake which lies at the foot of Mount St. Patrick. Here within a stone's throw of the shore a wanderer from the Emerald Isle, Patrick Hanrahan by name, has established a residence, and in order to introduce him and his quaint originality, I will quote an account of our party's first introduction to him when, on a similar trip last September, we had driven up as we have today. His whole-souled, generous and hospitable nature revolted at the idea of our "camping out" while he had a good log cabin and barn to share with us:

"Faith," he says, "It's not often I see the likes of yees out in this haythen wilderness, and (barrin the ould woman) yees are welcome to any and ivery blamed thing I have. I have a deer hound, the likes of which yee'll not find betwixt this and ould Ireland, and if I jist whisper in his ear, he'll put a deer into this lake for yees in the smaller half o' thirty minutes. Now do yees go straight into the cabin and put yer guns across the deer horns up out of the children's way, and before yee ken say Jack Robinson, the ould woman 'll have yees a smokin' dinner an' a cup o' bilin' tay. No yee're not aither, goin' to tint out, an' cook yee'r own fodder, not while me name's Pat Hanrahan. Here, bye, run, run as fast as iver yer legs kin carry yees, and give the gintlemen's harses some hay, and none o' yer scrimpin', now mind ye, give 'em the full o' the manger; and, Johnny, run now, run ye divil ye, and tell yer mother to put the tay kittle a bilin', there's a gintlemen here from the states of Ameriky, coome all the way to see ould Patsy Hanrahan. Well, well, well, I'll be blamed if ever I thought such a thing could happen. Ah, byes, byes, coom in, coom in, and run, Tommy, ye booger, and give Bosy a pan o' sour milk, and whisper in his ear, and tell him we'll be after givin' him a sniff at a deer as soon as the gintlemin pick their teeth. Hi! hi! hip, faith an this is a big day for Patsy Hanrahan. And here's me ould mother, five and ninety years since the day she was born, an' she's able to lick the best of 'em now, an' here's me wife and the mother of me ten children, an' she can shake her feet this minnit as illigantly as any o' yer byes and gearls in yer big city. Coom now Mary, spake to the gintlemin, and make them feel like they were in their own cabin, an' barrin yees have no objections, I'll be aither haulin' up to a cup o' tay wid ye.

"How does we be aither getting a docther here, is it? Well, well, well, Mary, do yees hear that now? Faith an' niver a bloody docther—Paddy, now run away with yees, an' don't be lookin' at the gintlemin like they was a bear in the oat lot. As I was sayin', niver a docther put his wicked hed in at Patsy Hanrahan's door. We have heaven's pure air, an' that's all we ask for. Faith, an' I will take another cup. Yees brought tay the likes of which I niver saw before. Bears, is it? Ah, in the winther ye should see them, an' ye should see the one that took me ould sow one night last winter, an' ye could hear the sides of her rippin like ye were tearin' boards off a barn. Now away wid ye, ye young ruskil, or yer tin toes 'll be fro ted before ye have yer pertees dug. An' now, gintlemin, if yee're done, the dog is waitin' for ye at the door, an' now mind! A segar, is it? Faith, Mary, an' would ye have one? It's for the like o' ye and the childthern that thim are a pleasure to. It's the black plug for me ivery time, and when I see the black, sthrong smoke curlin' up from it, thin is whin I get pleasure, but bein' as ye offered it, I'll take one just the same to remember ye by.

"An' is it in yeer country ye have apples? Faith, an' ye might have ivery blamed deer in Ontario an' welcome, if yeed only say we might raise apples here. Ah! dear, dear dear, it's a fine dhrink the juice o' that same apple makes, an' shorter wud it make many a long winther's evening whin we sit in this ould cabin wid ice four feet thick on yanther lake, and all we can listen to is the wind, and the wolves a racin' a deer over the top o' the mountain. And now, Bosey, the gintlemin are ready for ye, and begone wid ye. And now mind, do ye go wid Scott an' watch the runway above the clearin', and do ye two take that birch canoe and, and, kin ye swim? An' now do ye steer straight for the tall pine on the other shore, and thin paddle as fast as

ivir ye kin go to the first five acres above an' as soon as ye get in the rushes wid yer canoe, wid yer left ear ye'll hear the dog coming round the mountain, an' mind do ye look straight across the lake, an' about three acres above the pint, ye'll see the deer comin' in the wather. Now mind what I tell ye, if ye don't bring home that deer, it'll not be the dog's fault, and if it's a buck, and ye wound him, don't ye come to close quarters wid him, or he'll put his fut through yer birch canoe and ye'r a goner."

And thus we were then welcomed, introduced and regularly installed as members of the Hanrahan family, and started on our first hunt in less time than it takes to give the above verbatim report. And from this you can imagine somewhat the nature of our reception in the old log cabin on this Wednesday afternoon after a year's separation. Patsy was enthusiastic and hilarious in the extreme, and the next fifteen minutes' flow of language would fill a volume.

All this time while Patsy was "delivering himself" Mrs. H. was quietly preparing the "cup o' bilin' tay" for us. Some of our party have jaw-breaking but magnificent names, so I have given them the more familiar ones of Brady, Dorsey, Miner and Rerdell, and the dog—why certainly we have a dog; brought him all the way from Connecticut, but I have forgotton to mention him—we call him Rock. He is one of the finest looking members of the party. After doing justice to the "bilin' tay" and the necessary accompaniments we found that we had some two hours time before sunset. Time, we thought, for a little preliminary skirmish with deer. Our host provided canoes, and we crossed the lake, Scott, Miner and Rerdell to the southern end, Brady and Dorsey to the northern. B. G. A.

[TO BE CONTINUED.]

BELOW QUEBEC.

FOURTH PAPER.

IT is only a short run from the mouth of the St. Johns River to the Parroquet, as the distance does not exceed eight miles. This island lies at the westernmost extremity of a long chain, which once unquestionably formed, in connection with near-by Anticosti, the southern shores of the main coast line, as shown by the separate fragments forming the group of the Mingan Islands, which resemble a long strip of coast as they are only separated from each other by narrow gaps of the sea.

Even within the memory of the old settlers on the near-by north shore they once teemed with a great variety of game, which has now been almost exterminated in consequence of incessant raids made upon it by both whites and the Montagnais Indians, which tribe has made Mingan and the main land for years past their annual summer quarters. Hence they organize their hunting excursions for seals and sea birds of various kinds which once bred in great numbers upon the islands. Notwithstanding, however, these ravages which have resulted in the extermination of game, and thus deprived in a measure those fairy gems of one of their chief charms, they are still in many respects well worth visiting. In a brief excursion of ten days we managed to call on this present occasion on Parroquet, Mingan and Birch islands, which are separated by narrow straits and resemble each other in their general formation though they differ in many minor details.

Parroquet Island is still the chosen annual breeding ground of thousands of puffins, a small colony of gannets (*Sula bassana*) the herring gull and the spotted sandpiper (*Actitis macularius*) the young of which latter were barely able to fly at the time of my arrival. There were also quite a number of seals sporting about the rocks at the base of the fort-like vertically rising cliffs, by which Parroquet is distinguished from all the rest. Among these animals we noticed a very large species called by the settlers the horse-head seal. It differs both in size and aspect from the harbor, hooded and Hays' seals, all of which are equally well or better known to them. The harbor seal is the smallest species of the three, and breeds in the well sheltered coves along the shores of many rivers, where it raises one or two young. The Hays' and hooded seals are not indigenous to these parts, but arrive in March in countless numbers upon the drift ice, which is carried into the basin of the gulf by the northern currents running through the straits of Belle Isle.

The heavy detonations from the large Westley Richards express rifle, which is Mr. Bland's favorite arm, advise me soon after our landing at Parroquet, that he was paying his regards without delay to some of the horseheads, one or more of which I wished much to obtain, for the sake of their skins and skeletons. But the aim is uncertain, the round heads of the seals are only visible at intervals, they bob up and down in the uneasy swell of the sea, and rarely afford a good mark for an accurate shot My own efforts, seconded by Sharps hammerless, old reliable rifle, prove alike futile, and the skipping balls plow up the water in front and beyond the glistening round heads of the seals without doing any damage. To make up for lost time the shotgun is now called into requisition, and with its aid we soon obtain a sufficient number of puffins, murres and gannets to select a few good specimens for preservation. Although it is the beginning of August when these birds ought to be in full moult, they are still in as good plumage as in the spring, and we notice even no pin feathers when we skin them. Heavy shot is needed to penetrate their thick coats, and they will often manage to get away with quite a number of No. 6 pellets in their bodies.

We pass the larger portion of the day upon Parroquet, but as there is no anchorage for the Gasbet, and as the sun is getting low, we return aboard after our hasty call and square away for Mingan Island, which is only a couple of miles to the eastward. As there is an excellent bit of land-locked harbor on its west end of sufficient depth to float a boat, and as carrying facilities are also very superior, we prepare to remain there a few days. There is on Mingan Island a total absence of all mosquitoes and black flies, and an abundance of good water and driftwood along the beach, although not a single tree or shrub grows upon its bleak and exposed surface. To the northwest it rises in bold relief, forming a distinctly marked terrace with an ancient ridge of cliffs overtopping it, which shows the outlines of its former beach line as clearly as when the primeval waves dashed against it. Many isolated and curiously carved out rocks bear additional testimony to the unwritten history of its remote past and the manner in which they were then acted upon and undermined by the action of surf and frost.

The surface soil of Mingan Island consists of decomposed limestone, lightly covered with rotten vegetable mould. Upon this flourishes to a thickness of a foot or more, a soft, yielding vegetable growth, composed of gray and green lichens and mosses, which are closely interlaced by a network of trailing branches of dwarf birches, willows, shepherdias and like shrubby plants. Wherever these are not monopolizing all light and heat and encroach upon the less favored species, a thick, soft carpet of crowberries, cranberries and worthleberries, dotted with innumerable bright-colored flowers, hides every inch of the cold, bare rock.

The stems and foliage of the tender nurselings of this inhospitable region are deeply imbedded into the warm folds of the mosses, and their blue, yellow and purple blossoms are glowing like so many bright stars upon the sombre background of the dark green sward.

The noon of this floral honeymoon is, however, fast waning, although we notice still a fair number of blooming species, consisting, in the beginning of August, chiefly of blue bells, white yellow-eyed dryas, stonecrops, andromedas, calmias, wild roses, and bright, yellow, shrubby potentillas. They all bloom here and there, almost side by side, as the dry soil is varied frequently by many little boggy patches which are never dry.

Wherever the rocks themselves are exposed to view, as is the case near the seashore, they reveal an abundance of fine fossils, belonging, evidently, to the Lower Silurian, and if anyone who desires to make collections of them were to come here properly provided with heavy hammers, powder and fuse, he could gather quickly a great amount of beautiful fossil remains. On the northwest corner of Mingan Island, which is covered chiefly with the debris broken off by frost from the near-by cliffs, we saw immense accumulations of almost perfectly preserved large orthoceratites of elegant patterns, piled up here and there in confused array like as many small, loose sticks of square-cut firewood. Some of these were several feet in length, all hollow and literally studded on their inside with rosettes of transparent, calcite crystals. Large detached fragments of calcite, with perfectly formed crystals of larger size than those from Derbyshire, lie here and there fully exposed upon the surface, where they have been apparently tossed and broken up by waves and action of frost. Notwithstanding our entire want of much needed tools, we yet gathered here in a few hours a sufficient number of fine specimens to fill a large box—a mere fraction of what could have been done with a better outfit.

Mingan Island, called by the natives Bald Island, is, as stated above, devoid of all arborescent vegetation, hence its name. For this reason its temperature is both day and night several degrees lower than that of any of the near-by islands, and not a note of a single mosquito is ever heard to interrupt the pleasant cool siestas we take stretched out at full length upon its velvety turf.

It would be difficult to explain this local absence of all higher vegetation when the nature of the soil is the same, and when the surrounding water shows no appreciable variation of temperature. There are also, on account of its absence of trees, barely any land birds to be seen. A few Savannah sparrows were the only species I noticed in the scenery along the shores. At low tide in particular, which exposes many mud flats, the tableau is, however, more animated owing to the presence of large flocks of the red-backed sandpiper (*Tringa alpina*) and a few marbled godwits and curlews, which just now commence to migrate and make their appearance on this coast. The eider duck is also occasionally seen. They breed here. Their young are now full grown, and a handful or so of the soft down indicates here and there the site of their old nests. The red-backed sandpipers have just now arrived from the North and are still very tame. A few charges of coarse shot fired into the midst of the densely packed flocks soon supplied the larder, which had been previously added to by a great number of fine lobsters captured by Fred Beatty at low tide underneath the boulders which line the beach. Of the many spots where, during the sweltering heat of mid-summer, a cool retreat might be enjoyed, Mingan Island would certainly take the palm. In point of bracing, invigorating air it surpasses all the rest of the many health resorts along the whole length of this coast from Quebec to the Straits of Belle Isle, and although the nights are cool enough to render a double blanket comfortable, excessive changes of temperature during July and August are never experienced, and the temperature of day and night varies only a few degrees. It is a sanitary paradise for all afflicted with dyspepsia, and our appetites increased greatly under the stimulus of the cool oxygenated air, which seems to infuse fresh energies into every fibre of the body.

With the help of botanizing, hunting, fishing, and collecting, our time passes rapidly among these islands, where we have all the luxuries of tent life, unmarred by the many inconveniences which so often attend the same when preparations are insufficient to insure the full enjoyment of bodily comforts.

There are, no doubt, many campers who prefer what is termed "roughing" in the harshest sense of the word, who content themselves with a blanket and a teakettle for an outfit, and find their recreation in the personal attendance to the laborious details of camp life. We differ from these views, and prefer to increase our appetite and health by help of more legitimate means. There is no need to leave our back yard if the cutting and splitting of wood, the cooking and washing of dishes is our chief object—all of these exercises may be performed equally well at home, where, however, we cannot attend to gun, fishrod, and collecting-box in our premises. I prefer, if needed, to get up an appetite by a long tramp along the shores, through fields, woods, and swamps, and to sit down after my return to a plain but well-cooked supper, in preference to the crude messes which form so often the bill of fare in tents. We have not always been bedded on roses, and remember well the time when a couple of old tin cans made up our entire outfit of cooking utensils on a journey of several hundred miles, in a small open boat, along the eastern shores of Florida. But this is no reason why we should have enjoyed these privations and look in regretful mood upon our present improvements. The sweets of life are ever few compared with its drawbacks, and I, for my part, subscribe to the epicurean platform, and prefer the camp where all my personal wants are supplied to the one where the reverse obtains. This was the case here in its fullest sense, and the days seemed thus to shorten into hours which flew past only too quickly, perhaps never to return.

We spent a couple of weeks on this excursion among the islands, and taking advantage of a fine breeze from the northeast ran back safely into the St. Johns River to prepare for our return to Gaspé in the Kate, which had been ordered to call for the party. There were, fortunately, a few days to spare, and these were devoted to trout fishing, which had been temporarily suspended, and is here still in its prime. The mouth of the river fairly swarms with them. They run out and in from the sea in its ebb and flood tide, and prefer over and above all just now the fly to the most tempting bait. The sea trout attains occasionally to a weight of seven pounds. The average is about from two to three pounds, and fish of such a size afford good enough sport for a few days, at least. Any large salmon fly is preferable to the small regulation patterns of trout flies, and rigged out with such, backed by double salmon leaders, there is no danger of going back with empty creel. The very perfection of sport is attained when fish ascend the river *en masse*, and when we get in the very center of a great shoal with a good man in a light canoe. Hundreds of beautiful large-sized trout may then be seen splashing all around the boat, all eager to rise to the trailing fly, which often scarcely touches the water before a five-pounder is hooked. In the latter end of three consecutive flood tides, or about seven hours all told, three rods took four hundred and fifty pounds of sea trout. All of them were as gamy, and if anything more vigorous than the most lively brook trout. To the novice this was indeed a great achievement, which, however, the veteran anglers, in recollection of their forty-pound salmons, viewed as mere child's play.

While waiting still thus agreeably occupied for the arrival of the Kate, and varying our sport with an experimental codfishing trip, which netted a ton and a half of flesh gross weight, an easterly wind favored among other arrivals, that of a fine sloop-rigged yacht direct from Natashquan. This vessel was purchased a couple of months ago by Messrs. Hope Vere and Morrice, both of whom were fresh from Cambridge University, and had started to wind up their commencement exercises by an initiation into the mysteries of salmon-fishing. They landed at Quebec in early June and made inquiries about a steamer which they might engage for a passage to their leased stream. But no less than the modest price of $800 was asked of them by the owners of the coasting steamer Otter, which makes regular semi-monthly trips along the north shore from Quebec and extends by schedule her journeys within about 150 miles of the Natashquan River. In plain words, an extortion price of $800 was asked to carry a small party of four men to and fro at a distance of only 150 miles in a vessel, whose running expenses, judging from her looks and size, ought never to exceed fifty dollars per day. To avoid this imposition the stranger sportsmen purchased and manned a new and well fitted out sloop in which they took a sail 600 miles below Quebec to get the value of their investment. They report a catch of 365 fish, averaging about 14 pounds, and succeeded in making in less than six weeks the best score of any thus far ascertained.

By calling on their way back for a day or two at the St. Johns River, we had the pleasure of meeting them. Their past excursion is only an initiation into a projected tour round the world, including a tiger hunt in Bengal, upon which they naturally look as the culmination of their prospective adventures. Though still novices in such wild sport they are yet in virtue of their athletic frames admirably equipped and will no doubt acquit themselves handsomely in any face to face encounter with their ferocious prey.

There was of course a little stag party given in honor of their unexpected visit, and the bill of fare on this occasion might well be calculated to create some surprise in the mind of any one who labors under the illusion that seal oil and codfish is the staple article of daily diet on the lower St. Lawrence. We remember among the various items of our spread fresh roast mutton, codfish tongues, a rice pudding plus eggs, canned fruits and jams, and last though not least a large dish of delicious fresh wild strawberries, the first of the season, backed for a dessert by some fine cucumbers and cauliflowers. The latter dishes came from the hotbed of Mr. Conway, the agent at St. Johns, who succeeds to raise under glass as fine garden vegetables as are sold in the New York markets. All these luxuries, some of which had been imported from long distances, were properly diluted with a few bottles of dry Verzenay, the only survivors of a once numerous tribe. Coffee with Havana as suitably finished this memorable repast, to which I have only adverted on account of its novelty and completeness in such an out of the way place. We met our friends once more on the River St. Lawrence, where they were in the unpleasant environment of a thick fog, with a strong gale dead ahead and no harbor under their lee. By the opportune kindness of Capt. Wakeham, the commander of the government steamer La Canadienne, they were, however, promptly relieved from their embarrassing position and towed into the beautiful and secure harbor formed by the land-locked bay of the seven islands.

I have made occasional mention of this vessel, which, in connection with two more (the Druid and Napoleon), is employed in the interest of the fisheries along the coast of the Gulf of St. Lawrence as far as the Straits of Belle Isle, the terminus of the jurisdiction of the Dominion. But not only is it the mission of the Canadienne to report upon the various matters connected with statistics of fisheries, but she is also a sort of an armed floating commissioned police force, to maintain order and the authority of the government in these remote parts. To accomplish all of these tasks efficiently there are but few idle days for her during the summer beyond those needed to lay in a fresh supply of coal. This enables her to move rapidly from station to station, to make pertinent inquiries, and adjust the various difficulties which arise from time to time, where large bodies of reckless men are controlled by only a few responsible agents. She even brings, wherever and whenever needed, medical and surgical relief to the distressed settlers, as her commander, Capt. Wakeham, is the only efficient professional physician capable to administer the same.

It costs the city of Buffalo, N. Y., annually a trifle of over $250,000 to maintain law and order in a community of about 170,000 people scattered over about five square miles; but here I am assured that an annual appropriation of a little over $25,000 is all required to patrol and guard the social welfare along a coast line of over one thousand miles, not counting the various enumerated duties devolving all upon one single man. Since I had, for a few days, the good fortune to exchange the prospective narrow berth on board of the Kate for the commodious, tidy cabin of the La Canadienne, I was thus able to gain a fair insight into the manner in which her complicated task is so efficiently and economically accomplished. My only regret was this, that there was so very little delay at any of the various stations at which we called, and that we rarely made any stops exceeding two hours. I am thus not well qualified to speak authoritatively upon the resources and features of the Magpie, Sheldrake and Moisie rivers, at which all told we hardly remained half a day. At the latter I saw very comprehensive but now abandoned works for the reduction of iron ore. I am assured that their erection involved an expenditure of

over half a million dollars, but none of the sanguine expectations entertained by the shareholders were ever realized. The transportation of fuel from great distances, the shipment of the reduced ore to Quebec, which is the nearest central depot of communication, and also the want of sufficient quantities of workable raw material, presented so many stumbling blocks, and led to the complete abandonment of an enterprise of which so much had been expected, but from which virtually nothing but unpaid debts were realized.

The ore itself turns up at various points along the shore of the gulf in form of a black magnetic iron-sand, comminated into its present fine-ground state in the course of long ages. It has probably never been correctly determined how deep the superficial layers extend which fringe the shore, close to the water's edge; but it was left to the happy illusions of the stockholders that they were inexhaustible. If any of them had only taken the pains to visit some of the great iron ore deposits in the mountains of North Carolina, where there are innumerable deposits awaiting development, and lie unused because they are not near enough to any trunk line of quick communication, they would have probably thought twice before engaging hap-hazard in a scheme which was scientifically and financially unsound to its very bottom.

I called at Seven Islands just in time to witness the departure of a large number of Montagnais Indians, men, women, and children, for their winter hunting-grounds. They presented a spectacle of the most abject human misery and squalid, ragged appearance imaginable. The great forest fires of last year had destroyed the game in their regular hunting and trapping grounds, and, as a consequence, they came back half starved and without furs. At the agency of the Hudson's Bay Company, at Seven Islands, the usual advance of provisions and clothing has been withheld this summer on account of the unreliability on the part of the Indians to ever fulfill any given promise to pay debts, and some of these families, consisting of half a dozen or more members, leave now for a six months' sojourn in the far, icy wilderness, with nothing more than a barrel of flour and some ammunition. How they will manage to survive is impossible to say. It is fair to assume that more than one half must perish, as the bare necessities to maintain life are lacking. L.

IN THE OLD VIRGINIA LOWLAND.

WHAT a picture comes back to my mind of an old ancestral Virginia plantation as I sit on the porch of ye ancient place called Tower Hill—an old home, the typical Old Dominion dwelling in the ante bellum days, when a rich Virginian counted his broad acres by the thousands, his sable servitors by the hundreds, his horses by the score, and he lived his life like a baron of the good old age of Squire Allworthy and Squire Western, though with more refinement and style than the sixteenth century possessed.

A big plantation was the Tower Hill. The house, like most planters' mansions, was of that order of architecture brought from Holland by the Dutch, with steep gable roofs and small dormer windows. A wide, spacious lawn of twenty acres surrounds the dwelling.

In its time the plantation comprised a goodly settlement; a blacksmith and wheelwright shop stand side by side; a weaving-house, cotton-gin, clothroom, spinning-room and stillhouse, while back of all the servants' quarter runs. Neat log-cabins they were, with garden in front. The stables, out-houses, cotton-barns, machinery-rooms were scattered about in independent irregularity. Most of these structures are mouldering down now, and a few lie prone upon the ground, showing only too plainly that the ancient regime, with all of its splendid faults and noble virtues, is gone forever.

The typical Virginian of those days was a thorough sportsman. After his morning ride around the place he had nothing to do, and his horses, dogs and gun in bright weather and his library in foul constituted his employment and pleasure.

Here, in Sussex county, was the finest hunting probably in all the Middle States, for the county is not only adapted for the propagation of game, but was very thinly settled, the few estates being of immense area, chiefly devoted to the production of cotton. Then, again, the landowners stringently enforced the game law. The slaves, of course, were forbidden to carry or possess any firearm, and confined their hunting operations to the legitimate darkey game—the 'coon, the rabbit and the 'possum. The poorer class of whites could not afford to keep dogs, and so the whole preserves were for the pleasure and sport of a very few rich landowners.

Deer were the chief in the list and were so plentiful that a dozen were frequently killed in a day by a small party of three or four. It was not then the uncertain sport it is now, for at that time, the land being under cultivation and inclosed with what is known as the Virginia snake-fence, the deer avoided them, so that in the drives the sportsman always knew exactly where to stand.

The fields teemed with birds. In the winter time there were at this place frequently dozens of partridges, in large coops, that were kept in high condition and turned loose in the spring—thus the supply was always kept up. The hunting was splendid—at that period the canebrakes and impassable morasses were cleared, and the birds had not an impenetrable fastness to fly to when flushed. Big bags were the order of the day. Even with their Joe Manton muzzle-loaders, fifty birds to a gun was no uncommon result of a day's hunt.

And the fox-hunting was something to thrill our hearts now to think of them. They were grand affairs, these gatherings of the neighboring gentry, called "meets," and were to the master what the corn-shucking jubilee was to the slave. As many as one hundred and fifty hounds, the property of the planters for fifty miles around, were often in full cry after a single fox. Imagine, if you can, the ecstatic music from such an orchestra as that. If there are any sweeter, more tuneful notes in this terrestrial sphere of ours, human ears have never heard them.

The grand sweep of the grounds and the picturesque mansion are all that remain of the old plantation; the busy hum of life, the sound of the blacksmith's hammer, the whirr of the spinning-wheel are no longer heard—while the old mammy, that autocrat who queened it over all, has disappeared—even the master and mistress acknowledged her sway—for had she not raised them from puling infancy to lusty man and maidenhood—and on her sympathetic bosom had not their tired childish heads ever found a resting-place! Ah, me! the vision of that aged but erect figure, clad in brigit calico, with a gaudy bandana handkerchief covering her grizzled head, rises before me now; then the stately butler, with his Chesterfieldian manners; the proud coachman, the envy of the field-hands; the fat cook, no unimportant personage, I can assure you; the likely maid servants, and the whole tribe of pickaninnies—have all gone and vanished in the dim past.

An air of Sabbath-like stillness broods over the quaint old place, a half a dozen hounds lie stretched out under the shade of the trees, a couple of setters are snapping at the flies on the porch, three or four horses graze contentedly on the lawn, while a tame fawn is gamboling on the green.

Throughout these mutations the love of sport has survived all changes, all vicissitudes. The stable where eight hunters fattened in the stall, now has one, which is used both as a riding horse for the ladies and to follow the hounds with.

The splendid gamekeepers have gone the way of all the rest, and a deer a week is about the average in September. Where there were a dozen just after the war, there is one now, and the ubiquitous darkey is the cause. They never work until forced by hunger, and live always in cabins in the woods. Each African is the possessor of an old army musket and two or three mongrels, who will chase anything from a squirrel to an antlered buck. It is a common thing to pass in one hunt a dozen negroes with their gangs of curs scouring the woods and old fields for deer—or meat, as they call it—and a cordon of them watching for the game to pass. Their weapons are loaded with all kinds of shot, mostly squirrel shot, and they pepper every deer in the section, and the consequence is, that one rarely kills a buck or a doe without finding a pound or so of small shot in the carcass.

They shoot anything, even a wild turkey hen sitting on her nest.

The formation of a darkey's stomach is as different from that of a white man's as a Congo African's head is from the skull of the Anglo-Saxon. The lowest class of negroes have no desire for fixed meals. They eat when they are hungry, and will often get up at 2 o'clock in the morning and scoop clean the hominy pot.

No white man can go to work without breakfast. Such an attempt will surely result in a faintness or nausea, but the colored man and brother can labor on for hours without eating. I have often heard one say in the harvest field:

"Hum! Ise gettin hongray. I haint eaten nuthin sence yestidday."

Then they have neither imagination nor anticipation, for they go to sleep the minute they are at rest. Where game is plenty they subsist entirely on that, and in many of their cabins there has not been a dust of meal for two weeks.

The only species of bird that is safe from them is the partridge, and as there is rarely a deep snow in this section of the State where they can track them, Bob White walks the field in full security against their ancient, brass-mounted, straight-stock, hard-triggered musket, that throws three ounces of shot and makes a report like a six-pounder.

I have never in my life seen the partridges so numerous as they are in and around here this year, and there will be fine sport this fall.

There are but few sportsmen in this section, young George Blow being the foremost. Over fifty pair of antlers decorate the porch, the result of his gun.

On the side of the barn are spread out and nailed up sixty-three fox skins, all of which he caught in one year.

He has eschewed hunting now, and presented the pick of his trained pack of hounds, six in number and probably the finest-drilled dogs in America, to Mr. Harry Ferguson, of the Baltimore F. H. Club. CHASSEUR.

SUSSEX COUNTY, Virginia.

THE WOLVES OF BYWYA.

I WAS much pleased with an article by "A. Mule," entitled, "A Swamp Episode," in your issue of August 17, as it carried me back to my life in that glorious hunting land many years ago. I have hunted through the counties of Winston, Lowndes, Oktibbeha and Chickasaw. I once had three months of hunting life in Oktibbeha with three the best friends God ever gave to man, which forms the brightest period of all my life to look back upon. It seemed to me that the sun never shone upon such a stretch of hunting territory as lay between Mayhew prairie, south of Starkville, and the center of Chickasaw county. The two great swamps, Trimcane and Bywya, meet in the northern portion of Oktibbeha, and together make a stretch of forty miles of continuous swamp averaging from one-half to two miles wide. These same dear friends—two of them long since dead, with the one still living in Texas—were types of that generous and manly growth which seems to prevail among the better educated Christian families of the South.

I speak of the far-back ante-bellum days, and presume that the same holds good still. I never knew their like for downright unselfishness, generous impulse and kindly nature. They were young, but full of strength and self-reliance, and no labor was too great which gave me any gratification.

I would like to tell you of one little incident of a hunt which continued through fourteen days with these same three friends, and which was an exciting experience to me. There were in the South two kinds of wolves, the black and the gray, or tawny, and it is well known that they have great antipathy to the dog more than to any other animal, and will take his track whenever they cross it and follow it, and if a number of them can gather in time, woe be to that purp, for he must either find shelter at once or be very fleet of foot.

We had established our camp just at the junction of these two great swamps—Trimcane and Bywya—and were having very exciting drives by day and fire hunting by night. Deer were much plentier than birds or squirrels are in our Northern woods. I counted from thirty to fifty a day. Two of us had been out on a fire hunt until about midnight, leaving the others in camp, and when we returned, as we rode into camp, we noticed that one of the hounds had broken his tether and was gone. We were some twelve or fourteen miles from any plantation, and we knew he had taken our track and was probably then three or four miles from camp. Calvin, our oldest boy, very quietly remarked, "Now, look out for fun; the wolves will bring him into camp on the double quick, or they have got to be pretty sharp if they catch him." We began blowing our horns to give the hound our direction. In about ten minutes, and while we were listening, a wolf far up the swamp gave a long, mournful howl, and was answered by one a mile off in another direction. Soon one gave a sharper, quicker note, and was answered by a number in different parts of the swamp. They seemed to be all gathering in the direction of the first wolf. Then a long, querulous note and the whole pack broke into full cry, and it seemed that a hundred of them were on the poor dog's track and rushing him down the swamp toward us. Such clamor and noise from such infernal throats I had never listened to.

Stirring up the fire and snatching up our guns we stepped to the bank of the slough—for we were camped just in the edge of the cane—and waited the finish of this race for life. Pity for the poor dog was uppermost and we fairly raged with a desire to get a shot at the wolves. If his strength and speed held out—and they were coming like a hurricane—he would reach us before they gathered on him. But we could not forget—

"Their long, low gallop that can tire,
The hound's deep hate, the hunters' fire."

And we trembled for the poor dog. On they came, a hundred black throats in full cry. We cocked our guns and strained our eyes to pierce the darkness and gloom of the swamp beyond. Then suddenly, as they came nearer and nearer with a rush, pell-mell and hubbub most devilish, dog and wolves piled into the slough before us and Calvin on top of them. We dare not fire, lest we should kill the generous fellow as he stamped and struck with clubbed gun in what seemed such an unequal contest. The poor dog had but barely made it and his life was saved; but we did not kill a single wolf We could hear them all around us in the cane whimpering for the rest of the night, but were not disturbed and did not fear them. H. B. S.

MARIETTA, O., Oct. 3, 1882.

UP IN THE ROCKIES.

THOUGH I promised to send you sketchings of my rambles in Colorado as anything occurred worth noting in the line of field sports, I have up to the past few days not attempted to do more in hunting and fishing, than to wear away the summer months by rambling about the banks of the beautiful and historic stream, the Rio Grande, whose bright waters swept along one side of this quiet little village. Occasionally I have amused myself with the rod and fly, whipping the rapid shining current for those gamy little paragons, the speckled trout, whose number seems to be countless in all the mountain streams, especially in that of the Rio Grande. I have had no field companion, except an occasional stranger, who might chance to halt here for a few days on his way up the river to the so-called Wagonwheel Gap, and sometimes above to Antelope Park; the gap being thirty miles above here and Antelope Park about thirty miles above that, all on the Rio Grande River, and it being understood that the higher up on the river the better the fishing. All tourists and parties coming out here, to have a full benefit, strike at once for the head waters, some stopping for a few days at this point, but the larger portion going directly on. This is, so far as my experience goes, mostly a matter of fancy. I found at all times sport enough here, until indeed it ceased almost to be sport, because of success being so common and so easy acquired that really to me it grew stale, and rather impressed the idea of cruelty instead of sport, legitimately speaking. At any rate I always caught all and more than I had any use for unless I should condescend to become a potter and express them to Denver and sell them, at which place they are always in brisk demand at remunerative prices and great numbers were sent there by the pot fishermen during the summer, expressed by the Denver & Rio Grande Railroad from this point.

Thus the summer months have been spent in this quiet little village of the foothills of the great Rockies, the climate of which is the most delightful for a summer residence that could be desired. At length my expected party of friends arrived about the latter days of August. The company consisted of the following gentlemen: Col. Tom Steel, Sr., Tom Steel, Jr. and Frank Cook, of Little Rock, Ark., and R. McDonald, of Kansas City, Mo. They came to spend September at least in the sports of rod and gun, and accordingly, as soon as full preparations were completed, the above four and myself started for Wagonwheel Gap. The road was fine, partly rail, the rest buckboard. We arrived the same day, Aug. 26, at that paradise for sportsmen, especially those of Waltonian proclivities, Peck's Hotel, one mile below the famous Hot Springs. We spent the following day trouting. Peck, the jovial and accommodating landlord, who keeps a good, clean, neat house and excellent fare, and full teams of horses, wagons, burros, etc., readily outfitted the party with wagons and sent us up four miles above the gap, where he said the very best fishing was, and so we found it to be. Taking lunch with us we spent the day casting the fly on those bright waters with success. On returning to Peck's our sacks were emptied and the fish counted. They numbered 207, and weighed 104 pounds, several weighing separate 2½, 3, 3½ and 4 pounds. One weighed 5½ pounds, and was what the small boys call a whopper.

The fish were turned over to Peck, and the next morning, August 28, we commenced to outfit for the mountains, which we found to be, "sure enough," real mountains. Our entire kit, consisting of cooking utensils, tent, bed and bedding, together with provisions, gun, etc., were packed in pack saddles, on five little burros, while each of us was well mounted on good, gentle horses, all except Cook, whose horse was a burro. We left Peck's Hotel at 8 A. M., traveled up the river five or six miles, leaving the valley or rather the river at mouth of Bellows Creek, that reaches the river through a terrific canyon, with solid rock walls three thousand feet high. Here the mountains set in on all sides. Above and to the north of the canyon a half mile a little old buffalo trail was perceptible, and along this we commenced to climb the immense mountain before us. The 3,000 feet we must ascend along that trail, which was not more than one foot wide, between rough ledges of rock and along the margins of yawning precipices, McDonald leads the way, Col. Steel next, then the five little faithful burros, each without bridles or halters, and under a pack as large as himself, and weighing 200 pounds, and close at their heels tramps Tom Bim, the burro handler and our guide, whose Mexican lingo seems to be as perfectly understood by these little donkies as one Mexican understands another; they never refuse implicit obedience. Cook and Steel, Jr., and myself creeping along in the rear, our horses puffing and blowing like small steam engines. Looking away up at the ascending train and at McDonald, reminds one of Napoleon ascending the Alps; his horse with terrible effort struggles up an ascent whose angle is not much less than forty-five degrees.

At last we reach the summit of Bellow's Mountain and pause while our stock "blow" and take a little rest. Soon, however, we are ready to proceed again along that little trail that now lends obliquely down the side of a steep, sharp gorge, from the bottom of which we again ascend as before. Then reaching the summit of at least another thousand feet, and turning west along its crest and traveling about three miles over the most terrible rough rocks and through a dense forest of spruce timber, suddenly we debouch into broad, beautiful parks, covered with beautiful and luxuriant grass and dwarf willow. We camp on the

margin of the park near a small pond of clear water. Looking at my watch I found that it was four o'clock, and that eight hours had been spent on the trip. Our tent being hastily pitched, a roaring fire made of seasoned spruce logs, we partook of an enjoyable supper of broiled bacon, bread and coffee. By this time it was becoming dark, and snow commenced falling, which continued at intervals all night.

The morning of August 29 opened dark. A dense fog or rather cloud enveloped the entire mountain on which we were camped, the altitude of which was over 11,000 feet above sea level. On the mountain lay a snow four or five inches in depth. A little inspection in early morning developed the fact that within forty yards of our camp were two good sized bear beds, which the bears had probably left the evening before unobserved by us, as we approached the place. This fact naturally enough produced at once an excitement in camp. A hurried breakfast was swallowed and all hands sallied forth to the woods, each man eager to kill a bear to begin with.

I also started on the bear hunt, but as my gun was a twelve-bore, I reconsidered the case, and as I also concluded that I could not remember having lost any bear, returned to camp willing to decline the honor to more enthusiastic amateurs. In less than three-fourths of an hour I heard the crack of a rifle and directly another, and pretty soon another, then a yell and a whoop. Very soon three of the party arrived in camp reporting a dead bear, and the last rifle shot had killed a fine deer.

By twelve o'clock the clouds had cleared, the snow had very nearly all gone and the bear and deer had been packed into camp. All went out in the evening. Nothing more was killed, but a number of deer reported seen; 30th, McDonald who had killed the bear, killed a deer, and Col. Steel two deer; 31st and 1st September, three more deer killed, and 2d killed two fine deer, and as we now had all the game that we could pack in with concluded to go into Peck's, our headquarters, and rest a few days and return. So leaving our tent and beds, blankets, etc., all packed on an improvised high bench or scaffold, brought up the five burros, and loaded them with all the meat they could carry and balance hung high up on poles, and took the back track to Wagon-wheel Gap, when after a terrible zigzag, break-neck, reckless ride we arrived all safe at Peck's, where we rested quietly for three days. The further arrangement was to return on the 5th September, which we did, and the result of which will be detailed in my next. R. T.

DEL NORTE, Colorado, Sept. 1882.

Natural History.

BIRD MIGRATION IN THE MISSISSIPPI VALLEY.

COMPILED FROM THE NOTES OF MR. O. WIDMANN BY W. W. COOKE.

PART II.

(24) *Hylocichla mustelina*—Wood Thrush.—S. S. common; 4, 22, F. not numerous, the van only has arrived; 4, 24, still scarce and not yet in song; 4, 26, more numerous; 5, 2, not in full numbers and song seldom heard; 5, 4, numerous and in song.

(33) *Hylocichla fuscescens*—Wilson's Thrush.—T. V., 5, 3, F., two migrating; 5, 9, two migrating; 5, 18, L.

(23) *Hylocichla ustulata swainsoni* and *H. aliciæ*.—T. V. very common; 4, 21, F., one seen; 4, 26, more numerous; 4, 27, more conspicuous and singing; 5, 2, in many places, but small numbers; 5, 3, very numerous, especially var. *Swainsoni*, now at height of season, that is, as numerous as they ever will be; 5, 5, migrating individuals seen; 5, 9, to 5, 14, many every day; 5, 23, still numerous; 5, 24 and 25, numerous; 5, 26 and 27, only a few; 5, 29, still a few; the last left before 6, L.

(14) *Hylocichla unalascæ pallasi*—Hermit Thrush.—T. V. irregularly common; 4, 4, F.; 4, 6, more seen; 4, 7, one seen; 4, 9 to 4, 14, a few more met with; 4, 18, no increase and not conspicuous; 4, 22, a party of four in a pasture; 4, 25, L.

(2) *Merula migratoria*—Robin.—R., but mostly S. S., a few stay in mild winters; 2, 25, F., two males; 3, 4, great arrival of flocks and first song; 3, 4, was the day of robins, they were seen and heard everywhere; 3, 20, heard everywhere, but still no migrating flocks; 4, 2, large migrating flocks are here; 4, 3, seem to be restless, flying to and fro in all directions; 4, 4, still numerous in flocks; 4, 7, mostly gone; 4, 15, a new migratiug flock of twenty-five; 4, 22, migrating flocks again seen; 5, 2, sits on eggs, male sings morning and evening; no more flocks; 5, 12, fledged young on lawn.

(17) *Mimus polyglottus*—Mockingbird.—A few stay in mild winters (1877-8 and 1-81-2). The great numbers arrive in March and April, very irregular. Once seen 2, 10, but may have been an escaped cage bird; 4, 7, F., three males and females, one male in song; 4, 17, found building, 4, 18, a little more numerous, but still scarce; 4, 24, ranks fill up, females arrived, males are noisy; 5, 2, not all arrived, the earliest comers are building.

(24) *Galeoscoptes carolinensis*—Catbird.—S. S. very common. 4, 22, F. not numerous, the van only has arrived; 4, 24, still scarce and not yet in song; 4, 26, more numerous and singing; 4, 27, males singly, singing, no females; 5, 2, about one-half of S. S. are here, singing often, but not excited; 5, 4, full numbers and flock of migrating individuals; 5, 10, first egg.

(7) *Harporhynchus rufus*—Brown Thrasher.—S. S. very common. 3, 13, F. one bird silent on ground at old stand; 3, 18, two seen, first song; 3, 20, a little more numerous, but none migrating; 4, 2, no increase, not ten per cent. yet arrived; 4, 3, N. N.; 4, 6, wild with song and seen in pairs; 4, 9, the most conspicuous songsters, hundreds populate the gardens, parks, etc.; not uncommon to hear three to six at the same time. They ascend to the tops of the highest trees and sing in such an earnest way, and with such an energy, that it makes one think they must sing for a certain purpose and not for mere pastime; 4, 15, building; 4, 22, besides our S. S. which have nests (first set of eggs to-day), flocks of migrating individuals are met with in brier patches, hedge rows, etc.; 5, 2, on eggs, no flocks, a diligent songster.

Sialia sialis—Common Bluebird.—R. Great numbers stay all winter. They became gradually more and more numerous during February, and are now in full force since 3, 3, which day may be set down as the first day of warbling bluebirds. They were seen and heard continually all day and everywhere; 3, 19, full numbered, pairs are found at all the places which they frequented in former years, no migrating individuals observed, all are S. S.; 4, 8, first egg. They now keep pretty quiet and silent except in early morning; 5, 2, feed young in nest.

(14) *Poliuptila cærulea*—Blue-gray Gnatcatcher.—S. S. 4, 4, F.; 4, 6, more seen; 4, 7, two seen; 4, 8 and 9, seen at different places, and places where they do not breed; 4, 9 to 16, a few met with; 4, 21, males in full numbers and quite noisy; 5, 2, building, no migrating individuals.

(12) *Regulus calendula*—Ruby-Crowned Kinglet.—T. V. 3, 28, F., from then to 4, 2, increasing in numbers every day; 4, 3, singing; 4, 4, everywhere—heard song at ten different places; 4, 7, N. N.; 4, 9, more and more numerous, not in flocks, but everywhere—in gardens, on trees, by roadsides and in woods. Their song is now much more beautiful than that heard in March. 4, 21, about same numbers since first part of month; 4, 22, noisy and conspicuous; 4, 27, decrease; 5, 3, a few only left at certain stands; 5, 4, one bird; 5, 5, migrating individuals; 5, 9, L.

(9) *Regulus satrapa*.—Golden-Crowned Kinglet.—T. V. 3, 16, F. one seen; 3, 18, one; 3, 23, one; 3, 31, L.

Lophophanes bicolor—Tufted Titmouse.—R. Equally numerous in winter and summer, but "peto"-ing in excitement since 2, 25; 5, 2, have eggs, males are still noisy.

Parus atricapillus—Black-Capped Chickadee.—R. 3, 7, goes in pairs and full of music; 5, 2, have eggs, but the males still keep singing.

Sitta carolinensis—White-Bellied Nuthatch.—R. Seldom seen, as it is very retired.

Sitta canadensis.—Red-Bellied Nuthatch.—T. V. Irregular; no record for '82; for '79, 4, 25, F.; 5, 10, L.; and for '81, 5, 2, F., 5, 6, L.

(9) *Certhia familiaris rufa*—Brown Creeper.—T. V. almost W. S. 3, 16, F., one seen; from 3, 20, to 4, 2, four seen; 4, 7, L., two seen.

Thryothorus ludovicianus—Carolina Wren.—R. 3, 7, its loud whistle heard very often; 3, 15, carrying building materials; 5, 2, young in nest, males as noisy as ever.

(11) *Thryomanes bewicki*—Bewick's Wren.—S. S. 3, 20, F., one singing at old stand; 4, 2, full numbered at old stands; 5, 2, rather stingy with its little song.

(17) *Troglodytes ædon*.—House Wren.—S. S. 4, 7, F., one male; 4, 9 to 16, a few met with; 4, 18, a little more numerous but still scarce; 4, 20, twelve males; 4, 21, not one-half of full numbers; 4, 22, heard to-day everywhere; 4, 24, ranks fill up, females arrived, males are noisy; 4, 28, N. N. everywhere; 5, 2, building.

(14) *Anorthura troglodytes hyemalis*—Winter Wren.—T. V. 4, 4, F.; again 4, 5.

(28) *Telmatodytes palustris*—Long-Billed Marsh Wren.—S. S. 4, 27 F., one male, singing, in migration.

(28) *Cistothorus stellaris*—Short-Billed Marsh Wren.—S. S. 4, 27, F., one male, singing, in migration.

(17) *Mniotilta varia*—Black-and-White Creeper.—S. S. 4, 7, F., one male in woods where it breeds; 4, 22, one more male seen; 4, 24, more numerous; 5, 2, male and female seen every day.

(25) *Protonotaria citrea*—Prothonotary Warbler.—S. S. Rare; 4, 24, F., one male, migrating; 5, 2, N. N. at its breeding places.

(27) *Helminthotherus vermivorus*—Worm-Eating Warbler.—S. S. 4, 26, F., and few.

(22) *Helminthophaga pinus*—Blue-Winged Yellow Warbler.—S. S. 4, 20, F., five males at old stands; 4, 21, males in full numbers and quite noisy; 4, 22, migrating individuals everywhere, in gardens and orchards in city; 5, 2, N. N. at its breeding places.

(28) *Helminthophaga chrysoptera*—Blue Golden-Winged Warbler.—T. V. 4, 27, F., male, singing, in migration; 5, 2, males only; 5, 4, first female; 5, 9, male and female seen; 5, 16, L.

(28) *Helminthophaga ruficapilla*—Nashville Warbler.—T. V. 4, 27, F., male, singing, in migration; 5, 2, males only; 5, 4, several seen and heard; 5, 14, two seen; 5, 16, L.

(29) *Helminthophaga celata*—Orange-Crowned Warbler.—T. V. Irregular; 4, 28, F., one male.

(26) *Helminthophaga peregrina*—Tennessee Warbler.—T. V. Regular and abundant; 4, 25, F., one male in song; 5, 2, in many places, but small numbers only; 5, 4, everywhere and numerous, singing continually; 5, 5, migrating individuals; 5, 8, same, larger numbers; 5, 9 to 13, many seen, although the bulk left 5, 8 and 9; 5, 16, L. (as was supposed), but on 5, 24 and 25 they suddenly became again numerous; 5, 26 and 27, only a few; 5, 29, heard and seen in different places; before 6, 1, all gone.

(22) *Parula Americana*—Blue Yellow-Backed Warbler.—S. S. 4, 20, F., one male at old stand; 4, 21, males in full numbers and quite noisy; 5, 2, noisy at stands.

(23) *Dendræca æstiva*—Golden Warbler.—S. S. 4, 21, F., two males in full song; 4, 22, the bulk of this species, the males at least, have arrived; the song is continually heard, and is to-day omnipresent. 5, 2, N. N. excited, mating.

(—) *Dendræca cærulescens*—Black-Throated Blue Warbler.—T. V. Never seen in spring and but once in fall.

(8) *Dendræca coronata*—Yellow-Rumped Warbler. T. V. 3, 15, F., one male and one female; 4, 2, the female has remained at same place, but no other individuals found; 4, 5, general arrival, more males than females; heard song at many places; 4, 7, N. N.; 4, 9, seen and heard in many places, but most numerous along banks of creeks; 4, 21, about same numbers since first of month; 4, 22, noisy and conspicuous; 4, 24, extremely numerous; 5, 2, same numbers at same places; 5, 3, many young birds and females; bulk left 5, 8 and 9; 5, 10, two seen; 5, 11, L.

(33) *Dendræca maculosa*—Black-and-Yellow Warbler.—T. V. 5, 3, F., one male migrating; 5, 4, several males in song; 5, 9 to 13, several males and females; 5, 16 to 18, numerous; 5, 24, females seen; 5, 29, two females; all left before 6, 1.

(23) *Dendræca cærulea*—Cerulean Warbler.—S. S. 4, 21, F., four males in full song; 5, 2, noisy at stands.

(33) *Dendræca pensylvanica*—Chestnut-Sided Warbler.—T. V. 5, 3, F., one male migrating; 5, 4, several males in song; 5, 5, migrating individuals; 5, 9, male and female seen; 5, 16, 18, 23, single birds and pairs.

(38) *Dendræca castanea*—Bay Breasted Warbler.—T. V. One male, 5, 16.

(31) *Dendræca striata*—Black-Poll Warbler.—T. V. Abundant; 5, 1, F., one male; 5, 4, all at once N. N.; 5, 5, migrating individuals; 5, 8, same, large numbers; 5, 9 to 13, male and female; bulk left 5, 8 and 9; single birds and pair seen every day to 5, 23; 5, 24 and 25, again numerous; 5, 26 and 27, only a few; 5, 29, male and female seen and heard in several places; 6, 1, L.

(—) *Dendræca blackburniæ*—Blackburnian Warbler.—T. V. Irregular; only once seen 5, 4, 1880.

(—) *Dendræca dominica*—Yellow-Throated Warbler.—T. V. Never seen in spring and but once in fall.

(31) *Dendræca virens*—Black-Throated Green Warbler.—T. V. Irregular; 5, 1, F.; one male; 5, 16 males seen.

(24) *Dendræca pinus*—Pine-Creeping Warbler.—S. S. Rare; 4, 22, F., in song.

(15) *Dendræca palmarum*—Red-Poll Warbler.—T. V. Abundant; 4, 5, F.; 4, 6, more seen; 4, 9, very few seen; may be more numerous, but they keep secluded, much more so than those which come later in the season; 4, 22, seen again; 5, 2, numerous now, everywhere seen and heard; 5, 4, still numerous almost anywhere, 5, 5, bulk left; 5, 8, considerable decrease; 5, 12, male seen; 5, 15, L.

(40) *Dendræca dicolor*—Prairie Warbler.—S. S. Local; 5, 22, F., found at stand.

(22) *Siurus auricapillus*—Golden-Crowned Thrush.—S. S. Common; 4, 20, F., three males; 4, 21, males in full numbers and quite noisy; 5, 2, full numbers at stands, noisy.

(29) *Siurus noveboracensis*—Short-Billed Water Thrush.—T. V. 4, 28, F.; 5, 2, numerous, migrating; 5, 4, still numerous almost anywhere; 5, 10, 13, many seen; 5, 18, L.

(17) *Siurus motacilla*—Large-Billed Water Thrush.—S. S. Local; 4, 7, F.; one male at old stand in wood along creek. May have been there several days already. It was much excited, singing incessantly during my stay (7 to 9 A. M.), restless, changing station often within its chosen district, mounting high branches of trees, etc. This showed its mate had not arrived. 4, 9 to 14, a few met with; 4, 25, three males and one female, somewhat more numerous and noisy; 4, 21, males in full numbers and quite noisy; 5, 2, noisy at stands, full numbers; 5, 4, singing continually till 9 A. M.

(38) *Oporornis agilis*—Connecticut Warbler.—T. V. 5, 16, F.; seen again 5, 24, 25, 26, 29.

(28) *Oporornis formosa*—Kentucky Warbler.—S. S. Abundant, 4, 27, F., singing at old stand; 5, 2, noisy at stand; full numbers.

(36) *Geothlypis philadelphia*—Mourning Warbler.—S. S. 5, 19, F.; seen again 5, 20, 25, 26.

(20) *Geothlypis trichas*—Maryland Yellow Throat.—S. S. Common. 4, 18, F., one male; 4, 20, four males, somewhat more noisy and numerous; 4, 21, not one-fourth of full numbers; 4, 22, more numerous; 4, 24, ranks fill up, females arrived, males are noisy; 5, 2, noisy at stands, full numbers; 5, 4, exceedingly N. N., probably migrating individuals among them.

(26) *Icteria virens*—Yellow-Breasted Chat.—S. S. Common. 4, 25, F., several at old stands; 4, 26, N. N.; 5, 2, noisy at stands, full numbers.

(26) *Myiodioctes mitratus*—Hooded Flycatching Warbler.—S. S. 4, 25, F., one male singing at old stand; 5, 2, noisy at stands, full numbers; 5, 4, full numbers and singing all the morning.

(34) *Myiodioctes pusillus*—Wilson's Green, Black-Capped, Flycatching Warbler.—T. V. Abundant; 5, 4, F., males, singing, migrating; 5, 5, migrants; 5, 9 to 22, male and female seen every day, also on 5, 24 to 25; L. very soon after.

(34) *Myiodioctes canadensis*—Canadian Flycatching Warbler.—T. V. Rapid transit, same as *M. pusillus*.

(23) *Setophaga ruticilla*—Redstart—S. S. Common; 4, 21, F., three males in full song; 4, 24, more numerous; 4, 27, females arrived and male jubilant; 5, 2, noisy at stands, full numbers.

[TO BE CONTINUED.]

SPRING BIRDS OF QUEBEC.

MR. JOHN NEILSON, the well-known Canadian ornithologist, has recently contributed to the Quebec *Morning Chronicle* his observations on the migration of birds during the spring of 1882. His notes cover a period extending from March 1 to July, and we take pleasure in introducing them through the columns of FOREST AND STREAM to a wider circle of readers interested in ornithology than they would reach in the journal where they first appeared. The observer says:

Except sparrow birds, ever the first (song) harbingers of spring, such as "Wilson's snowbird, or nun," the "song sparrow," and a few others, many species made default till rather late in the season. This was particularly the case with respect to that beautiful and useful family, the "warblers," while of fly catchers proper, a few only have been detected. The fact, however, that from the end of April, the field of my personal observation was not extended to much beyond the immediate environs of my residence here, may, in a great measure, account for this; as it does for the very limited arrivals recorded in the following

SPRING LIST.

March 1.—Common crow, on spring migration; several passed the winter here and at St. Foy.

April 1.—Canada goose. 3d, song sparrow. Wilson's snowbird or nun. 5th, robin, few have remained to breed in this locality at this time. 15th, golden-eye duck, shot confluence of "Tourili" the only open rapid from settlements on the St. Anne, to "Peche a Markham." This duck is abundant during winter on the lower St. Lawrence, and occasional here. 16th, woodcock, reported some days earlier. Rusty grackle, of late becoming more abundant on spring and autumn passage. Great northern shrike, several on upper St. Anne, in company with the no less sanguinary hawk-owl, following vast hards of white wing, and red crossbills, pine finch, redpoll, grosbeak, etc. Winter wren, near "Peche a Markham," St. Anne River. 20th, grass finch. 21st, black duck, discharge of "Lake Sergent." 24th, snow goose, yearly becoming more regular on spring passage. Redtail hawk, gyr falcon (*F. sacer*). This falcon, formerly rare, may now be noted as regular (one to five specimens each season) on spring migration, and occasional as a summer visitor here. I have frequently observed it in June, and on two succeeding days in mid-July, apparently foraging over fields at Valcartier. A gentleman resident at Pine Lake, Matawin, writes to say that the gyr falcon is fairly common in that locality, and that the birds themselves, under his observation, gave the strongest possible reason for believing that they breed at, or near, Pine Lake. The same observer also sends curious and interesting notes touching the habits of this beautiful hawk and others, too long for the present list. Herring gull. 29th.—White-throat sparrow, Peabody-bird, sweet pinkey, etc. White-crown sparrow.—A spring visitor sometimes abundant. I have not observed it as a summer resident, or during autumn; but Mr W. U. G. has remarked a pair during summer near Sillery. It has a sweet, wild song, entirely different from that of the white-throat sparrow. American bluebird (*Sialia sialis*), principally on spring and autumn passage it is said, breeds largely at Lake St. John, where in September, and till late in October, I have met it occupying a large extent of country. Summer 1880, this elegant bird attempted to build at Quebec, St. Foye and other places, with poor success apparently; since the venture has not, to my knowledge, been repeated. Golden-wing wood-pecker.—Though really a wood-pecker, its habits in many respects are quite different from others of the tribe.

May 1.—Golden-crested wren, as far as my experience

goes, never abundant. Pewee or phebe, rare this season. 2d. [Fox sparrow] on passage north, amongst sparrows the most brilliant songster. [White-bellied swallow.] 3d. [Tree sparrow,] spring and autumn on passage. 6th. [Chipping sparrow] for rapidity of reproduction it has no equal in our *fauna;* four broods to date, is the result of this season's operation. [Hermit thrush—] the sweetness of its melody has won for it, amongst our American cousins, the appellation of swamp angel. The wood thrush only—a rare summer resident here—is its equal as a vocalist. 7th. Yellow-bellied woodpecker, rather rare in this district, now breeding in Cap Rouge woods. Pigeon hawk (*F. columbarius*) common spring and fall, frequently found breeding here. 8th. Broad-winged hawk (*B. pennsylvanicus*) adult in full plumage shot, presented in aid collection Sillery Convent. Last year, July 14, on "Dornald" property, I discovered the nest of this species. It contained two young, probably eight to ten days old; the female and one young shot and presented to above institution, while the remaining young was captured alive, and presented as an addition to the "Spencer Grange" aviary. Want of space forbids a minute description of the nest. 10th. Yellow bird, or Canadian goldfinch. 11th. Solitary tattler, nestles about Beaver meadow, far from the haunts of man; probably two or more broods, as I have late in August, observed the female anxious for her young, no doubt, secreted near by. Belted kingfisher. 20th. Yellow-rumped warbler; rare this season, sometimes very abundant. Breeding far North, it returns late in autumn and is frequently caught in heavy snow storms, when it resorts to various grass seed for food. 23d. Scarlet tanager; very rare. At Pont Rouge, a pair probably breeding—kindly reported by my esteemed confrere, Alex. S., Esq. Whippoorwill, now very rare. Within the limits of our province I have never detected this pleasing nocturnal, so familiar during my sojourn in Manitoba. Its presence this summer up to July 16, has been reported, from Grand Anse, St. Maurice, Pine Lake, and at Cap Sante. Peregrine falcon (*F. anatum*) occasional; has been taken in the neighborhood of Quebec. One specimen only noticed here the present season; several have been observed at Pine Lake, where it was seen to capture a golden-eye duck while on the wing. Another friend states his conviction, that this famous hawk breeds in the St. Maurice district. The matter deserves attention, and will receive it. 25th. Golden-crowned thrush, or "oven bird," its nest is oven-shaped, hence its name; like the grouse, if you approach the nest, it will feign lameness or a broken wing to draw the intruders from its treasures—abundant. 25th. Yellow red-poll warbler, not common in this district; not detected breeding here. 27th. Black and white creeper, common; Wilson's thrush, very common, and "Swainson's," the latter not sufficiently identified, equally common. [Summer yellow bird, rather fond of city life, if these pests, the town sparrow, would leave it in peace. Chestnut-sided warbler, regular and commonly breed close to my residence and generally about woodlands, environs of Quebec.] Maryland yellow-throat, has a pleasing warble, is fond of building about scrubby pastures.] Savannah sparrow, habits like grass finch. [Black-throated green warbler, common, but generally seeking its insect prey on spruce or balsam; is difficult to detect. [Bay-breasted warbler, generally rather rare, but more abundant the present season than ever before noticed. 31st. Redstart, common, breed here, is probably more terrestrial than any other warbler.

June 1.—Ruby-crowned wren, very rare the present season, one specimen only detected, while at other seasons this pretty little wren fairly invades a large section of country. 2d. Black-poll warbler, not common; I think it breeds here. 3d. Green black-capped flycatcher, rare, but as its haunt is low bushes, it is probably more abundant than we suppose. I have not detected it later than June, nor have I found any signs of its building about here. 5th. Canada flycatcher, rather common and very regular. Ruby-throated humming bird, common resident; well known. Like the bird itself, the nest is the perfection; such as I have found were always placed far from the busy haunts of men, about ten feet from the ground, curved over by *cryptogamia* or snow; once at Reviere aux Pin Lakes, about eight miles from any habitation. 6th. Black and yellow or magnolia warbler, not common; sometimes frequents low scrub; often the tops of evergreens; I have not found it breeding here, but probably it does, or at least at no great distance north. 7th. King bird, valuable as a farmyard protector; neither crow, hawk or even eagle dare approach the vicinity of its nest. Red-eyed vireo, never arrives till the forest tree leaves have attained at least half their normal size; everywhere abundant; a pleasing, untiring songster; certainly two broods and perhaps three. 15. Cedar bird. Yearly decreasing in number. After fruit season it becomes a graceful and expert fly-catcher. This bird is an exception; it feeds its young, I believe, entirely on fruit—principally on the shadberry. Great-crested fly-catcher (*M. crinitus*)—A very rare summer visitor; four or five specimens only observed (this district) by me. The subject of present note was detected at "Spencer Grange," by the proprietor, J. M. LeM., Esq., author of "Les Oiseaux du Canada," besides other literary productions of which Quebec may well be proud. 17th. Indigo bird, known to the French-Canadians as l'oiseau de Montreal. Up to last season two or more pairs regularly built about "Dornald," the present season two or three—evidently stragglers—have appeared This beautiful and charming songster has been noted abundant on the route from Bertnier to Pine Lake; also, at the latter place, a pair of Baltimore orioles. 18th. Catbird. Rare in the environs of Quebec; found breeding in the Gomin Woods, near the Jewish Cemetery; common west of Three Rivers. 24th. Warbling vireo. Not common, nor have I ever, beyond a doubt, found its nest; but being a summer resident it no doubt builds here. While in the Northeastern States it seldom (see Samuels) frequents deep forests, here woodlands are its favorite habitat. As a sylvan vocalist this vireo has no superior.

July 13.—Blackburnian Warbler.—Among the many beautiful warblers that annually visit us, this unquestionably is the most beautiful. Its habits are similar to those of the bay-breasted warbler, seeking its insect and larval food, by actively ferreting in and out the thickest of thick balsam and spruce clumps. At such time, it is extremely unsuspicious, and may be leisurely examined from arm's length. The subject of this notice (a pair) appearing much later in the season than usual, led me to suppose that the nest might not be far, but my search was vain, and my pretty friends shortly after took flight to some locality outside the circuit of my interviewing. Speaking of this bird, Mr. Cauper (see Samuels 13th N. E. p. 369) notes it as "very abundant here last spring." No doubt correct, but personally during many years of observation I have certainly not met a dozen specimens—probably less. 29th—Bonaparte's Gull (*L. bonapartei*).—From date till mid-September, common, generally flying over or swinging about the channel of St. Lawrence, where they—apparently independent of shore life—very gracefully pick up surface matter or insects. An extremely pretty little gull, very tame. Neck, head and bill black; upper parts pale blue; under parts and tail pure white; outer primaries tipped black; feet reddish orange.

For reasons before stated the above will be found but a meagre list when compared with the real number of migratory land and other birds that as transitory or summer residents visit the picturesque environs of Quebec. Birds of different families necessarily require and seek different conditions of country to suit their various habits—highlands, lowlands, heavy timber, evergreen or deciduous, scrubby pasture, meadow land, or grain-field, marsh or waterside; each claims, by reason of the food or other wants supplied, a certain number of feathered denizens. To secure these, even a tolerably full spring list, it behooves the field observer to be up and doing. The circuit for research is extensive and springtide short. The eye, the ear, not to speak of the vast amount of patient endurance (mosquitoes and black flies) required, will be brought into play; but the discovery of even one rare bird will always be deemed more than ample compensation for the fatigues of the day. To read a book is to learn and profit by what the author knows and teaches; but if we wish to add our mite, let it be ever so small, to the common stock of knowledge, we can do no better than to seek at the fountain-head, open the book of Nature, and from it, while we enjoy the beauty and harmony that on all sides surround us, we glean such matter as may suit our aptitude or taste; we will learn that which is no less precious—more truly to love its author.

SECOND BREEDING OF QUAIL.

OSCALOOSA, Ia., Sept. 19, 1882.

Editor Forest and Stream:

I hardly think it necessary that I should make any reply to the article of "Ches A. Peake" in issue of September 14, but I would like to try to vindicate my esteemed friend "Bob White." I will confess I felt slightly indignant on reading that article. Any wonder?

Sportsmen of the "great Northwest," mark what he says: "I never knew of the third, nor even the second brood, nor do I believe in such nonsense."

I was not indignant that "Ches A. Peake" should doubt my statement. Oh no! but only that he should doubt the good qualities of the Iowa quail.

If "Ches A. Peake" should state that the soil of North Carolina produces quail spontaneously, I might (?) think he was misinformed, but how else they come there in such numbers, except by second or third brood I know not. When I think of the disadvantages under which "C. A. P." must labor, I readily forgive him. Probably he has never had a hunt on the broad "flat prairies" of the Northwest, and because he has never "seen with his own eyes" he cannot believe, which is sometimes a good fault. Seriously, "Ches A. Peake," has it never occurred to you that Iowa is several miles from North Carolina? That climatic conditions may have something to do with that which you know nothing of? Or that "Bob White" of Iowa is only another example of the productiveness of the "great Northwest?"

I will further state for your benefit that I not only flushed those quails, but I shot two of them (not for meat but for curiosity), and actually held the "impossible" monstrosity in my hand. Unfortunately I did not think to "put it in a glass case with the 'hoopsnake'" (sorry for the comparison) and send it to the "Smithsoman," where all doubting skeptics might examine it at leisure.

I wish to bring forward one authority. In "Game Birds of the U. S.," Thomas Alexander says: "A little later," (after the first brood takes wing) "the mother" (quail) "relegates the care of the rising family to her liege lord, and sets about the pleasant duty of getting a second brood ready for the sportsman, sometimes, it is said, even a third."

J. E. S. is still "to the front" on this question. He seldom makes a statement as "a fact" until his senses have convinced him of it, then he is seldom driven from the stand of firm conviction. Now, resting it on the basis of indisputable evidence, I "submit the case." J. E. S.

In regard to quail, would say that in November, '75, in the lower part of Delaware, I saw quail so young that they could barely fly a few yards. I. N. DE HAVEN.

[We know from personal observation that at least in one instance quail have raised a second brood, for we carefully watched from day to day the very interesting performances of this happy family, and know that there could be no mistake. We, too, have many times seen broods in November which were so young that they could not fly, and we believe with our correspondent that quail frequently, if not usually, rear two broods in a season].

BREEDING QUAIL IN CONFINEMENT.—Rockland, Me., October 3.—I saw in the last FOREST AND STREAM an article on breeding quail in confinement, and I was glad to hear from the writer, and I wish that we could hear from more on the subject. I have now two quail chickens which were hatched the 17th of September. The quail began to sit on six eggs on the 22d of August; time of incubation twenty-six days. Only three were hatched, and one of the chicks got into a hole in the brush in such a way that he died; the other two are very smart. The cock did not sit on the eggs at all, but when it was about time for the eggs to hatch, he nestled down beside his mate, and has been very attentive ever since. I am satisfied now that the quail that I hatched under a hen last year died for want of a proper mother, as I gave them the same food that I feed these with. I hope to get them through the winter. I hope the correspondent who inquired through you if quail could be bred in confinement, will be encouraged to try it, and I should like to hear from the gentleman who had the quail sitting at the time he wrote. I feed my chicks on boiled eggs chopped fine and mixed with bread or oatmeal (raw), a few small earth worms cut into small pieces. I dug into some ant hills and got some eggs, ants and dirt, altogether a waterpailful, and they seem to enjoy eating these the best of anything, but they only get them as a dessert.—JAMES WIGHT.

A CURIOUS MIRAGE.—Cleveland, O.—I send you a sketch of two ravens as seen by a party of us one forenoon, the result of mirage on one of the border deserts of the "Great Basin" in 1856. All exclaimed, "What are those Baptist ministers doing here?" Gen. Marcy, in his "Army Life on the Border," page 143, describing the mirage of the Western plains, says: "A raven, for instance, would present the appearance of a man walking erect."—W. E. STIRLING.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

HOLD WELL AHEAD.

I.

ON he comes with whirring pinions
Darting swiftly toward the blind,
Would you kill him as he crosses?
'Tis no child's play, you will find.

II.

Now, my friend, when you salute him,
Throw your barrels well ahead
(That's the only way to bag him),
Otherwise you waste your lead,
And will see him still whizz onward
When you had him (in your mind).

III.

Mark, my boy, that single feather,
Gently sailing down the wind.
Just a "souvenir" he's left you,
Showing that you shot behind. DICK.

A RED LETTER DAY.

TEN or twelve years ago I was living in Philadelphia, Pa., and as business would admit when the shooting season came in it was my custom to visit friends in Delaware for a day or so shooting on woodcock, and later on try the canvas backs and redheads. Looking back now on the solid chunks of comfort in the field and in the blind taken those days, I feel a pang of regret that I cannot now repeat them. Following Mr. Barnard's well-trained setters and hearing Geo. Barnard's cry of "mark cock" as one or more longbills rose and flew into the open where I was generally placed, while Henry Barnard being on the opposite side of the cover, George between working sometimes a cocker or a setter, while one or more of our canine friends would be doing their work at the edges. And then after the day's shoot was over we would assemble around the table—a table amply provided with good things at the hands of Aunt Polly. Our conversation would usually be of the events of the day, dwelling clearly on all the good shots, particularly the difficult and scientific ones, leaving the scratches and poor work to care for itself. And with what pride I would return to town if I could take with me five or six brace of birds and not be particular either as to keeping the birds out of sight, for was I not something to brag about before strangers on the train and look a veritable Nimrod and "blasé" sportsman? and how satisfactory to hear some one say:

"That's a fine bunch of birds; takes a good shot to make any sort of a showing on those birds."

Some one else might say:

"Well, where did you come crost them birds? Kill 'em all yourself?"

"Yes; that is not quite all."

"Buy 'em?"

"No, sir; what do you suppose I'd take my gun 'long for and then buy the birds. Scarcely, my friend."

"Well, I have seen some of the city fellers come down to my part of the country and blaze 'round for a week or so then hire some of the country boys to shoot a bag full of birds for 'em to make a blow over in the city."

"Yes, I have heard of such things, but would scarcely believe a sportsman capable of it; oh, no, not all, of course not."

It was Wednesday, late in October, about six P. M. I came through the hall door of my boarding place feeling tired from the day's business and wishing at that moment I could take a run down the country for a day or so, but business was so brisk with the company with which I was employed I hardly dared to ask for a short leave of absence even.

I was met by my very amicable landlady who handed me a telegram. "Mr. Dick," the boy said, "you was not at the lower office so he brought this here, knowing you would get it as quick as any way." It read:

"Come down to-morrow. Flight birds coming in; made good bag this morning; old place reserved; will meet you. GEORGE BARNARD."

Now what was I to do. I could not possibly see my chief until ten o'clock next day to ask permission, besides, even if I did ask him he might grumble, not being a sportsman, and there were shells to load.

Ah, ho, ho! brilliant idea. I would take my tea and at once board a horse car and go to the residence of the manager, who was a sportsmen, but whose infirmities prevented him taking the field. I know, too, if any man in this world was fond of looking at and eating woodcock it was the same general manager.

Three-quarters of an hour later I was ushered into the manager's comfortable library.

"Come in, Dick, what's the trouble, why your face looks as long and grave as if something weighty was on your mind. Any wrong with the joint traffic? Been shooting this season? Fine weather this mellow October; now if this foot of mine would bear me out for half a day, I would certainly try it and invite you to go with me." A good opening, truly. I handed him my telegram; a smile, then a hearty laugh.

"Mr. F—," said I, "I cannot see Mr. Reese in time to make arrangements to go, will you, sir, please fix it for me. I wish to go very much."

"Now, Richard, I can fix it, but you must do a little business for me in Baltimore before you come home, and be sure and bring me a brace or so of nice birds; here is a good segar for you, now be off, but find Henry down-stairs and tell him to go to Mr. Reese to-night and say that I am using you to-morrow. Here is a letter to pass you over the different roads."

So much for having a gentleman sportsman for manager, and one of the old school, too, thought I. I'd never have gone on this trip if I'd had the average run of humanity to deal with.

I hurried home, inspected my undergrip breech-loader, and loaded a hundred and fifty shells before going to bed and got my traps together for the start.

Nine o'clock next morning I was comfortably seated in the train on the P. W. & B. R. R., happy with the prospect of two days' sport. Arriving on time at the station, I found George and Henry there.

"Halloa, Dick, glad to see you, old chap."

"How's the birds, George?" said I.

"Birds? lord, man, they are thick. You will just wear

yourself out on them; haven't seen a bigger flight for years. Pond is good, and I calculate they will stay until they're froze out."

"Seen any ducks, Henry? How is Floss's lame leg; think she is fit for work?"

"Oh, yes, she'll do; she'll go on one leg if you'd show her a gun and look as if you meant business."

"Good enough! good enough," said I, delighted with the prospect of shooting over this admirable dog. "We will get them up if we don't touch a feather. How's all the folks?"

"Well; and expecting you. Kate, Molly and Miss Cochran say they will bring us our lunch at one o'clock to-morrow, so we will have a sort of a picnic and then drive home."

"Charming! Now see here, boys, I must take a few brace of cock to the city or I will be cashiered, have my shoulder-straps ripped off and bugled out of camp." I then explained how I received my permission to get away.

"How are you, Mr. Barnard," and "Aunt Polly, how are you." "Come in, come in." "Hollos, Floss, and here is Nick (the cocker) and Duke, also Ginger, all to greet me." Such a wagging of tails and short barks, exclamations from the folks and greetings from the girls, who by this time had met us as we moved toward the porch. After making a little toilet I sat down with the family to a late dinner.

To some readers all this introductory to a shoot may seem superfluous, but to my mind the "how I got there," the welcome, the good folks and general notes on same, help immensely to make up the pleasures of a shoot.

Thursday morning, shortly before sunrise, we were on our way to the covers, Floss, Ginger and Nick in high spirits. We worked pretty thoroughly all the good and indifferent covers, and at twelve o'clock could show but seventeen cock to the three guns. We had our lunch and enjoyed the society of the ladies, but there was disappointment on our faces and in our hearts. I had killed only four birds. The bulk of the flight George had found must have left. However, I had one more day, and remembering how erratic the longbills are, and a few more might come in now that frosts were reported north of us, I took courage.

Saddling George's horse, a beautiful saddle animal, like a bundle of light steel springs under you, accompanied by Henry, we rode some eight miles distant to the duck blind to put some things in order, look over the stools, and if there seemed to be a ghost of a chance to take a shot at the ducks on Saturday morning.

We saw old Mr. Abron, who lives near the water. He had killed a few that morning—half a dozen teal and three mallards, and thought it highly probable we might get a few shots. We turned home, riding across the country, and if bars were not handy and the fences not too stiff we took them pretty much as they came. A fine country for fox hunting. Many a time have I heard the music of the hounds and a dozen or so of us in the saddle, following, wild with excitement. Is there any music that can compare to the cry of a well-trained pack of hounds, eight or ten couples say, running even together on a hot scent and far enough away from the listener to mellow the sound? I like to have the wind blowing just enough to make the delightful music sound faint, fainter, almost lost; then, as the wind carries it back to the ear, it will come with double force and melody, thrilling the listener through and through. And again when the old red is running in the open, in plain sight of the pack, every dog mute, putting in his best work, then too the best horses are to the fore; all is anxiety and suppressed excitement; the old red's brush is trailing; his tongue hangs out; the pack assume the shape of a very elongated V; now we see the best ones in the pack; on, on they go, the distance between fox and dogs decreasing surely and certainly; nearer and nearer; a fence is reached, and the old red with spent strength makes one effort to mount, falls back, turns and faces his relentless pursuers; they are on him; snap, snap; smothered growls; a confused heap of dogs and very little fox, until the hunter who takes the brush holds the dead fox up and whacks his brush off.

In my experience in shooting, as a rule I have found that where I make reckoning and feel sure of having plenty of good shooting, I am usually disappointed. Time and experience has not taught me better. I am as enthusiastic now as ever at the start out, and only realize after the disappointment that it might have been better for my feelings if I had not been so sanguine. Going to the field next morning feeling as if I would not have sport, I was disappointed in the right way.

"Now, Dick," said George, "you take the outside on the left. I'll go to the right with Ginger, and you work Floss. Then will work Nick right down between us. We will just work this big place for all it's worth." This was said as we tumbled out the wagon and getting fixed. A walk of 200 feet—"Hi's on, Nick." The cocker instantly bounded away and immediately gave tongue. Bang, bang, went Henry's gun. "Mark cock!" Well, I should smile; yes, grin; then yell. The air was full of them—big, strong fellows; not duly cock, unworthy of a sportsman's notice. "Gefunden," what a flight there is here.

I must here remark, brethren, I was kept pretty busy on my side. The first bird I killed came whistling through the treetops accompanied by seven or eight more. I will always remember that particular cock, and how I threw up my gun, covered him, and at the crack he collapsed in mid-air, held for another and missed, shoved in a couple more cartridges, birds getting up all around by this time, in front, at the side, out of the brush, through the treetops. The excitement was intense. One noble bird whistled within two feet of my head, coming in from my back. I believe I actually dodged. The next moment I had him down. I stood right there and killed seven. A cool, old hand would have doubled the number. Floss lay charged the whole time and when this introductory scrimmage was over she fetched my birds in style. We kept right on killing every few yards, some difficult, but mostly fair shots. Henry had the worst place to work, but gave a good account of himself, working clear through the cover. We cast the setters off in the open, but within a hundred yards or so of the trees, and had some magnificent sport, in not only shooting but in watching the dogs point and back, sometimes both pointing. This work yielded us thirteen birds. I started with, if I remember, thirty cartridges—they were now gone, and I had killed twenty-two. To the three guns we bagged seventy-four cock in about two hours and a half work. After mutual congratulations we decided to return home, replenish with ammunition and try the other cover towards evening. This we did, Mr. Barnard making one of the party; had most excellent sport, bagging thirty-seven more, making in one day's shoot to four guns part of the time, one hundred and eleven birds. Mr. Barnard said it was the largest bunch of flight birds he ever knew to come in there, or, in fact, anywhere in that part of the country.

I have had good woodcock shooting since, but never saw so many birds together at one time. I understand, though, that in the vicinity of Charleston, S. C., woodcock are very abundant at the proper season. I have heard of a crack shot there, handling a Westley Richards 12-bore, killing a hundred in a morning's shoot, and of his killing straight thirty-six cock. Well, gentlemen sportsmen and friends, that is shooting—it 'tis so. Since I have really known better, I have not shot for the bag; but in shooting flight birds, of course it is generally held even now to get all you can, though I very much doubt if this is right, and I would not want to set a bad example to the young sportsman by killing any of the varieties of our game birds for the sake of the bag. The practice is unworthy of a sportsman and gentleman, and partakes very little of Christian charity.

Being asked for my opinion as to the proper loads for breech-loaders, best adapted to 10, 12 and 16-bores for different game, I can only say that it is quite impossible to make any set rule—a rule that will be a guide for all gauges. Tables are sometimes useful; the criterion to go by is experiment, and only by this can you find the best or the proportionate charge for a gun. For woodcock shooting the gun should be a 12—28—6¾ to 7lbs., test pattern say 150 of 1oz. No. 8, but even; 2¾ to 3 drams good powder, No. 8 grain; 1oz. No. 10 or 11 shot. Heavy guns are used, of course. Some gentlemen use a 10-bore and find great pleasure therein, but the 12-bore I think is the golden mean. The woodcock dies easily, a slight shock such as in a quail would not be noticeable, will often kill these delicate and beautiful game birds. A quick-burning powder is necessary, as most of the work, and in some places all, is snap shooting, often not seeing the bird but aiming where he in your judgment ought to be. Under such circumstances a good retriever is absolutely necessary. I sent twenty brace of birds to the city, and followed from Baltimore. I picked out five brace after getting home, and sent them to Mr. F., and did not lose his friendship either. Oh! no. I don't forget the box of segars he sent me, and how we chaps enjoyed them at the office.

CAMP COOKING.

OUR friend Dr. Eaton's experience in cooking without a camp stove is probably very like that of many others, who, having never been thrown long enough upon their own resources in the wilderness, are apt to neglect the old adage that "necessity is the mother of invention," and to apply it in preparing a savory meal without the appliances of a modern kitchen, or the skill of a Blot in their manipulation.

While not making any claims to being a *maître de cuisine*, it has always been my custom to prepare some little morsel after my own fashion while in camp, even when supplied with a regular cook, few of whom ever pay attention to the niceties of seasoning or browning to a turn, which adds so much to the enjoyment and relish of an epicure.

Camp stoves, as a rule, are a nuisance save when used inside the tent for the double purpose of warmth and cooking during cold, damp weather. For myself, I would not have the best one made, if compelled to "tote it" around on my fishing and hunting trips. When a man goes to the woods to hunt or fish, if an experienced hand, who enjoys it because the very opposite of the city, he don't want to take his piano, Saratoga trunk, and spring bed, that are all necessary at home. He goes there to enjoy and study nature in her own domain, with only natural surroundings, where, "he gathers knowledge from every leaf finds instructive sermons in stones, secrets in bubbling brooks, and poetical lessons of wisdom in everything.

Being one who relishes all good things to eat, especially all game birds and fishes, let me suggest to the Doctor and his friends, the way in which they may secure with a little care or effort, a meal which, when seasoned with the appetite of a day's pleasure in the wilderness, would prove most welcome to a hungry palate. If you will take an "old stager's" advise, carry along just as few cooking traps as possible, unless for a long stay with plenty of help and little change of camp. I go long trips every year, often alone, and never carried a camp stove in my life; and all my kit for cooking you can put in a good haversack. I generally live pretty well, too, for I have a decided failing that way.

First of all, you cannot cook without plenty of coals and hot ashes. A fire of good hard wood that has burned several hours, or better still, all night, is the best.

If ducks are the game and not too large, pluck them, clean and draw them and cut off heads and feet. Broil a piece of salt pork by sticking it on a forked stick (birch if to be had) and put it inside the birds, then rub a little salt on the outside, grease a piece of paper with butter, lard or the fat from the pork, and wrap the greased side next the flesh. Then envelope in at least three thicknesses of wet paper or large green leaves. Now make a hole near the center of your bed of coals, dig it out with a good stick as deep as you can, size etc., depending upon number of birds to be cooked. Then push in a good thick layer of live coals and cover slightly with hot ashes. Lay in your game several inches apart, after having secured their wrappings with twine or strips of bark, and cover them with a thin layer of ashes, then rake on a good bed of hot coals at least six inches thick on the top and sides, and on top of this throw a few light sticks of wood to burn and keep the air from cooling off the bed below, and leave it to bake about forty-five minutes to one hour, while you get the rest ready. If you have potatoes to bake, cut the ends off slightly and put them in a bed the same way, only use more ashes and not so thick a layer of coals, and place where they can be raked out before the ducks are done or they will be burned to a crisp; about thirty or thirty-five minutes for medium sized potatoes and good coals. Fish of good size, especially bass, are very fine cooked in this way, the only difference, do not dress in any way except to wash them off clean, and wrap them in three or four layers of wet paper or leaves, the buttered or greased paper being omitted as being only intended for game whose flesh comes in contact with paper and would otherwise stick to it. When the fish are done run a knife along the back and the skin with the scales will peal off, taking the offal along with it, leaving the flesh white and beautiful. A little butter and salt while smoking hot, and a delicious dish is the result. Corn on the cob may be cooked the same way by removing one outer husk, stripping off the silk and breaking off the silk end about an inch. Then twist down the husk tightly over the broken end. When all is ready your coffee will be needed, and the water should be all ready boiling hot. A few minutes before ready to serve up put into a clean coffee pot a tablespoonful of ground coffee for every cup wanted, "one for the pot," and set it near the fire to get thoroughly warm. Then see that your water is boiling a gallop, when it is, pour in the number of cups wanted into the pot, cover over tight and set where it will keep hot but not boil, for fifteen minutes, when you will have a cup of coffee that will do you good. If game is large split it down the back and make two parcels in wrapping for the fire. Small game, such as woodcock or snipe, pluck, but do not draw, as such birds have no crops, or entrails to speak of. The trail can be removed after they are cooked by those who do not like it, but it adds greatly to the gamy flavor to let it remain while cooking either this way or any other.

I have heard persons say it was a good way to put birds in the same as fish, undressed, but anyone who has tried it and got a whiff of burnt feathers will not be apt to try it a second time. The meat will not cook properly unless plucked and drawn and the smell of burnt feathers would drive a hungry horse away from his oats, much sooner a hungry sportsman from his supper. Let me remind the Doctor that this way of cooking requires time and that perfect success depends greatly upon plenty of good live coals and a warm bed of ashes. To insure the best results you must have a good bed of live coals under as well as on top.

In my next I will describe another method more speedy and requiring less fire—two desirable features when one is hungry and wood scarce—but to my taste will produce equally good results. CAPT. DORSAL FINN.

CHICAGO, Ill.

NOTES FROM SANDUSKY BAY.

NATIVE ducks are not found in as large numbers as usual this season at the marshes at the head of Sandusky Bay. The law is off Sept. 1, but the Ottawa, formerly Howe's Point, Club, do not commence shooting until the 15th. Ten members were present at the opening this year.

As there are one or two stands that are very much better than others, we cast lots for choice of positions. This prevents any scrambling for the best places and liability of several going to the same point.

The shooting is done at daybreak, and for two or three hours after, and the bag consists almost wholly of bluewing teal, although there are a few mallard, pintail and greenwings.

The shooters are all back to the club house by ten or eleven o'clock.

Best bags were fifty-one, twenty-eight, sixteen, etc.

We were out again on the morning of the 16th, and scarcely fired a gun, which shows how easily the ducks are "whipped out" at this season.

Since the 15th, shooting has been very poor, although one member got into a mallard hole and killed forty or fifty mallards in one day.

We often wonder if the "coots," that the Eastern gunners work so hard to get, with boats strung along the beach in the surf, are the same as our mud-hens, that are a nuisance and an abomination, covering our marshes by the acre, swimming ahead of our boats in droves, and only flying when closely pressed. They lie just out of gunshot, or even closer, and decoy ducks—to our disgust—their great numbers making them more attractive than our painted symbols. If these are coots, must say you are hard up for shooting. It is a problem with us how to get rid of them. I think we should offer a valuable prize to the man who kills the greatest number of mud-hens during the fall on our marshes, for the reason that they are great eaters, and, I must, of course, lessen the duck feed.

Everything is backward this season, and we do not expect the "heavy weather" duck until later than usual, although pintail and widgeon will soon be in. M. H. ABLE.

QUAIL INTRODUCED INTO VERMONT.

"BOB WHITES" AND "MIGRATORY."

YOU will perhaps remember that I wrote you in the spring of the present year, giving you the result of our effort to plant the American quail (Bob White) in this State. I am happy to say that that experiment was crowned with great success. We procured from Texas twelve dozen birds, about one hundred and thirty-five of which we succeeded in turning down in good health on the fifteenth day of April. They appeared to have mated between the fifteenth of May and the first of June and very generally to have nested and hatched their young. Thirteen nests were broken up by mowing machines and other causes, which was about twenty per cent. of the whole number of possible nests; this was a heavy loss and quite discouraged us. These disturbed birds, however, made other nests, or else some birds raised two broods, for we find now, at this late date, some broods not yet able to fly.

I have been out twice and killed in all sixteen well grown and strong birds. I know that it was earlier than the laws allow in States where there is a law, but there is no law on quail in this State and these birds are ours, so the judge and I are a law unto ourselves, so far as quail are concerned. We brought them here simply to see whether we could get them to breed so as to give us one season's shooting, intending to lay in another breeding stock next season, if this one proved successful. We shall try, however, to carry some of this stock over winter by feeding and care. Quail used to be moderately plentiful in some portions of this State, so at least the oldest inhabitants tell us, and there is no reason to doubt it, but on the contrary, every reason to believe it; but in those days small grains were more commonly raised than now and food was more plenty. Now food will have to be supplied for them and I see no reason why, with plenty of food, they cannot withstand the rigors of a Vermont winter as well as ever they could. We shall try it at any rate, but shall provide for a fresh importation all the same.

I think that there is some reason to believe that quail are working their way into this State again in a natural manner. Some three or four years ago there was a small covey raised in the town of Manchester about forty miles south of this town. During the early winter of 1881–'82 there was a large covey in the adjoining town of Sunderland, but whether they wintered or not I am not informed. Some three years ago there was a quail shot in Granville, N. Y., some twenty-five miles southwest of Rutland—all this points to a northward movement of the birds for some years prior to our plant of this year.

There have been quail seen and they are known to have nested and bred in several places in the State this season. There is good reason to believe that they have been seen or heard at least in Ferrisburgh, fifty miles north of this, and this at a time so nearly following the liberation of our quail, as to seem to preclude the possibility of their being astray

from our flocks. Nests have been found, and young birds seen in Leicester, twenty miles from here to the northward.

One of three things is certain, either the birds were at these different points by natural means; or our birds were great rovers (and I do not understand that the native bird is a roamer.) Or—and here comes the point of greatest interest—the migratory quail have come back to us. I do not like to speak very positively or even hopefully about this last point, but there are certainly some indications that such is the case.

A farmer who took great interest in the migrations, and on whose land they bred in great numbers, when they were turned out some years since, asserts positively that he flushed a bevy of at least fifty birds in his stubble field on the 25th of this month, that they rose to a good height in the air, and flew away over the woods to the south, that he watched them at least a quarter of an hour. Now this is just what the migratory should do, and just the season for them to do it, and it is not like Bob White to do any such thing. Furthermore, Bob Whites do not flock at this season so that fifty birds can be flushed together. There were no Bob Whites raised, so far as is known, on this or adjacent farms. If they had been native birds they would almost certainly have returned to that same stubble, but there are no birds there, so that I am well inclined to believe that the migratories have been here this season, but it is not certain. Woodcock are fairly abundant this season—that is for this country, where they are always scarce. I killed nine fine birds yesterday afternoon. Ruffed grouse very scarce here and everywhere else, as I think.

The judge has a fine lot of rainbow trout growing. I have not seen them, but they are said to be all that they should be. VERDE MONTE.

RUTLAND, Vt., September, 1882.

THE VERMONT DEER.

SOME time since you asked me to write you the result of our efforts to restock the mountains of this State with deer. It is, perhaps, too early yet to speak with certainty as to the success or failure of the experiment. So far as we are now able to judge, however, we have no reason to be dissatisfied with the result. The deer, some fifteen in number, were turned loose in the spring of 1877, I think. They were all park deer, and some of them very tame, their tameness, in fact, was a source of infinite trouble to us, and some expense as well, for instead of seeking at once the fastnesses of the forests as they were expected to do, they sought instead the gardens and grain fields of the farmers, from which it was almost impossible to drive them. They would run just fast enough and far enough to discourage the farmers' dogs, and in an hour be back in the garden. Blank cartridges had no terrors for them, and horns, gongs and the like seemed to be rather an invitation than an alarm. Many a round bill for damages we had to pay the ring the first two years. Now, however, the native wildness of the animal seems to have returned to it, and we rarely see or hear of them near the habitation of men. Some of the original stock have probably died from natural causes, and it is possible that some have been killed, although we have no reason to believe that such is the case. We are assured that they bred and multiplied after the manner of their kind. Every season we have seen or heard of fawns following their dams. Their tracks are also seen by the lumbermen every winter, and it is not infrequently the case that they come about the places where the lumber hunters feed their horses, to pick up the refuse hay and grain. So that on the whole, we have no occasion to regret having made the plant. They are protected by law until 1885, and we shall make timely provision for an extension of the protection for a long terms of years. Not one of the parties engaged in the enterprise ever expects to shoot a deer in Vermont, that pleasure is to belong to another generation who shall come after us. VERDE MONTE.

RUTLAND, Vt., September, 1882.

THE McCLOUD RIVER PANTHER.

"I'VE got the panther," Mr. Barbour called out to us when he came down to the river bank this morning, where we were hauling the seine for salmon.

The panther referred to had made himself very much disliked in our neighborhood the last two or three weeks. He had come down to Mr. Barbour's house every two or three nights, and had stolen several pigs almost from his very door. It is estimated that he and his mate have killed upwards of twenty pigs and hogs this season. He seemed to have a regular beat for his nightly foragings. His custom was to go to Mr. Barbour's house, and from there to follow up the river trail to the Trout Ponds, where he would skirmish around for something to eat, and where, a few nights ago, he even tore open a cage containing a beautiful pet gray squirrel, which he killed and ate. From the Trout Ponds his track usually went directly up the high mountain behind the house, on the flanks or summit of which he probably spent his days, like other cats, sleeping.

The panthers lately have become very bold and numerous here, and besides hogs, they have killed calves, colts, and even full-grown cattle and horses. The consequence is, that our whole neighborhood has had a lively feeling toward panthers in general, and particularly toward this one referred to by Mr. Barbour when he called to us this morning as we were drawing in the seine.

"Where did you kill the panther?" we inquired.

"Just behind the house," Mr. Barbour answered.

Upon hearing this, I told Mr. Barbour I would like to go up with him when he went for the animal, and see the scene of the conflict. So taking an Indian with us to pack the creature down to the house, we started off. On our way up, Mr. Barbour said that the panther came to the house about two o'clock that morning and pounced on a pig, as usual, almost under his window. Seizing his rifle and a torch, and calling his son, they started in pursuit. They did not have to go far, for they found the panther in a tree hardly a stone's throw from the door. Their approach frightened him out of the tree, and he jumped and ran for another tree a few rods off. He left this one again as they came up, and was treed by the dog again about twenty rods further. This time Mr. Barbour concluded not to come up again to him with a light, and so they built a fire where they were and waited till daybreak. When it was light enough to see a little, the hunters left their fire and went to the tree where the panther was. His great, tawny, but graceful form could be plainly seen about forty feet up the tree. Mr. Barbour did not like to shoot by so dim a light, but the panther began to "churn" the limb he was on with his immense paws, and to lash his tail, and it was evident that it was now or never, for he was about to spring. Drawing as good a bead as he could by the gray light of the early morning, Mr. Barbour aimed and fired at the panther's eye. It was a most successful shot. The ball entered his eye and passed through his head and neck, and with hardly a struggle the creature fell to the ground—dead.

When Mr. Barbour and I reached the spot, the panther lay where he had fallen, and looked like a large cat asleep. We lifted the body on the Indian's back and took it to the house and dressed it. We found nearly a whole pig in the creature's stomach. His skin measured eight feet and a half when stretched. Since his capture, we have had roast panther, boiled panther, panther steaks and panther croquettes. The meat is white, dry and clean, tasting something like partridge meat, but of a coarser grain. Our house cats eat of their great cousin with much relish, but the human members of the household ate only enough to satisfy their curiosity. Such is the force of prejudice, for the meat was as clean and delicate as any venison or beef, and wholly free from any unpleasant taste. L. S.

U. S. FISHERY, McCloud River, Sept. 21, 1882.

MASSACHUSETTS NOTES.—Taunton, Mass., October 9.—One glorious month of autumn has quickly passed, and October, the best month in the year in New England, is here. This is one of the months that the true sportsman has waited for, and as he passes into the woods, where the leaves are falling from the trees, the ruffed grouse springs up with a roar like muttering of thunder, and he must have a steady hand and a cool head to bring this grand game bird to bag. I have been out in the woods nearly every day for the past month, but my bags of game have been few and far between. The leaves have been too thick to have good sport with the noble grouse, and owing to the dry weather in August, but few woodcock are to be found. The prospect for quail shooting is good; have started young quail nearly every day, a large number of which were not more then half grown. How anyone can shoot quail that can hardly fly, and call it sport, is what I can't see into. This last spring I found a a quail's nest with eggs just lain, at Cape Cod, May 27, and my brother found a quail's nest with eggs here July 27. Any person can see by this that quail must have at least two broods in a season. Gray squirrels are more abundant than for years past. Quite a number of black ducks have been shot in ponds near here. While out with my gun one day last week a little incident occurred, which I should like to relate. I was passing through some fields, when a meadow lark flew off of a fence in the field and alighted near a piece of land that had just been plowed. I had shot away all of my large charges, and had in my gun at the time a shell loaded with dust shot. I determined that I would creep toward the lark and see if I could get near enough to shoot him. I crept forward on my hands and knees, until I thought I was near enough to shoot, and then rose up, expecting to see the lark, but to my surprise the lark was not in sight. Stepping quickly forward to one of the furrows I looked down to the end, and there beheld Mr. Lark, running as hard as he could. He saw me, and knowing well that he was out of gunshot he started up with a nod of his head, as much as to say, "I was too cunning for you that time, old fellow."—CHESTER.

TENNESSEE NOTES.—Quail are, as I have written, very abundant, though the weeds are too rank for the dogs to work, and almost impassable to man. Notwithstanding this statement, a restaurateur has "Quail on toast only 25 cents." It is a disgrace to our State Legislature that the laws passed to protect game are not enforced. Hundreds of negroes armed with muskets, and worthless shotguns, overrun the entire country, killing scarcely any, but wounding thousands of birds, rabbits and other game. One in a hundred of these fellows may know how to shoot, though certainly not more, and as a small size porker, or a few innocent barnyard fowls are as acceptable to their palates as game, they content themselves with breaking up the sport of genuine sportsmen, injure the game, and rely upon the domestic animals enumerated to fill their bags with. Now that we are to have Charles Reed, of Saratoga, domiciliated in our midst, I expect to see a tremendous boom in "fox hunting." He is so partial to steeple chasing and across country work as sport, the taste must have sprung from his fondness for the chase. If so, he has purchased a farm in just the best fox hunting portion of Tennessee, and with such neighbors as Col. W. H. Johnson, Bill Shute, Tom Chadwell and Marsh Pinkard, it will not be long before a rattling pack of hounds, and a few trained fencers, will form part of the new establishment at "Fairview." That the native knights of the pigskin will receive him with opens arms it is useless to repeat, and they will cotton to him all the closer, when they see he is no fancy chap but a "Nimrod" of the old school. While the gentlemen aboved named are highly refined and educated, when they mount their noble coursers to the melodious sound of the hunter's horn, no lar-de-dar business will pass among them. This is a glorious country, but we want some new elements introduced, and the high-toned breeder of thoroughbred horses, and thorough sportsmen is that element, so let it come.—J. D. H.

GEORGIA.—Columbus, Oct. 2.—Being an ardent sportsman, (and a successful one), I can't resist this opportunity of writing something about game. I kill turkeys, ducks, geese, snipe, quail and some few woodcock. I have never seen a year in this locality but that I could kill largely of the above-named game (except geese). Here the winters are never too cold to bar you a day's hunt. Duck and turkey hunting are in my estimation the refinements of sport. On ducking days I leave Columbus at dawn in a batteau with old Reuben to paddle. I travel thirty miles before 4 P. M., shoot for an hour at Jenyhill Pond, take steamboat at 10 o'clock P. M., sleep well in good berth, and at 2 P. M. am showing my luck to madam, who counts on an average about twenty-five ducks, with an occasional turkey gobbler and a few geese. Besides I am within forty-eight hours' travel of bear, deer, ducks, and geese, without number.—G. B. Y.

DELAWARE RAIL.—Wilmington, Del., Oct. 5.—I will tell you what some of our crack shots (not professionals) have done with the rail birds. Sept. 26—On the tide, E. T. Walton killed 244; E. Hewes, 219; Wm. Jones, 210; G Churchman, 209; C. B. Richardson, 164; H. Gause, 135; A. G. Wilson, 110; making 1,291 birds for seven boats. Sept. 27—E. T. Walton, 282; E. Hewes, 201, and broke his gun; H. Gause, 247; G. Churchman, 230; A. S. Richardson, 223; A. G. Wilson, 137; G. McClellen, 103; making 1,423 birds for seven boats. That is hard to beat. Would like to hear from some others up the river.—JR.

THE NEW BRASS SHELL ABROAD.—Philadelphia, Pa., Oct. 7, 1882.—The most interesting current discussion of which I have any knowledge—interesting to "shooting" men, I mean—is that one which, for the past six weeks, has absorbed the attention of every really well-posted lover of the shotgun in England, on the improved or "perfect" brass shells (and boring of chambers) of the Messrs. Kynoch, Birmingham. The objective point is the reduction of the considerable "shoulder" between chamber and barrel; and this, it seems, is effected in a marked manner by using the so-called "perfect" shell (only one-fourth as thick as the paper shell) in barrels, either new or "bushed," fitted for this shell; the "shoulder," in these barrels, being reduced to about .005 of an inch. This new shell is only .027in. thick, while the paper case is .027in. thick. It goes without saying that, if this new-fangled thing holds out as well as it has started, it will prove the most important thing, to sportsmen, that has been brought out in ten years. The subject is vast and keenly interesting, and I am astonished to have to say that, so far, I have seen not a word in reference to it in any American paper. Who does not dislike that annoying "shoulder"?—W. MCK. HEATH.

PENNSYLVANIA.—Allegheny City, Oct. 7, 1882.—I have just been on an extensive hunting tour through the various counties in Western Pennsylvania. In Indiana and Westmoreland counties game as a general thing is scarce, very scarce. The squirrel hunter has absolutely no use for his gun whatever, the frosts having killed all the nuts. Pheasants are present, but in very limited numbers. Quail are somewhat more plentiful, and rabbits are found in abundance. In Mercer county, north from Pittsburg, game is very plentiful, with, I believe, the single exception of grey squirrels. For those who wish to enjoy a deer or bear hunt in this State, I would recommend Sullivan county as being the best place for it. It is readily accessible from Williamsport by stage. Brook trout fishing is also excellent in this vicinity in season. To those who visit the town of Mercer, in Mercer county, I would recommend Whistler's Hotel as being the most desirable stopping place for sportsmen; the hospitality of the host and the kindness and generosity of the people in general are unexcelled. Within a radius of two miles from town you can have royal sport.—C. A. R.

HUNTING IN TUNIS.—The following extract is from a book published in 1738: "The Arabs and gentry of the kingdom of Tunis who delight in field sports do not spring the game with dogs, but shading themselves with a piece of canvas stretched upon two reeds into the shape of a door, walk through the several brakes and avenues where they expect to find it. The canvas is usually spotted, or painted with the figure of a leopard; and a little below the top there is one or more holes for the fowler to look through and observe what passes before him. It is remarkable that the partridge and other gregarious birds will, upon the approach of the canvas, covey together, though they were before at some distance from each other. The woodcock, quail, and such birds as do not commonly feed in flocks, will, upon the sight of the same, stand still and look astonished. This gives the sportsman an opportunity of coming very near them, and then, resting the canvass upon the ground, and directing the muzzle of his piece through one of the holes knocks down sometimes a whole covey at a time."

VERMONT NOTES.—Highgate, Vt, Oct. 4.—Large numbers of gray squirrels have been killed during the past month here, in Northern Vermont, around our corn fields, orchards, and outbuildings. This has led many to believe that our whole country is swarming with this game, but the truth is there are no nuts in the woods this season, and this has caused the squirrels to come out to the cultivated districts in search of food. Ruffed grouse shooting has been, so far, fair. The Missisquoi Gun Club report black duck shooting good over their grounds, but snipe shooting poor, owing to the high water, that has completely flooded the marshes. Very few woodcock, so far, have been bagged by the members of this club. Fall duck and wild geese are now coming in, and they will remain with us until the bay freezes up. Mr. Leach, President, and Mr. Beatty, member of the club, have made some good bags of wood-duck and blue-winged teal.—STANSTEAD.

MINNESOTA.—Duck shooting is in full vigor around the twin cities of St. Paul and Minneapolis, and Pickerel Lake, Pig's Eye, the pass on the Minnesota at Van Ness's place, Sugar Island, at the sloughs over in West St. Paul, in fact every piece of water within walking and driving reach of either city, had more than its due allowance of shooters. In fact, such places as Van Ness's, Pig's Eye and Sugar Island, well known to fame, were overcrowded, and on such a day as yesterday there were more gunners than ducks. Nevertheless "the frequent gun" was heard on every side and every fowl of the duck tribe was fired at, whether within range or not. The amount of ammunition wasted on out of range ducks is marvelous, equaled only by the marvelous number of ducks reported killed and never retrieved.—*St. Paul Press.*

MISSOURI.—Jackson, Oct. 3.—The quail law in this State will soon be out (on the 15th inst.), and our sportsmen are anxiously waiting for that time to come. Quail promise to be plentiful, and we are expecting some fine sport. For the past few weeks we have had good practice, shooting doves, which are also numerous. They come in from the fields, late in the evening, to roost in the fruit and shade trees in or near town; and the rapid discharge of the breechloaders is heard almost every evening. Squirrels have been very scarce in this vicinity, but we look for them to come in soon. Some of the boys are talking of a trip to the swamps on a deer and turkey hunt about the 10th or 15th inst., and if they go, will have a grand time. We also look for some good duck shooting later in the season.—H.

NEW HAMPSHIRE GAME.—Claremont, N. H., Oct. 6.—The grouse with us are scarce, and the woodcock—the flight birds—have not yet appeared. I have been out a few times and have bagged in all, over Elcho, forty-five birds, thirty-six cock, nine grouse, my best day's score being eight cock, three grouse, then six cock, one grouse, then three grouse, two cock. Of course not much, but just enough to keep green that love of sport with dog and gun we have. Mr. Fottler, President of Massachusetts Fish and Game Protective Association, has been visiting me for a week past. I was sick on my back two days, which rather affected my fun, but I got out with him for a couple of days. One day we bagged sixteen cock, six grouse, and another five cock four grouse.—MONT CLARE.

TEXAS GAME GROUNDS.—Indianola, Oct. 3.—The weather is still very warm, and the ducks, etc., are slow in coming this way. I have killed a few blue and green winged teal and a few pintail ducks, and my first jacksnipe on the 24th ult. In the surrounding country quail and pinnated grouse are very plenty, especially the former, which have been shot at very little, and as the summer rains have been plentiful, they have splendid cover and will give fine shooting all winter; but those wishing to bag them must have a good dog and hold straight, or they will "get left." Any one having the means and wishing fine quail shooting, let them come out here now, and they can have all they want all along the line of railroad (Gulf, Western Texas & Pacific) and anywhere along the bay shore or river bottom, with pleasant weather up to January, just cool enough to tramp, and, with a few exceptional stormy days, all winter—no snow or ice—and a sprinkle of all kinds of game.—G. A.

IOWA.—Ridgeway, Oct. 3.—Chicken shooting has been going on for six weeks, and we have been disappointed at results. We thought before the season opened that we were going to have better sport than for the last four or five years, but we have had no better, if as good. I don't think it is from any scarcity of birds, but from an increase in the amount of corn grown, and more particularly from our having had six weeks hot weather with hardly any rain, thereby holding the birds in the corn until very late in the evening. I think we have plenty of quail this season, and snipe and duck are beginning to come round. I am glad to be able to tell you that I have never seen the game laws better observed round here than they have been this season.—CUPIDO.

SNIPE IN NEW JERSEY.—Tom's River, N. J., Oct. 8.—Snipe shooting has begun here. On Friday, 6th inst., there were a good many birds. I moved at least seventy-five on one spot of about six acres; was working two puppies, so did not make much of a bag. On Saturday I found about twenty birds.—H. C. GLOVER.

Camp Fire Flickerings.

"That reminds me."

GUS is a good wing shot, inveterate wag and an unmerciful practical joker. One morning before he had passed the town limits on his daily hunt, he was overtaken by an old farmer in his rockaway returning to his home, three miles in the country, after taking the girls to school. Ever on the alert for a lift, the clatter of the vehicle caused Gus to look back for the chance, and he chuckled when he recognized the single occupant of that roomy conveyance bound for the very ground selected for that day's hunt. So confident was he of a cordial "get in" that he stopped and waited for the old man to come up, when, to his utter dumbfoundment, the driver merely bowed as he drove on. Aware that the old fellow was a little hard o' hearing, Gus yelled, "Lem me ride?" "Hey?" as the old man's head popped out of the rockaway. As the anchor dragged Gus threw up a hand as a signal to land and take in a passenger, while he moved up with an unwonted agility, repeating, "Lem me ride?" Sailing on the captain of the craft informed Gus in most unctuous tones, "I'm only goin' two or three hundred yards down the road."

Trudging on to the top of a hill beyond the first milestone, Gus espied the rockaway in front of the toll gate keeper's smithy, which is nearly two miles from town, and determined to climb in and ride the last mile and a quarter; he quickened his gait and came almost alongside, when the brakes were loosed and the old gentleman again jogged on. At the next turn in the road a glimpse was caught of that vehicle disappearing up the avenues. I don't think that Gus ever was a model Sunday school scholar, for he was always fluent as an unique orator, and he spread himself in a soliloquy on that occasion which blued the circumambient to a shade that it would be a gun-barrel colorer's delight to reproduce.

Late in the afternoon, loaded with game, as was a matter of course, the fagged out sportsman had lighted his pipe and was taking a rest on the top rail of a worm fence before entering on the home stretch—that most unpleasant, exhausting part of a pedestrian's day's sport. Being in sight of that avenue he was relieving himself of a half mental, half muttered supplement to his morning soliloquy, which a realization that at that time of day ninety-nine of every hundred vehicles were leaving town had little tendency to tranquilize. There is yet "balm in Gilead," thought Gus, when he heard a vehicle coming his way. Imagine his disgust when he discovered that same old farmer in an open buggy, leisurely driving a mild-eyed, mild-mannered cow. Formal salutations were exchanged, but apparently no balm for Gus in that turnout. Just before reaching the pike the cow remembered that she had forgotten something and must go back, and to Gus's no little delight scorned all the gentleman's remonstrances. Springing from his buggy he rushed down the road after her, yelling to Gus, "Head that cow! head that cow!" Gus didn't move except to encourage the rebellious brute, and when the accommodating (?) farmer came puffing abreast that unfeeling fellow, without deigning him a glance, Gus consoled him with "Oh, she's only goin' two or three hundred yards down the road." Last seen of the old man he was "clipping it" across the fields with little prospect of getting ahead of that cow before she reached the nearest house, nearly two miles from where Gus continued to sit, complacently smoking, so long as the cloud of dust gave evidence that the cow was still on the move. J. T. B.

SLEEPY HOLLOW, Ky.

Every one who has shot ducks on the Gunpowder Bridge knows old man S., one of the best shots and best claimers that ever fired a gun from that very popular shooting place. The old man has a very heavy muzzle-loading gun, No. 7 bore, that kicks like a mule. When he fires it he always throws himself forward so as to meet the recoil, and not be kicked over backwards. One day when the old man was rowing home, he saw a large bunch of ducks flying toward him. He stood up in his boat and prepared himself for a shot, expecting to knock two or three ducks out of the bunch. He got sight on them, pulled the trigger and threw himself forward to meet her recoil, but the old gun missed fire, and Daddy S. went heels over head into the river, gun and all. The old man is near eighty, but has recently taken unto himself a buxom wife of eighteen; and says he "Haint going to shoot no more on that bridge; there is too many gol darned claimers shoots there for him."

BALTIMORE, Oct. 9, 1883.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

There is, I think, a love of novelty in all anglers. We prefer to fish new waters when we can, and it is sometimes pleasanter to explore, even without success, than to take fish in familiar places. New and fine scenery is always worth finding.—W. C. PRIME.

THE ANGLERS' TOURNAMENT.

WE republish the directions for reaching the grounds and the rules governing the tournament. The first annual FOREST AND STREAM Anglers' Tournament will be held at Harlem Mere, Central Park, New York city, on Thursday, Oct. 19. The only postponement will be on account of rain, when it will take place the first fair day following. The grounds can be reached from the City Hall in forty-five minutes, either by the Sixth or Ninth avenue elevated roads, or by the the Third avenue line. In the case of the two former the visitor will leave the road at One Hundred and Sixteenth street, and a twelve-minute walk will bring him to the spot Should he go by Third avenue, then the nearest station is One Hundred and Sixth street, which leads directly into the park a few yards south of the lake.

RULES FOR FLY AND BASS CASTING.

SINGLE-HANDED CONTESTS.

1. No rod shall exceed eleven feet six inches in length, and it shall be used with a single hand.

2. Any style of reel or line will be allowed, but a leader, or casting line of single gut, of not less than eight feet in length, to which three flies, one stretcher and two droppers, shall be attached.

3. No allowance of distance shall be made for difference in length of rods.

4. Persons entering these contests shall draw lots to determine the order in which they will cast, and will be ready to cast when called by the judges.

5. Each contestant will be allowed five minutes to cast for distance and will then stand aside until called in his turn to cast for delicacy and accuracy, when he will be allowed five minutes for this purpose.

6. The distance shall be measured by a line with marked buoys stretched on the water, said line to be measured and verified by the judges at least once each day of the casting. A mark shall be made on the ground from which the buoy line shall be measured and the caster may stand with his toes touching this mark but may not advance beyond it. Should he step back of it, unless directed so to do by the judges, the loss in distance shall be his.

7. The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important. A contestant may claim time for repairs, which shall be allowed by the judges. Or the judges may order the next on the list to cast while repairs are made, in their discretion.

SALMON FLY CASTING.

1. The foregoing rules shall govern, except that the rods shall not exceed twenty feet in length, and may be used with both hands, and that only one fly will be required.

HEAVY BASS CASTING.

Rods shall not exceed ten feet in length, any reel may be used, but the line shall be of linen not less than twelve threads. The casts shall be made with sinkers, weighing two and a half ounces. (These will be furnished by the committee). The casts shall be made in lane formed by the buoy line and a line parallel to it, and distant twenty feet. Each contestant will be allowed five casts. His casts within the lines shall be measured, added, and divided by five and the result shall constitute his score.

LIGHT BASS CASTING.

The above rules shall govern except that the sinker shall be one ounce, and there shall be no restriction as to lines.

COMMITTEE OF ARRANGEMENTS.

FRANCIS ENDICOTT, President Richmond Co. N. Y. Game and Fish Protective Association, Chairman.
JAMES BENKARD, President South Side Sportsman's Club of Long Island.
WALTER M. BRACKETT, Vice-President Massachusetts Fish and Game Protective Society, Boston.
EUGENE G. BLACKFORD, N. Y. Fish Commissioner.
S. M. BLATCHFORD, Squibnocket, Club, New York.
MARTIN B. BROWN, Wawayanda Club, New York.
HENRY F. CROSBY, Willowemoc, Club, New York.
DR. A. FERBER, New York.
JAMES GEDDES, Onandaga Fishing Club, Syracuse.
DR. J. A. HENSHALL, Author of "The Book of the Black Bass," Cynthiana, Ky.
FRED MATHER, Fishery Editor FOREST AND STREAM, New York.
PROF. ALFRED M. MAYER, Stevens Institution of Technology, Hoboken, N. J.
BARNET PHILLIPS, Secretary American Fish Cultural Association, New York.
GEO. W. VAN SICLEN, Willowemoc Club, New York.
JAMES L. VOLLOTON, President Pasque Island Club.

MINNOW-CASTING FOR BLACK BASS.

AT the coming FOREST AND STREAM Anglers' Tournament it has been suggested that a contest in casting the minnow, as for black bass, should be arranged. The committee has considered the question, and, owing to the length of the programme and the apparent lack of interest in such a contest, have decided not to attempt it this year. We asked Dr. Henshall to give us his views of what the rules governing such a contest should be. He has kindly furnished them, and we publish them below. The Doctor may be right in saying that the number of black bass casters throughout the country exceeds those who fish for striped bass, but we would except the Atlantic coast from this estimate. Again, the black bass fishers of the East seldom cast the minnow, and it is doubtful if there would be three entries in such a class; but by publishing the proposed rules it will call attention to the subject, and perhaps such a contest may be arranged another year.

DR. HENSHALL'S PROPOSED RULES.

CYNTHIANA, Ky., Sept. 27.

As there is to be a contest for "bait-casting for striped bass," there is no reason why there should be none for "bait-casting for black bass." There are one hundred bait-fishers for black bass to one of striped bass anglers in the country.

I offer the following suggestions for rules for such a contest:

1. No allowance for length or weight of rods, but they shall be not less than eight feet in length and not less than seven ounces in weight.

2. In casting, the rod is to be used with one hand.

3. Only multiplying reels to be allowed, clicks or drags not permitted, as the rendering of the line, in casting, must be controled by the thumb alone.

4. Lines shall be of not less caliber than No. 5, braided silk or linen, No. 1 grass line, or corresponding sizes of other material.

5. The weight of artificial bait and sinker not to exceed one and one-half ounces, and the same bait and sinker to be used by each contestant.

There might be prizes offered for both distance and accuracy. The casts for accuracy to be at twenty yards distance.

The foregoing rules will be better understood in regard to their limitations, when I say that with a five-ounce stiff rod of five feet in length, I can cast a minnow nearly twice the distance, than with the ordinary nine-feet, eight-ounce rod, especially by using an extremely small line, as a single thread of sewing silk. It is therefore proper to limit them to practical and ordinary tackle. It is also important that the same bait and sinker shall be used by each contestant, as the heavier the bait, the further it can be cast.

J. A. HENSHALL.

CAMPS ON THE WAY.

I.—TROUTING ON THUNDER RIVER.

"Wouldst thou rest
Awhile from turmoil and the feuds of men
These old and friendly solitudes invite
Thy visit." —*Bryant.*

EVER since I went trout-fishing with grandpap Farrington on a tiny stream one sunny afternoon away up in the White Mountains, I have wanted to be with the trout again. That was a matter of a dozen years ago at the least, and yet I have never forgotten the savage jerk a half-pound fellow gave my line on that occasion. Grandpap and I fished with worms. I do not know that he had ever seen an artificial fly in his life; most certainly I had not. Dropping my worm in the holes at random after the fashion of my chub fishing in boyhood days, I happened to let it fall at the edge of a bit of overhanging rock, and like a bolt from a cross-bow that half-pounder struck it. The surprise was mutual, but I am bound to confess that the fish recovered before I did, and as a consequence he had all the fun to himself. Although I failed to hook him, I have never forgotten him; and as each fishing season has come round since then, the memory of the lusty fellow has come beckoning me to the streams held by others of his tribe.

Nine annual summer pilgrimages I made to the Michigan Au Sable and was content with the sport the grayling gave. Beginning with a tamarac pole and a grasshopper bait, I advanced by easy stages in the art of fishing on the open waters of that stream and its tributary, Big Creek, until finally accoutred with a decent fly-rod and a book well stocked with the best flies, I came to imagine myself a fairly good fly-fisherman, if not a little more than fairly good with the grayling. But the grayling of the Au Sable cannot last always. Had fishermen contented themselves with killing no more than enough to supply their own camp tables, grayling fishing would still be in its prime in that stream. But the average fisherman is seldom satisfied with enough for camp use. He must forsooth send fish home to friends, and so the unlucky grayling have been killed by the thousand and shipped to distant parts to become stale on the road.

And so last year when my quondam fishing friend, Dr. Walter, of Marietta, Ohio, met me at the "Forks" of Big Creek for a two weeks' fish, we found the fishing somewhat tedious; and this year I resolved to renew my acquaintance with the tribe to which the fellow belonged who bit so savagely at my hook that sunny afternoon away up in the White Mountains.

Every one, I suppose, who purposes trying new waters, experiences more or less difficulty in getting satisfactory information concerning the same. I know such has been the case with me, and I write this and the one or two articles which may follow more for the purpose of telling what little I learned about the fishing localities I was in the past season than for any other purpose. Having made up my mind as to the kind of fish I would seek, I looked to Wisconsin or the Upper Michigan peninsula as the place to go. Of course I examined the "Sportsman's Gazetteer" and the back volumes of FOREST AND STREAM, and of course I got information. But I did more; I studied the map—especially of Wisconsin—and wrote letters to men whom I knew and whom I did not know—to lawyers, doctors, preachers, post masters, lumbermen and station agents. Enclosing to each a stamped envelope and a list of questions, which, if answered, would give the information I was after, it would seem that I ought to have laid in such a fund of knowledge concerning Northern Wisconsin at least, where by far the larger number of my correspondents lived, as to have been at no loss whatever concerning the location of its many trout streams. But alas, my bureau failed me! Out of the lot I got but three answers that had information in them and were serviceable to me. The others went to the waste basket, and while I am thankful to the writers, on general principles, I do not think I will ever again open a correspondence on so extensive a scale with a view of learning where fish do bite. The outcome of it all was Thunder River was selected as the first objective point. This stream has no place on any of the maps that I have seen, but it was enough to know that I had to go to Peshtigo, near the north shore of Green Bay, and then "wagon out about fifty miles."

On the morning of the 18th of July we reached Peshtigo, the seat of a once thriving lumber trade and famous for having been twice swept away by fire. The we, as above, comprehends George, Edward, Oscar, and myself My three companions were young men and in no sense sportsmen. George was an old camper—had been with me on a half dozen extended trips, and was a good camp cook and camp "tender." He had a nose for berries, and would walk further for raspberry or "huckle" than any other person I ever knew; but he neither fished nor shot. Neither of the other two had ever been in the woods before, and both were out this time on account of bad health. Unexpectedly we met with trouble at the very outset. Usually it is no hard matter to find teamsters during the summer season in any lumber town, ready for an undertaking of the kind we were in, but, for some reason, no one hankered after the job that day. Boniface, it is true, was quite willing to send us to Lake Nok-e-bay, where he assured us of plenty of bass and pickerel fishing, and that, when we tired of that, some one who lived at the lake would, for a consideration, hitch up and take us to Thunder. The road to Nok-e-bay, he said, was quite good, else he would not be able to send us even there in his light wagon. According to his plan it would have

cost us well on to forty dollars to go to Thunder River and return, and judging, from his occupation, that he was presumably interested in our being sufficiently pleased with our trip as to speak well of it, and perhaps return another year, I am unable to understand how he could so coolly suggest the fleecing. The Nok-e-bay suggestion was disposed of in short order, when our landlord sent his hired man out in town to learn whether or not he could borrow a wagon suitable to carry us and our camp stuff; but it seemed that the man who kept wagons to loan was out of town that day, and so the hired man returned as he went.

The situation began to look desperate. No one could say when a wagon could be had, and the only livery man of the town, so far as I saw, being from home, his driver was "mighty sure" that he would not let a team go to Thunder if he were at home; and at any rate for not less than fifteen dollars a trip. And then we began thinking about other fishing grounds and to inquire the time of the arrival of the next north-bound train, and while getting this information a young man driving a well-fed and stout team of horses stopped at the pump for water. At a venture I accosted him, and to my delight he said: "Certainly; will carry you out for ten dollars, and when your stay is out fetch you back for a like sum." He could not go until the morrow; but in a little while we had our "outfit" on his wagon and he hauled us out to a good camping ground, where we set up our tent and went to housekeeping.

The next morning Charley Armstrong, for that was the young man's name, came after us according to promise, and at once we set out for Thunder River. It would be needless to cumber the pages of the FOREST AND STREAM with a description of the country through which we passed. It is enough to say that about half the way (as I now remember it) was through hardwood timber, and over the worst roads to be roads at all I certainly ever saw. The team walked fast, and with stumps, roots, mud holes and corduroy I never had such a shaking up in all my life before. Where the pines grew the sandy soil insured us dry roads and reasonably smooth.

About twenty-five miles out we came to the "Armstrong farm," a clearing in the heart of the lumber region. Soon after passing this we crossed Beaver Creek, a very pretty stream, and one which I have no doubt is a fair trout stream. The cook at the farm boasted in our presence of the fine string he had caught in Beaver Creek the day before, the first information we had of our nearness to a trout stream, but when I mentioned the circumstance to Charley he said the cook was an "awful liar," and then said something about the fish being "for the farm." On our return I met the schoolmaster at the "farm," and he told me that he had good trout fishing in Beaver Creek.

At the setting of the sun we climbed a high ridge, from which we could see far to the west, through the thinly scattered pine trees, the cloud-reflecting surface of Thunder Lake, and beyond, in the hazy distance, a mound shaped hill which our driver said was Blue Mountain of the white men and Win-cha-win-ching of the red. The scene was one of great beauty. A rain cloud which had just passed over, and but for our rubbers would have given us a good wetting, hung like a black pall in the east, while the crimson sun shone over the west of Win-cha-win-ching, and lighted up hilltop and treetop with "colors dipped in heaven." It was not yet dark when we reached our camping ground, which was on the north shore of Thunder Lake, fifty feet or more down the surface of the water.

Thunder Lake, which in the Indian tongue was Ah-me-ke Sok-i-e-gan, in its greater length is about a mile long and lies south-southeast by north-northwest. It is perhaps three-quarters of a mile wide and is surrounded with low hills, thinly covered with pine timber. It is fed by a little stream which takes its rise in a spring a couple of miles to the west, and which stream widens into two small lakes ere it enters Thunder. The outlet is from the north side not far from the inlet, and it runs a mile northward, discharging into Thunder River a mile or so above its entrance into the Peshtigo River. Our camp was pitched in the angle formed by the lake and its outlet on the east side; and about fifty yards from us, down near the stream, was the cabin of old Frank, a crack-brained old fellow who has lived the life of a hermit here for nine years.

We had heard of old Frank while at Peshtigo, and had been given to understand that it would be well for us to honor his whims, for he knew where the best fishing grounds were, and without his help we might lose valuable time hunting them for ourselves. On two or three subjects old Frank was a decided crank, but on all others he appeared to be straight as a gun barrel. He thinks he is the lawfully elected President of the United States, but has been deprived of his office through the machinations of bad men. He was elected in 1876, and has been patiently awaiting a summons from Washington to come and assume the reins of government ever since. That summons will come at any rate by the fourth of next March, or else war will set in between the Democrats and the Republicans, and the people will go to cutting each other's throats. Old Frank is overcome by a "power." A "power" has revealed all these things to him. He was born one hundred years to a day after Washton, and he was elected one hundred years to a year after Washington, or to use his familiar speech, "George did his great work." Old Frank imagines that the hill on the west side of the outlet of the lake contains a gold mine, and for two years he has been digging for the precious metal. That gold is in solid ingots and belongs to the people of the United States. He has dug a great hole in the hill's top and has sunk a shaft about thirty feet deep in the bottom of that hole, which is curbed with wood. Every bucket of sand drawn up that shaft occasioned him a journey up and down it. The old man is as gentle as a child, and, strange as it may seem, talks very little upon his crank themes. He is "God's man and can afford to wait," he says, and it never seems to enter his head that anyone could be so foolish as not to believe as he does. Twice a week he carefully shaves himself and twice a day he carefully combs his long, thin hair, and thus keeps himself in a presentable condition, should Secretary Frelinghuysen or even President Arthur unexpectedly call upon him to go up to Washington and take control of public affairs. But if after all it should happen that it is I who am the crank, I nevertheless feel sure that the Secretary or President, whichever it is that goes out to Thunder Lake, would do well not to enter old Frank's cabin. The country air out there is delightful, but the ancient smells that come forth from the open door of that old cabin would never remind one of "Araby the blest" I am sure.

Win-cha-win-ching is an egg-shaped hill, the longer axis of which lies east and west, with the "little end" to the east. It is, perhaps, three or four miles long and two and a half or three wide at the widest part. It rises gradually from the plain, save on the south side, where there are said to be precipitous cliffs, but at no point does it exceed one hundred feet above the level of the surrounding region. It is covered with a dense growth of heavy timber, with impenetrable thickets of an undergrowth beneath, and it is the home, says old Frank, of great numbers of bear, deer, and wolves. Two streams, which take their rise, the one west of the hill and flowing along the northern side, and the other southwest and flowing along the southern side, meet east of it and form the Thunder River. From thence down to the Peshtigo River is three miles or more as the crow flies, and in these two streams and for two miles below their union is where the trout are found.

High up in the northeast quarter of the hill, surrounded by dense groves of giant trees, is a little lake of limpid water. Hither came the deer, judging from their tracks, in great numbers, to feed on the water-lilies, and about the submerged logs bass were lurking in numbers truly astonishing. I threw a spoon from the shore and caught four lusty fellows as fast as I could draw it in, which were returned to their home as soon as sufficiently admired. Old Frank assured us that immense trout live in this lake, also—trout weighing three and four pounds; but they are never caught before October, and from thence on through the winter. In Thunder Lake the larger fall and winter trout are also taken, but in no other lakes than these two thereabout.

Fishing in Thunder River is no realization of an artist's dream. The fisherman therein cannot lounge under the shadow of the trees upon beds of soft grasses and summer flowers. He may hear the singing of birds, and especially that sweet singer of the thickets, the hermit thrush; he may perhaps hear the whistle of a startled deer now and then, but as he journeys down the winding Thunder, he will soon learn that it is all he can do to preserve his Christian integrity. The brush is literally in clouds, the ground is spongy and full of holes, and by the time one fishes the "likely spots" that lie within the length of a half mile of the Ahme-ke-Se-be-Wer-shen,* if he has not ripped out some fearful imprecations, he is a wonderfully even-tempered man, like myself. But then the fisherman can get trout, and I am inclined to think as richly-colored fellows as swim in water. The Thunder River trout are very highly colored, more so, I think, than the trout of any other stream that I afterwards fished. They were new to me, and I seldom took one off my hook that I did not turn it over and over and study and admire its wonderful combinations of blue, vermilion, salmon and other colors, shades and tints. And the Thunder River trout are by no means scarce and are of good size. In looking over my journal, I find the following figures indicating the numbers taken at different times, to wit, 16, 25, 23, 9, 24, 12. The largest I took was fourteen inches in length and weighed twenty ounces; the next was thirteen inches long, and I got several a foot in length and a good many ten inches long.

"For nine years," said old Frank, "people have been coming to Thunder and fishing, and the fish are about as plenty this year as they were at first. I don't know where they come from. They must come from some place, for they will be pretty well caught out by the time people quit coming this year."

I do not know how true all this may be. I apprehend there will be an end to trout fishing in the Thunder River in due time, but the stream would seem to belong to a region that is peculiarly favorable to the growth of trout. The tributaries of the Oconto, Peshtigo and Menominee, all of which discharge their waters into Green Bay, are many of them trout streams and some of them famous for the numbers and size of their fish. The "Menominee range," as is called that region of highlands rich in iron ores, through which the celebrated Brulé River runs, abounds in trout streams.

The Brulé has been the objective point for many trout fishermen for many summers, and a Chicago lawyer wrote a book about it, but I was assured by trappers, "land lookers" and others, that all through the range there were other streams abounding in trout. The entire region has been lately opened up to fishermen by rail and a new line of road running some distance west of the Northwestern Railway is in process of construction, and the probability is, that in a few years more the Green Bay streams will be depopulated. This new line of road will pass within twenty miles of the Thunder and crosses Beaver Creek at the Armstrong farm. It heads up for the "range," and when it is opened I apprehend there will be a grand rush from Milwaukee, its point of departure, for the new streams it will make accessible.

D. D. BANTA.

* Chippewa for Little Thunder River.—OLD FRANK.

WITH HACKLES AND GENTLES.

FOURTH PAPER.

"The south wind, like sighs from a fair maiden's breast,
Just ripples the water that else were at rest;
The cloud, like a frown from that fair maid, scarce seen,
Just shadows the surface that else were serene:
While honey-drops, type of the lovely girl's tear
Just stain the fair streamlet that else were so clear.

THE south wind, as for the huntsman so for the angler, is the typical wind, is the desired wind for sport, but barring the east and northeast bluster any wind, other things being favorable, may blow, and the patient and painstaking angler may bring to creel worthy fish. I have fished with the baneful northeast blowing half a gale, but it came on when the day had been "set apart" for an outing, and I must either try my luck or mope. It was where "hackles" or any other fly had not been used for at least a generation, and indifferent bottom fishing was the only alternative.

It was my wont to keep a "worm preserve" in good condition for immediate use, and the well-scoured "brandlings" and "gentles" well repaid the care taken of them in luring goodly perch and occasional bass to my hook. I freely confess that I do not like to kill trout save with the fly! It seems the only proper way to take those cleanly, aristocratic fish, and certainly none other is so perfectly satisfactory, either to contemplate or to practice. Dost not agree with me, my brother of the angle?

"In plying our dear craft" we meet, at every step of the way, new experiences, and with every fish brought to creel we lay up in the memory some pleasant thing to serve us when fish and fishing are not at hand.

The mind of man from childhood to age, is the receptacle of many and varied etchings, pleasant to recall and indestructible while memory holds its sway, and the sportsman has such a glorious stock of these in store, that he ought to be envied by those who see nothing to be enjoyed out of the daily routine of their dull lives. This is no day for fishing, and these thoughts come to me as I sit with a quaint copy of an "Angler's Song Book" in my hand, and through smoke-wreaths watch the leaden sky and the steady downpour. The wind is south, to be sure, but the rain is *wet* and all the earth is sodden! Had we no leisure to wait for a good fishing day, I could not so calmly sit under this "frown" of nature on our anticipated sport; but there are times when a rainy day, to the angler, is a godsend—to be enjoyed, and not to be scowled upon aneath a "cursing-cap." On such a day, if his tackle be not in order, he can read Walton and other masters in the "gentle art," review the past and forecast the future, and be the better prepared to go a-field when the "shadows flee away."

After such a season with tackle and books and retrospect, if a sympathetic and congenial friend chances to "drop in," and his smoke wreath co-mingles with your own, how fast the dull day wears away.

"We are just like brother and brother,
And this is our toast,
The true anglers' boast—
Success and good will to each other."

But there are times when a rainy day is a dire one for any angler to accept graciously and every gentle influence fails to soothe. Everyone who has long used the rod can recall such, and some, it may be, have left scars behind them that quiet musing unveils. One, even now, "looms up" before me out of the long ago and brings with it a chill, as a ghost may be supposed to bring with it from its pent charnel-house. On that day, long anticipated, the east wind blew as if bent upon marring every chance of success, and I fished with bravado as if to spite the elements. Fished? I made casts and changed positions, but my creel swayed on my hip with every blast, too empty to defy the wind. Like the apostolic fishermen I "toiled" and "caught nothing." I fished because I had left town on that special day to fish, and high noon passed before the buffetings of the fateful wind made me surrender. This one day was sandwiched between two perfect fishing days—a "stroke" of "fisherman's luck" far worse than a "wet jacket."

The literature of angling is so rich, both in prose and poetry, that all tastes may be suited, and no seeker need fail to find, though he runs "riot." Of yore men wrote from the heart, wrote as they builded castles and cathedrals—for all time; and 'tis a rare joy in this matter of fact age to "unearth" an old book on field sports and see the honest zest and hearty love that sat behind the quill. All honor to the worthies who wrote of field and flood, who sang, in sweet measure, as they strolled a-field!

"Here's a bumper to rod and to spear!
A bumper to those, who, where'er the rill flows,
Are spearing and angling along!

"Here's a cheer for the charms of the stream,
A cheer for a glorious burst;
And who would not cheer, when the bold throw the spear,
For the fearless are always the first.

"Here's a sigh for the anglers afar,
A welcome to those that are here:
A health to the whole, who, in spirit and soul,
Are friends to the rod and the spear!"

As gold to the miser, so is the sight of running water to the angler—it thrills him to the heart's core, and his eye peers into the deeps for a lurking fish with a greed and a hope that must be felt to be understood. Sad indeed it is to see so many "likely" waters utterly bereft of worthy fish! Alack! the miser hath usurped the angler, and the fouled streams croon a requiem for the fish that are fled!

O. W. R.

SECOND PRESBYTERIAN FISHING CLUB.

THE log of the twelfth annual cruise of the Second Presbyterian Fishing Club of Philadelphia, on the schooner Samuel Applegit, is just before us in a neat and humorously illustrated pamphlet of ninety-six pages. The large chart of the cruise shows a most remarkable formation of the country about Chesapeake and Delaware bays which materially differs from the charts of the U. S. Coast Survey, and shows what inferior work is done by the Government engineers. The latter corps seem to have entirely neglected the resemblance of different head lands to the profiles of the members of the Second Presbyterians, and consequently the government maps do not show any similarity to Smith's nose in the peninsular terminating at Cape Charles, nor do the names of places at all compare with those of the new chart now presented. The log, as kept by Mr. Clifford P. Allen, and illustrated by Mr. Herbert S. Packard, shows that due regard for the solemnity of fishing was observed and all levity banished from the schooner. Yet they were not happy. Some evil-disposed person had posted handbills purporting to be signed by the Chief of Police of Kensington, offering a reward of $500 for the apprehension of the "outlaws who stole the schooner 'S. Applegit,' now said to be in the neighborhood of Norfolk," thereby causing these truly good men to be looked upon with suspicion. An advertisement was also inserted in the Norfolk *Landmark* warning people not to trust the members of the 2d P. F. C., and in consequence they were sore at heart.

We have given the by-laws of the club in former years, and only note a new clause which says: "No member shall receive credit on his score for the biggest fish yet, when he 'ail but got him on board but lost him;' neither shall he insist that the weight of his fish is seven pounds when it is evidently eight ounces." The trip of the club covered the first two weeks of July, and twenty-two members participated in the grief, which became intense when it was discovered that there was not a single onion on board. Among the edibles was a snapping turtle, and after the cook had decapitated the reptile the following lecture on anatomy was delivered by Dr. Minich:

"Gentlemen! If you will give me your attention I will endeavor to explain the construction and uses of the subject, which my assistant, Mr. Simon, has so ably prepared and which now lies before you. The specimen is the head of the *Gymnopaus spiniferus*, or in plain English, the snapper; you will perceive that the head is divided into two parts—an inside and an outside. The outside is composed of bone covered with skin or cuticle. The skin on his cheek, you will observe, is very thin and appears almost as hard as the bone which it covers—as hard in fact, as the cheek of the average member of this club. The inside you will find largely decorated with brain, muscle, nerves and sinews. Here we have

the eye, or organ of vision, with all its delicate appendages; it differs from the organ which our brother Mousley operates upon, in not having a handle. Connected with it latterly though we find this thread-like substance which is the optic nerve. This nerve is connected at the other end with the snapper's caudal appendage, commonly known as the tail. This acts on the snapper's eye like the rudder on a ship, if it is flopped over to one side the eye naturally turns to the opposite. This nerve is subject to various diseases, prominent among which may be enumerated cross-eye, strabismus, and cock-eye. The latter is caused by the nerve becoming entangle in the spinal column, or vertebræ, and the only remedy in such cases is to take out the backbone and disentangle the nerve. The vertebræ can be put together again with Spaulding's glue. In man such a disease may be both a blessing and a curse. If he looks at a pretty girl and sees double it may be looked at in the light of a blessing. Should he, however, reach out to a lean lunch counter, and find that his eyes deceive him, he is more than likely to deem it the reverse. In that best friend of man, the mule, the optic nerve is connected directly with the hind legs, so that the moment he sees anything from the rear he 'lifts his fut.'"

We regret that our space forbids publishing the Doctor's learned lecture in its entirety, but enough has been given to show that the club devote some time to intellectual enjoyment as well as the mere animal one of catching bluefish.

RAINBOW OR CALIFORNIA TROUT.

TO any one familiar with the fish laws of the State of New York it must be evident that something is wrong, since the rainbow and other western trout, as alleged, have been introduced into some of our native trout streams and lakes.

The season for brook trout opens on April 15 and closes September 1. The season for the rainbows and other trout opens September 1 and closes May 15. Now it looks as if the foreigners must be kept out of the trout streams or it will have a tendency to make our present laws a dead letter.

The rainbows and other western trout do not commence spawning in our waters (as far as heard from) until the latter part of April, and are not through by June 1.

In many parts of the State our native brook trout begin spawning the latter part of September and in most streams they finish in November.

Now what is to be done? You can't regulate it so that a California trout will not take your fly in the spring when he should not, or the fisherman would not, nor in the fall can you prevent the brook trout from doing the same after it is unlawful to so take him.

Dropping the fish so taken out of season back into the stream don't fill the bill, even if every person were so disposed to return them. I see no way out of it if they are still put into trout streams, but to have the open seasons made the same for both, or all the year round, and abandon all attempts at protection.

And then a word about the salmon trout, *Cristivomer namaycush*; I think the open season for them should close September 1. They have been caught in the lakes of Western New York during September in greater numbers than during any month of the year, and they are then full of spawn which is almost ripe. J. ANNIN, JR.

CALEDONIA, New York.

AQUARIA AT INDUSTRIAL EXHIBITIONS.—Philadelphia, Oct. 3.—The interesting account in your paper of week before last headed "Fine Display in Aquaria" at the Cincinnati Exhibition, calls to mind a matter which has not yet been published. In your city there is a flourishing institute which holds an interesting exhibition every season. There is also a high-toned institution in this city that don't have an exhibition every year, in fact, the last one they had was some eight years ago, the last previous one was sixteen years before. At the time of their last exhibition the fish commissioners of this State desired to make a display in aquaria, showing methods of artificial fish-hatching, etc., and secured space therefor. One gentleman at much trouble secured a fine lot of glazed tanks for the display. When the time arrived to make arrangements for the water, it became necessary to obtain the signature of the president of the institute. That astute individual at once squelched this feature of the exhibition, declaring that it was boy's play, without a solitary scientific feature. The scientific gentlemen connected with the exhibition felt much scandalized, and one of the professors remarked that their president owed his position to his money rather than his brains. In this connection I am reminded of the Centennial display, but *infandum renovare dolorem*.—AQUARIUS.

FISHING NEAR NEW YORK—Oceanic, N. J., Oct 2.—"Brooklynite," in a late issue of FOREST AND STREAM, wants to know where to get a day's fishing near New York. Striped bass, I suppose, is what he is after. Now, let me try and inform him where I have had good success from October to November 15. Take Central Railroad of New Jersey to Bergen Point Station, Walk down to Burns's where he will find boat. Fish from the first of the flood to high water at 1,500 to 2,500 feet west of the draw. Fish off from the abutments about 100 feet; cast in 20 feet from the corners of the abutments. Should shedders be too high-toned in price, let him use for bait some small oysters—say a quart—which have been salted over night. In addition, he may use shrimp and a bunch or so of soft clams. Use a tracing sinker. I have taken fine messes of bass during this month. Fishing has been fine in Shrewsbury River this summer. We have taken the largest kingfish that has been taken for years. My neighbor Vantine and myself took to-day twelve fine bass and two weakfish in three hours' fishing.—J. H. WILD.

CHUB OR BLACK BASS?—West Point, King William County, Va.—On the 21st of September, there came such a rainfall as to wash away five mill dams in this county, thus turning loose a great number of mill pond chub. No doubt many of the small fry reached the Mattapony River, but a great many large ones were captured and delighted the palate of the epicure. Three gentlemen in the neighborhood of King William Courthouse bought over fifty pounds of fish weighing from five to ten pounds a piece. Experienced fishermen or those who observe closely, do not consider the southern, or mill pond chub, as identical with the black bass. They say there is a striking similarity, and yet well defined points of difference. And then the chub grows so much larger, sometimes turning the scale at fourteen pounds.—TUSKRAP.

A STEP IN THE RIGHT DIRECTION.—ALTONA, Clinton Co., N. Y., Oct. 7.—I notice with pleasure that four of the most persistent violators of the game laws in this part of the country have just been arrested for illegal fishing at Chazy Lake, Clinton county, N. Y. These men have nearly exterminated the trout in Chazy Lake with their gillnets and nightlines, and have lately turned their attention to the Chateaugay Lake, which lies about six miles from Chazy Lake. Not long ago these lakes were teeming with trout, and deer and grouse were plenty on the hills surrounding them, making quite a sportsman's paradise. It is a pity that a few lazy, lawless scamps should be allowed to slaughter the game and fish during the close season, by the sale of which they scarcely manage to eke out a miserable existence. They catch hundreds of pounds of trout off their spawning to use as bait for their mink-traps, and "crust-hunt" the deer merely for their hides. I hope, now that the good work has begun, that it will be followed up until these pests have been driven off. The hotel-keepers on the lakes should take a lively interest in the prosecution of these fellows.—GROUSE.

TENNESSEE NOTES.—Nashville, Oct. 6.—As soon as we have a rainfall a number of gentlemen from Nashville will away to their favorite fishing grounds to enjoy the fine sport and the luxuries of camp life during October, the most delightful month of the twelve in this latitude. Ed. Horn has been having some remarkably fine sport angling in the Cumberland River. The other day he procured a bucket of live minnows, and from five until seven o'clock A. M. he creeled eight handsome bass, weighing from one-half to one pound and a half each. This is all the more remarkable as the fish were caught from the wharf, which is in the very center of the city. A day or two later the same gentleman took a fine string of bass and drum from the river at the same place, but this time with dead minnows and common earth worms. This change in the supply of river fish is one of the most striking evidences of the advantages gained by protective laws.—J. D. H.

Fishculture.

THE FISH QUESTION IN VERMONT.

THE following letter to the Rutland *Herald and Globe* gives a fair account of the question which is now agitating anglers in the Green Mountain State:

It appears to be generally understood that an effort will be made during the coming session of our Legislature to have the "Odious Fish and Game Law" repealed, and a just and sensible law enacted in its place. I believe this move is a good one, as any man who really knows anything about the matter, knows that under the present law the trout in the waters of this State have steadily decreased.

Our present law was enacted, avowedly, for the purpose of protecting the fish with the view of increasing them. We were told that this law would have "the effect of increasing the supply of fish"—how, no one has told, or no one can tell, but that was the claim. Now, what after a trial of eight years is the result? in this section—and I am informed it is so all over the State—the trout have steadily decreased; and why? For the very best of reasons, viz: This law has thrown all of the free fishing exactly on to the places where the supply comes from—namely, the mountain streams. No spawn deposited in streams in the open country where the soil is broken by cultivation, roads, etc., ever hatches out, as the fine sediment which settles on the eggs is sure death to every egg, as every fishculturist will testify. Therefore the supply must come from the mountain streams where the soil is little broken, and so comparatively little fine sediment is ever deposited on the eggs; besides the mountain streams are more rapid, and what little fine sediment is deposited is quickly washed off after high water occurs.

We might just as well expect to raise a large supply of poultry by killing the little "chicks" soon after they are hatched, as to by law throw all the free fishing directly on to the hatching grounds, and thus encourage a larger amount of fishing exactly where it does the most harm, *i. e.*, cut off the supply—what folly! We have been told by men who pretended to be very wise on the subject, "If you will only stop fishing a little while the streams will soon be full of trout."

I do not wish to appear egotistical about this matter, but let us say there is not a word of truth in this statement. It has taken years and years of fishing, fair and foul, lines, nets, spears, snares, etc., to deplete the streams and it would in a natural way take years and years to replenish them.

Fishculturists, men who have spent years in studying up this matter, say that doubtless not over one trout egg in a thousand deposited in a natural way is ever hatched out and produces mature fish. Thus you see the process of re-stocking is extremely slow. We can't wait for such slow work, if it can be done more quickly, and it can be, with but little trouble and expense. From 85 to 95 per cent. of trout spawn can be, and is, every year artificially hatched. If any reader will figure the difference in percentage between the two methods, and then say he thinks the streams will best re-stock themselves, I would like to see that man. I think Vermont cannot afford not to have a "State hatching house" and every year put the trout into its streams, and let the people take them out under proper restrictions as to time and implements. For we all know that the artificial propagation of fish is no longer an experiment involved in any doubt. The results obtained in other States where they have "hatching houses"—establishes the fact so firmly that no one can possibly doubt the feasibility of re-stocking our streams with trout artificially at small expense compared with the beneficial results that would be attained.

This State is now able to reap the benefit of the outlay and experience of other States. The great benefit of having plenty of trout in our streams of course no one can question. Pleasure and profit are not often combined, but in this case they are, and I believe if the question of a "State Hatching House" is properly presented to our legislators they will make a fair appropriation for it, repeal the present law and enact a just one in its place. But if the Legislature does not see fit to make an appropriation for a "Hatching House" it certainly, by all means, ought to repeal the present law, which every one knows prevents private enterprise from restocking the streams; for, of course, no man would, at his own expense, put fish into a stream and then when he went to catch a few for his breakfast, be liable to be arrested as a criminal and pay a heavy fine and cost, or be "jailed," for taking the very fish out of a stream that he himself put in.

The story is too long to tell in one letter. I only write this to call attention to the subject as it is understood some of us intend to make an effort to have whatever is done be an improvement on our present system. All persons who feel an especial interest in the subject of restocking the streams of our State with trout are invited to correspond with the writer, giving their opinions and knowledge of the working and effects of our present law, that this matter may be plainly and fairly presented to our Legislature for their consideration during the coming session. C. F. ORVIS.

MANCHESTER, Vt., Sept. 25, 1882.

PLANTS FOR CARP FOOD,—Nashville, Tenn.—Dr. A. Gallenger is now engaged in botanical researches in this State, and tells me that he has for some time past given attention to those species of aquatic plants, so common in our southern States, with a view to ascertaining the character, and of determining which would be most likely to furnish the much desired food for German carp. He thinks there are a number of these plants now growing in many Southern ponds and streams which are particularly adapted to the carp as food, and in this his opinion is almost confirmed by the appearance of certain aquatic plants, not indigenuous to the country, but imported from Asia by some mysterious manner. One of these varieties was lately discovered by a botanist in Massachusetts. The Doctor is a thorough master of the science of botany, and no doubt will solve the question of carp food before long. The carp placed by Col. G. F. Akers, when State Fish Commissioner, in the ponds upon the Capitol grounds, have grown amazingly from all accounts. Those given to Captain Frank W. Green have multiplied beyond conception, and grown to a great size. He has so many in his pond that he is now advertising them for sale. Next year a great many ponds will be built and stocked with either carp or our native varieties, the superb harvest of this year placing our farmers in a better condition to improve their homes than they have been in many years.—J. D. H.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters, whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 884, New York, Secretary.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. S. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

'COONING NEAR NEW YORK.

THE other evening a party of eight, five bipeds and three quadrupeds, rendezvoued at a spot eight miles from Jersey City, and a mile and a half west of the Hudson River. The bipeds were Charley, Hugh, Jim and George, residents of Jersey, and Doc, a tenderfoot from New York. The quadrupeds were Jack and Shot, hounds, and Bess, a brindle bitch "of the bull-terrier persuasion," in fact the very one that "V. H. C." brought into notice in some recent communications to this journal. The hounds were old and experienced 'coon-dogs, and the bitch was brought along to see the fun, and if we had luck to take her part in scrimmages. We started for the woods at half past nine, and a walk of a mile brought us to Palisade Avenue. Here the dogs were cast off, but found nothing. Walking up the road with lanterns carried low we presently found the track of a large 'coon, crossing the road and making for an adjoining cornfield to the west. The dogs brought up refused the scent, the road being covered with a coating of dry dust an inch or more in thickness. The hounds were then cast off in the standing corn and left to follow their noses, while we, with careful steps and searching eyes, scanned the ground for 'coon sign—and we found it. Every low and wet place was fairly covered with tracks as if a party of twenty or more had been frolicking all over the field. Presently the hounds opened, and Hugh exclaimed "They've got him treed!" and after a minute's pause added, "No, that isn't a 'coon up a tree, it must be something else."

Hurrying up, we found Jack and Shot over on each side of a stone wall that was thickly overgrown with wild grape vines and briars. The hounds were fairly crazy and trying to get in to the wall. Bess was held in arms, crying in the most piteous tones to be released and struggling with all her might. A low growl came from the wall, and Hugh sung out again, "Yes, boys, it's a 'coon after all, but in all my life I never saw one take to stone wall before." The stones removed and Jack's nose went down into the hole. Out it came in an instant with something attached and Bess jumping from the arms that held her, in an instant became one with the struggling animals. A brief fight settled the matter, and our first 'coon was found to be an opossum. This was about half past eleven, and the rising moon now began to throw out more light on our proceedings. Everyone was happy except Bess, who wanted more 'possum, and slipping from hand she made one jump and closed her jaws partly on 'possum and partly on Hugh's fist. Half an hour later the hounds again gave tongue, this time in the woods. The tree was reached, and found to be a small, one not more than twenty feet in hight. His 'coonship was descried high up, but a few shakes brought him down, and as she lit out proved to be a cat. A few rabbits, a fox and a few more cats were started, and as the night drew on it seemed as if our 'cooning was to be a failure. About two o'clock the dogs again began to talk, and this time they appeared to be in earnest. We found the tree to be a large one in the midst of a swampy wood. A fire heaped high with brush was quickly kindled, and Hugh, putting on his climbing irons, was soon among the branches. Charley followed him up, and the 'coon, this time a real one, was seen lying out on one of the upper limbs. Hugh descended, and Charley being of lighter build went higher and shook him out. A thud, and in an instant four struggling animals were united. Jack had him by the nose, Shot by the stern, and Bess closed her powerful terrier jaws upon his loin in a grip that relaxed not until poor cubby had given up the ghost, and even then had to be choked off, much to her grief and indignation.

The dogs again commenced to range, but it was some time before they announced a tree. Careful search revealed nothing. The critter, whether 'coon, 'possum or cat, had escaped before we arrived. The track was down toward and at four o'clock we reached Kelly's hostelry at Fairview. Some liquid refreshment, and an hour's nap prepared us for an early train, which brought us back to the city in time for breakfast. A few funny things occurred during the hunt. After Hugh's fingers had got mixed with Bess's teeth he insisted that she should be kept on chain. "He wasn't going 'cooning along with such a dog that didn't know when the 'coon was dead." Hugh had crammed the 'possum into his overcoat pocket, but the powerful scent was a sad temptation, and Doc. had his hands full in keeping Bess out of mischief. Later when we reached the cat tree, the chain was removed and the bitch held by the collar until the game came to earth. When the cat jumped hounds and men took after her, but Bess didn't care for cat (plenty of them at home), but made a jump for Hugh's coat and held to it with a pretty tight grip, and Hugh hardly knew whether to keep on the run dragging the dog behind him or to shed his coat and leave Bess master of the situation and the 'possum.

This 'coon hunt brought back the memories of twenty years ago, when the writer devoted two or three nights a week, during the season, to the running of 'coons in the rich bottom lands bordering the Genesee River. In those days, in September, as soon as 'coon sign became plenty in the corn, the

sport was inaugurated, and the nightly harvest was usually satisfactory. We rarely worked the same fields two nights in succession, but with a stretch of several miles of good 'coon ground had plenty of opportunity to make good bags. Starting as soon as it was dark, we were generally through by one o'clock, when the fire by the last 'coon tree enabled us to prepare a little primitive refreshment. Roasting ears, potatoes, a few bullheads from the river and a piece of 'coon meat were hastily cooked and eaten with gusto, and added relish from some neighboring melon-patch.

The above has been written to show that Bergen county has a few 'coons and opossums to spare, that they can be gotten without much trouble, and that a night's sport can be had in the immediate vicinity of the city. The morning mail brought me a note from a friend, in which he stated that a few days ago, in company with three others, they shot sixty-one ducks, teal, widgeon, etc., without boats or decoys, and within five miles of New York City Hall.

A word to "V. H. C.," I am prepared to admit, in reference to the color of bull-terriers, that white sometimes has its advantages, *e. g.*, when dog and 'coon are badly mixed on a dark night it is easier to tell them apart; and secondly, when the dog has fleas, it is easier to see them. BRINDLE.

RETRIEVING AND STYLE.

Editor Forest and Stream:

In discussing the qualities of our field dogs a great deal is usually said about "pace" and "nose," but not much about "style" of hunting. Now "style," as regards the way in which a dog carries his head, is to my mind of as much importance as the quality of his nose, as unless he does so in good form he will certainly potter or flush more than he ought to do, however well he may have been trained. Style of hunting is an innate quality that can be improved or injured by good or bad management.

Hunting on the prairies is generally supposed to be good for style, as if the head is carried too low, the nose gets cut by the grass. Trailing (following the foot scent) is about the worst habit a setter or pointer can get into; and retrieving wounded game is the surest way of encouraging it. No one will, I presume, confound it with *roading*, which, when well done, is the finest of work. Retrievers ought to trail their game, so in training them, one of the chief points to be attended to is to encourage them to do so, and they are only at first hunted upon wounded game. Several years ago, before I had had the experience in American hunting that I have since had, I suggested in the valuable columns of FOREST AND STREAM, that it would be better to use a separate dog for retrieving instead of allowing one's setters and pointers to do so, but the idea was then evidently considered absurd, because the point of it was not understood. Sportsmen who only keep one dog, must, of course, have them to retrieve; but where several are kept I am certain it would be found advantageous to have this retrieving left to a regular trained retriever; scarcely any game would then be lost, either from land or water, the hunting dogs would not be distressed in hot weather by having to look for and carry it in; nor in very cold weather by getting wet; they would also behave better in a general way, as retrieving is the cause of much unsteadiness, a fact that is proved at every field trial. These advantages would be gained, in addition to the preservation of fine style. C. E. MCMURDO.

SHADWELL, VA., Oct. 7.

FOX HUNTING IN TENNESSEE.

DURING the past two weeks "Revnard" has been permitted to take but little rest by our numerous fox hunters all over the State. The moon has shone forth with unusual splendid brightness, and the temperature all that could be desired, cool enough for bold man and horse, yet not enough so to require heavy top coats and other encumberances at times necessary for comfort.

The last chase took place a few nights ago, meeting as did the twenty or thirty enthusiasts at "Spout Spring," about two miles from the city. Splendidly mounted was each and every one, and the dogs never in better form or keener for the race, the only item needed to make up the tableau was the wily fox. On Morrow's poultry farm being in the vicinity, it was safe to calculate upon finding one of the fore-legged lovers of the dainty fowls somewhere thereabouts, and in that conjecture the master of the hunt was about right, as was shown by the eagerness of the hounds to be slipped from their leashes at the sound of the sharp, shrill voice of Dandy, who had been sent out to reconnoitre in the vicinity of where we were all assembled quaffing our juleps and enjoying the lovely scenes around us.

The first dog to open cold Burkhardt, he to be instantly seconded by Rover, Rattler and Duncan, broke away, coupled as they were, and had the effect to make the others of the pack very restless; in fact, so much so that, contrary to custom, they were let go before game was certain to have been unearthed. Like lightning they dashed up the sides of the precipitous hills surrounding the spring, and before the horsemen could get out into the open country the entire pack was in full cry and going a pace that nothing short of a thoroughbred in good trim could have kept up with. Col. Geo. Akers led the hunt on his reliable black mare Fanny, closely followed by Charley Hollister and Major Ed. Saunders, from Nashville.

Marsh Pinkard, Hermann Burkholz, Billy Raggio and George Holmes were more considerate upon their horses, and took the Vaughn pike at a trot, keeping within hearing of the dogs all the while; thus the chase went on for a few minutes, but after this the entire phase of the sport changed. The fox turned towards the pike and at a tremendous speed came down through a field of stubble, and took the fence a few yards in front of George Holmes, frightening his horse and causing him to heave and pitch so furiously as to land his rider in a bunch of briars and giving him such a shaking and scratching as to put him *hors de combat* for the remainder of the night. Hermann Burkholz applied the spurs to his charger, and in an instant had cleared the stone wall at one side of the road and was soon in with the pack; Marsh Pinkard's Bijou refused to leap, and came near skipping his cargo, but being a first class rider, that was not to be done. Billy Raggio, a son of poetical Italy, was too prudent to attempt the leap, but active enough to dismount at a weak place in the wall and knock off rock enough to allow his nag and Marsh's to get over without further trouble.

By this time the hounds with Hermann close at their heels, were a mile or more away, and the remainder of the boys would have been rather lonely if the Colonel had not come up at that time. He was a picture indeed. Don Quixote, after one of his most perilous tilts, never looked more forlorn, or had fared worse than did our gallant Virginian. Hat gone, coat rent asunder, one leg of his trousers had been ruthlessly torn away by some intruding vine, face scarred, out of breath and as mad as a nest of disturbed hornets. This was about the plight he was in. The old mare had dumped him in a ditch, and while scrambling through the undergrowth briars and plowed ground, the balance of the misfortunes had befallen him; never was there a man in Tennessee so exasperated, writhing with pain, ridiculous to look at and utterly disgusted with his luck; he, like "Richard," was willing to give his kingdom for a horse, mule or any conveyance that would enable him to prosecute the chase. Billy Raggio, like the good Samaritan, was on hand, offered his mount to the gallant son of Mars, and again, like Richard, he was himself again.

"Where are they gone?" said he.

"I dunno," replied Marsh, "and guess you don't care much."

"I'll catch that vagabond of a fox if he stays in Davidson county," continued the Colonel, "or I'll never take another drop of Lincoln after this one," at the same time feeling for his flask. Fancy his expression when he discovered that the useful tickler was gone. There was no use grumbling, however, and off he started at the top of his horse's speed, and Marsh after him. Fortunately there were no fences of importance around the field they were in; hence all went well until they reached the Gallatin pike, where they again came within hearing of the hounds. This gave new life and enthusiasm to the Colonel, and off he started again, though not destined to go far, because of a terrible cropper he got in attempting to cross a gully, into which his horse fell, rolling over on him and bruising him badly. This effectually closed the sport for him, though the hounds went on, still followed by Hermann, whose horse never faltered at an obstacle, or apparently tired, until the fox, overpowered by fatigue, yielded up his life at the first toll house, into which he sought refuge, but found death, and that not by his pursuers, as he ran upon a huge mastiff belonging to the gate keeper, and which finished him with one shake.

Charley Hollister received severe contusions about the head, and the Nashville man had his arm broken, by their respective tumbles. Colonel Akers sent for "Sandy Carber" to wait upon him, and by a mass of restoratives, applied scientifically by this aged caterer to fast boys, the bruises were soon healed. Marsh Pinkard underwent a similar treatment, though not wounded, and is now doing better. Charley Hollister and the Kentuckian are able to be about, and have been taken repeatedly, the one for Arabi Pasha and the other for Admiral Nicholson of Egyptian notoriety. A telephonic communication was received from Billy Raggio, at Gallatin, that he had surrendered after giving up his horse. He reported being footsore and financially embarrassed. Funds were at once telegraphed, and when he gets in to town all the members of the famous chase will have reported.

The hounds have, like chickens, come home to roost, and every possible attention paid to them. They will be ready a great deal sooner to take the field than any of their followers; but as soon as heads, arms and faces get well, the boys will go out again.

J. D. H.

THE RED IRISH SETTER GARRYOWEN.

MR. HILLIARD'S protest against Mr. Giltrap's champion red Irish setter Garryowen appears to have raised quite a breeze in the English journals. As some of Garryowen's descendants in this country have made their mark upon the show bench, we append the following from the *Stock Keeper*, which will give our readers the gist of the matter: We have received some additional correspondence relating to the setter Garryowen, and as there are some curious and novel statements made by one or two of the writers, it may be well to briefly review the history of the dog. He was originally called Shot, and was bred by Mr. H. S. Moore, of Dublin, who sent him to a first-rate trainer; but the dog did not show any unusual intelligence, which was accounted for at the time by the low condition the dog was in. He was subsequently purchased by Mr. J. J. Giltrap, his present owner. When in the possession of the breeder the dog's nose and eyes were of a "flesh-color," but when seen by Mr. Moore he "had great difficulty in identifying the dog from what he considered an alteration in his appearance." Mr. Giltrap "admits that he has a deshy nose, and I never heard of a dog having any other sort of nose. As to the color of it, I deny that it was ever black. It is a dark liver-color, and very much darker (as well as his coat) than when I bought him of Mr. Moore. He was then a miserable-looking creature, full of worms, not a pick on him, with sunken eyes, a staring coat, and no feathering." In this wretched state Mr. Giltrap purchased the dog, believing he was a good specimen of Irish setter. How the transformation is attributed "in addition to improvement by age, good care, a clean kennel, wholesome food, combined with regularity of feeding, a constant supply of pure water, and plenty of exercise." And every one knows what an alteration can be made in the appearance of poor, ill-conditioned dogs when well looked after, properly fed and exercised. We are not in a position to say whether the dog's nose and eyes have or have not changed in color since he has been in the possession of his present owner; but it will probably be new to most people to know that the color of the eye of a dog can be changed at the will of the owner any more than this can be done with the human eye. A clearness and a brightness can undoubtedly be obtained either in a man or a dog when they are in a healthy condition, but that the naturnl color of the eye can be changed we do not believe.

This dog, as well as Mr. Hilliard's Comet, were exhibited at the Alexandra Palace Show; both owners were present, and Mr. Hilliard as well acquainted with the alteration in the dog's appearance as later on, but instead of lodging a protest then, when the matter could have been thoroughly investigated, Mr. Hilliard waited until the Belfast and Bristol Shows, when Garryowen's owner was absent and not able to defend himself except by calling in two vets.

But now comes a still more serious charge against Mr. Hilliard, inasmuch as Mr. Giltrap accuses him of exhibiting dogs that had previously won three or more prizes, and should therefore have competed in champion classes instead of in open classes, both at Belfast and Portadown. At the latter show his dog Palmerston was disqualified for this very cause. If this is so, it is a very serious charge, and by no means adds to the reputation of Mr. Hilliard; for one could hardly think it possible for an exhibitor not to be aware of the number of prizes his dog had previously won. Still it is possible Mr. Hilliard may be able to satisfactorily explain this matter.

It appears to us that, finding his dog beaten, Mr. Hilliard became annoyed, and not making sufficient allowance for the improvement to Garryowen's appearance, somewhat hastily came to the conclusion that the dog's nose had in some way been tampered with, and hence the many long and personal letters which have appeared on this unpleasant subject.

THE COLLIE AS A SPORTSMAN'S DOG.

THERE has been much complaint among sportsmen and gamekeepers in reference to the hardness of the mouth of the retriever. I have very much pleasure, through your widely-read paper, to offer a remedy for this long and grevous complaint. I have been experimenting on the collie as to his capabilities as a sportsman's dog. I find him capable in every way, and a superior worker to the retriever, with a beautiful soft mouth. To sportsmen and gamekeepers I would recommend the collie, rough-coated (black and tan), as a superior dog in every way to the retriever, and by adopting the collie instead of the retriever they will have no more grumbling about hard mouths. The collie retrieves splendidly on both land and water. I had very little difficulty in training collie to his new calling. I do not think it cost me more than half of the time that I would have required when training a retriever. The collie's usefulness to sportsmen is of much value. I consider I am conferring a great boon to sportsmen and gamekeepers in offering them this experience of the collie through your valuable paper. A GAMEKEEPER.

A correspondent forwards the following cutting, which appeared in the Hmily *Express* on this subject:

I would have given my experience, as a gamekeeper, of what I think of the collie as a sportsman's dog in your last week's paper, but I have been very busy, and had not had time to write. I beg to state that I have the collie working instead of the retriever, and I would not now give "collie" for twenty retrievers. It is a pleasure to see "collie" at his work, and the careful manner in which he collects the game; he is as strong in the head as the retriever, and much softer in the mouth. "Collie" is a doggie that one can train to anything within the brute beasts' power. "Collie" is born a true companion to man; I have therefore great pleasure in recommending him to my brother gamekeepers to work instead of the retriever. I would recommend gamekeepers to get the thoroughbred south long-haired collie. I got my collie from Haddington (off Champion—Highlander). In the North the breed of the collie is spoiled by the mixing of the breed with every mongrel up and down the country. Robbie Burns gives the true idea of a Scotch collie in his tale of the "Twa Dogs." In reference to Luath, the ploughman's collie, Robbie says:

> His honest, sonsie, baws'nt face (or lang face)
> Aye gat him friends in ilka place.
> His breast was white, his towzie back
> Weel clad in coat o' glossy black.
> His gawcie (or bushy) tail, wi' upward curl,
> Hung o'er his hurdies wi' a swirl.

This is certainly the description of no mongrel cur, but a picture of a collie of the best and purest Scotch breed. The retriever is a mongrel, with breeds of the foxhound, Gordon setter, collie, Newfoundland, Labrador, and other mongrel breeds in him. The best way to train a collie is to use the same method as when training a retriever, with the exception of doing away with the whip, and using kindness and coaxing instead. "Collie" cannot stand the whip; this is the reason why some of the shepherds' collies are so much cowed —with using too much of the rod. I hope that those who have well-bred collies in their possession will see that their breed is carefully cultivated, and get these mongrels cleared out of the country. In closing, I would recommend every gamekeeper to work the collie instead of the retriever.—*Live Stock Journal.*

COCKER JUDGING AT CLEVELAND AND TORONTO.

Editor Forest and Stream:

At the Cleveland Bench Show (1882) Mr. Kirk, in judging cockers, declared that he would award no honors to animals that failed to score 75 points of his scale. Several cockers which in the East would pass for good specimens were on exhibition. Of these Idol was deemed the best, but she obtained but 62½ points, the others less, and consequently no prizes or honors were awarded. Now I have carefully read Mr. Kirk's standard and scale of points and confess that I can find little fault with it as it appears on paper, and my conclusions were that Mr. K. had established an ideal scale under which no cocker, either black or liver and white, at present existing could score a very high mark; that Mr. K. desired to create, as it were, a new animal rather than to compare the merits of those now bred and in use. Assuming such to be the case, I was greatly surprised on reading the report of the late Toronto show (FOREST AND STREAM Sept. 21), Mr. K. again judging the cockers, to find that four prizes—first, second, he and c—were awarded. The only inferences that I can draw from this are that Mr. Kirk at that show judged by some new standard, or that he lowered his limit low below 75 points, or that Canadian cockers are much better than ours. I can hardly believe the latter to be the case, and therefore feel impelled to ask Mr. Kirk whether he has one rule for the Provinces and another for the States. GREENHORN.

NEW YORK, September, 1882.

TRANSPORTATION OF DOGS TO HIGH POINT.

SOME misunderstanding having occurred in relation to the free transportation of dogs that were being taken South preparatory to the Eastern Field Trials, Mr. Leach explained the matter to the different railroad managers, and has received the following from the Pennsylvania Railroad Company. He presumes that the other roads will adopt the same course when they understand that the dogs must go some time previous to the trials instead of waiting until then. The letter is as follows:

Pennsylvania Railroad Company, Passenger Department,
Office of the Eastern Passenger Agent, 849 Broadway,
New York, Oct. 4, 1882.

GEO. T. LEACH, Esq., care Messrs. H. K. & F. B. Thurber & Co.:

DEAR SIR—Referring to the matter of transportation of dogs to take part in the trials of the Eastern Field Trial Club at High Point, N. C., our baggage masters have been instructed to pass such dogs, accompanied by an attendant, as may be offered, on presentation of a card signed by your secretary, Mr. Coster. Trusting that this arrangement will be satisfactory I am, Yours truly,

SAMUEL CARPENTER, E. P. A.

PRINCE ROYAL AND PRINCESS.—Incredible as it may appear, we have ascertained beyond all question that the Laveracks Prince Royal and Princess were killed at Aldridge's after they had failed to realize the reserves set upon them. Of course, an owner can do what he likes with his own, but it is not a sportsmanlike action or one that savors of humanity to kill animals of note that have won our classic prizes at shows simply because they fail to realize a large amount of money. There were several present who would have given £50 for Prince Royal, and such a price always insures a dog being taken care of. A good home could have been procured for him, therefore, without any difficulty.—*Kennel Gazette.*

THE ORGILL KENNEL.—We are sorry to learn that Mr Edmund Orgill has decided to give up the breeding of pointers except such as he may require for his own use. Mr. Orgill has been the most successful breeder of fine pointers in this country. Starting only a few years ago with Steele's Flake and Guide's Lilly for the foundation, he has built up a kennel whose reputation is world-wide, and it seems a pity that it should be broken up. He will retain Rush and Rue for his use in the field, and dispose of the others. We trust that they will fall into the hands of gentlemen qualified to appreciate their worth.

HARDY'S DIANA RECOVERED.—Boston, Mass., Oct. 9.—After an absence of eighteen months I was able to trace and recover my old bitch Diana, dam of Clair, Clairine and Pollux. The case was tried this morning, and I recovered her, but was unable to fix the theft on the party in whose possession she was found.—EDWARD E. HARDY.

KENNEL MANAGEMENT.

W. G. H., Greenfield, N. H.—Can an all tan Gordon setter be pure blood? I have one whose parents were both black and tan and one to be full blood, but out of a litter from them three were black and tan and two all tan. The one I have is nearly as dark a liver color as an Irish setter, with white flecks on the breast. Ans. It is by no means a rare occurrence for the best bred Gordons to throw a red puppy.

A. C. F., Clinton.—I have a mastiff bitch who is troubled with a small raw spot on top of her head at the base of the ear. It will apparently heal up and then break out all raw and bloody. There is no matter in it and the dog is quite free from any humors. Her appetite and general health is good. Ans. Cleanse thoroughly with soap and water, removing all scabs, etc., then dust on some powdered iodoform. Repeat in three days, and again if necessary.

A. R. F., Meacham Lake, N. Y.—My old hound was taken about ten days ago; first loss of use of hind legs, after two or three days one of the fore legs became affected. He eats well and his eyes are bright. I gave him three Schenck's pills yesterday. The only reason I can give for it is that he has been tied since last December with but little chance for exercise, as he puts for the woods every time we let him out. He gets about to-day better than any time before; we let him run at large now. We also have two collie pups about one year old, both of which have large lumps under their necks. I thought at first it was an enlargement of the glands and would go away, but it shows no signs of it yet; does not appear to hurt them when handled unless pressed very hard. Ans. Paralysis is probably the cause of the loss of power and may be the result of old age, or it may be as

you suggest, the result of want of proper exercise. Rub the limbs night and morning with volatile liniment and see to daily exercise. 2. If the enlarged glands do not disappear after using daily for two weeks iodide of potassium ointment, show them to your family physician, perhaps he will remove them for you.

J. W. P., North Middletown, Ky.—My pointer dog has been sick about two weeks; he coughs and gags without throwing up anything; it is much worse when taking exercise, otherwise he seems very well; is fed with scraps from the table; is in very good condition but not fat. He is four years old and weighs about fifty pounds; has never been sick to my knowledge before. Please prescribe. Ans. Your dog has chronic bronchitis, for which a cough medicines containing two or three grains of iodide potass., given twice a day, would undoubtedly do it benefit.

L. E. A., Oneida, N. Y.—My hound, six months old, is broke out with a fine red rash that keeps him scratching all the time; his hair is very thin. I have been giving him sulphur and washing him with carbolic soap, which helps, but does not cure him. Please prescribe. Ans. Wash the animal thoroughly with strong soft soap suds, using warm water, then apply the following, rubbing it well in: Sublimed sulphur one dram, balsam of Peru one dram, lard two ounces. Apply this for three successive days, on the fourth day repeat the warm bath. Repeat this treatment at the end of a week if a cure is not effected.

B. R., New York.—My setter dog, aged 3 years 4 months, has been ailing some time; he seldom finishes a meal without throwing part of it up; he is very thin indeed; his eyes run; his nose is hot; for three months or more he has been losing his hair profusely. I do not think he has worms. Ans. If it were not for the age of the dog we should think distemper might be the trouble. Your account of the symptoms is not explicit enough. We should know the kind of food given, character when vomited, digested or not, and general appearance, regularity of bowels and character of discharges, amount of exercise taken, condition of skin and coat.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*;

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breading or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Chance. By Mr. W. Cleaver, Brooklyn, N. Y., for red and white setter dog, whelped April 1, 1882, by Mr. W. Hunter's Gippo out of owner's Nell.

King Paul. By Mr. A. W. Hitch, Cleveland, O., for liver and white pointer dog, whelped April 2, 1882, by Beaufort. (Bow—Beulah) out of Fannie Turner (Sensation—Queen II.)

Little Dott. By Mr. A. W. Hitch, Cleveland, O., for pointer bitch, whelped Aug. 10, by Lewis's Rush (Duke—Nell) out of owner's Nellie.

Teleo. By Mr. W. F. Owens, Bergen Point, N. J., for lemon pointer bitch, whelped May 9, 1882, by Sensation out of Dell II. (Duke—Queen).

Bridgeport. By Mr. George C. Sterling, New York, for black, white and tan English setter dog puppy by Dashing Monarch out of Vannette.

Nelly. By Mr. H. W. White, Yankton, Dakota, for English setter bitch, whelped Dec. 18, 1877, by Dash (Pride of the Border—Dora) out of Nellie Gleason. Lead in mouth. Color, lemon and white.

Kenza Frank. By Mr. H. W. White, Yankton, Dakota, for Gordon setter dog, whelped March 5, 1880, by Kenoza Kit (Doane's Tom—Thompson's Bessie) out of Lock (Doane's Tom—Fottler's Pansy).

Kitty. By Mr. H. W. White, Yankton, Dakota, for Gordon setter bitch, whelped Sept. 7, 1881, by Doane's Tom (Dash—Fly) out of Lucille (Marble's Grouse—Fottler's Pansy).

Feather. By Mr. A. Duane, Bergen Point, N. J., for liver and white pointer dog, whelped May 9, 1882, by Sensation out of Dell II. (Duke—Queen).

BRED.

☞ *See instructions at head of this column.*

Fly—Pilot. Mr. Richard Torpin, Jr.'s (Philadelphia, Pa.) setter bitch Fly to Mr. Samuel G. Dixon's Gordon setter dog Pilot (Grouse—Maud), Sept. 27.

Pixie—Porter. Mr. Robert C. Cornell's (New York) white and tan fox-terrier bitch Pixie (Gamester—Feefee) to Mr. J. Coleman Drayton's Tartar (Jester II.—Thyra), Oct. 5.

Fannie Turner—Beaufort. Mr. G. H. Nixon's (Leesburg, Va.) liver and white pointer bitch Fannie Turner (Sensation—Queen II.) to his Beaufort (Bow—Beulah).

Gipsy Girl—Rousseau. The Fairmount Kennel's (Hyde Park, Mass.) St. Bernard bitch Gipsy Girl to their Rousseau, Oct. 1.

Gretchen—Perkio II. Mr. Samuel S. Howland's (Hyde Park, Mass.) St. Bernard bitch Gretchen to their Marko II. Oct. 5.

Rose—Knickerbocker. Mr. Fred. Smith's (Jersey City, N. J.) liver and white pointer bitch Rose (Duke—Queen) to Mr. Geo. L. Wilm's Knickerbocker (Glenmark—Girl), Oct. 3.

WHELPS.

☞ *See instructions at head of this column.*

Rose. The Westminster Kennel Club's lemon and white pointer bitch Rose (Snapshot—Gypsie), Oct. 4, nine (six dogs), by their champion Sensation.

Biteen. The Borstall Kennel's (Morristown, N. J.) liver and white pointer bitch Biteen (Sensation—Daisy), Oct. 3, nine (two dogs), by their Rab (Rush—Romp).

Regia. Mr. Rodney Benson's (New York) recently imported St. Bernard bitch Regia, Oct. 6, twelve (six dogs), by Mr. W. Smith's (Sheffield, Eng.) Rollo, E. K. C. S. B. 11,754; one bitch since dead.

SALES.

☞ *See instructions at head of this column.*

King Hal. Liver and white pointer dog, whelped April 2, 1882, by Beaufort (Bow—Beulah) out of Fannie Turner (Sensation—Queen II.), by Mr. R. Nixon, Leesburg, Va., to Mr. A. W. Hitch, Cleveland, Ohio.

Bridgeport. Black, white and tan English setter dog puppy (Dashing Monarch—Vannette), by Mr. J. C. Higgins, Delaware City, Del., to Mr. George C. Sterling, New York.

Bob and Jenny. Black spaniels, dog and bitch, by champion Brush out of champion Rhea, by Mr. R. M. Lindsay, Scranton, Pa., to the Hornell Spaniel Club, Hornellsville, N. Y.

Flora and Meg. Black spaniel bitches by Bub (Brush—Rhea) out of Jenny (Brush—Rhea), by Mr. R. M. Lindsay, Scranton, Pa., to the Hornell Spaniel Club, Hornellsville, N. Y.

Answers to Correspondents.

W. H. B. wishes to learn of a good deer country in Ohio.

W. H. B.—Deer are said to be plentiful in Sussex County, Va.

D. U. P., New York.—We shall shortly publish the desired description.

H. J. B., Pittsburgh, Pa.—We know of no book on ferret management.

J. F. B., Bangor, Me.—The semi-hammerless guns named are perfectly reliable so far as we know.

RIFLE, Brooklyn.—You can best determine the proper charge for your revolver by experimenting with it.

CONSTANT READER, New York.—Would a 10-bore 8¼ or 9-pound gun, choke bored, finish barrels, be a better shooter than if it had 30-inch barrels? Ans. No.

P. C. E., Boston.—The advertiser of bird calls was Mr. Geo. W. Edwards, North Andover, Mass., but he has gone out of the business, being absent from home.

T. M. P., New York.—I have a young setter bitch that retrieves, but bites her birds badly. Can you tell me how to break her of it? Ans. Read "Training vs. Breaking."

DORSAL FIN, Chicago.—For information about Florida shooting resorts you should consult back files of this journal. Read Barbour's book on Florida, published by the Appletons, of this city.

F. M. H., Tiffin, O.—What game can be found near Brainerd, Minn., from October 15 to November 15. I would like to spend a month in that locality this fall. Ans. Elk, deer and bear, wildfowl, grouse, etc.

R., La Porte, Ind.—Can you or any of the readers of FOREST AND STREAM give me the pedigree of Dr. Wm. Jarvis's imported Dick and Nellie. Also of Black Nell, imported by the Marshalls, of Virginia? Ans. Dr. Jarvis's Dick was from a pair of Red Irish setters imported by Mr. Goodwin, of Boston, Mass. He was undoubtedly well-bred, although nothing is known of his pedigree. Nellie was a white setter bitch, with orange markings on head and body. Her eyes and nose were black. She was presented by Dr. Jarvis to a gentleman at Yonkers, N. Y. Nothing is known of her pedigree. Will some of our readers supply the information about Black Nell?

W. H. H., Oil Creek Lake, Pa.—Which seed should be sown in the fall or early spring. We do not know that there is any choice between the several "brands" of seeds for sale by parties who advertise in this journal.

R. A. O., Norton, Mass.—Is "Forest and Stream Bird Notes" available as a work of reference without "the first twelve volumes" of which it is composed? Ans. Yes. Each reference is followed by a synopsis of the article.

GEORGIA, Columbus, Ga.—1. How do cockers work their game? 2. Are these breeds of dogs trained to tree birds, running trail silently and giving tongue when treed? 3. What could one so trained be purchased for? I want one to tree turkeys. Ans. 1. Cockers are generally trained to work within gunshot. Many of them give tongue or whimper on trail. Others give tongue only when the bird flushes, while some work silently. We know of none for sale such as you describe, nor do we know the price of a well-trained cocker.

OSCEOLA, New York.—A cousin and myself, both just coming of age, with inherited fortune of $5,000, and desiring to go into and succeed in stock raising. We have had no practical experience, but have been "studying up" for the last three or four years. Would you or any of your readers kindly advise us how to undertake it, what our requirements would be, etc., and I should consider it a great favor. I was exceedingly interested in Maj. H. W. Merrill's remarks on Texas. Ans. We should advise "Osiolio" to make a trip to the cattle country, where he may, by personal inspection, learn the merits of the different sections and gain a knowledge of what will be required.

See the advertisement of the Scott Hammerless Gun, for sale by Wm. Read & Sons, Boston, Mass. This firm carries a large stock of the best sporting equipments.—*Adv.*

Rifle and Trap Shooting.

COL. BODINE'S REPORT.

AT the regular meeting of the Board of Directors of the National Rifle Association held on the 3d instant, the feature was an extended report from Col. Bodine of his work as Captain of the American Team, which position he has chosen captain of the team for 1883, and will visit Wimbledon next July in that capacity. He says of the late match:

To the President and Board of Directors of the National Rifle Association of America:

GENTLEMEN: Having been honored in being elected to the responsible position of Captain of the American Rifle Team which represented the National Guard of the United States in the late international Military Rifle match with a representative British Team from the Volunteers, I beg to transmit to you my heartfelt thanks for your hearty co-operation and liberal support, and also the thanks of my team for your bounteous provision for their comfort while engaged in the competitions, and on days of match, and for your earnest endeavor to promote the efficiency of the team.

Although unsuccessful in our efforts to obtain the victory, I feel that my men deserved success by their indomitable pluck, and stern resolve to win if possible.

The late contest has given us a measure of the prowess of our opponents, and the efficiency of their arms.

I am entirely assured that this defeat will inure to our future success. Our National Guardsmen will spare no effort to reverse the result of the late contest.

I most respectfully present herewith a report of the late International Match, under proper headings, of such matters as seem to me important:

CONDITIONS OF MATCH, AND ITS CONSEQUENT REQUIREMENTS.

The conditions of the late International Military Rifle Match, between the National Guard of the United States and the Volunteers of Great Britain, were as a team to require a team of twelve men, representing different States, who were not only expert at the well-known military ranges, but who had a very considerable proficiency at the longer ranges. It was found easy to fill the first condition, but difficult, I may say impossible, to secure the last, for reasons well known to your Board, which I need not enumerate. Competing, taking effort, and the necessary encouragement of our State or National Governments, and of patriotic individuals, together with the earnest support of the National Rifle Association, to secure any respectable proficiency at long ranges, it such teams, if such teams are to be placed on an equal footing with British organizations.

We have in our National Guard a spirit of emulation and a willingness to expend time and money in individual effort, which under present discouraging circumstances, is most commendable.

The conditions of the match also required that under this head will be the arms which were to be used in the late match.

It became apparent to those at all familiar with the matter that we would require a new and effective arm, which would conform to all of the requirements of both short and long range work, while it must needs come within the rules for military rifles. And that it must be not what our Ordnance Boards and State governments declared to be a proper service arm, but it must conform most strictly to the service rules of the British Empire. We were obliged to discard certain favorite arms with which I found myself expert, and go back to obsolete forms which were known to be inferior.

The task of producing this arm at short notice was undertaken by two of our prominent gunmakers, and as much accomplished, as under the circumstances could be expected. both produced guns of merit, and though they were defective in some minor particulars, noticeably in adaptation of ammunition, yet, with such modification as their use in this match has suggested, I feel warranted in saying that they will prove satisfactory. It would extend this article too much to explain. What I may think would improve the arms.

METHOD OF SELECTION OF TEAM AND ITS OFFICERS.

I will only allude to this subject very briefly, although I believe it of the utmost importance.

The mode of selection of team by competition has only one advantage in matches of an international character.

It is supposed to afford the opportunity of readily securing a representative team. Aside from this it has no merits and has been discarded in Great Britain for a number of years. Our own experience in this method of selection has proved its defects when applied to former teams.

I will not attempt to suggest a method which would meet all the difficulties, but will only say that if the proper representation can be secured, the appointment system would result in good in many directions. It would secure a more thorough subordination to its officers, and the best and most efficient men for the team. The appointment system would result in good in many directions, and this should commence with the appointment of the captain and his adjutant. I am fully convinced that the captain should be entirely relieved of the most unpleasant duty of parading of the men, and shooting with them. His work should commence after his adjutant and the team had been selected, after which he should have supreme control, with power to displace any member, for what to him might appear sufficient cause, in favor of one of the reserves. He should also have the power of dismissal in cases of subordination or neglect of discipline.

SELECTION OF ARMS TO BE USED IN MATCH.

I cannot help expressing my regret that it could not have been found feasible to sooner appoint the committee, of which I had the honor of being a member, for the recommendation and selection of arms to be used in this match.

I am also prepared to say that it would have facilitated the earlier production of the arms. It is certain that the committee was appointed too late, and that the production of the arm was so delayed that the ammunition who shot for places on team were either obliged to use old and obsolete arms or new guns, which they had not yet seen before, and even of these only a few were available at this time. The new guns were coming in for some time after the team had been selected. And as the old guns were considered inferior, it was thought expedient to allow members to use the new guns outside of regular competitions.

But I most emphatically, in all cases, charged each man in such cases to "Hold his grip on the old gun." And when I discovered that he was not doing well with the new one I immediately set him back to his old one.

I found that with one exception that the Bocnardts brought forward for the match were chambered for the short shell. I caused these to be rechambered for a longer shell, in order to take the full charge and seat the bullet 3-10 of an inch. This was done with good results.

The result of all of these trials and experiments left in the hands of the shooting twelve, 9 Remington, 2 Sharps and 1 Hotchkiss.

METHODS EMPLOYED IN EFFORTS TO SECURE THE GREATEST EFFICACY OF TEAM.

After the selection of the fourteen men, and on my election as captain, we commenced the regular system of practice with a view to improve in shooting and familiarize our men with their new guns and peculiarities of the range. After three competitions, two additional men were added to the team, making the full number sixteen, from which to select the final twelve. After some days of practice, I finally selected ten men, and shortly after this the remaining two. This last selection caused me much perplexity and I felt, somewhat unpleasant results, as one member was guilty of so-called subversion of discipline; this, with other causes of a most reprehensible character, led me to arraign him before the team. They disposed of the case in a way which was satisfactory to themselves.

I had intended to shoot the men in the usual fifteen squads of four men each, and shoot them around, but I finally concluded that this method would be defective, as with the crude sights entailed by conditions being obliged to discard the windgauge, the men were necessarily thrown as a unit country on their several points, and the consequence being the caution afforded by long-range coaches as to sudden changes of wind. Their various opinions in regard to changes of light on their elevations were in most cases so different from those entertained by long range experts that they were left to themselves in this matter.

It was evidently to be a match to be contested on the individual judgment of each man, except so far as his comrade could help him in a general way. And I venture to predict that only when our men have acquired sufficient experience to each stand on his own bottom at all of the ranges will our teams become the equals of the British. And I repeat here what I have said in public, that this is not a thing to be acquired in a month or a year. With the windgauge much can be developed in a few months, but not as much as when using the fine orthoptic sights on the smallbore.

I enjoined careful and systematic loading, and recommended to my team to use such form and materials as I knew to be best by long experience and careful experiment, and at last my advice assumed the form of an order.

I, together with my adjutant, were indefatigable in our efforts to provide powder, bullets, shells, lubricants and wadding, and this was accomplished under great difficulties, as scarcely anything was forthcoming by long range experts that they were left to themselves in this matter.

I caused to be prepared for each man a table of the value of one-hundredth of an inch, or one point, for each of the six ranges, calculated in accordance with the distance between sights, so that each man might know the exact value of the points at all the ranges, for either elevation or wind allowance, providing each with a copy for ready reference, so that feet, inches or points became interchangeable. As relating to gun or target, I enjoined the strictest attention at the firing point, the men being in squads of two, to the most careful and uniform treatment of the rifle, the constant watching of conditions, and the proper entering of these conditions, and their scores each day on the score books provided.

I caused to be kept by an adjutant a correct and minute record of each range and position at all ranges, together with corresponding records of weather conditions.

The men before commencing the opening at each range were cautioned to verify each other's sights. These records proved of great use, and although their efficiency was somewhat impaired by the changes made in ammunition and guns.

My greatest effort was in the direction of procuring the greatest efficiency in work on the targets, and consequently my discipline of the men was very strict at the firing points.

Aside from this I did not feel it incumbent on me to enjoin silence under the awnings, nor did I think it necessary to place my men in line, and at shoulder arms, to please the fastidious notions of those self constituted critics, whose pretensions far outstrip their knowledge.

The only difficulties in the way of prompt attention to orders grew out of the great time required in the preparation of ammunition for use each day, and the great want of proper loading tools for each man. My duties, as to my adjutant were to handle the men with forbearance and discretion, as most conducive to obtaining best results. His and my own constant care was to secure their greatest comfort and promote their greatest efficiency. I heard no complaints, and know of no cause for any.

AMMUNITION—WHAT WAS USED, AND WHAT SHOULD BE USED, IN A MILITARY MATCH.

My experience in this match has satisfied me that the ammunition to be used in military matches should be carefully loaded, if possible, under the eye of the captain, by experts who are skilful in the work, and that no man, after becoming a member of a team, should be permitted to use any ammunition not loaded by himself.

The uncertainty of what guns would be adopted for use in this match, and their late procurement by members of team, and the failure of the companies to supply what was necessary, either in a liberal shape, or with materials for loading the same, entailed upon us all of the uncertainties incident to this state of things.

I was obliged to allow each member to load his own ammunition, but I charged him to make no useless or hazardous experiments. I gave him such directions as I knew to be best by long experience, and so far as practicable provided him with powder selected by myself some years since, and the same as used by the British team. I procured the best lubricants obtainable, and also procured materials and had lubricant made. I supplied my team with tools and implements for facilitating loading. I found, however, a most unpardonable disposition to depart from my instructions, which can only be partially excused by the prompting motive. Each man was exceedingly anxious to secure any advantages over his fellows in their struggle to obtain a place on the shooting team. I found in one instance, which will serve as an example, that six or eight of the men had taken the recommendation of a member of known experience, and had been using for a week the composition known as the Bracket powder (a preparation of nitro-glycerine and some other substance), placing from seven to eight grains in bottom of shell, under the black powder, in order as they delared to clean their guns.

This was destructive of even shooting, and further it vitiated all previous records of elevations. I learned of this by accident, and stopped it at once, and by severe measure caused them to adopt the system at all times recommended by myself.

We found a radical defect in the shell for new guns; they were too long and too large; they required reducing after each discharge, and the bullets in many instances when seated were found to be seated crooked. I at last observed one small tool, and this had to serve for all the men; I sent the remainder to a gunsmith, but he could not improve them. This want of tools kept the men up as late as midnight reloading their ammunition, and often delayed work in the morning, the shells being in so long we necessitated the using so much powder or else the flame up with too much wadding. The experiments made with these shells at the factories were fallacious, as the excess of lubricant used has been discarded long ago by all experts.

The patching of bullet was defective for dirty shooting on account of being so thin and delicate that the powder crust if not fully saturated with moisture by breathing in barrel would scrape it off, or if bullet not properly seated it remains in barrel for a few shots, and the paper would become saturated and pulpy, and in this case would become displaced and produce bad results, besides leading of the gun. I prepared a preparation, of which vaseline was the base, which resolved the last difficulty. We used a thicker patched bullet, but time would not permit of any change.

MORALE OF TEAM, AND ITS EFFECT ON THE DISCIPLINE OF TEAM.

At no time, even when the outlook was most discouraging, did any of the members of the team show any demoralization; on the contrary, they one and all showed a cheerful alacrity and a grim determination to "shoot for all they were worth." I am proud to say this of the team, as the comments of the press were to the discouraging—the reporters vieing with each other in laudation of our opponents, which we thought to be quite proper, as we admired their skill ourselves, but surely it was not necessary to deprecate and decry the merit of our efforts, as the team, when they were fighting an up-hill battle under insuperable difficulties, and this for the honor of our National Guard.

COMPARISON OF ARMS USED BY EACH TEAM.

The arms used by the British Team were undoubtedly superior to ours in many particulars. They are the product of the keenest rivalry between the leading gunmakers of England, backed by capital and scientific talent stimulated by the expectation that such arm as may prove best will be the one adopted to replace the present service arms—the Snyder and the Henry-Martini—neither of which are popular with the soldiers or officers.

Our guns were extemporized in haste for the occasion, and it would be almost a miracle if at so short a notice our makers had succeeded in producing a gun fully equal to the British arm.

But our muskets are second to none in the world, and, given the fire and the necessary inducements, no one can doubt their ability to produce a military, as they have a sporting or long-range arm, which will be superior to any in the world.

The present gun used in the team I feel assured will, with some slight changes, which I have indicated, prove equal to the British; it may prove superior.

POSITIONS IN FIRING.

I wish to earnestly recommend the following positions in firing:

At 200yds., the left hand should be placed in the military position, and if it is shoved out or extended rather farther on the barrel than is required in this position, it will be found an advantage. The right shoulder should be thrown back and the body rest squarely on both feet, which should be about fifteen inches apart, and in a natural and unconstrained position.

In the prone position the hand should grasp the barrel in front of action, the body and legs should lie obliquely to the left, and the

right shoulder should be somewhat withdrawn, as in this position the recoil is much less severe than when taken squarely on the shoulder. For the long ranges there can be no doubt but the back position is incomparably the best, for, except that the sight may not be quite so clear, all other considerations point to this position as the proper one for the skirmish line or for the long range expert.

And now that the wind gauge has been adopted and issued to the British troops, we shall again return to its use in all matches and consequently use the V sight, which will facilitate the seeing more easily on the back position.

MILITARY SHOOTING, COMPARED WITH SMALL BORE, OR WHAT HAS BEEN HITHERTO CLASSED AS LONG RANGE WORK.

I think that I may safely say that a good self-reliant military shot can soon become a good long range or small bore shot. But the reverse of this is not so apparent.

The acquirement of a steady proficiency as a military shot entails so many radical conditions that the small bore expert will find much experience needed before he can take up the military arm with the comparative certainty with which he uses his favorite weapon.

Hence the difficulty of recruiting the ranks of our military marksmen from our long range experts.

I will not deny that long range practice will undoubtedly be a considerable help in promoting the efficiency of the military man, as he will be sharper to detect changes of light and sight, the intentions of wind, the effects of which are more easily appreciated on the fine gun.

My experience is that the long range expert, if purely such, can not be an efficient coach. Nor do I think that our Irish rifle team, with its present sights, can be done with any marked success. I satisfied myself of this in the last match, and only went through the motions to satisfy the public and prevent strictures from the press.

The leader of the British team told me on several occasions that he deemed it impossible to coach a military team, and that he only cautioned his men occasionally as to radical changes. This was all my coaches could do, and if more was attempted it only confused the men.

The last man in a squad can be of assistance in putting the leading man of the succeeding squad on the target, and where two shoot in squads, they will soon become used to each other's methods and sighting, and can be of much mutual assistance. Men should be squared off with a view of their most harmonious action, and this involves several considerations.

Long range, small bore work is of incalculable advantage in bringing out and developing the capacity of the arm, and directing attention to all matters of improvement in military arms. And all such improvement has been worked out and determined solely by small bore work, with fine orthopic, Vernier sights.

It is exceedingly interesting to trace the history of small bore shooting, from the first successful experiments of an English officer, General Jacobs, in India, down to Whitworth, Rigby and Metford, and more recently by our own great makers since 1870; and to notice how steadily the improvements in the purely military gun has kept pace with the small bore. And in this connection, I will repeat what I have said before, your honorable Board on previous occasions, that long range, small bore shooting is the corner-stone of all shooting. It should never be allowed to languish, as when an interest in this acquirement ceases all shooting will depreciate.

WHAT OUR EXPERIENCE IN THIS MATCH INDICATES, AND WHAT OUR NECESSITIES MAY BE IN THE COMING MATCH.

Our experience in this match has demonstrated two things beyond a doubt. One is that our present gun is defective in some important particulars, and the other that our best military shots need much more experience at the long ranges. The matter at this time needing most prompt attention is that of preparing an arm, either by some modifications of the present one, or a new one, which, from careful experiments and comparison, with fine sights, will show itself equal at least to the English gun, and now that we have their guns, this comparison can be made. If our makers can not produce a gun of such a gun at short notice, then it becomes a question as to whether it may not be expedient to procure guns from abroad to use until such time as our makers can produce an arm which will be equal to the British. This, however, would be humiliating, but best by far so than to attempt to repeat our last costly experiment, and subject our team and its officers, and through them the National Guard, to defeat as a foregone conclusion.

The guns must be procured at once, or with the least possible delay, and placed in the hands of competent men, and work commenced at once and carried through the winter at Creedmoor and other convenient ranges where suitable scaler fire can be afforded. When you consider that the match would be held in the middle of July, you will see that, as outdoor practice commences about the 25th of April or 1st of May, there would be only at best about six weeks for practice in the spring before sailing. The team must be selected, or at least put in shape for selection, this fall, or we will be in no condition.

The above matter should be carefully considered, and if what is suggested is impracticable, then it is well to discuss the only alternative, which would be the opening of negotiations with the British Association looking to the postponement of this match for one year. I think that a favorable answer might be made as to what I may prove to be insurmountable difficulties to sending a team next year would receive courteous attention.

If this was done and the public given to understand the matter fully, a full and representative team would not lose interest in the match, as the constant practice for this purpose would keep up the public interest.

And if this could be accomplished, I have no, doubt but that by July, 1883, we would be fully able to place ourselves on an equal footing with our opponents. You will, however, in judging of this matter, and in your collective capacity arrive at a proper conclusion.

I make this suggestion with a full knowledge of the very grave importance of the subject in an international point of view, and with a feeling that our pledge for a return match next year must be fulfilled, unless Great Britain freely accedes to our request.

Is it wise under any circumstances to ask this concession? If we can procure proper guns, either through alterations in the Remington model or can have proper guns at short notice, we can do much earnest work this fall and winter, and I have no doubt arrive at a fair proficiency before sailing next year; but I repeat again that it mainly depends on our being able to procure the guns; and of the two alternatives, that of procure the guns or asking them to defer the match for a year, I must say I much prefer the last, but half the *eclat* of winning would be lost if we had to go to them for guns. I earnestly hope that neither will be necessary, but it would not be well to ignore that it may become inevitable.

If the match must be shot next year, then our duty is plain. Shut out all speculations as to chances and by hard work go in to win. If we spare no effort, then if defeated again, it will bring no disgrace, but only intensify our determination.

In any event, it is absolutely necessary to proceed at once to appoint a committee for procurement of guns, another for the procurement of necessary funds; and if the appointment of the officers of the coming team was made at once it would ensure promptness and despatch in many matters of importance, as there is an absolute necessity that much experimental work should be done at once in order to be able to decide on the arm to be used.

If this is left to the factories, I fear that we shall be in the same shape next year as in this, and I hope we shall not have a recurrence of this experience.

OBSERVATIONS ON CONDITIONS OF WEATHER AND ITS EFFECTS ON DAYS OF MATCH.

The weather conditions on days of match were of such an unusual character as to render useless all experience had by my team on any previous days of practice under the conditions of the match, and I offer petitions. In fact it was such an experience as is rarely met with by the oldest habitues of Creedmoor. If the days of the match had been of the general characters of our practice days, we would have been beaten but I have little doubt we would have won by a much larger lead of the British Team at least 200 points. The conditions, although not conducive to high scores for our opponents, yet were such as favored them as regards winds most prevalent at Wimbledon. The greater experience also enabled them to combat its difficulties with greater success than could be expected from my team.

On Thursday, September 14, the first day of the match, the wind was strong and gusty, the dial marking V. to VII. The light was bright and sky clear.

The barometric, thermometric and observations of wind as follows:

Time.	Barometer.	Temperature.	Wind miles per hour.
10 A. M.	30	72	6
11 "	30	80	8
12 "	29.95	81	8
1 P. M.	29.9	83	9
2 "	29.86	83	9
3 "	29.82	72	18
4 "	29.81	71	14

RESULT OF SHOOTING.

	Americans.	British.
200 yards	331	340
500 yards	369	378
600 yards	343	331
Totals	1,043	1,092

On Friday, Sept. 15, the second day of the match, the wind had shifted to the opposite quarter, and instead of the rear fishtail of the first day, blew a gale of fifteen or twenty miles an hour from the northwest 10 to 11 o'clock; my fair, with dark masses of clouds flitting across the sky, producing sudden changes of light, one of the most perplexing of the many changes which riflemen have to encounter, the wind gradually slackening at the last range.

In bringing this report to a close, I can only add that, so far as your honorable body is concerned, it secured a match with the British Volunteers was your only object, then you have been successful; but if the efficiency of the National Guard as against the volunteers of Great Britain was to be the test, then this match is worthless, as the arms used are much too costly, and in some respects unfit, even for rough military usage; they are in every sense longrange smallbores, except in sights. On the side of the British these the guns are made by longrange experts of ten or twenty years' experience. I have tested one of these guns since the match, and they are equally fine. I can pronounce it equal to our fine longrange guns for accuracy.

Had this match been with service guns, and at military distances —say up to 600yds.—the chances of 600yds. would have been most favorable, and such a match would have determined the comparative merits of the guns in practical use in both countries, as well as the skill of each in their use. But the past match has only proved that the British, having, by the expenditure of time and money, produced a long-range gun for a special purpose, have also created a skill which, while our weakness is the result of a total neglect of all of the essentials necessary to a display of superior skill. But such a match of a purely military character could not be arranged, and consequently you had no choice.

It was a match in which the British was to have *carte blanche* as to conditions or no match at all. Under these circumstances, I think it was wise to have the match, and it is our duty to see to it that no exertion is spared to supply our deficiencies both as to guns and the experience to use them at long-range, as it is evident that all future matches will now be determined by skill at short range.

I have thought it unnecessary to report scores in detail, or to remark on individual efforts, for the reason that all such matters having been reported most fully in the daily papers, would seem to render this of no interest. The regret was universal not be properly closed without a hearty recognition of the services of several gentlemen, and also of my adjutant, Chas. F. Robbins. I can only say of him that my intimate acquaintance with the man and my appreciation of his executive ability has been fully sustained by his services in the late match. He has devoted the best of his energies to this task, and has been a most valuable, painstaking and efficient officer.

I wish to tender the thanks of myself and team to Messrs. Rathbone, Bacon and Dudley, for their earnest endeavor to promote the efficiency of the team. Their services, which were very exhausting one, was continued at my request, with a hope to bring something out of it at last, but it proved a hopeless task to attempt to coach a military team, on any plan applicable to former long range contests. Had the wind gauge been allowed they could have made their experience available.

I beg to apologize for this lengthy and somewhat discursive report. I felt it at the dry statistics properly pertaining to a paper of this character would be of little interest to your honorable body or to the public.

JOHN BODINE.

BROOKLYN, Oct. 2, 1882.

RANGE AND GALLERY.

CREEDMOOR—OCTOBER PROGRAMME.

ELEVENTH and 14th.—The "Qualification" Match of 1882.—Open to members N. G. S. N. Y. and N. R. A., the former being in uniform (jacket, cap and belt) may count scores made as partially qualifying them to shoot for the N. Y. State Marksman's badge, provided that they use the State Remington rifle, 100 and 200yds.; standing at 100, kneeling at 200yds. Five shots at each distance with any military rifle. Entries, fifty cents each. Re-entries permitted at the discretion of the executive officer, but only the highest score to count. To the competitors in each competition making the five highest aggregate scores, sixty per cent. of the entrance money will be equally divided.

11th and 14th.—The "Champion Marksman's Badge" Match of 1882. Open to all members of the N. G. S. N. Y. and N. R. A., the latter, however, not being eligible to win the principal prize. Distances 200 and 500yds., five shots at each distance. Weapon, the Remington rifle, any military model. Position standing at 200yds.; any, with head to the target, at 500yds. Entrance fee, fifty cents each. Re-entries allowed re-entries in each competition at the discretion of the executive officer, but only the highest score to count. Members of the N. G. S. N. Y. in uniform (jacket, cap and belt) may count their scores made in this match as qualifying for N. Y. State "Marksman's badge," provided that, if ordered, they have attended (or do once through the season attend) general practice, and provided they have previously qualified in the "Second Class" (100 and 300yds. See "Qualification" Match).

First Prize.—A gold champion marksman's badge of 1882, offered by Brig. Gen. Alfred C. Barnes, general inspector of rifle practice, S. N. Y. The badge to become the property of the competitor who, at the close of the season of 1882, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide. Winners of former champion marksman's badges to be handicapped five points at each competition. Ten other prizes (silver medals) presented by the N. R. A. to the ten highest competitors as a mark of merit. The same man can only win one medal during the season.

11th, 14th, and 21st.—"Army and Navy Journal Revolver" Match.—Open to members of the Army, Navy, Marine Corps and National Guard or Militia. Weapon, any Army or Navy revolver with trigger pull of 3lbs. or over. Regular service ammunition to be used. Revolver to be brought unloaded to the firing point. Three entries allowed on each day that match is shot; six shots at each entry. Entrance fee, $2. Re-entries, $1. Three guns at short notice, would be can also much earnest work this fall and winter, and I have no doubt arrive at a fair proficiency before sailing next year; but I repeat again that it mainly depends on our being able to procure the guns; and of the two alternatives, that of procure the guns or asking them to defer the match for a year, I must say I much prefer the last, but half the *eclat* of winning would be lost if we had to go to them for guns. I earnestly hope that neither will be necessary, but it would not be well to ignore that it may become inevitable.

If the match must be shot next year, then our duty is plain. Shut out all speculations as to chances and by hard work go in to win. If we spare no effort, then if defeated again, it will bring no disgrace, but only intensify our determination.

In any event, it is absolutely necessary to proceed at once to appoint a committee for procurement of guns, another for the procurement of necessary funds; and if the appointment of the officers of the coming team was made at once it would ensure promptness and despatch in many matters of importance, as there is an absolute necessity that much experimental work should be done at once in order to be able to decide on the arm to be used.

If this is left to the factories, I fear that we shall be in the same shape next year as in this, and I hope we shall not have a recurrence of this experience.

OBSERVATIONS ON CONDITIONS OF WEATHER AND ITS EFFECTS ON DAYS OF MATCH.

The weather conditions on days of match were of such an unusual character as to render useless all experience had by my team on any previous days of practice under the conditions of the match, and I offer petitions. In fact it was such an experience as is rarely met with by the oldest habitues of Creedmoor. If the days of the match had been of the general characters of our practice days, we would have been beaten but I have little doubt we would have won by a much larger lead of the British Team at least 200 points. The conditions, although not conducive to high scores for our opponents, yet were such as favored them as regards winds most prevalent at Wimbledon. The greater experience also enabled them to combat its difficulties with greater success than could be expected from my team.

On Thursday, September 14, the first day of the match, the wind was strong and gusty, the dial marking V. to VII. The light was bright and sky clear.

The barometric, thermometric and observations of wind as follows:

Time.	Barometer.	Temperature.	Wind miles per hour.
10 A. M.	30	72	6
11 "	30	80	8
12 "	29.95	81	8
1 P. M.	29.9	83	9
2 "	29.86	83	9
3 "	29.82	72	18
4 "	29.81	71	14

RESULT OF SHOOTING.

	Americans.	British.
200 yards	331	340
500 yards	369	378
600 yards	343	331
Totals	1,043	1,092

On Friday, Sept. 15, the second day of the match, the wind had shifted to the opposite quarter, and instead of the rear fishtail of the first day, blew a gale of fifteen or twenty miles an hour from the northwest 10 to 11 o'clock; my fair, with dark masses of clouds flitting across the sky, producing sudden changes of light, one of the most perplexing of the many changes which riflemen have to encounter, the wind gradually slackening at the last range.

In bringing this report to a close, I can only add that, so far as your honorable body is concerned, it secured a match with the British Volunteers was your only object, then you have been successful; but if the efficiency of the National Guard as against the volunteers of Great Britain was to be the test, then this match is worthless, as the arms used are much too costly, and in some respects unfit, even for rough military usage; they are in every sense longrange smallbores, except in sights. On the side of the British these the guns are made by longrange experts of ten or twenty years' experience. I have tested one of these guns since the match, and they are equally fine. I can pronounce it equal to our fine longrange guns for accuracy.

Had this match been with service guns, and at military distances —say up to 600yds.—the chances of 600yds. would have been most favorable, and such a match would have determined the comparative merits of the guns in practical use in both countries, as well as the skill of each in their use. But the past match has only proved that the British, having, by the expenditure of time and money, produced a long-range gun for a special purpose, have also created a skill which, while our weakness is the result of a total neglect of all of the essentials necessary to a display of superior skill. But such a match of a purely military character could not be arranged, and consequently you had no choice.

It was a match in which the British was to have *carte blanche* as to conditions or no match at all. Under these circumstances, I think it was wise to have the match, and it is our duty to see to it that no exertion is spared to supply our deficiencies both as to guns and the experience to use them at long-range, as it is evident that all future matches will now be determined by skill at short range.

I have thought it unnecessary to report scores in detail, or to remark on individual efforts, for the reason that all such matters having been reported most fully in the daily papers, would seem to render this of no interest. RANGE AND GALLERY.

CREEDMOOR—OCTOBER PROGRAMME.

ELEVENTH and 14th.—The "Qualification" Match of 1882.—Open to members N. G. S. N. Y. and N. R. A., the former being in uniform (jacket, cap and belt) may count scores made as partially qualifying them to shoot for the N. Y. State Marksman's badge, provided that they use the State Remington rifle, 100 and 200yds.; standing at 100, kneeling at 200yds. Five shots at each distance with any military rifle. Entries, fifty cents each. Re-entries permitted at the discretion of the executive officer, but only the highest score to count. To the competitors in each competition making the five highest aggregate scores, sixty per cent. of the entrance money will be equally divided.

11th and 14th.—The "Champion Marksman's Badge" Match of 1882. Open to all members of the N. G. S. N. Y. and N. R. A., the latter, however, not being eligible to win the principal prize. Distances 200 and 500yds., five shots at each distance. Weapon, the Remington rifle, any military model. Position standing at 200yds.; any, with head to the target, at 500yds. Entrance fee, fifty cents each. Re-entries allowed re-entries in each competition at the discretion of the executive officer, but only the highest score to count. Members of the N. G. S. N. Y. in uniform (jacket, cap and belt) may count their scores made in this match as qualifying for N. Y. State "Marksman's badge," provided that, if ordered, they have attended (or do once through the season attend) general practice, and provided they have previously qualified in the "Second Class" (100 and 300yds. See "Qualification" Match).

First Prize.—A gold champion marksman's badge of 1882, offered by Brig. Gen. Alfred C. Barnes, general inspector of rifle practice, S. N. Y. The badge to become the property of the competitor who, at the close of the season of 1882, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide. Winners of former champion marksman's badges to be handicapped five points at each competition. Ten other prizes (silver medals) presented by the N. R. A. to the ten highest competitors as a mark of merit. The same man can only win one medal during the season.

11th, 14th, and 21st.—"Army and Navy Journal Revolver" Match.—Open to members of the Army, Navy, Marine Corps and National Guard or Militia. Weapon, any Army or Navy revolver with trigger pull of 3lbs. or over. Regular service ammunition to be used. Revolver to be brought unloaded to the firing point. Three entries allowed on each day that match is shot; six shots at each entry. Entrance fee, $2. Re-entries, $1. Three guns at short notice, would be can also

much earnest work this fall and winter, and I have no doubt arrive at a fair proficiency before sailing next year; but I repeat again that it mainly depends on our being able to procure the guns; and of the two alternatives, that of procure the guns or asking them to defer the match for a year, I must say I much prefer the last, but half the *eclat* of winning would be lost if we had to go to them for guns. I earnestly hope that neither will be necessary, but it would not be well to ignore that it may become inevitable.

If the match must be shot next year, then our duty is plain. Shut out all speculations as to chances and by hard work go in to win. If we spare no effort, then if defeated again, it will bring no disgrace, but only intensify our determination.

In any event, it is absolutely necessary to proceed at once to appoint a committee for procurement of guns, another for the procurement of necessary funds; and if the appointment of the officers of the coming team was made at once it would ensure promptness and despatch in many matters of importance, as there is an absolute necessity that much experimental work should be done at once in order to be able to decide on the arm to be used.

If this is left to the factories, I fear that we shall be in the same shape next year as in this, and I hope we shall not have a recurrence of this experience.

OBSERVATIONS ON CONDITIONS OF WEATHER AND ITS EFFECTS ON DAYS OF MATCH.

The weather conditions on days of match were of such an unusual character as to render useless all experience had by my team on any previous days of practice under the conditions of the match, and I offer petitions. In fact it was such an experience as is rarely met with by the oldest habitues of Creedmoor. If the days of the match had been of the general characters of our practice days, we would have been beaten but I have little doubt we would have won by a much larger lead of the British Team at least 200 points. The conditions, although not conducive to high scores for our opponents, yet were such as favored them as regards winds most prevalent at Wimbledon. The greater experience also enabled them to combat its difficulties with greater success than could be expected from my team.

On Thursday, September 14, the first day of the match, the wind was strong and gusty, the dial marking V. to VII. The light was bright and sky clear.

The barometric, thermometric and observations of wind as follows:

Time.	Barometer.	Temperature.	Wind miles per hour.
10 A. M.	30	72	6
11 "	30	80	8
12 "	29.95	81	8
1 P. M.	29.9	83	9
2 "	29.86	83	9
3 "	29.82	72	18
4 "	29.81	71	14

RESULT OF SHOOTING.

	Americans.	British.
200 yards	331	340
500 yards	369	378
600 yards	343	331
Totals	1,043	1,092

On Friday, Sept. 15, the second day of the match, the wind had shifted to the opposite quarter, and instead of the rear fishtail of the first day, blew a gale of fifteen or twenty miles an hour from the northwest 10 to 11 o'clock; my fair, with dark masses of clouds flitting across the sky, producing sudden changes of light, one of the most perplexing of the many changes which riflemen have to encounter, the wind gradually slackening at the last range.

In bringing this report to a close, I can only add that, so far as your honorable body is concerned, it secured a match with the British Volunteers was your only object, then you have been successful; but if the efficiency of the National Guard as against the volunteers of Great Britain was to be the test, then this match is worthless, as the arms used are much too costly, and in some respects unfit, even for rough military usage; they are in every sense longrange smallbores, except in sights. On the side of the British these the guns are made by longrange experts of ten or twenty years' experience. I have tested one of these guns since the match, and they are equally fine. I can pronounce it equal to our fine longrange guns for accuracy.

Had this match been with service guns, and at military distances —say up to 600yds.—the chances of 600yds. would have been most favorable, and such a match would have determined the comparative merits of the guns in practical use in both countries, as well as the skill of each in their use. But the past match has only proved that the British, having, by the expenditure of time and money, produced a long-range gun for a special purpose, have also created a skill which, while our weakness is the result of a total neglect of all of the essentials necessary to a display of superior skill. But such a match of a purely military character could not be arranged, and consequently you had no choice.

It was a match in which the British was to have *carte blanche* as to conditions or no match at all. Under these circumstances, I think it was wise to have the match, and it is our duty to see to it that no exertion is spared to supply our deficiencies both as to guns and the experience to use them at long-range, as it is evident that all future matches will now be determined by skill at short range.

I have thought it unnecessary to report scores in detail, or to remark on individual efforts, for the reason that all such matters having been reported most fully in the daily papers, would seem to render this of no interest. The regret was universal not be properly closed without a hearty recognition of the services of several gentlemen, and also of my adjutant, Chas. F. Robbins. I can only say of him that my intimate acquaintance with the man and my appreciation of his executive ability has been fully sustained by his services in the late match. He has devoted the best of his energies to this task, and has been a most valuable, painstaking and efficient officer.

I wish to tender the thanks of myself and team to Messrs. Rathbone, Bacon and Dudley, for their earnest endeavor to promote the efficiency of the team. Their services, which were very exhausting one, was continued at my request, with a hope to bring something out of it at last, but it proved a hopeless task to attempt to coach a military team, on any plan applicable to former long range contests. Had the wind gauge been allowed they could have made their experience available.

I beg to apologize for this lengthy and somewhat discursive report. I felt it at the dry statistics properly pertaining to a paper of this character would be of little interest to your honorable body or to the public.

JOHN BODINE.

BROOKLYN, Oct. 2, 1882.

RANGE AND GALLERY.

CREEDMOOR—OCTOBER PROGRAMME.

ELEVENTH and 14th.—The "Qualification" Match of 1882.—Open to members N. G. S. N. Y. and N. R. A., the former being in uniform (jacket, cap and belt) may count scores made as partially qualifying them to shoot for the N. Y. State Marksman's badge, provided that they use the State Remington rifle, 100 and 200yds.; standing at 100, kneeling at 200yds. Five shots at each distance with any military rifle. Entries, fifty cents each. Re-entries permitted at the discretion of the executive officer, but only the highest score to count. To the competitors in each competition making the five highest aggregate scores, sixty per cent. of the entrance money will be equally divided.

11th and 14th.—The "Champion Marksman's Badge" Match of 1882. Open to all members of the N. G. S. N. Y. and N. R. A., the latter, however, not being eligible to win the principal prize. Distances 200 and 500yds., five shots at each distance. Weapon, the Remington rifle, any military model. Position standing at 200yds.; any, with head to the target, at 500yds. Entrance fee, fifty cents each. Re-entries allowed re-entries in each competition at the discretion of the executive officer, but only the highest score to count. Members of the N. G. S. N. Y. in uniform (jacket, cap and belt) may count their scores made in this match as qualifying for N. Y. State "Marksman's badge," provided that, if ordered, they have attended (or do once through the season attend) general practice, and provided they have previously qualified in the "Second Class" (100 and 300yds. See "Qualification" Match).

First Prize.—A gold champion marksman's badge of 1882, offered by Brig. Gen. Alfred C. Barnes, general inspector of rifle practice, S. N. Y. The badge to become the property of the competitor who, at the close of the season of 1882, shall have won it the greatest number of times. In case of a tie, the highest aggregate score of all the competitions participated in up to that time to decide. Winners of former champion marksman's badges to be handicapped five points at each competition. Ten other prizes (silver medals) presented by the N. R. A. to the ten highest competitors as a mark of merit. The same man can only win one medal during the season.

11th, 14th, and 21st.—"Army and Navy Journal Revolver" Match.—Open to members of the Army, Navy, Marine Corps and National Guard or Militia. Weapon, any Army or Navy revolver with trigger pull of 3lbs. or over. Regular service ammunition to be used. Revolver to be brought unloaded to the firing point. Three entries allowed on each day that match is shot; six shots at each entry. Entrance fee, $2. Re-entries, $1. Three guns at short notice, would be can also much earnest work this fall and winter, and I have no doubt arrive at a fair proficiency before sailing next year; but I repeat again that it mainly depends on our being able to procure the guns; and of the two alternatives, that of procure the guns or asking them to defer the match for a year, I must say I much prefer the last, but half the *eclat* of winning would be lost if we had to go to them for guns. I earnestly hope that neither will be necessary, but it would not be well to ignore that it may become inevitable.

If the match must be shot next year, then our duty is plain. Shut out all speculations as to chances and by hard work go in to win. If we spare no effort, then if defeated again, it will bring no disgrace, but only intensify our determination.

In any event, it is absolutely necessary to proceed at once to appoint a committee for procurement of guns, another for the procurement of necessary funds; and if the appointment of the officers of the coming team was made at once it would ensure promptness and despatch in many matters of importance, as there is an absolute necessity that much experimental work should be done at once in order to be able to decide on the arm to be used.

If this is left to the factories, I fear that we shall be in the same shape next year as in this, and I hope we shall not have a recurrence of this experience.

OBSERVATIONS ON CONDITIONS OF WEATHER AND ITS EFFECTS ON DAYS OF MATCH.

The weather conditions on days of match were of such an unusual character as to render useless all experience had by my team on any previous days of practice under the conditions of the match, and I offer petitions. In fact it was such an experience as is rarely met with by the oldest habitues of Creedmoor. If the days of the match had been of the general characters of our practice days, we would have been beaten but I have little doubt we would have won by a much larger lead of the British Team at least 200 points. The conditions, although not conducive to high scores for our opponents, yet were such as favored them as regards winds most prevalent at Wimbledon. The greater experience also enabled them to combat its difficulties with greater success than could be expected from my team.

On Thursday, September 14, the first day of the match, the wind was strong and gusty, the dial marking V. to VII. The light was bright and sky clear.

The barometric, thermometric and observations of wind as follows:

Schmidt	0 0 0 0 0 1 1 1 1 1	0 0 0—5
Bergmann	0 0 0 0 0 0 1 0 0 0	0 0 0—2

Ties on 12 won by Jose; on 10 by Stern, on 8, Stadler.

NASHVILLE, Oct. 4, 1882.—Andy Meadus shot a match at glass balls to-day for $100, he to break 85 balls out of 100, 50 to be thrown singly in any direction, and 50 double balls. The following are the scores. 50 single balls, Mole's traps, 21yds. rise:

Meadus .....1111111111111111111011111011111111111111110110—46

Double balls, 18yds. rise:

Meadus .....1101110111111111111101111111101111111101111110—46

Before leaving the grounds the following match was made for $100, to be shot in four weeks from to-day: Andy Meadus agrees to break 185 glass balls out of 200. 100 single balls thrown at five angles, and 100 double, traps ten yards apart. The distance at single balls 21yds., and doubles 18yds. It is safe to predict that Meadus will win, because he is certainly a wonderful shot.

If you want a fine gun buy a Scott Hammerless of Wm. Read & Sons, Boston.—*Adv.*

Yachting and Canoeing.

FROM THE THAMES TO THE WOLF ROCK IN THE ORION WITH AN AMATEUR CRU.

It affords us great pleasure to publish the following cruise in the British Channel as an example of yachting at sea, which cannot fail to be of great interest to the growing fraternity of cruisers in this country who have learnt to discover something deeper in the sport than drifting in smooth water. It is from the pen of R. T. McMullen, of Greenhithe, England, well known to our readers and throughout the yachting world as the author of such welcome little volumes as "Orion," "Down Channel," "Cruise in the Procyon," and others. The log is as follows:

"Not caring to fit out the Orion (nineteen tons) and do precisely as I had done so many times before, I sounded two young friends, Horace Bethune and William Todd, the owners of little sailing craft and used to roughing it, to ascertain if they were willing to accompany me on a short cruise down Channel as sailors before the mast, without any professional assistance whatever. As they jumped at the proposal and cuttingly approved my plans. I forthwith set to work and fitted out the vessel, with the assistance of my ship-keeper, a supernumerated coastguard, and two boys from the training ship Arethusa. Beyond this, for heavy lifts, hauling out of dock, etc., I had extra help from the same source, as my friends were not able to join until we were prepared for sea.

Although my intentions were not avowed until the volunteer crew turned up, which left me free to go forward or to retreat if from any sufficient cause I desired it, having undertaken the work I determined to persevere with it to the end, and succeed, after having everything prepared for the reception at the time appointed.

It was understood that all close harbors, such as Ramsgate, Dover, and the like, would be avoided as much as possible during the five or six weeks allotted to the cruise, and that stoppages for needful rest and recreation would be passed at such anchorages as were used by pilot cutters now, and were used by the revenue cutters of former days.

Water and fuel, and all but perishable stores sufficient for the entire cruise, were taken on board at Greenhithe. Thus, with ample supply of tinned meats and bread, hard and soft, there was no fear of failing short of wholesome food if compelled to keep off the land longer than there was reason to anticipate.

July 7.—We sailed from Greenhithe, Kent, with a strong wind from the southward, and were compelled to anchor in the Lower Hope, in consequence of a plate-glass side light in the boob-hatch being accidentally smashed off Gravesend. As the means of repairing such accidents have always been intended in the Orion's stores, we turned glaziers for the nonce, and, after coming to an anchor for the night, repaired the damage.

July 8.—Under way at 7 A. M. with one reef down, wind S. W., and run to the North Foreland; and, after a smart turn to windward, anchored off Deal at 4 P. M. with rather dull barometer, 30.05.

July 9, Sunday.—Spent a pleasant day at anchor. Weather strong and squally with rather much swell.

July 10.—Wind hard and squally from S. W., and very cold. Had a heavy beat to windward round the North Foreland to Dover, during which the jib outhaul was carried away, necessitating a run before the sea for repairs; also a heavy sea was shipped, which, consequent upon the terrific lurch, caused some damage to the crockery and glass below. Being anxious to receive and post letters at Dover, we anchored in the bay for the night, and rode to a large scope of chain and the "cable buffer." Weather cloudy and strong; sea very rough; barometer 29.5.

July 11.—Turned down to Dymchurch (Dungeness Road), and again anchored for the night with a large scope of chain and the cable buffer. Weather rainy and strong with much swell.

July 12.—Got under way late in the day; but, the wind falling and flying round to all parts of the compass, with the appearance of a storm, anchored again in a good berth off Lydd. Weather dark and cloudy, with a cross swell from S. W. and from east.

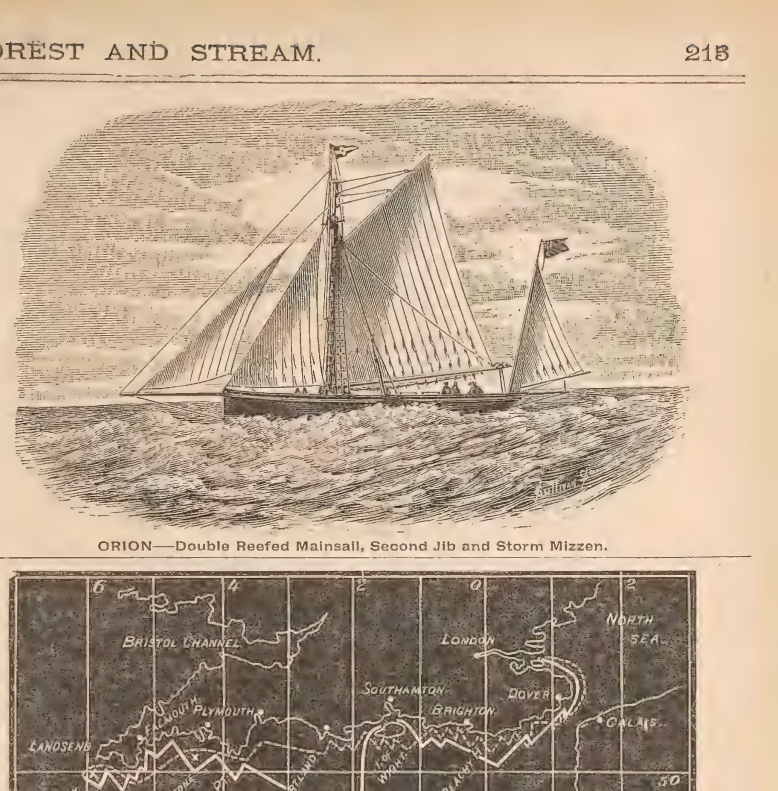
July 13.—Wind W. S. W., fresh and fine, but with falling barometer. Five miles south of Dungeness, carried away inner iron block of starboard bowsprit shroud. Repaired from stores and proceeded.

July 14.—After a rough and very tight turning to windward on the south coast, we desired to anchor in Selsea road (about four miles south of Bognor), in the hope of being able to procure a good breakfast; but, the wind being violent and the sea too heavy, thrashed on to Hayde, J. of W., and anchored there at 4 P. M. We remained inside the island for six days, chiefly in Lymington River, to have handsome and tired from handling so much wet canvas and ropes that were rendered harsh and untractable by frequent saturation.

July 20.—Sailed from Lymington River at 11:30 A. M., bound to Cherbourg (Normandy); wind W. S. W., and fresh and fine, with strong flood tide we stood over toward Yarmouth, passing through a fleet of weather-bound vessels; and, being desirous to give my young friends a good view of that picturesque little town, I stood on close-hauled too near the shore before putting the Orion about, and, where actually in stays, took the soft mud just above the pier. With the assistance of three men from a schooner at anchor close by, and my own kedge and hawser, we got off in less than an hour, and proceeded to beat down against a neat sea to the Needles, which we cleared at 2:30 P. M., and headed S. S. W. for Cherbourg, with the patent log overboard. I suppose there is not a yachtsman or a sailor of experience living who cannot perceive the very trumpery nature of this little manœuvre, which those who close shave the land in inland waters for the mere amusement of the thing every day and think of no more account than intentionally taking the ground for the many purposes that small craft habitually do. Yet, for some reason difficult to fathom, seeing that the vessel is under 20 tons register, is exclusively my own private property, and was manœuvred, I have received a request to attend at the office of the Receiver of Wreck, and fill up a form which would be applicable to the stranding of the steamship Mosel at the Lizard Point. While engaged in hauling off, a boat from Yarmouth, with three men in it, came alongside and wanted to board. That I peremptorily forbade, for reasons that everyone will understand. Then the coastguard boat, with an officer in charge, arrived, and the latter I cordially received, being in reality no stranger. But when he exhibited a portentous great scroll with much printing on it, which I was too busy to examine, and wanted me to fill in a mass of particulars, such as would be applicable to the above mentioned stranding at the Lizard, I told him that he could see exactly how the matter stood, and that, as the yacht was mine and uninsured, I must decline to sign anything I did not understand; in fact, that it was absurd, and that taking notice of such silly little mishaps, of daily occurrence, would destroy all confidence in the correctness of the official returns. Had I been insured the case would have been different; but even then, as the utmost I had to complain of was the chafing of a Manilla hawser, it would have been ridiculous. I have been insured only four times, and never made a claim—once on a voyage to Ireland, twice on voyages to Scotland, and last year, chiefly in consequence of the enormous increase of steam traffic, on a general cruise in the channel. I offered to insure upon this cruise also, and for the same reason, but, owing to my announced determination to sail with an amateur crew, was refused. Thus the premium was saved, and I became responsible only to myself.

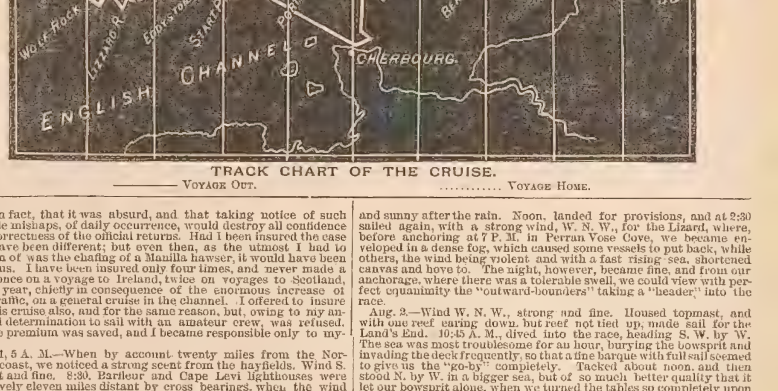
July 21, 5 A. M.—When by account twenty miles from the Normandy coast, we noticed a strong scent from the hayfields. Wind S. W., light and fine. 8:30, Barfleur and Cape Levi lighthouses were respectively eleven miles distant by cross bearings, when the wind fell calm, and we were drifted eastward to the meridian of the former. During the afternoon, with a strong breeze from S W., which severely tried the bowsprit, we beat into Cherbourg by the eastern entrance, and, having anchored off the town at 5:30, hastened to furl the canvas before a heavy downpour set in for the night.

July 23.—Went on a slipway in the outer harbor and cleaned the copper. For this job I hired men by agreement, who so scamped the work that the following morning we completed it ourselves, and at high water returned to our previous anchorage in the roads.



July 28.—Wind S. W., light and fine. With a large spread of canvas we sailed for the Cornish coast, and for a long while had just cause to apprehend being drifted into the Race of Alderney, or the Swinge, for which the pretty scenery the calm clear atmosphere enabled us to enjoy offered very inadequate compensation. But, a fresh breeze, springing up, with a long swell from the S. W., we got clear away, and at 2 P. M., by cross bearings of the western point of Alderney and the Casquets, were thirty-two miles W. N. W. of Cherbourg. Until 10:30 the night was superb and moonlight, when a dense fog came on, which, with a short interval about midnight, continued until 2:30 P. M. of the following day. The fog was so wetting, that halyards, tacks, and sheets had to be eased during the night.

July 29, 6:30 P. M.—The wind having headed us off the course, with a strong adverse tide, we bore up for the Start Point, and anchored north of the lighthouse at eight. The sails being heavy with moisture, and having been hard set for turning to windward, took us an hour and a half to stow -I mean to furl in a manner that anyone might see and criticise. From the severity of the tackling, the boltropes of the jib and topsail "crackled" like burning firewood while being forced into the bags—a sure indication that more than ordinary energy would be required to get the "bunt tyer" on the mainsail when its turn arrived, and that those who had no spare fingernails to turn back would be a step in advance of those who had. It asked how many hands a yacht of a given tonnage should carry, I should reply by another question—what is the weight and quality of her canvas? For it is in reefing, handling, and furling canvas of high quality, more than in anchor work, that deficiency of manual power becomes conspicuous. The canvas of an 18-ton schooner, beside which I was lying in Dover harbor when on a single-handed cruise in the Procyon, 7-ton lugger, was quite flimsy compared to the lugger's mainsail of No. 5 double; while the latter, which has often punished my hands, is light in comparison with the lower sails of the Orion, whose mainsail and foresail are of No. 3, and working jibs of No. 3 double—a substance of canvas that for my work has important advantages, which I would not sacrifice to any other consideration whatever. These details are necessary to account for the time and labor expended in their manipulation, often hinted at in my cruises without being clearly explained. Night calm and moonlight.



July 30, Sunday.—Had a glorious day at anchor. Dried sails, and landed at the lighthouse for a stroll. Wind west, fresh and fine. Night extremely grand.

July 31.—Under way 7:30 with a light air E., and hove to with foresail to windward. During breakfast drove round the Start Point at a safe distance. 9:30, wind west, a nice breeze; set large topsail and commenced turning to windward. Views of the coast charming, and unsurpassable in Great Britain. Eight miles west of the Start spoke a torpedo boat, with seven hands, under canvas for Brazil, which, by master's request, I reported at Falmouth. Although the sun was shining when the wind freshened, the air, as on previous days, became so exceedingly chilly as to require thick clothing. 3:45 P. M. passed south of the Eddystone to view the new lighthouse. Sea choppy. 8 P. M., tacked off Looe, Cornwall; wind N. W. by W., fresh. During the night passed close to several fishing boats, some without lights, their position being announced to us by the sea gulls that were uttering their cries incessantly around them.

Aug. 1.—2 A. M., weather thick and rainy. Hove to in Veryan Bay, south of the Dodman Head, to get supper and wait for daylight to enter Falmouth. 6 A. M., anchored off the town; morning fine and sunny after the rain. Noon. landed for provisions, and at 2:30 sailed again, with a strong wind, W. N. W., for the Lizard, where, before anchoring at 7 P. M. in Perran Vose Cove, we became enveloped in a dense fog, which caused some vessels to put back, while others, the wind being violent and with a fast rising sea, shortened canvas and hove to. The night, however, became fine, and from our anchorage, where there was a tolerable swell, we could view with perfect equanimity the "outward-bounders" taking a "header" into the race.

ORION—Double Reefed Mainsail, Second Jib and Storm Mizzen.

TRACK CHART OF THE CRUISE.

Voyage Out. ..... Voyage Home.

Aug. 2.—Wind W. N. W., strong and fine. Housed topmast, and with one reef during down, but reef not tied up, made sail for the Land's End. 10:45 A. M., dived into the race, heading S. W. by W. The sea was most troublesome for an hour, burying the bowsprit and invading the deck frequently, so that a fine barque with full sail seemed to give us the "go-by" completely. Tacked about noon, and then stood N. by W. in a bigger sea, but of so much better quality that it let our bowsprit alone, when we turned the tables so completely upon our late antagonist that her identity was lost amidst a fleet to leeward. It was fine sailing, the weather at that time being beautifully clear, though cold enough for October. 3 P. M. passed to windward of the Runnel Stone buoy—carrying a bell with numerous clappers, which strike without reference to time or harmony—the rock itself being occasionally visible in the trough of the sea. The Longships and the land beyond were also very plain when we tacked and stood off for the Wolf Rock Lighthouse, round which we sailed, but at a respectful distance, on account of the race of tide and heavy sea. The voices of its occupants, who appeared in the gallery and at the windows, first on one side and then on the other, and with whom we exchanged frequent salutations, were drowned by the noise of the elements. To windward of the lighthouse we pitched into some tide rollers that would have played sad havoc with the head-gear had it not been very powerful. In the first of these tremendous "scends," one of the weather runner-plates was carried away, and there was evidence afterwards that everything that could move throughout the vessel was more or less displaced. 4:30 P. M., waived adieu, and commenced the run back to the Lizard, against tide, and dead before the wind and sea—the most objectionable point of sailing in a fore-and-aft rigged vessel. 6 P. M., the sky became overcast, and, in spite of a high barometer, the weather set in so wet and miserably cold that at 8:45 we were exceedingly glad to bring up at the anchorage we had left in the morning. Exceptionally tired and hungry, the terrible job we had with the saturated canvas and hawsers, happily followed by a good dinner off hot loin of mutton and potatoes at 11 P. M., are incidents that never pass entirely out of recollection. Upon an occasion like this the general clear-up is undoubtedly rather trying; but in open anchorage, where there is no certainty that at any hour you will not be called upon hastily to make sail and stand out to sea, whatever work before might by lazy people be left to the morrow, on deck order must be thorough and complete. Anchorage at sea night after night, especially upon an iron-bound coast, is fraught with nothing but danger where these conditions are not recognized and strictly observed. The Lizard coast is very interesting and enjoyable in fine weather; but in clouds and darkness, when there is reason to be anxious, its beauty vanishes in a moment.

Aug. 3.—Dried sails, etc. Crew landed for a ramble to Kynance Cove and other interesting spots, while I found abundant occupation on board. Wind N. N. E., a moderate breeze. Night fine and clear, with a gentle swell from the eastward.

Aug. 4.—Wind fresh from N. N. E. After the usual wash down, in which all hands participated, and which was only once omitted owing to the rough sea rendering it impracticable, we sailed at 8:30, and shortly afterward hove to with foresail to windward, heading slowly on the course while getting breakfast and attending to such duties below as, if attended to in the order of daily custom, would have deferred the time of sailing for two hours, and have lost us eight miles. But for the low temperature, the day was most delightful. All the headlands and bays of this much-indented coast were clearly distinguishable in the distance, and the sea, in color a compromise between a dark sapphire and a dark emerald, was sparkling and clear as crystal. 1:30 P. M., passed north of the Eddystone in a strong breeze, the foam in our wake looking as white as freshly fallen snow. 8:15, after a magnificent sunset, which charmed us with its effect upon the rugged shore, the wind having almost died away, we huffed up into Lanacombe Bay, near the Start Point, and anchored for the night in seven fathoms low water; a spot which, if possible, was more charming than any anchorage that preceded. Night moonlight, starlight, calm and clear, with an agreeable scent of cornfields off the land. Anyone unaccustomed to anchorages in the immediate vicinity of high land can hardly fail to be alarmed at its apparent nearness after dark, when the sense of perspective, by which distance is estimated by daylight, no longer exists. Thus, the darker the night, the more complete is the illusion of the cliffs and the hills behind them being merged into one lofty perpendicular, which overshadows the vessel by its black reflection in the sea, advancing almost to her side, and

seems to leave not a fathom of space to swing, much less to get under way, without finding oneself ashore. Readers may not understand our enthusiasm in regard to these dry-and-night views that so constantly engage our attention and challenge our admiration. They will perhaps think we might address ourselves to duller details; but it is in reality our chiefest and almost sole recreation on deck in fine weather, without which a voluntary cruise at sea would seem far too tame as an amusement to compensate for the actual labor, expense and constant watchfulness it entails. Followed as a pastime, it is not unlike the pleasure human nature has invariably found in successfully gathering roses off thorns; for, however amiable the sea may appear to us in its quiet moments, or, even better, when contemplating its grandeur from the land, it is, after all, a mighty hard if not a rough playmate; and even steam, the yachtsman's craze of the day, will never render it anything else.

Aug. 5.—Sailed from Lunaconobe Bay at 3:30 with a nice breeze, S., S. W., and when round the Start Point landed the foresail to windward, and allowed the Orion to sail across Harbridge, where we anchored in the Range, and rowed up to the town in the boat for letters and provisions. Later returned to the Start, and anchored about a mile north of the lighthouse, in five fathoms low water. The weather looking cloudy and threatening; we got our coir with a large scope and the cable buried. At night the sky cleared and became magnificently fine. Generally the boat is turned in at night, ready for sea; but occasionally, as in this instance, when determined to ride if possible a stop is passed over her, and, with one pair of oars, the rowers, kept handy for various uses, the strain is relieved from the davits and thrown upon the standing part of the runner. My davits are abaft the main rigging, for greater convenience in handling the boat, which can never carry in the davits under way.

Aug. 6, Sunday.—The first really hot summer day of the cruise. From morning till night, ahead and ashore. It was a day of unalloyed enjoyment—such as, in my opinion, concurred in by my mates, would be impossible in harbor. Provisions, also, required, to be got from my table at sea, though unfortunately ranking with perishable stores, was replenished with a grand collection of wild flowers, in which ferns, honeysuckle and ox-eye daisies were most conspicuous.

Aug. 7.—Sailed at 8:30; wind light, weather fine and warm. 3 P. M., four miles E. S. E. of Torquay, under large canvas, lay a course for Portland; wind S. W., veering gradually to N. W. 6:30, hove to for an hour, with both headsails aback and mainsheet pinned in, to keep her from traveling off the course and to preserve the gravy for its proper use during dinner. Night fine; moonlight in early morning.

Aug. 8.—3 A. M., Portland Bill N. E. by N.; tacked in a shifting head wind, and later weathered the Shambles Lightship. 6:30 hove to off Lulworth, found it impossible to get into the bay, and kept up to St. Alban's Head. 6 P. M., anchored in Alum Bay, I. of W.; wind S. W., fresh and fine. While lying here we observed the unfortunate steamship Mosel, which stranded next day at the Lizard.

Aug. 9.—Under way at 4:30; wind E., fresh and fine. Passed out at the Needles and beat up outside of the island, standing inshore when there was any place of special interest to observe, such as Black Gang, St. Catherine's and Ventnor. 6 P. M., made the Looe Channel when the tide turned. 9 P. M., wind W. N. W., light; anchored off Selsea in four fathoms low water.

Aug. 10.—Wind E. N. E., a moderate breeze and miserably cold. 6 A. M., under way; 8, hove to off Boguor. 6 P. M., anchored for the night off Brighton, and landed to post letters and procure supplies.

Aug. 11.—Wind E. by N. to E. N. E., fresh and fine. 4 A. M., got under way, and, chiefly in regard to the pleasant agricultural and homely views on shore, had a magnificent turn to windward past Newhaven and Seaford, and round the grand cliffs of Beachy Head against the tide. Thence we encountered a truly cold wind every sense, accompanied by a short sea, averaging twenty-one to the minute, which greatly impeded our progress. (On the Cornish and Irish coasts I have met them averaging five and even four to the minute, which may properly be described as "a head sea"). 3:45, tacked off Eastbourne, and, after rounding the Royal Sovereign shoals, stood in toward Hastings, where the sea was too rough to anchor as desired; so we continued under way, and at 9 P. M. hove to off Fairlight, with the foresail to windward, which allowed one hand to turn in comfortably below. Night fine and starlight, a heavy dew and very cold.

Aug. 12. Wind E., fresh and fine. 8:30, passed Dungeness. 1 P. M., anchored off Dover, and landed for letters. 5:30, the weather looking too stormy for Dover Roads, we sailed again, and beat against the tide round the Foreland and the South Foreland, and anchor for the night off Upper Deal. We had partaken of an excellent hot dinner below in turn, between 3:30 and 10 P. M., when the wind suddenly left us hopelessly becalmed and drifting at the southern entrance of the Gull Stream. At this time the weather, although all round, with frequent flashes of lightning and thunder rumbling in the distance. Being very anxious about a group of bright lights, one of them the three triangular lights of a Trinity wreck steamer, I ordered the anchor to be cleared, and that especial attention should be directed to the cable, so that it might be ready to run out in an emergency should arise. This precaution was fortunate, for, notwithstanding a light air sprang up, which held out a promise of escape, it soon became evident that the spring tide, which runs with great force in that direction, was bringing us down upon the sands into danger. Apart from this alarming complication, if an anchorage in Dover Bay were deemed unadvisable on account of the threatening appearance of the weather, certainly this was a case of "out of the frying pan into the fire." 2:30, when the flood made and the tide upon some obstruction was plainly audible, and evidently very near, we let go the anchor, "all standing," and did not attempt to check her until the thirty-fathoms shackle passed out of the hawse pipe, and when paid out a few more extra shackles. Then, according to the lights, the horizon was so dark that, even with the binoculars, we could not distinguish a vestige of anything beside, so had to wait for daylight to ascertain how the case really stood. While stowing the canvas, several steamers bore down upon us with their three lights, and then shaved away for the Goodwin Lightship. Later on our mate descended from aloft, after unlacing the topsail, he remarked that the light immediately astern of us had an unusual appearance, and that he could not help thinking it must be on the mast of a sunken ship. As we could not easily weigh with a good scope of chain, and it was useless to sit up speculating upon those matters, we turned in at 4:30, and soon forgot all about it.

Aug. 13, Sunday.—At five o'clock, feeling more anxious about the weather than anything else, and the wind, now nor'-west, diminished, that our near neighbor was the mast of a large ship with five wire shrouds on a side, and rattlings entire, which accounted for the great rush of water we heard overnight; that the Trinity steamer was about two cables east of the wreck, and that there was lashable smacks, with a diving apparatus on board, were also attendance. An ominous swell from the south, with a squall rising in that quarter, and thunder rumbling in the southwest, warned me that no time should be lost in extricating ourselves from so awkward a position. Though the Orion was veering down, or away from the wreck, at a fast hour, we were still within the influence of its eddy; so that while the chain was being hove in she swung towards it again and again, until she became wind-rode with a strong breeze from the southward, and had the cable short under the bow. This was the anchor watch, the headsails and mizen having been previously prepared for hoisting and the anchor hove short, the latter was broken out of the ground by a violent gust of wind, which also cast the yacht's head to the eastward, and threatened to drift her broadside on with a good scope of chain, and it was useless to sit up speculating upon those matters, we turned in at 1:30, and soon forgot all about it.

Aug. 13, Sunday.—At five o'clock, feeling more anxious about the weather than anything else, and the wind, now nor'-west, diminished, that our near neighbor was the mast of a large ship with five wire shrouds on a side, and rattlings entire, which accounted for the great rush of water we heard overnight; that the Trinity steamer was about two cables east of the wreck, and that there lashable smacks, with a diving apparatus on board, were also attendance. An ominous swell from the south, with a squall rising in that quarter, and thunder rumbling in the southwest, warned me that no time should be lost in extricating ourselves from so awkward a position. This was the anchor watch, the headsails and mizen having been previously prepared for hoisting and the anchor hove short, the latter was broken out of the ground by a violent gust of wind, which also cast the yacht's head to the eastward, and threatened to drift her broadside on with a good scope of chain, and it was useless to sit up speculating upon those matters, we turned in at 1:30, and soon forgot all about it.

Aug. 14.—With all plain sail set, and a fine breeze, sailed from the Gore Channel at 6:30 A. M., and arrived at Greenhithe 12:30. Wind S. W., a moderate breeze to strong. The Orion was docked same tide—the first night in harbor since quitting Cherbourg on the 28th of July—and by the evening of the 16th she was stripped.

To save misapprehension on the part of three parties, perhaps you will allow me to make a few observations more. That I did not distrust the spirited qualities of my friends is proved by the fact that when insurance on current terms for first-class yachts was only in one quarter declined on their account, I assumed the risk without further inquiry, or in the slightest degree modifying my plans. Besides the vessel and gear, which alone would have been covered by the insurance, there were among my personal effects many things I should have been much grieved to lose, including a very powerful microscope with lenses by well-known names. Thus the expenses, of course, and the entire risk, together with every responsibility for success or failure, were mine. But if everything had been theirs, they could not have shown more consideration for their own than they did for mine, nor have worked more assiduously and anxiously to guard against failure. That the experiment succeeded beyond my highest expectations was due to the fact that my crew proved to be as manly as they were gentlemanly; and that, in spite of the hard work, they, as well as I, can look back with nothing but pleasant recollections to the adventure, is due to their appreciation of the magnificent scenery that our coast presents to those who know where to find it, and the happy medium between inferior nearly constant employment at anchor the time was chiefly spent in little excursions to the shore, where weeds, birds, rocks and caverns, etc., abounded. Upon one rock we visited in the boat the birds were so tame that they suffered us to lie quietly alongside and remark their peculiarities—even a ludicrous little farce, amounting to a bloodless quarrel, being carried in our presence. Our sketchers and caricaturists would have been delighted with this.

Surprise has been expressed by those who know nothing of the labor required to keep a yacht in a complete state of efficiency and cleanliness that we found no time to read the newspapers. I will explain this by a practical illustration, instancing the cruise of the previous year, which happened to be nearly over the same course. The two seamen employed on that occasion, who were good average specimens and of good repute in their town, complained to my shipkeeper that they were "driven like slaves." Well, here are the statistics for last year, and for this, to which I will only add that of my cruise round Great Britain in 1881, though upwards of twenty others, not less instructive, could be furnished if required.

The cruise complained of lasted seventy-two days, and the geographical mileage was 830, or an average of 11.5 per diem. The nights at sea were 44, and were four, nights anchored at sea twelve, and nights in harbor fifty-six.

Upon this occasion (1882) with my two young amateurs, who were light weights of the respective ages of 20 and 23, the cruise lasted thirty-eight days, and the aggregate mileage was 1,000, or an average of 26.8. The nights at sea under way were five, nights anchored at sea nine-teen, and nights in harbor fourteen.

In 1883 the cruise lasted ninety-eight days, and the geographical mileage was 2,640, or an average of 26.9. The nights at sea under way and at anchor were sixty-four, and nights in harbor eighty-four, of which thirty were passed in the more or less exposed anchorages of the Firth of Clyde.

If I gave more assistance to the amateurs than to the professionals, nobody would the difference between trained and untrained hands be taken into consideration, but that more was accomplished in half the time. All the same, there never was an occasion that could have given rise to the absurd complaint, when the men were tired and I was not, or when their hours were long and mine were not longer, living, in addition to my share of the active seamanship, to conduct a difficult navigation which I have never ventured to leave to chance. Moreover, if I were not habituated to take my full share of the heavy work, it would be impossible for me to cook, which I assure you I have managed it alone? The difference lies simply in the estimate of work by a volunteer and by a paid hand.

In domestic matters, except the cooking—in which it is a recognized axiom that a difference of opinion spoils the broth—each one managed for himself, as he would at home.

On this cruise, which may not inappropriately be described as "fun in earnest," I had an advantage in the society of educated men instead, as not unfrequently met with in my experience, of men who could neither read nor write, but who, as a rule, I have found infinitely more impracticable than those who can. In saying this, I am not unmindful that there is no rule without exceptions—and perhaps distinguished exceptions too!"

SAN FRANCISCO Y. C.

UNDER the auspices of this club the recent public "mosquito race" proved a great success. There were twenty starters in all, divided into six classes, for Whitehall boats, plungers or cat-boats, fishermen, sloops and yawls. The race was sailed Sept. 23, over a course from a line fixed between Mission Rock and Long Bridge to a stakeboat moored midway between Mission street wharf and Yerba Buena Island, thence around stakeboat in mid-channel to leeward of Mission Rock, and then to starting line. Mr. Gutte's schooner Chispa and Vice-Com. McDonough's schooner Aggie were kindly tendered as stakeboats for the use of the regatta committee, and they were moderate—just the day for the small fry. There was great rivalry among the Whitehalls, and also among the Italian fishermen in their peculiar and seaworthy craft. These boats are somewhat on the whaleboat principle, with the addition of the well-known Block Island boats of this coast. They are flush decked, though, being used in the off-shore fisheries on the Pacific outside the Golden Gate. Most of them retain the high-peaked and picturesque lateen sail of the Mediterranean, some of them wear tarred canvas, and display the Italian flag, and, after coming in first, planked down some glittering "eagles" as a challenge to any one wishing to try him again. The Italian fishermen are considered expert sailormen, and their boats are often met with a long distance out at sea, making comfortable weather of it under circumstances which bother much larger trading vessels. A steam tug took the judges over the course, and a number of steamers had full loads of excursionists aboard, while crowds turned out along shore to witness the racing, which is said to have excited much interest and enthusiasm among the people. As there was also much instruction to be gained from the sailing, as such a variety of boats have seldom been brought together.

The revenue cutter Lousa sent her long boat with six hands and the Pilot Rowing Club entered a new-rigged gig, the latter pulling the latter coming near capsizing. The Lake Merritt sloop Shadow with her low freeboard could not carry on and gave up. The sharpie Daisy did fairly well at running, but, as might have been expected, she was of no account to windward. The judges say that, contrary to expectation, she showed no speed compared to the yachts. Young Frank Stone, son of Wm. Stone, the builder, went around in the flat bottom plunger Squibob, and landed third prize. The Lark, winner in second class, is the work of the amateur builder, a musician. Cora, in same class, was sailed by four youngsters, all under twelve years of age. The race was in every way successful, and proved so popular that we look for an increased fleet of small yachts in the harbor. It would be well if some of our clubs on the Atlantic seaboard exerted themselves in behalf of idle races open to fishermen and working boats. All the New York Whitehall boats were beaten by craft of local build, the Sennett being the handiwork of Dan O'Connell, of the North Beach. We append the summary:

	Length.	Actual.	Corrected.
FIRST CLASS (Whitehalls).	ft. in.	h. m. s.	h. m. s.
Lark	13 3	1 48 19	1 27 23
Cpt. O'Connor	16	1 46 57	1 27 57
Squibbob	20	1 53 30	1 38 30
Cora	16	3 24 25	2 05 25
Chiquita	20	2 32 00	2 17 00
Idaho	17 6	2 55 10	2 37 10
Triton	15 6	withdrawn.	
THIRD CLASS.			
Carrie	24	1 23 25	1 12 25
Fleeting	24 11½	1 23 45	1 13 00
Blackbird	22 9	1 37 25	1 15 20
Saddie	20 6	1 26 15	1 22 45
Emilie Ethel	23 4	1 32 27	1 27 42
Skipper	21 6	1 57 30	1 44 30
Rebel	17 6	2 30 50	2 10 20
Shadow	22 6	withdrawn.	
FOURTH CLASS.			
Fawn	28 3	1 23 45	1 19 00
Vim	27 6	1 33 22	1 24 52
Daisy	27 8	1 43 55	1 35 40
FIFTH CLASS.

Lizzie Williams	32 0	1 34 25	1 32 25
Bottle Meyer	33 3	1 34 20	1 32 35
FOR THE FLAG.			
Thetis (1)	33 6	1 09 25	1 07 55
Flirt (2)	33 0	1 13 12	1 11 42

ROYAL NOVA SCOTIA Y. C.—The closing matches of the season were sailed Saturday, Sept. 30, in a fine easterly breeze. Course, from Lumber Yard to Dartmouth Ferry buoy, thence to Fort Clarence flag boat, thence to Point Pleasant buoy, back to Dartmouth buoy and pass between Lumber Yard and George's Island to the starting line. Daphne's owner unfortunately met with an accident, Marquita did not show up, and the cutter Velenar was short-handed, so all three forfeited entrance fee. Both races were for that reason merged into one, giving two prizes, the Vice-Commodore's Cup, and the squadron prize, Phantom and Miranda sailing for both, and Oi-Kaze for the squadron prize only, the cup being the gift of her owner.

First Class, Phantom prize, 16 tons, Vice-Com. W. A. Chauncey; sloop Phanton, 4 tons, F. Stairs, and sloop Miranda, 3 tons, R. I. Wills. All got away at 2:20 to a single gun under lower sail only. The cutter took the lead and won easily, with Phantom second throughout the race. Oi Kaze bore away around Fort Clarence mark at 2:56:45; Phantom at 3:0:10, and Miranda at 3:3:40, the latter making an extra board to weather. Checked sheets took them around Point Pleasant buoy in the same order, and the finish was made by the cutter at 3:47:30; Phantom, 3:56:39, and Miranda, 4:03:25. Oi-Kaze took squadron prize by 4m., after applying allowance for tonnage, the cup going to Phantom by 7m. 55s., the latter being also the winner of the Rear-Commodore's Cup in a previous race. The latter then finished winning flags for the season, Oi-Kaze showing three for five starts, two firsts and one second. Phantom showing five for as many starts, two firsts, two seconds, and a third; Miranda new one for three starts, a second, and cutter Velenar four for the same number of starts, three being firsts, and one a second. Some private matches are on the prospect, Velenar having challenged Miranda, Miranda challenged Miranda with Mariquita as a probable third, and Lily will likely want a separate match with the cutter as well. Others are in prospect, but will probably have to lie over till next season.

NEW YORK CANOE CLUB.—After several postponements on account of bad weather the club on Wednesday last sailed regatta Saturday last. Unfortunately there was too little wind for the sailing match, though the paddlers found the water as they wanted it. The sailing race was open to seniors and juniors. Course, from club house on Staten Island around Robbins Reef buoy and home, about two and a half miles. A. C. A. rules were in force. Entries open, one prize. The start was made at 3:43 in light airs from southwest. This gave a beam wind both ways, but at the mark the wind died away and left the racers nearly becalmed, the Wraith, Mr. Wm. Whitlock, being the only canoe to finish under the limit of three hours, in 6m., reaching Time, 1h. 28s. The fleet included the Cricket, Mr. Green; the Lorna Doon, Mr. Oudin; the Theresa, Mr. Van Rensselaer. Second class, the Snoilo, Mr. Hoffman; and Foam, Mr. Collins. Also in first class, the Jack, C. B. Walk; Tramp, Mr. Ould, and Peak, C. D. Ondin. Regatta won in seniors in 6m. 3s., course nearly a mile; Coquette, second. Wraith won in juniors. Fifth race was open to tandems, same course. Vaux and Schuyler in the Lark led from the start, winning by two lengths in 5m. 28s., beating the Coquette. At the close Mr. Van Rensselaer gave an exhibition of tricks and difficult accomplishments in his canoe, showing wonderful command of balance and agility.

LONG CANOE CRUISE.—Capt. S. D. Kendall, of St. Johnsbury, Vt., and Dr. C. A. Neide, of Schuylerville, N. Y., left Lake George on the 9th inst., and went through the locks at Glen's Falls, thence down to Whitehall, and then followed the Northern Canal to Troy, then via Erie Canal as far as Belle Isle, where they were stopped by a break. They made a portage to Onondaga Lake, and then down the Seneca and Oswego rivers to Oswego, from there they followed the lake coast to Little Sodus; here the equinoctial was encountered, and they remained three days. The weather not improving they took the train to Weedsport and thence to Buffalo. Mr. Kendall's wife was joined him here, and will accompany him on the rest of the voyage. They will leave to-morrow for Olean, where they will strike the Allegany River, thence they go to Pittsburgh, then via Ohio River to Cincinnati, where they will be the guests of the Canoe Club at that place for about a week. Judge Longworth, of the Supreme Court, is commodore of the club, and they are great friends. They will then continue down that stream to Cairo, and thence down the Mississippi River to New Orleans, then carry to Lake Ponchartrain, then via Gulf coast to Florida, around the Capes to Lake Worth, near Palm Beach, where they will meet Commodore Bishop, of the Lake George Canoe Club, who has his winter residence here. Commodore Bishop has attained wide celebrity for his famous voyage in his paper canoe. Messrs. Kendall and Neide will return to New York early in April. The coast some time during next August.—*Buffalo Sunday Times, Oct. 1.*

NEW HAVEN Y. C.—The fall match was sailed Sept. 27. Eleven started out of twenty-five entries. The wind blew ugly from southeast during early part of the race, and many were disabled. Course ten miles to the Light House and return. Mystery's rigging gave way, and at steering gear went to pieces. Joe Jefferson, Jr., and Marshall Florer had a sail over, and took the cup in class G. Happy Thought won silver pitcher in class C, and Stranger a marine glass in class D, subject to protest as to her rating as a cabin or open sloop. Waybosset, Jr., was the recent winner of the first prize in class, and Happy Thought a pennant for best corrected time. Judges, W. J. Mills, A. W. Minor and C. H. Hall.

EAST RIVER Y. C.—Owing to refusal of the Conway to take prize in class B on protest, against Elsie May for not having member on board during race, the prize was awarded to the latter, and race to re-sail Sunday last. Course from Bedloe's Island through Narrows, around buoy in lower bay and return. Only the Conway, 20ft. 4in., James Conway, and the Alice, 27ft. 4in., Thomas White, started at 9:45 A. M. from southwest wind. Alice won the race, no time being taken, the sloop T. S. Gage, Mr. Sullivan, Pavonia Y. C., acting as judges' boat for the day.

VELENAR–MIRANDA.—A match between these two yachts of the N. S. Y. S. was sailed in Halifax harbor Oct. 4, crew limited to two hands, over the three-ton course of the club. Velenar was not in good trim, her sails not bent, and her bottom, after a season in Dartmouth Ferry buoy, Miranda winning handsomely in moderate breeze from north and a smooth water.

BEDOUIN.—Mr. Archibald Rogers's new cutter is sailing well and proves a grand seaboat. Her iron-work is giving some trouble. During some of the recent heavy weather she has come home all on her own self. It is noped she will appear in the proposed Seawanhaka races, though she can hardly be in good fighting trim by that time.

BOUND SOUTH.—Sloop Gulnare, Hudson River Y. C., will sail in a week or ten days for the gulf coast of Florida, where her owner, Dr. J. H. Rathbone, has a winter residence at Palm plantation. If there are other yachts bound south soon, the Gulnare would like company. There is good hunting on the inside route.

SEAWANHAKA Y. C.—The proposed races have been fixed for the following dates: Tuesday, Oct. 24, New York Y. C. course; Thursday, Oct. 26, twenty miles to windward and back outside the club's third race, course and date to be decided by the sailing committee.

SWEEPSTAKES.—Entries for the Columbia Y. C. sweepstakes close to-day. Open to yachts 27 to 28ft. long, over Columbia Y. C. triangular course. Entrance $25 each. They should be made to Mr. Owen Welsh, Columbia Y. C. house, foot Eighty-sixth street, North River.

THE POCAHONTAS.—The *Sun* has interviewed some of the owners of this sloop, who report that she was fully paid for, and that a regular contract existed between them and the builder, in spite of the latter's denial in a recent letter published in this journal.

ANNASOO.—Disgusted with the apathy of the New York Y. C. in bringing about a change to fair terms in the America Cup challenge conditions, Mr. Hedderwick has concluded to sell his famous forty and give up the idea of paying us a visit.

RANGER.—Mr. S. L. Blood has sold this schooner, 68ft. 7in. over all, to Mr. John A. Norris, of New York. She is now receiving an overhauling at Truman's yard, South Brooklyn, and will probably cruise to the southward this winter.

PACIFIC Y. C.—Mr. Hyde Bowie, schooner Nellie, has refused to accept second prize in the match of the Pacific Y. C. sailed Sept. 9, claiming the race void owing to the starting gun not being heard on board several yachts.

VAYU.—This sloop, owned by Mr. Fowler, of St. Johns, has been got off the rocks off Gerrish Island, after stripping and cutting away mast. She has been towed into Portsmouth, N. H., for the winter.

SINGLE-HANDER.—Mr. A. Cary Smith has under way plans for a single-hander, 16ft. water-line, 6ft. beam, 2ft. draft, with 900 lbs. on keel, and 1,000 lbs. inside ballast, and 1,000 lbs. outside ballast.

WASHINGTON VILLAGE Y. C.—A new club house, to cost $1,000, is now being erected for this club. The house is being built on a scow, which may be moved as found convenient.

DO CUTTERS ROLL?—From the *Herald:* All this time before the wind the cutter Orion sailed as steady as a rock, while it was fearful to behold the violent rolling of the schooners.

VAYU.—This is the name of Mr. Fowler's new cutter, 39ft. on deck, now well advanced. She has an iron keel of six and a half tons, and will be launched in a few days for trial.

RESIGNED.—We learn that Mr. A. Cary Smith, so long measurer of the New York Y. C. has resigned his office owing to pressure of his business as yacht designer.

DIED.—The report comes from San Francisco that Daniel Cook, owner of the schooner Ethel Wave, is dead.

MONTAUK.—A letter from Mr. Prague in reference to Montauk's spars was received too late for this issue.

See Shelton's monthly issue to sportsmen in another column.—*Adv.*

TERMS:

A Draft in full with the order.

NO AGENTS.

IMPORT DIRECT FROM

PIONEER WORKS, BIRMINGHAM, ENGLAND

And also No. 1 Conduit St., Regent St., W., London. One minute from Regent Circus.

For the above sums the guns described can be placed on the cars in New York, all paid, in eight weeks from order reaching us. A comparison of these prices with those charged in the gun stores for really fine English guns of first-class quality, will result in your ordering direct from the manufactory.

It has come to our knowledge that common guns are being sold in the States bearing our name. As we make only fine guns, genuine "Tolley" guns have engraved on the rib:

"J. & W. TOLLEY, MAKERS, ST. MARY'S SQUARE, BIRMINGHAM."

The Colt Club Gun.

It should be remembered that while we are the chief distributors of the regular Colt Guns, we are sole agents in New York for the Colt Club Guns. The marvelous performance of these guns in pigeon and glass ball trap shooting is so well known that no word of commendation is necessary. Every genuine Colt Club Gun has the rubber heel plate with the words "The Club Gun" around a circle, within which appears the rampant colt beautifully embossed. We are also agents for the new Harrington & Richardson Hammerless Guns, which at about half the cost surpass all imported hammerless guns. Address

P. O. Box 1114. H & D. FOLSOM, 15 Murray St., New York.

The Parker Gun.

Again Victorious at the late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Twenty Per Cent. Reduction.

HOW TO ORDER THESE GOODS.

Send stamp for our catalogue and price list, select such goods as you want, deduct twenty per cent., add fifty cents to cover cost of boxing, and send New York Exchange or Post Office money order. If the goods are not satisfactory, we will on return of them to us in good condition, without delay, refund the money less express charges. In sending for catalogue please state the kind of goods you desire to purchase, as we have three catalogues. No. 1 is devoted to breech and muzzle-loading guns, rifles, revolvers, ammunition, &c. No. 2 is devoted exclusively to Westley Richards hammerless guns. No. 3 is devoted to fishing tackle. We advise all to order as soon as possible before the assortments are broken.

BLOCK SAFETY HAMMERLESS, With Crystal Apertures.

The *only* Hammerless showing position of hammers at a glance. The only Hammerless having fixed firing pins, thus preventing smoke and dirt entering the lock. In others the aperture through breech to lock is open, the hammer and striker being one piece.

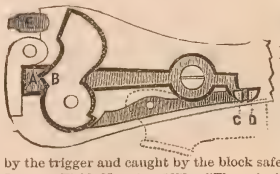
1876—PHILADELPHIA, MEDAL AND DIPLOMA. 1878—PARIS, SILVER MEDAL.

1879—SYDNEY, FIRST AND HIGHLY COMMENDED FOR MANUFACTURE. 1881—MELBOURNE, SPECIAL GOLD MEDAL AND FIRST ORDER OF MERIT.

COGSWELL AND HARRISON, 142 New Bond Street and Strand, London.—"After careful consideration of the merits or otherwise of the various systems of Hammerless Guns now before the sporting public, our opinion, formed sixteen months since, remains unchanged, that the principle of your top lever gun with the safety tumbler-block has many advantages over any other gun we know of at present; we consider with the extreme safety secured, together with the sound principle on which the gun is formed, will make it a general favorite in the future. As far as we are personally concerned we like the principle so much that we have adopted the system."

CAPTAIN BOGARDUS.—"As evidence of the durability of your guns, I have shot one gun over 50,000 times. I used your triplex action in my two recent matches with Mr. Fennel, winning both times; also in my match with Captain Shelley, at which time I scored 84, the highest score on record; and in the international match with Aubrey Coventry, Esq., for £1,000, which I won, killing 70 out of 100—all 30 yards rise."

THE *Field* says:—"The match will be handed down as one of the most exciting contests ever witnessed."



"GREAT PIGEON MATCH.—Captain Bogardus, in his recent match with Mr. Rimmel, of England, used his new W. & C. Scott & Son's **"Block Safety" Hammerless,** and killed 99 out of 100—30 yards rise."—*Forest and Stream, New York.*

C. M. STARK.—"The Scott Hammerless is the very best shooting gun I ever owned or have seen shot both for closeness and penetration."

LATEST VICTORY FOR THE SCOTT HAMMERLESS.—Match between Mr. Chas. Macdaster, of Philadelphia, and Mr. E. C. Murphy, N. Y., for $1,000 a side.

Constantly receiving fresh invoices of these guns of all sizes.

SEND STAMP FOR OUR CIRCULARS OF DIFFERENT MAKES.

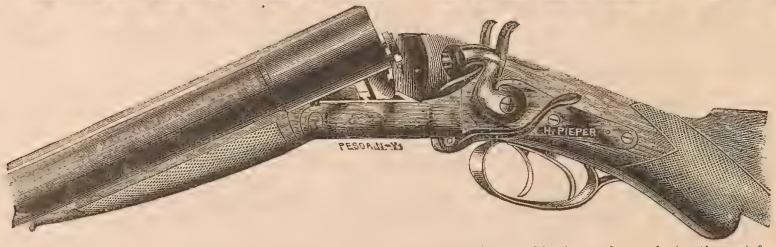
Absolute Safety!

Patent Block Safety Lock.

This gun is always safe from any accidental discharge. In opening the gun for loading, the block safety A, interposes between hammer B and striker E, which is only removed when the trigger is pulled. The drawing is intended to show the hammer as accidentally discharged, other than by the trigger and caught by the block safety.

LONDON Field, Nov. 1st, 1879.—"The principle accords with our ideas of what is wanted to make the hammerless gun safe."

Land and Water, Nov. 10th, 1879.—"The great improvement lies in the New Tumbler Safety Block; this being worked by the triggers only, supposing the hammer from any cause should fall, **without the trigger being pulled,** the projection on the hammer falls into the **Safety Block,** and so prevents an explosion. The gun is on the favorite top lever action, and the cocking arrangement is exceedingly simple and smooth-working."



REV. W. J. RAINSFORD, Toronto, Canada, Oct. 2d, 1879.—"I have used many guns, by many makers, and certainly your New Premier Hammerless is the hardest hitter I have put to my shoulder."

CAPT. BOGARDUS says:—"No gun can excel mine in shooting. The Block Safety is perfect."

GREAT INTERNATIONAL PIGEON SHOOTING, MONACO, Feb. 18, 1882.—Grand Prix du Casino, 80 competitors, comprising the best shots in the world. Sig. Guidicini (the most noted shot in Italy), won the 8,000 frs. prize with a pigeon gun by W. & C. Scott & Son.

We call attention to a few of their leading hammer guns, viz: their New Trap Gun; their Star quality gun with Prize Compensating Lump; their New Triplex Lever Grip Pigeon Club Gun. Superior quality in hammers and hammerless. Their highest quality is marked "The Premier Quality" between name and address. No guns are genuine unless marked in full W. & C. Scott & Son.

THE PIEPER SIDE SNAP.

This Gun is made by the *same manufacturer* and on the *same system* as the now celebrated **Diana,** advertised in these columns during the past four weeks. (Orders for the Diana's have come in so rapidly that the factory cannot keep pace with them). One reason they give so much satisfaction is that by this system every gun shoots to center, and shoots just where you hold it. Dealers are asked continually for a good, cheap gun, one that they can recommend. The Pieper Side Snap is the only gun that will fill the bill. Barrels are fine twist, locks are steel, rebounding and good quality, stock is oiled, finest walnut, pistol grip, butt plate rubber, patent fore end.

WHAT OUR CUSTOMERS SAY ABOUT THEM.—"It is the best cheap gun I ever saw."—Thos. Golcher, Philadelphia. "They sell beyond my expectations."—W. H. Colvert, Beloit, Wis. "Every gun sold has given the best satisfaction."—D. T. Seeley, Bradford, Pa. "Have sold the twelve received; send twelve more at once."—E. T. Allen, San Francisco. "I have always been opposed to selling cheap guns that haven't given satisfaction, but the Pieper Side Snap suits me."—F. P. Taylor, Chicago. Numerous others of the same purport.

Samples sent without solicitation have resulted in large orders. *In fact there is no other gun in the market that can compare with it.*

Price List:

No. 586.	12-gauge, fine twist barrels, 8¼ to 9lbs.,		$30 00
No. 586.	10-gauge, " " " 9 to 9½lbs.,		30 00
No. 587.	12-gauge, Damascus barrels, double bolt, 8¼ to 9lbs.		35 00

The "American" Side Snap.

The reinfore breech and joint lump are one solid piece of case-hardened iron, fine twist barrel, case-hardened mountings, rebounding locks, oiled walnut stock and fore end. These guns are made by C. S. Shattuck, Hatfield, Mass., and are choke-bored by the "Shattuck Process," which gives the most remarkable results.

Price, 12-gauge, 30 and 32in. Barrels, $14.00.

Sole Agents, SCHOVERLING, DALY & GALES, 84 and 86 Chambers Street, New York.

TO SPORTSMEN.

For Sale.—Four or five islands containing upwards of four hundred and fifty acres, situated in what is called the Back Bay of Currituck Sound, all within three hundred yards of the main island, having over five miles water front, with boats and decoys, also one portable house suitable for six or eight persons, with mattresses, cooking utensils and stove, cutlery and crockery, where there is plenty of swan, geese, canvas backs, red heads, sprig tails, ball pates and widgeons, black and all other kinds of fresh water ducks. It is the best snipe ground in the vicinity. I have started over two hundred in two hours within a half mile of my house on the main island the first of December; they are there all winter, and ducks from October to April. The best sporting ground in the United States; a grand place for a club or a hotel. Price $2,000. I will be at the Mansion House, Norfolk, Va., on Monday, the 20th day of November next, and show parties the grounds at Currituck Sound. If not disposed of at that time it will be sold to the highest bidder. For further particulars address A. ARKERSON, No. 12 Park st., Cambridgeport, Mass.

P. S.—Convenient to stores and steamboats. oct12,4t

Discontinuation
OF—
"THE BLUE STAR KENNEL,"
—OR
THE COCKER SPANIEL KENNEL,
FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,1t

THE BEST

DOGSKIN LEATHER JACKETS

AND

"BOSTON SHOOTING SUIT."

Dogskin Leather Jackets, windproof, flannel-lined, pliable, durable, indespensible! We are importers and manufacturers, and can supply the very best leather jacket or vest that is made.

Last season we sold nearly one thousand jackets at retail alone. This season we have manufactured very largely *to supply the trade.* Send for samples of material and special circular, with rule for self-measure. These leather jackets and vests are supplied in either *black* or *tan colors.* To all who are exposed to the inclemency of the weather, to sportsmen, drivers, brakemen and professional men, they are highly to be recommended!

The "BOSTON SHOOTING SUIT," which is shown in our illustration, is the standard suit for sportsmen in America. It is made from waterproofed duck, and is practically indestructible.

Special circulars descriptive of this suit, with samples, can be had by any one who sends address.

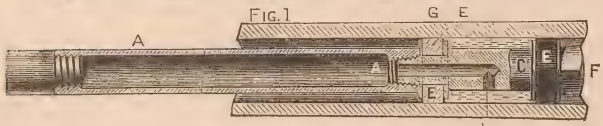
EDMOND REDMOND,

Rochester, N. Y.

Climax Gun Cleaner.



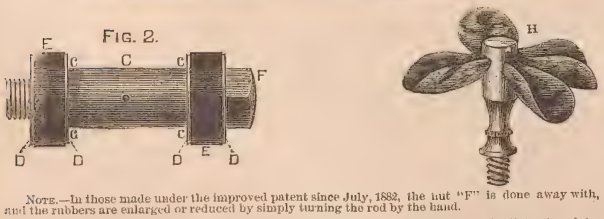


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

To Sportsmen.

The undersigned having sold her property at Van Slyck's Landing, together with all her rights and title to the marshes in Currituck Sound, North Carolina, desires to notify her friends and sportsmen generally that in future the house formerly occupied by her will not be opened for the reception of guests, having become the winter residence of the members of the Kitty Hawk Club, the purchasers of the property. She takes this opportunity to express her thanks to her friends who have enjoyed the shooting over her grounds, now closed to the public, for their kind patronage extending over many years. C. B. NYE. Oct. 2, 1882.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip
OR—
EXPANSIVE SHOT CONCENTRATOR,
With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device hails the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE:

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 fine; burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

ANSWERS TO CORRESPONDENTS.

OUR READERS *will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the* FOREST AND STREAM, *but who would presumably be interested in the paper.*

THE ANGLERS' TOURNAMENT.

THE tournament will be in progress at Harlem Mere, in Central Park (weather permitting), this morning, after this issue of FOREST AND STREAM is in the mails. We anticipate one of the most interesting contests that has yet taken place in the annals of angling, and believe that this will be the beginning of a series of tournaments which will attract much attention to the elegant art of fly-casting and serve as an educator of our youthful Waltons, some of whom, for want of proper teaching, are falling into the heretical notion that bait-fishing, or even the use of nets, is as good as the fly, so long as by such means fish may be captured, a result that they erroneously consider to be the end of angling.

The arrangements for a successful tournament are most complete. The judges in the different classes have been selected with care, and a different set of them are assigned to each separate contest. Score-books have been printed which contain the rules, the prize-lists, and also ruled blanks for keeping the score in each contest, giving the name of the contestant, length and weight of rod, distance cast, and the points awarded him in the contests for delicacy and accuracy, as well as the number of his award.

One feature, new to angling tournaments, which may need some explanation, is the different "scales of points," made for the different contests in fly-casting. This is the result of different opinions held by individual members of the committee, on the value of these points. Some of the members, the majority in fact, were for making all the contests on one plan, in which the distance cast was the only thing to be taken into account. A few contended that a fly-caster should cast delicately and accurately in order to achieve the best results, and therefore these points should have weight in the decisions. The majority, not wishing to carry their point by simple reason of being a majority, agreed to make one contest for distance alone, and to give different values to the delicate and accurate points in the others. Hence the light rod contests and class A have the following scale of points: Length, the distance cast; delicacy and accuracy, 25 each; thus: If a man cast 65 feet and is awarded 20 in delicacy and only 10 in accuracy, his score is 65+20+10=95. In class B the scale is: Distance, actual cast; delicacy and accuracy, 10 each; here if a man cast as above his score would be, distance, 65; delicacy, 8; accuracy, 5; equaling 78. In class C the distance alone counts. While admitting that delicacy and accuracy are most important points in angling, we must confess that we were with the majority against considering them in an angling contest, and will give our reasons.

There are many other things which go to make a successful angler beside casting a long line and casting it delicately and accurately. These are selection of flies, knowledge of the habits of fish, caution and a hundred things which cannot be taken into account in a tournament. As for the point of accuracy, we hold it of little or no value in actual fishing. A cast within four feet of a rise will be seen by a trout as well as if placed in the center of the ring which he made, for it by no means follows that he is lying under that point when the next cast is made. As for the point of delicacy, our views, which, as we have said, are held by the majority of the Committee, some of whom are familiar with fly-casting tournaments, are that it should have no place in a contest. After this assertion, which seems radical to those who have not devoted time to the consideration of angling tournaments, it may be well to give the reasons for this opinion also.

In all contests in fly-casting the main interest centers in length of cast. The spectators are interested in it, and those who are not present inquire on this point only. A fly-caster's record is one of distance alone, and it is a point upon which there can be no two opinions, as there easily may be upon the comparative "delicacy" of two casts. It is the record that the winner will be most proud of, and the one that will go farthest in the estimation of other anglers reading of the tournament. The delicacy of his casts, on the contrary, cannot be recorded; this is like the art of the actor, only apparent to those present, and but to a portion even of these. We believe that a man cannot make a long cast and splash his flies down heavily on the water; the force is lost when the flies fall, and they must, therefore, necessarily fall delicately. Besides, a man who is enough master of his rod to make it cast seventy feet, has sufficient knowledge of it to cast sixty feet with delicacy. It is true that when a man casts seventy feet with a single-handed rod that his line touches the water before the flies do, but it is in that part of the water that he has fished before and has exhausted. When an angler begins near shore or at the edge of a spring hole, and takes all the front possible at a twenty or thirty foot cast, he then begins to get out more line, and pays no attention to the spots where he has cast before. He reaches out, out, out, and in some cases the man who can cast the furthest makes the best creel.

The Committee of Arrangements have had a platform six feet and a half square built out thirty feet into the lake, and a walk four feet wide leading to it. This platform was originally intended to be two feet above the water, but the bass-casters, some of whom cast by sweeping the rod under, wished it to be three feet high, and it was made so. This arrangement gives a choice of casting in three directions, along the shore to the right or left, and out into the lake, as the direction of the wind may make it advisable. The Superintendent of the Park, Mr. Jones, has kindly offered to send over seats for ladies, members of the press, and elderly gentlemen.

A few more prizes have been offered and placed in the prize list. Mr. F. D. Divine, Utica, has given a rod, which is put in Class C, single-handed fly-casting. Mr. G. M. Skinner, Clayton, N. Y., has given a dozen assorted spoon baits and a photo of a forty-pound maskinonge, which goes in the salmon contest. Mr. F. J. Kaldenberg has offered an elegant meerschaum and amber cigar-holder, with carved trout upon it, which has gone to the class in light bass-casting. An additional contest has been arranged for actual members of the press, in which the entrance is complimentary. The first prize is "The American Angler's Book," by Thad. Norris; second prize, a McKinnon pen (these prizes go to the two contestants who cast the longest lines); third prize, bunch of twenty-five cigars, to go to the handsomest caster; fourth prize, a pipe of meerschaum, to go to the ugliest caster; fifth prize, a string of fish, which the list says is "beyond price," and is to go to the poorest caster.

At the present contest there will be a better gathering of anglers than has heretofore been collected in America, and from this meeting will come suggestions which will be of great value to future ones. The present tournament is the first of an annual series which FOREST AND STREAM has begun, assisted by some of the most prominent members of the brotherhood of anglers, and the interest which it has awakened has surprised the originators of the enterprise, for it was conceived outside this office, and while the department editor of this paper, who naturally would have been consulted in the matter, was in the Adirondacks, and first knew of it on his return. To the wisdom of the excellent committee of arrangements is due the success which promises to attend the first Anglers' Tournament ever held in America, which was really what it was intended to be, and not a mere side show or after thought to other contests.

RUFFED GROUSE.

WE are assured by many of our correspondents, and also by many friends with whom we have conversed, that the ruffed grouse is not entirely exterminated, and that the prospect is bright for a fair amount of sport the present season for the lovers of this "king of game birds." Our information is not from isolated or limited sections, but covers a wide area of the country inhabited by them, and almost uniformly gives us welcome news of full broods, of well-grown birds, and in many instances we were assured that they are quite plenty, much more so than they have been for the past few years. We have given much space to the question of the cause for the scarcity of the grouse, and so far as words are concerned, it has been very ably discussed by our many correspondents, but none of them, to our mind, have explained the true cause of their disappearance. "Byrne" very plausibly advances a new idea in our issue of Aug. 24, and attributes their scarcity to the chicken cholera, introduced to this country by foreign fowls. That his theory is true or false, we may never know, as in matters of this kind it is almost impossible to obtain facts that are incontrovertible.

We have carefully and persistently studied the habits of these royal birds for nearly forty years, and with extreme sorrow have noted their gradual decrease. We have several times within this period observed that, following a season when they had been unusually plenty, we have found their haunts comparatively deserted, and that they would then gradually increase until in a few years they would again be plenty, and perhaps remain so for a year or two, and then again unaccountably disappear. When we first noticed this, we were loath to believe that our beautiful friends had winged their last flight, but, with vague ideas of a migration to more favored retreats, where, perhaps, an ample supply of their favorite food could be found, we trustingly awaited their return. But as the seasons rolled by and we failed to find more than the natural increase of the birds which had remained, and learned that in widely separated districts in every direction the same lamentable state of affairs existed, we were sorrowingly forced to admit that our conclusions were wrong, and that, unless in the happy hunting grounds, never again should we "through woodland wild or tangled copse" behold the flashing forms of the glorious birds we loved so well. It is with increasing sorrow that we have seen each recurring period of scarcity more disastrous than the preceding, and each season of comparative abundance less plentiful than before, and we greatly fear that the time is not far distant when these noble birds will become extinct.

That the pursuit of them with dog and gun, in proper season, would ever exterminate them, we cannot believe. We have seen too many of their successful tricks, and witnessed too many of their triumphant escapes from the best of dogs and the best of guns to believe anything of the kind. There are also in nearly all localities frequented by them, many places where, owing to the inaccessible nature of their chosen retreats, they are practically secure from the most daring hunter, and in most sections these places will always preserve a stock amply sufficient to furnish the next season's supply, to say nothing of the many survivors who craftily escape the hunter's wiles, even upon the most favoring grounds. With snaring the case is entirely different; and the man who thoroughly understands their habits, in a short time will entirely exterminate them from any locality. So long as this practice was confined to the country boys, who rarely succeeded in capturing enough to seriously diminish their numbers, no one could find any fault; but when the market hunter, with a consummate skill, born of his needs and opportunities, commenced his merciless war of extermination against the helpless innocents, it was high time that all lovers of these beautiful birds should band together for their protection; and it is a stigma upon the name of the many sportsmen's game protective associations throughout the land that this pernicious practice is still allowed.

True, some of the States have a law upon their statute

books prohibiting this practice, but it is a dead letter, as there is generally a loophole which allows the owner of land to snare in proper season, upon his own grounds, and often this privilege is delegated by the easy-going landowner to the very ones that the law intended to proscribe.

We are well aware that animals and birds of prey form no inconsiderable factor in solving the question of the destruction of our game birds, but that they are responsible for a tithe of the sum total, we do not believe.

The attacks of the partridge-fly—*Olfersia americana*— in some seasons are very destructive; but it is only occasionally that this pest makes its appearance in numbers sufficient to do great damage.

Notwithstanding the formidable array of obstacles in the pathway of *Bonasa umbellus*, we greatly rejoice that his brave heart and cool head so often enable him to outwit his many enemies, and that he still lives the pride of the forest. It is well that it is so, and that during these glorious October days many an overworked brain and many a weary heart will gain renewed vigor and happiness while rambling over the forest-crowned hills and through the beautiful valleys where our gallant bird delights to dwell.

EASTERN FIELD TRIALS.

AS the time approaches for the holding of the Eastern Field Trials, the indications that the meeting will prove a great success are daily multiplying. The Derby, from all that we can learn, will be the most interesting event of the kind that we have ever seen. A large number of the entries are sure to start, and the friendly contest for the honors of victory will be gallantly fought, and well worth going a long way to see. Many of the crack field dogs, from all parts of the country, are already located in the South, and hard at work preparing for the Trials.

The All-Aged Stake, judging from the number of applications for entry blanks, will also prove an eminent success, and we shall undoubtedly be called upon to chronicle some of the best work that has ever been seen at a public trial. There appears to be considerable enthusiasm among the members of the association with regard to the Members' Stake. As we have often urged, this should be the most important event of the meeting, at least to the members of the association, and everyone who can possibly attend should enter and run his dog. There is nothing more conducive to the success of such an association than the hearty and active co-operation of its individual members in support of the objects for which it was formed. We hope to see a large number of starters in this stake, and trust that every member who has a good dog will come forward and conclusively show that he deems the honors of victory worth striving for.

The following is a complete list of the judges: Col. James Gordon, Pontotoc, Miss.; Mr. J. J. Snellenburg, New Brighton, Pa.; Mr. Joseph H. Dew, Columbia, Tenn., and Mr. John M. Kinney, Staunton, Va. All of them are practical sportsmen of many years experience, and are eminently qualified to fill the position. The running will, as has been customary at previous meetings of the club, be held under three judges. Should, however, the starters prove as numerous as is expected, another set of judges will be appointed for one of the other stakes, and both can then be run at the same time.

The trials will commence promptly on Friday morning, Nov. 17, with the Members' Stake, and the All-Aged will upon conclusion of this at once follow. The entries close Nov. 1.

The Seaboard Air Line Railroad will transport dogs to and from the Eastern Field Trials free upon presentation of pass from the Secretary, Mr. W. A. Coster.

THE ENDURANCE OF CARP.—Many are the stories of the hardihood of the carp and its powers of retaining life under adverse circumstances. We add the following: About two weeks ago a man who was driving along a country road about eight miles from Newburg, on the Hudson River, saw something flopping in a mud-puddle, not over three feet in circumference, by the road-side. He stopped and picked it out of the water and found it to be a strange fish, which he threw into the bottom of the wagon and drove leisurely to Newburg. On arriving at his destination he saw that the fish still lived, and he placed it in water and called in all the local fishermen to decide what manner of fish the stranger might be. The fishermen united in expressing themselves to the effect that they hoped to be blessed if they knew what to call it, and some one suggested that it be sent to Mr. Blackford, of the New York Fish Commission, for identification. When Mr. Blackford received it in a small bait kettle he pronounced it to be a fine specimen of the leather-backed carp. On examining his books he found that last November Mr. Lewis Beach, member of Congress, had received from Prof. Baird a number of small carp, which had been distributed to persons owning ponds in the neighborhood of the place where this one was found. This fish must have been carried out of some preserve by the late flood, and found a resting place in the puddle by the road-side at the subsidence of the waters. Mr. Blackford at once placed the carp, which weighed three pounds, in one of his aquaria in Fulton Market, where it is now disporting itself in the happiest way. From a weight of certainly not more than two ounces in last November—in ten months—this carp has grown two pounds fourteen ounces.

The Sportsman Tourist.

"NUTMEGGERS" ON THE OTTAWA.

SECOND PAPER.

OUR home camp is now (Sept. 27) located on Lake Travere, Pittewawa River, Ontario, thirty miles back from the Ottawa River. Could you but fly over this section of country as the crow flies from little Mattawaska to the Ottawa, it would be a mystery of mysteries to you how we ever got here; but the little tell-tale blisters adorning each toe and heel unravels the whole thing. But never mind the blisters, we are here snug as can be in an old lumberman's log cabin, thirty miles from the last settler. Our cabin is already adorned with strings of black duck, wood duck, teal, partridge, and black bass, awaiting our all-increasing, all-devouring appetites.

By the way, speaking of black bass, you never saw such sport as we have with them. All the trouble is, we haven't any hooks and lines strong enough to hold them. With our lines doubled, we are able to land some beauties. We caught one day before yesterday fully three feet long, but could not land him, and had to let him break away, taking with him one of our largest trolling spoons. Since that little circumstance we take the precaution to station a man in the stern of the boat with a rifle, and he puts a ball through the big ones before an attempt is made to land them. We captured one very successfully in that way this morning. They always come out of water and take a look at our crew just before reaching the boat. They seem displeased at the appearance of some member of the party, and always go below with a fright, taking line and everything with them. We think the trouble lies with Dorsey. He has not been shaved since his departure for the Nutmeg State, and he certainly does look somewhat startling. We think of making a forced shave on him some night, or else not allow him in the fishing boat.

We have just taken our dinner of black bass, duck, partridge, cranberry and blueberry sauce, baked beans, biscuit and tea, all prepared with our little folding tin oven, bean kettle, pail, and frying pan. Cooking utensils are not plenty, but we venture to assert that no dinner at Delmonico's was ever taken with a better relish. The amount of food we eat is wonderful, and not one of the party feel any ill effects from it. We believe that the worst case of dyspepsia can be cured or permanently benefited by the judicious intermingling of the necessary hardships, deprivations, pleasures and labors of a camp located in a healthy wilderness like this. A person situated as we are to-day, one thousand miles from home and friends and thirty miles from the nearest settler, must feel that he is to rely principally upon his own exertions, and that he must hunt and fish or starve. Most subjects will at least try the former first, though I could name an occasional one who would almost cheerfully choose the latter were he obliged to decide between the two. I am not preaching to that kind of a man. He is past help. The only thing left for him to do is to marry rich and die young; but the active, go-ahead man, who, by reason of dyspepsia and its attendant ills, has lost his usual energy and ambition, and is almost incapacitated for business and comfort—I believe this to be just the place for him. I believe it will do what medicine and years of care and restrictive diet will not do. There are hardships connected with it which, when they are past, are invariably looked back to with pleasure. A man feels a certain pride in knowing that he has been placed entirely upon his own resources, and that he had the strength and the will to overcome and conquer. I believe in going back so far from civilization that only its absolute necessities can be carried. Make the comforts as you go along. Too many seek to regain health and lost energies at fashionable watering places, where every luxury can be supplied and every whim gratified. Look at the Canadian lumberman, he never had a sick day in his life, and he owns a stomach that will digest an iron wedge if you only sandwich it between two slices of fat pork.

I know from experience that a slice of plain bread, without butter, meat or sauce of any kind, tastes better in the woods than a broiled spring chicken at the best hotel in New York city. My theory is that it is not entirely the woods that brings this excellent appetite, but the hardships and exertion of getting into the woods, establishing your camp, with no stock of cooked provisions ahead, and not knowing where the next meal is to come from. Body and mind are both brought to a point where, if you have been reared in luxury and indulgence, they were perhaps never brought before. By the time you have got your camp prepared, bunks boughed down, etc., you are getting hungry. You cannot step in to the Astor House restaurant and order a lunch, and you have nothing but plain bread and butter in the cabin. You feel a little above that, so you shoulder your rifle and go out, expecting to knock over a deer or bear in a few minutes; but you don't find them, and come back empty handed. You must have something, and so start out again. After tramping around five or six hours, not finding so much as a crow, you are ready to lie down and die, but you finally come into camp with a chip squirrel and a partridge. By this time you are so hungry and faint you can hardly wait to have them dressed. When cooked they are eaten with such a relish as your fine dinners for the last six months have not been, and so is every meal after that while in camp. I don't believe a dyspeptic would be benefited in camp were he to drive in with his horse and carriage each day. But place him twenty-five miles back, where fish and game abound, with but one day's rations ahead, and he will certainly eat, laugh and grow fat. But "Hold on, hold on," I think I hear two or three individuals remark, "what kind of a side show is this? We thought you were reporting for the party at Travere Lake, and we are not ready to buy our tickets for a course of lectures yet." True, true, but we are all apt to wander from the text. I have known a minister to preach a sermon on the subject of love, and before he was through half, the congregation were mad enough to kick him out of doors.

At this writing Miner is over on the north bank of the Pittewawa following up the trail of a moose. Rerdell is at the Little Mattawaska looking for deer, Brady and Dorsey dressing fish and duck, keeping camp and preparing supper. By the way, I see that I have unceremoniously jumped from our camp at old Patsy Hanrahan's, or Ferguson Lake (which I described last week), to our present camp, leaving out the connecting link, so I hasten to weld it in while the fire is hot. You will remember that our party were just starting out on a still hunt for deer. You will also remember that I was under Brady's coat-collar, and unluckily Brady hung his coat on the ground in front of the cabin as he started out, but the whole party came back two hours later with long faces and no deer. Brady and Dorsey brought a string of partridge and duck. Miner shot at a fine buck but lost him; Rerdell ditto. They claim to have started several others, but I was not there myself and I am not going to believe any fish and bear stories on this trip except what comes within the focus of my own vision. The evening was principally spent in listening to the quaint, funny and original sayings of Patsy, a relation of his life experience, etc. He felt in a hilarious mood, and we had a first-class evening's entertainment with an appreciative and attentive audience. There being a large number of wolves about the mountain this fall, we found that they had ruined our sport, by driving all the deer to the eastern shore of the lake, where we dare not put out our dog for fear of losing him, and the underbrush is so close that we cannot still-hunt with any success.

We heard wolves racing a deer around the mountain in the night. There is something exhilarating and exciting in listening to the baying of hounds on trail of a deer, but when wolves take the place of hounds the result makes it seem terrible. Patsy says that a large pack of them came yelling down the mountain the night before, and just as the poor deer was entering the lake and probable safety they caught him, and in an instant almost the howling, yelling pack had torn him in shreds. We put out the dog on the west side next morning but found no deer. The lake not being a great fish lake, we decided to tarry no longer. "Ah," says Patsy, "I knew that wud be the nixt thing if ye didn't bring in a deer the first pop. Ye Americans must sniff the dinner a bilin' afore ye have yer brekfas' down. Ah, byes, if I only had poor Bosey here, ye wudn't be talkin' about 'away up the Ottawa' and thim places. Ye wudn't be afther lavin' ould Patsy so soon. I'd put ye in a deer afore ye could burn that stump of a segaar in yer teeth, but it's no use; poor Bosey's gone, he's gone; coome now, ye two gintlemen that hunted wid him last year, an' I'll let ye see his grave, an' maybe the other two wudn't dislike to take a luk at it. Ah, the bloody porcupines (an' I'd like to know what they were made for, anyhow; faith, an' I think 'twas a mistake,) that dhrove his villinous quills where they worked into Bosey's vitals. I'd like to be pluckin' the eyes of him wid that fork this minnit." We had now walked to a newly-made grave which Patsy reverently uncovered by removing a board. "Ye must excuse me, gintlemen, but it makes me feel bad in spite of me. In the many years I've lived in that ould cabin, me an' me ould woman hev brot up a family of ten childer, an' we niver had a death amongst us, an' I don't know how to bear one, an' still I used to kick an' thrash the devil out o' that dog whin he was wid me, but I take ivery blamed kick back to mesilf now."

To cut matters short, we left Patsy's cabin and hospitality that afternoon, drove to Renfrew and ticketed up the road, traveled nearly all night, and Friday noon brought us to Bissett's Creek on the Ottawa River. Some half a dozen settlers have established homes here. We stayed over night, expecting to find a team in the morning to take our flour, canoe and heavy luggage, and a guide to guide us back to the cabin we are now in at Travere Lake. We failed to get either; so we took two days' rations and our sleeping bags and rifles and started. Thirty miles seemed like a long tramp through the woods and swamps, and we expected to make a two days' journey of it; but we found an old lumberman's portage road which was quite passable most of the way. At noon and 5 P. M. we stopped, built a fire and made tea. No one voted to make a halt for the night, so we trudged along, and at 7:30 we hove in sight of Travere Lake. Here was a dilemma; our camp was on the opposite shore and our birch canoe thirty miles back; but a few rods down the shore of the lake we found a little tent belonging to some lumbermen, who are just establishing a camp a few miles farther on up the Little Mattawaska. We raised it, and soon had a rousing camp fire and a steaming supper.

We were tired and footsore, I assure you, but we slept nevertheless until daylight. Sunday morning was ushered in by Miner rousing us to hear a pack of wolves on a slope of the mountain to the left. Just then Brady discovered a deer swimming up the lake toward our camp. I wish you could have witnessed the rapidity with which our men sprang from their bunks, formed in line and prepared for action. Guns were unlimbered, cartridges driven home, and before a raw recruit could have drawn on one stocking, Brady and Dorsey went charging down through the brush and fallen timber, with underclothing and rifles in position, colors flying and one breeches leg at half mast. Miner and Rerdell, hatless, coatless and shoeless, made a gallant stand in the deep mud on the right flank of the enemy. 'Twas just at dawn,

> "When cannons boomed from shore to shore,
> And small arms made a rattle.
> Since war began I'm sure no man
> E'er saw so strange a battle."

Well, after all, the deer turned out to be an otter, and that wasn't the worst turn out, either, for it turned out that we lost him, but you must remember that it was Sunday morning. When we made the charge we supposed that we actually needed him, but we found that we could get along without him until Monday, and so let him go, or at any rate he went. We knocked over partridge enough for a good Sunday dinner, and took a Sunday afternoon stroll and viewed the country about us. We found bear tracks very plenty all about us, and occasionally a moose track, but no deer (we had been told that we would find none on this side of the Pittewawa). We find black duck nearly as large as geese in great numbers all around the lake.

I doubt whether I shall be able to get this letter out this week, but I shall try. This is just the season when lumber camps are being established away up the river, and we are liable to meet lumbermen going up or down the river. If going down I may be able to send mail out. Two batteaux loads of men went up yesterday, all soaked through and through. They had been three days reaching Travere Lake and had four or five days' boating ahead of them before they would reach their camp. The Pittewawa is very rapid, and in many places the men have to jump into the water up to their waists or shoulders, shoving the boat ahead of them or roping it over the rapids. All their luggage, consisting of trunks, cooking utensils, and sometimes barrels of pork and flour, must be carried around. Portages on the Pittewawa vary from ten rods to half a mile. A Canadian lumberman will take a barrel of pork on his back, with what they call a "tump line" across his forehead, and carry it through the brush and over the rocks of a quarter-mile portage without a grunt. This operation must be repeated again and again until batteau (which of itself weighs about 1,200 pounds) and luggage is all over. The next quarter-mile perhaps

must be journeyed over by the men wading waist-deep in the cold water; they do not pretend to keep dry. All they eat is bread and fat pork. Such is life to a Canadian lumberman. Their everyday life, each fall and spring, reminds one of the sad record of Lieutenant De Long's retreat over the ice floes from the lost steamer Jeannette. B. G. A.

BELOW QUEBEC.

FIFTH PAPER.

WITH the advent of the summer the heavy fogs which prevail in early spring on the Gulf of St. Lawrence yield to the warming rays of the sun, and retreat towards the Bay of Fundy, which has an evil reputation on that account. July and August are here generally marked by a prolonged spell of as fine weather as ever blessed the shores of happier climes, and the present season has been exceptionally favorable.

Our run back to Gaspé in the Canadienne was in the midst of these Arctic doldrums and not marked by any accidents, which are common enough in late fall. Upon our arrival we had the pleasure of again meeting with that genuine sportsman, J. U. Gregory, Esq., of the Marine Department of Quebec, whose graphic sketches of Labrador and late journey to Florida, rank among the most interesting contributions to the columns of FOREST AND STREAM. His stay at Gaspé was unfortunately limited and he left again next day in the government steamer Druid, to make collections of various materials pertaining to the fishing industries for the forthcoming international fishery exhibition at London. Neither was it our own luck to take a long rest, and my baggage is not landed but merely transferred to the next one, a schooner, which is just on the point of leaving for Anticosti Island.

As my time is getting very short, I can only count upon making a passing visit, and an exploration will be out of the question. To accomplish such the traveler will do well to engage all of his needed help and boat at Gaspé, as Anticosti is now a deserted wilderness, where nobody can be hired and nothing can be purchased. Baggage and men can, however, be easily shipped by any of the vessels trading or calling there, among which is the mail schoner Kate, which lands her mails by contract twice each month at the Southwest Point, her first stopping place. The blue outlines of that headland are in full sight of Ship Head, the northern cape of Gaspé Bay, and a fast sailer can easily make her trip from land to land in half a day. Although I have in former years called at Anticosti several times, I have, beyond its shores, seen really but little of it, since beyond these a dense belt of scrubby spruce forms an almost impenetrable barrier to the interior, which but few, if any, of the settlers on Anticosti have ever explored. The only authentic knowledge we now possess concerning the rocks along the coast and their natural products we owe to the exploration of Richardson, the Government Geologist, who made a geological survey of it about twenty years ago, which has been published in the government reports. His work has been so well done that the future explorer is not likely to add much; but the sportsman is sure to find here still, for many years to come, an excellent field for his avocations, particularly on account of the great numbers of seatrout which frequent nearly all of the rivers of the island. During spring and fall the shores are also alive with thousands of migratory birds, including wild geese, numerous seaducks, curlew, plover, etc., which for a few weeks afford good sport.

Among the larger land animals, the black bear is still more common here than elsewhere along the whole range of the coast line of the Dominion, and a chance shot at Bruin is by no means the least attractive item of the prospects of the sportsman. And yet there is hardly any place which bears a more evil reputation than Anticosti Island. It is a vast graveyard, and hundreds of ill-fated toilers of the sea have lost their lives here, by slowly freezing and starving to death even after they actually landed upon this frozen waste.

How many have perished here miserably is manifest from the large number of gray, weather-beaten boards along the beach, upon which I saw in roughly cut letters the date of the disaster and the names of the unfortunate victims who, far from their native home, found an untimely grave upon these bleak shores. But a better day is dawning, and the possibilities for repetition of these fearful occurrences are steadily lessening. No longer can weeks or months roll by as of yore before relief is quickly on hand, and the tidings of any ship's crew in distress now fly on the wings of lightning to where human help can hasten to the rescue.

This great improvement is accomplished by means of a submarine cable, which was completed several years ago, and now unites Anticosti with the telegraphic line along the mainland. The news of any wreck can thereby be known at Quebec almost as soon as a ship has struck the reef, and life and property are less exposed to destruction. This cable is also largely employed in the service of the Weather Bureau of the Dominion, since Anticosti by its oceanic position forms an important station for meteorological observations, and even the seal fishermen of New Foundland are benefited by it, as they can obtain telegraphic information concerning the arrival of seals in early spring, when all communication by vessels is blocked on account of the ice, which drifts in great masses in March through the Straits of Belle Isle into the Gulf of St. Lawrence.

The management of the telegraphic reports is committed to the keepers of the lighthouses, who have been duly instructed and charged with the additional duty of operators. There are now, I believe, four of these lighthouses on the southern shores of Anticosti, along which is the main channel for vessels bound in and out of the Gulf. As they are but a short distance from each other, nothing can happen along this shore which is not quickly known and reported. The cable itself terminates at the Southwest Point lighthouse, which has been made the central station.

The whole island is at present owned by a stock company, which has purchased this so far rather unprofitable piece of real estate from the Government of the Dominion. In order to improve affairs, a number of colonists were induced to settle here through the representations of what is known as the Anticosti Colonization Company, but the anticipations of either parties have not been realized. It was thought that the great abundance of fish on the coast, along with the productive soil, which was reported to cover the island, would insure success of the project, and several hundred people, chiefly from New Foundland, landed here and formed settlements at English Bay and Fox River, at the eastern and western extremities. The complete failure of their venture is due to the same causes which are at the bottom of many other enterprises, where means from the beginning are inadequate to the undertaking, and where the colonists themselves are also too shiftless to make good their footing. The newcomers were not agriculturists but fishermen, and indifferent ones withal, who depended entirely upon fish, which sometimes failed to put in an appearance. For several years past they have been in destitute circumstances and threatened by starvation, as they had neglected to raise for their subsistence even such vegetables as potatoes, cabbages, and turnips, which flourish excellently in the rich soil of the island, and realize never failing good crops.

But two months of poor fishing are hardly sufficient to provide for the remaining part of the year, and there were thus continual sufferings and consequent appeals for government relief, which looms up to most of the settlers along these shores as the last but never-failing sheet anchor. The government, however, seems to have grown weary of sowing without ever reaping, and has taken steps at last to mend matters by a wholesale removal of these unprofitable colonists. I learn that in October the last remnant of the population of Anticosti is to be transferred to Quebec and beyond, where they may get along without the aid of public charity. The settlements of English and Fox Bay will thus soon cease to exist save by name, and empty houses only will attest the existence of their former tenants.

Anticosti Island viewed from seaward appears like an enormous sleeping whale, covered with a dark green skin of low spruce trees. It is nearly surrounded by shallow fringing reefs, and has no harbors where vessels can lay safely in any gale, excepting Gamache Bay, named after old Peter Gamache, who was for a long time the only settler on Anticosti. Its formation is of limestone, which overlies a thick stratum of soft gray shale. There are no primitive rocks on or below its surface, excepting many boulders of various sizes which are scattered along the beach. It has a coast length of near 300 miles, and averages thirty-five miles in its widest part. Since Anticosti is surrounded by water, the temperature of its summers and winters is not marked by the same extremes which characterize the climate of Quebec, where in midwinter the thermometer often falls to 30 deg. below zero. Here it rises scarcely above 73 deg. in July, and seldom records less than zero in January. Fogs are frequent in spring and early summer, but lessen with the advent of fall. September is counted to be the finest month. Oats, barley, rye, potatoes, cabbage, turnips and clover grow and mature here as well as anywhere, and thrifty husbandmen could realize abundant crops, as the soil in itself is rich and warm, being composed of weathered limerock covered by a layer of several inches in thickness of rotten mold.

Even domestic animals can be acclimated, and at Ellis Bay cows winter without difficulty, where they are fed upon the excellent hay which is harvested there in great quantities by Capt. Sutter, a hardy and intelligent settler from the Orkney Islands. It is curious, however, that at Southwest Point again, which is only sixty miles east of Ellis Bay, cattle rarely survive the winter. Experiments have not yet been made with other domesticated animals, such as sheep, goats, etc., probably on account of want of pasture and the abundance of bears. The climate seems well suited to chickens, geese, dogs, cats and mice; the Norway rat, however, has never obtained a permanent footing, although it has been carried there time and again through the accidental intervention of vessels. Of the sea animals the seal is one of the most important. They arrive here often by thousands in early spring upon the drift ice, and are hunted with best success along the east end of the island. But few are seen further west. The walrus at no remote date also frequented these shores, as evidenced by its tusks, which are found occasionally along the beach or in the little bogs near it. Among other land animals of consequence to the trapper are the various species of foxes, including the black cross, silver gray and white one, mink, marten, otter, the furs of which command a high price on account of their special excellence. The Canada goose, eider duck, dusky duck and many seafowl breed on the inland ponds and along the cliffs. Although they are heavily decimated by the incessant raids made upon them, their ranks are always recruited again from the coming and going flocks of migratory birds, which breed somewhere north. I say here, purposely, somewhere, as there are good reasons to believe that the still unexplored interior of the Labrador peninsula is now one of their principal breeding grounds after they have been driven away from their ancient haunts further south.

The lighthouse-keeper at Heath Point, which forms the eastern cape of Anticosti, tells me that during October immense swarms of migratory water-fowl collect for a few days near the lighthouse, in the shallow ponds, where food is abundantly obtained from the succulent shoots of freshwater plants, and I would recommend this spot, which I visited at the wrong time of the year, to any one as the best upon the island for late fall shooting.

A large chapter could be written upon the fresh and salt water fish about and on Anticosti Island, as it lies in the center of the great fish pond of the gulf, and has long borne a high reputation by the sea trout alone, which ascend its rivers in enormous quantities. Mr. Henderson, an English sportsman, who fished last year on the Jupiter River, told me that he was unable to take any more salmon after the sea trout reached its pools. They would rise to the fly by the dozen, and frustrate all competition by sheer force of numbers. He affirmed that he could count three separate tiers of them, one above the other, and over six hundred pounds were taken by him in one single day. Their average weight is then from three to four pounds. Neither have I any doubts concerning the veracity of these statements, extraordinary as they seem, as I have since loaded down a strong man with as many trout as he could carry in less than one hour of fishing, on a stream hardly half the size of the Jupiter. It may be mentioned here that this river is the only one which is leased, and a special permit from its lessee is needed to enjoy its privileges.

The first point we touch on this present occasion is Ellis Bay, where we call for a few hours. Capt. Sutter, to whom we have adverted, owns here a farm which he profitably works with the aid of another man. There are several substantial looking buildings about the grounds, including the comfortable and clean looking dwelling house of the captain, who has lived here over thirty years and has successfully demonstrated the possibility to eke out a comfortable existence while other settlers have been almost starving. Near his house is the grave of redoubtable old Gamache, who in appearance is said to have resembled a pirate rather than a peaceable settler, as he never was known to be about without a formidable crusty old looking set of arms. He is dead and gone to his long last rest, but the bay on which he lived for so many years such an adventurous life will always be remembered by his name. Capt. Sutter has some fine cattle on his farm, on which he has also introduced a great novelty in shape of a patent reaper and mower. I saw here as fine a field of tall red clover as we might encounter in the most productive part of our Middle States. Notwithstanding the absence of the honey bee, which is asserted to be an indispensable agent in the fertilization of the clover, it blossoms here profusely and produces well matured seed. I leave it to others to solve this problem, as there is not a single honey bee upon the whole island of Anticosti, and although the flowers of the clover field in question diffused their powerful aroma for a long distance, but few insects, save some moths, were attracted by it. L.

IN THE VIRGINIA LOWLANDS.

SECOND PAPER.

ONCE upon a time, as the story-books have it, there dwelt on this place, which is in Sussex county, on the banks of the river that bears their name, a powerful tribe of Indians called the Nottoways. In the low grounds, a short distance from the house, was their town, as is evinced by the numerous remains of their weapons and household wares. The other day George Bloro, when plowing on the site, felt the coulter of the plow strike something hard, and upon unearthing it he found a stone vessel about the size of a soup tureen—say, about sixteen inches long by twelve wide. It was a species of granite, dark in color and perfectly symmetrical in its form. It probably belonged to a chief, and must have been a valuable article. Any one who examines it is lost in wonder at the immense labor it must have cost to have hollowed it out, when the implements used were stone itself.

Imagination can run riot over this curious and artistic piece of workmanship. It must have been either conquered by force of arms from the Powhatans or Delawares, who lived in the higher regions of Virginia, for this section for a hundred miles around is entirely destitute of rock, stone or pebble—or, perchance, it was a gift to some mighty warlike sachem by a warrior from the Blue Ridge or Alleghanies, who loved and bought his daughter, the star-eyed fawn of the Nottoway, with ponies and other rich gifts, this stone vessel among them.

Indian arrow-heads are found by the hundred. As I said before, there is no stone in this region, and the problem is, where did they get the flint?

Another marvel that we cannot fathom is how they could kill the deer that furnished their bowstrings, cords, thongs, leather, etc., with such rude weapons as they used. That they did it we know; but how?

I send by this mail a half a dozen arrow-heads found in the village. They were turned up by the plow.

To have gotten close enough to have killed a buck with such arrows as they used would have brought the deer within twenty feet of them, and then they must have had time to fit their arrows to the bow and pull.

I suppose they must have caught the fawns and domesticated them, for, surely, with their impotent and rude weapons, any animal could take care of himself against a rough cedar bow, a lopsided arrow, and a stone tomahawk.

There lived near here, not many years ago, a young fellow whose whole soul panteth after the deer, as a young hart panteth after the running brook. It was his recreation, his delight and his business, and being withal in independent circumstances, he followed the chase as Nimrod did before him, at all times and in all weathers. He was physically a splendid specimen of manhood, being six feet three in his stockings, as straight as an arrow, with square shoulders, and strength and agility that savored of the prize ring.

The chase was for a long time his goddess at whose shrine he worshipped, but fate played him one of her tricks when she led him in the presence of a woman, "*Dieu vous garde.*" A beautiful city belle, with eyes like stars, as fair as the Shunamite, as sweet a flower as ever man tried to gather. She was staying with a friend a few miles away, in a great stately place on the Nottoway River.

Henceforth the chase palled upon him, and Miss Phyllis was the queen and empress of his soul, and transferring his allegiance from Diana he threw himself with all the ardor of his nature in the worship of Venus. But woman, according to that old chronicler Sir Pepys, unites all the sweetness of the dove, with the wisdom of the serpent and cunning of the fox, and in vain did our Philip pursue her. She lured him on with bright smiles, and then with her feminine wiles she snared him beyond hopes of release. Again, and yet again he courted her, only to receive a declination with thanks.

He grew desperate, sullen, morose and mad by turns, even the sound of the hunting horn and the baying of the hounds lost all of its melody to him, and he moved about not caring for anything.

One day he and his younger brother went swimming in the river, the latter carrying his gun along. While they were disporting in the water the lover saw a solitary hound running up and down the banks of the stream. He turned to his brother with the remark:

"Willie, I wouldn't be surprised if there isn't a deer somewhere about here. Jack Marshall's pack are running now, and that dog is on the trail. You had better get your gun ready."

The words were hardly out of his mouth before a big six-pronged buck with a hide as yellow as a buttercup jumped from the covert into the stream.

It needed no cry of warning to send the younger plunging in frantic haste to the bank where his gun rested against a tree. In the meantime the buck was in the middle of the current gallantly swimming down, with the solitary dog keeping on the bank making the welkin ring with his bark.

The younger brother, seizing his gun, emptied both barrels into the deer's head, which was the only part above water. The loads struck fair, but a buck's head is almost as hard as a stone, and even though the distance from the shooter to the animal was not over twenty yards, the shot did not kill but only stunned him, the body sank and Philip, seeing this, hastily slipped on his pants, and jumped into the water to secure, as he thought, the carcass. As the head came above the surface he seized it and towed it to the sand bar, and then halloed to his brother to go to the house and get a knife so as to cut the animal's throat and bleed him. Jumping on a horse the younger put out at full speed clad in the costume of a Comanche Indian, only he had no breech clout around his waist nor plumes in his hair. He galloped like mad through brush and through brake until he reached the garden patch, about a half a mile, and then shouted to a servant to bring him a knife. Receiving it he put back as fast as he could.

Before his return a great change had taken place, the buck having recovered from the shock; and rendered savage from pain turned on his pursuer and tried to drive his prongs in

him, but Philip seizing his horns prevented this, and twisting the deer's neck around and tried to break it. Backward and forward over the sand bar they tugged, toiled and struggled in mortal combat. Just at this time, the whole pack of hounds reached the bank in full cry and without a moment's hesitation plunged in. The buck seeing this doubled himself up like a cat, and giving a mighty bound shook himself free from the hunter and rushed to the water, and swam for his life down the river, with the dogs and his pursuer close behind, while Willie kept even pace on the bank yelling with all his might, with a whole tribe of house and darkeys' dogs, all barking and yelping, added their noise to raise the volume of sound that swelled upward in one infernal uproar.

Now as fate or chance willed it, the noise reached every ear in farmer Brown's family where Miss Phyllis was staying, and the whole crowd divining there was a hot chase, pushed down the river to witness it, Miss Phyllis accompanying them. They took their position on a sand bank and waited for the denouement.

The Nottoway River is probably the most crooked in the world; being as full of turns and elbows as a Virginia snake fence, and a sudden angle hid everything from sight. The first one to put in an appearance was Willie who, scratched with briers, barefooted, bareheaded and unclad, rushed in suddenly, screaming like a fiend and waving a hunting knife wildly in the air. The ladies shrieked and covered their faces with their hands, and the younger brother turning a back summersault vanished in a flash in the dark recesses of the forest, where he remained mute, with all of his passion for the chase suddenly quenched. What he thought Heaven knows, for he stole silently home and never went deer hunting again.

The eldest was made of sterner stuff; as the deer struck the sand bank and saw the crowd collected there he turned suddenly at bay; one sweep of his powerful horns cleared the pack of hounds, and then he rushed on his human foe, who awaited him unarmed and undaunted. A confused melee followed, with man, buck-deer and dogs all intermingled. A second time the deer shook himself free. One dog crawled away with broken ribs, two were lamed, while Philip had a long but shallow gash on his neck, cut either by the antlers or by the forefoot of the buck, by which he could not tell, but the blood spurted from the wound and covered his body with the unsanguined flow.

The last round was fought right in the presence of the ladies. Under any other circumstance Philip would, like his brother, have beaten an instantaneous retreat, but his blood was up now and all the devil in him aroused. Again the combatants closed, and this time Phil got the buck fairly by the horns, and then ensued a fine struggle of muscle against muscle, of human strength against brute strength, as was ever witnessed in the old Colliseum in its palmiest days. And the ladies forgot to scream or shriek as they witnessed in breathless silence the gladiator form with swelling sinews brought out in full play, and the eye flashing with the excitement of battle. Even the dogs stood back. The contest was long, but never for a moment doubtful, for the buck could not use his horns. Twist, jump and spring as he may, the iron hands held their hold, until at last in his frantic struggles one of his antlers was torn off, and he sank panting and dying at the feet of his victor

Miss Phyllis watched this combat with kindling cheek and gleaming eye. She came from a nation of warriors and her blood must have thrilled at the sight of her discarded lover with a torso, though red with the ensanguined stream, yet combined the Hercules with the Apollo. What her thoughts were who can tell—and, by the way, who can attempt to follow the thoughts, the caprices, the sudden changes in any woman's heart? I only know that Philip, emboldened by her gracious manner, proposed to her one sweet summer night. He was accepted, and she, the irresistible Phyllis, a veritable dear, became a captive in a full and sweet surrender. CHASSEUR.

Natural History.

BIRD MIGRATION IN THE MISSISSIPPI VALLEY.

COMPILED FROM THE NOTES OF MR. O. WIDMANN BY W. W. COOKE.

PART II.—CONCLUDED.

(27) *Vireosylvia olivacea*—Red-Eyed Vireo.—S. S. common; 4, 26 F., a few; 5, 2, gradually more noisy.

(19) *Vireosylvia gilva*—Warbling Vireo.—S.S. common; 4,17, F., one male in full song (this may have been here for some time); 4, 18, three males, at stands, in song; 4, 22, has at once become N. N.; 5, 2, begins to build.

(22) *Lanivireo flavifrons*—Yellow-Throated Vireo.—S. S. common; 4, 20, F., one male at old stand; 5, 2, N. N. at stands.

(29) *Lanivireo solitarius*—Solitary Vireo.—F. V.; 4, 28, F., one seen; 5, 10, two seen, which were also the last.

(23) *Vireo noveboracensis*—White-Eyed Vireo.—S. S. common; 4, 21, F., one male in full song; 4, 22, more numerous; 4, 24, ranks fill up, females arrived, males are noisy; 5, 2, noisy at stands.

(27) *Vireo belli*—Bell's Vireo.—S. S. common; 4, 26, F., and few; 5, 2, increasing but slowly.

(—) *Lanius ludovicianus*—Loggerhead Shrike.—R. common; 3, 15, carrying building materials.

(—) *Ampelis cedrorum*—Cedar Bird. R. seldom seen; one flock 4, 29.

(9) *Progne subis*—Purple Martin.—S. S. common; 3, 16, F., three birds seen; 3, 18, three more seen at other places. These martins are S. S., visiting their boxes at once on arriving. 4, 2, have become somewhat more numerous; 4, 3, singing; 4, 6, carrying straw to box; 4, 9, old birds seem to be all back now, but they do not yet build in earnest; 4, 22, more numerous and noisy; 5, 2, old birds in full numbers, birds of last year yet to come; 5, 4, birds of last year arrived to-day, and caused great commotion among old pairs; they are as noisy and jubilant as possible.

(17) *Hirundo erythrogastra*—Barn Swallow.—S. S. common; 4, 7, F.; 4, 9 to 16, a few met with; 4, 21, more numerous.

(9) *Tachycineta bicolor*—White-Bellied Swallow.—S. S. 3, 16, F., a party of ten seen hunting over a lake. These are transient individuals. 5, 2, in migratory flocks yesterday and to-day.

(16) *Stelgidopteryx serripennis*—Rough-Winged Swallow.—S. S.-local. 4, 6. F., six at old stands; 5, 2, first swallow which has eggs.

(25) *Cotile riparia*—Bank Swallow.—S. S. local. 4, 24, F., small flock; 5, 2, not in full numbers, in cool days not about holes.

(23) *Pyranga rubra*—Scarlet Tanager.—S. S., abundant. 4, 21, F., one male, silent; 4, 26, males only, but more numerous; 5, 2, heard and seen rarely. Dense foliage this season makes it difficult to find them.

(32) *Pyranga æstiva*—Summer Red Bird.—S. S. abundant. 5, 2, F.

(—) *Carpodacus purpureus*—Purple Finch.—W. S. abundant (except during winter '79-'80). Seen all the time from 2, 6 to 3, 6; 3, 19, same numbers, but the males are getting rich purple on head, neck and rump; 4, 2, still very numerous, generally on elms, sometimes singing beautifully; 4, 3, to 9, same, males getting purple all over. Their song is often heard, but they keep almost as quiet as in March. 4, 19, party of seven females; 4, 20, two in wood; 4, 29, L.

(—) *Astragalinus tristis*—Thistle Bird.—R., common. A small party met with, 3, 3; 4, 2, seen in small companies, often with the purple finches on same trees, but not seen or heard much; they keep pretty quiet, comparatively. 4, 3, singing; 4, 5, more numerous and noisy, quite yellow; 4, 7, N. N.; 4, 9, they range now among our most conspicuous and noisy birds, in full summer dress; 4, 18, to-day the noisiest and most conspicuous birds; 4, 21, two large flocks too noisy; 4, 22, another large flock; very numerous now; 4, 24, extremely numerous; 4, 26, decreased; 5, 1, a flock on ground; 5, 4, a flock of at least a hundred along River des pères.

(14) *Passerculus sandwichensis savanna*—Savannah Sparrow.—T. V. 4, 4, F.; again 4, 5, both at old stands, where I find them every year. They do not breed there, but transient birds seem to like the place; 4, 9 to 16, has remained at stands; 4, 22, increase; 4, 27, more conspicuous and singing; 5, 2, still with us at same places, N. N.; 5, 4, on fences along roadside singing; 5, 8, considerable decrease; bulk left, and L., 5, 10.

(9) *Poæcetes gramineus*—Bay-Winged Bunting.—S. S. a bird which is never numerous in this vicinity, met with twice across the river; in Illinois 3, 16 and 4, 1.

(29) *Coturniculus passerinus*—Yellow-Winged Sparrow.—S. S. 4, 28, F.; 5, 4, migrating party in a meadow.

(12) *Chondestes grammicus*—Lark Finch.—S. S., common; 3, 28 F.; 4, 2, not numerous yet; 4, 20, four pairs, somewhat more numerous and noisy; 4, 21, has considerably increased and is now seen in pairs at old stands; 5, 2, N. N. at stands.

(24) *Zonotrichia leucophrys*—White-Crowned Sparrow.—W. S. but mostly T. V.; 4, 22, F.; 4, 27, more conspicuous and singing; 5, 2, approaching height of season, heard and seen often; 5, 4, decided increase, heard everywhere along roads, borders of woods, etc., height of season; 5, 5, bulk left last night, migrating individuals to-day; 5, 14, still present, but not numerous; small flocks until 5, 17, L.

(—) *Zonotrichia albicollis*—White-Throated Sparrow.—W. S. but mostly T. V. Has become much more numerous since 3, 1. Only small parties or single individuals were seen in February, but now flocks of 12 to 18 of all grades of coloration are met with, and their song is often heard; 3, 19, same; 3, 20, large flocks; 4, 2 to 9, same numbers at same stations, *i. e.*, places to which they return regularly every year, and where they will stay till May. They do not now keep exclusively on the ground, but are often found high up in trees feeding. They are not conspicuous, keeping quiet and singing but little. 4, 17, still plentiful at old places; 4, 22, flocks have increased to double their former size, and more highly-colored males among them; 4, 24, extremely numerous; 4, 26, decreased by the large flocks leaving; 5, 2, small flocks, all birds of the last year, are left; comparatively few, but still very numerous at certain stands, which are the same as in March and April; 5, 4, still numerous, but no increase; 5, 5, migrating individuals; 5, 8, considerable decrease; 5, 14, still present, but not numerous; 5, 17, L.

Spizella montana—Tree Sparrow.—W. S., common; 3, 6, still here; 3, 19, have left.

(8) *Spizella domestica*—Chipping Sparrow.—S. S., almost R.; 3, 15, F., one singing; 3, 18, two singing; 3, 20, numerous, more than a dozen males singing; 4, 2, full numbered, but no migrating flocks met with; 4, 6, first set of eggs; 4, 9, one of our most industrious songsters.

Spizella pallida—Clay Sparrow.—T. V., once met with; 4, 29, 1881.

(2) *Spizella pusilla*—Field Sparrow.—S. S., almost R.; 2, 25, F.; 3, 1, first song; after 3, 3, more numerous and song heard at many old stands; 3, 11, migrating flock; 3, 19, increasing; 3, 20, full numbers and full song; 4, 2, several migrating flocks; 4, 9, one of our most industrious songsters; 5, 2, N. N. on eggs.

Junco hyemalis—Snow Bird.—W. S. common; after 3, 1, they no longer kept silent on ground, but mount trees and sing all day; 3, 19, same; 3, 20, large flocks; 4, 2, more numerous, flocks of two to four dozens met with since 3, 28; 4, 3, suddenly almost all have left us; 4, 5 to 9, are scarce, but a few can always be met with, partly on ground partly up in trees, feeding there in company with peabody bird, purple finch, yellow rump, ruby crown, thistle bird, etc.; such trees sometimes swarm with a dozen different species; 4, 16, a few birds with a migrating flock of flickers and robins; 4, 19, one; 4, 20, saw two among flock of fifty thistle birds in woods; 5, 29, one!!

(3) *Melospiza fasciata*—Song Sparrow.—T. V., common; 3, 1, F., singing; 3, 7, very numerous and conspicuous; 3, 19 to 4, 2, same; 4, 3, beginning to leave; 4, 4, L.

(5) *Melospiza palustris*—Swamp Sparrows.—T. V., 3, 3, two seen among song sparrows; 3, 16, very numerous; 4, 2 to 5, 4, same numbers, but bulk left soon after; 5, 11, L.

(22) *Melospiza lincolnii*—Lincoln's Sparrow.—T. V., 4, 20, F., three seen; 5, 2, height of season; bulk left 5, 4 and 5; 5, 8, still more decrease; single birds to 5, 23, L.

(6) *Passerella iliaca*—Fox Sparrow.—T. V., almost W. S.; 3, 4, F., singing; 3, 7, everywhere among compound flocks of the *Fringillidæ*, but not more than three or four at a time; 3, 20, only a few seen; 4, 3, nearly all have left us quite suddenly; 4, 4, L.

(2) *Pipilo erythrophthalmus*—Towhee Bunting.—2, 25, F., one male; 3, 2, first song and first female; 3, 7, generally heard at old stands; 3, 19, full numbered, but no migrating flocks; all S. S.; 4, 2, S. S., all present and flocks of a dozen; 4, 6, males fighting like roosters; 5, 2, N. N., on eggs.

(—) *Cardinalis virginianus*—Cardinal Grosbeak.—R. common, heard on every warm day, but very noisy, 3, 3; 5, 3, N. N. male and female often heard.

(23) *Zamelodia ludoviciana*—Rose-Breasted Grosbeak.—S. S. common; 4, 21, F., one male in full song; 4, 22, male and female seen often, heard song; 4, 26, very noisy and conspicuous, females have arrived; 5, 2, N. N., excited and conspicuous.

(25) *Passerina cyanea*—Indigo Bird.—S. S. common; 4, 24, F., small flock of males; 4, 25, still scarce and not yet in song; 4, 26, males only, but more numerous; 4, 27, males seen singly and heard to sing, but no females; 5, 2, males and females in separate flocks, not excited yet, but song often heard, males numerous, females few; 5, 4, males everywhere, females in flocks; 5, 6, N. N. excited.

(26) *Spiza americana*—Black-Throated Bunting.—S. S. common; 4, 25, F., the vanguard; 4, 27, males seen singly and heard singing, but no females; 5, 2, males not in full numbers, singing, but often seen flying in search of something, much like cowbirds; 5, 4, N. N. and one of the most conspicuous birds.

(32) *Dolichonyx oryzivorus*—Bobolink.—T. V. not abundant and rapid transit; 5, 2, F., van only; 5, 4, males, singing on wing; 5, 5, large flock of singing bobolinks go north at 6 A. M.; 5, 11, seen; 5, 18, L.

(5) *Molothrus ater*—Cowbird.—S. S. common; 3, 3, a few observed; 3, 19, still scarce; 4, 2, hardly numerous; 4, 3, suddenly N. N.; 4, 8, females numerous, now conspicuous; three generally seen in hot pursuit; 5, 2, everywhere male and female.

(—) *Xanthocephalus icterocephalus*—Yellow-Headed Blackbird.—S. S. not common; seen 5, 11.

(1) *Agelæus phœniceus*—Red-Winged Blackbird.—S. S. small flocks seen going north as early as 2, 20, also a few at old haunts before 3, 2, but great arrival and large flocks going north at sunrise 3, 3, also in evening 3, 3, and morning and evening 3, 4; 4, 2, great numbers present, but few females; 4, 17, males and females in separate flocks; 4, 18, the noisiest and most conspicuous birds to-day; 4, 26, females still increase in numbers; 5, 2, mating and noisy.

(—) *Sturnella magna*—Meadow Lark.—R. common. 3, 7, very noisy and conspicuous during warm days; 5, 2, regularly heard at stands.

(24) *Icterus spurius*—Orchard Oriole. S. S. common; 4, 22, F., old males have arrived and are heard singing; 4, 26, still quiet, old males only; 4, 27, females arrived and males jubilant; 5, 2, not excited, singing, but not in full numbers; 5, 4, begins to be N. N.

(24) *Icterus galbula*—Baltimore Oriole.—4, 22, F.; old males only, singing; 4, 26, very conspicuous and noisy, females arrived; 5, 2, excited and mating.

(—) *Scolecophagus ferrugineus*—Rusty Grackle.—W. S. before 3, 15, flocks; 4, 2, small numbers everywhere, from then gradually decreasing; 4, 16, scarce.

(1) *Quiscalus purpureus æneus*—Bronzed Grackle.—S. S. the first flocks passed north 2, 20, and a few were at old stands before 3, 2, but the large flocks in countless numbers passed north the morning and evening of 3, 3 and 4; the S. S. now go in pairs, noisy and conspicuous; 4, 9, mating but still going to the common sleeping place on Arsenal Island; 5, 2, mating and noisy, have almost ceased using the island as a night resort since yesterday, a few only go to-day; 5, 4, new flocks, seen to-night, go to island.

(—) *Corvus frugivorus*—Crow.—R. most numerous in winter, when about fifty thousand spend the night on Arsenal Island, opposite the southern part of this city. 3, 7, have decreased very much in numbers; 3, 15, carrying building materials; 3, 19, mostly gone; 4, 2, not one per cent. left to spend the night on the island.

(—) *Cyanocitta cristata*.—R., 3, 7, not yet very noisy; 3, 19, same; 5, 2, flock of thirty go north at 6 A. M. followed by smaller flocks.

(—) *Eremophila alpestris*—Shore Lark.—R., abundant. 3, 7, very noisy and conspicuous during warm days; 5, 2, regularly heard at stands.

(20) *Tyrannus carolinensis*.—King Bird.—S. S. common; 4, 18, F., one male; 4, 21, two more birds, a male and a female; 4, 22, begins to be conspicuous, both male and female; 4, 24, more numerous; 4, 26, N. N., 5, 1, migrating flock.

(23) *Myiarchus crinitus*—Great Crested Flycatcher.—S. S. common; 4, 21, F., one, silent; 4, 24, more numerous; 4, 26, N. N.; 5, 2, conspicuous.

(5) *Sayornis fuscus*—Phœbe.—S. S. common; 3, 3, F., two males; 3, 6, first female; 3, 15, carrying building materials; 3, 19, full force, but no migrating flocks, all S. S.; 4, 14, first set of fresh eggs; 5, 2, feed young in nest.

(41) *Contopus borealis*—Olive-Sided Flycatcher.—T. V.; 5, 24 and 25, seen.

(30) *Contopus virens*—Wood Pewee.—S. S. common; 4, 29, F.; 5, 2, not numerous yet; 5, 4, pretty often heard to-day.

(36) *Empidonax flaviventris*—Yellow-Bellied Flycatcher.—T. V.; 5, 10, seen.

(28) *Empidonax acadicus*—Acadian Flycatcher.—S. S., abundant in forest; 4, 27, F., silent at old stands; 5, 2, not yet in full numbers.

(34) *Empidonax pusillus traillii*—Traill's Flycatcher.—S. S. common; 5,4, F., seen and heard at old stands.

(33) *Empidonax minimus*—Least Flycatcher. —T. V., not common; 5, 3, F., two or three migrating; again 5, 5; from 5, 11, to 28 seen every day; 5, 29, L.

(33) *Trochilus colubris*—Ruby-Throated Humming Bird.—S. S. common; 5, 3, F., one male.

(18) *Chætura pelasgica*—Chimney Swift.—S. S. common; 4, 14, F., one; 4, 18, five at one time, chasing; 4, 19, becoming more numerous; 4, 20, flocks go north in evening; 4, 22, air full of them even during rain; 4, 24, by dozens in air, especially in evening.

(—) *Caprimulgus vociferus*—Whippoorwill.—S. S. very common. No record for 1882.

(35) *Chordeiles popetue*—Night Hawk.—S. S. common; 5, 5, F., at 6 P. M.; 5, 8, more go north this evening.

(—) *Picus pubescens*—Downy Woodpecker.—R.

(—) *Picus villosus*—Hairy Woodpecker.—R.

(13) *Sphyrapicus varius*—Yellow-Bellied Woodpecker.—T. V. 3, 29, F., again 3, 31 and 4, 5; 4, 9, same birds at same places; 5, 4, females migrating.

(24) *Centurus carolinus*—Red-Bellied Woodpecker.—S. S. almost R., this year very late; 4, 22, F., one male; 5, 4, females migrating.

(—) *Hylotomus pileatus*—Pileated Woodpecker.—R., one seen 2, 6.

(11) *Melanerpes erythrocephalus*—Red-Headed Woodpecker.—S. S. but very irregular; in '77-'78 many were seen all winter; 3, 20, F., two at old stands; 4, 2, only three seen so far; 4, 9, still scarce; 4, 22, this bird so scarce before is today met with at every step singly and in small parties. Many are seen on wing flying to and fro; 4, 26, N. N.

(4) *Colaptes auratus*—Golden-Winged Woodpecker.—R.; but mostly S. S., generally moving with the robins; 3, 2, F., 3, 4 and 6, more numerous among robins; 3, 19, seen everywhere; 4, 2, N. N., mating, also in migrating flocks; 4, 9, belongs at present to our most noisy birds; 4, 15 and 22, migrating flocks seen.

(10) *Ceryle alcyon*—Kingfisher.—S. S. 3, 18, F., one male.

(34) *Coccyzus americanus*—Yellow-Billed Cuckoo.—S. S. 5, 4, F., heard often.

(—) *Coccyzus erythrophthalmus*—Black-Billed Cuckoo.—S. S. no record for 1882. 4, 24, F., 1880 and 5, 6, F., 1881.

THE MASSASAUGA'S BITE.

Editor Forest and Stream:

In your issue of Oct. 5 I read with intense interest an able article by "Nessmuk," entitled "The Massasauga's Bite." May I, who am of the laity, be allowed a few lines to give my theory, not necessarily as opposed to "Nessmuk," but what I have observed in quite lengthy travels in different countries. It is this: The bite of a venomous serpent is fatal only when the larger veins are struck where the circulation is large and rapid—in all other cases, one as a rule recovers.

It will be noticed in "Nessmuk's" article that two of the three who died were bitten, the one in an artery in the neck, the other in the wrist, where all the veins are gathered into a small focus; of the third who died he does not state where the bite was, but only that the victim was bitten twice. All others recovered. In support of my theory, I would state that it is a well-established fact that the hogs in our Western States destroy and devour rattlesnakes; it has also been observed that the hog presents that part of his neck that is near the shoulder to the attack and lunge of the reptile, it being commonly supposed that the bristles on that part of the hog's body prevent the snake from being able to bite into the skin; and while thus entangled the hog seizes his enemy below the head and crushes him.

This generally accepted belief of the attack and defense is substantially true; but it is also true that the hog is quite often bitten on the very part that he presents to the snake, and which nature has covered with a large accumulation of fat, and which has for that reason a languid circulation. The hog, struck on this part of the body, seems to feel little effect from the bite, the sebaceous follicles seeming to neutralize the poison; whereas, if he be struck in a vein, he dies, as human beings die under like circumstances.

The remedies noted by "Nessmuk" seem admirable, and the practical common-sense advice given is invaluable to travelers and sportsmen. The fact, nevertheless, remains that if a person is struck in a vein by a poisonous snake, he will, in my opinion, die. It is simply a question of where the bite is that decides the question of life and death, it being always supposed that proper remedies are applied and that the bite is inflicted by a virile, venomous snake.

FUSIL.

BOSTON, Mass., Oct. 10, 1882.

AN AUDACIOUS GOSHAWK (*Astur atricapillus*).—On the morning of Oct. 3, 1882, I saw a red poll warbler in an unusually dark plumage, and, wishing to procure it for a specimen, went to my office and loaded a small .22-cal rifle with a light charge of dust shot. On leaving the building I heard a hen cry out in distress from behind a pile of stones in the bushes near by. Guided by the sound I soon reached the spot, and found a goshawk perched upon an old hen, not more than ten feet distant. Aiming at his breast, I fired, but with no other effect, apparently, than of arousing his indignation and wrath, for he immediately arose and dove at my head with great fury. I struck him on the wing with the barrel of the rifle, and loosened one of his tail feathers, but did not succeed in knocking him down as I anticipated. Meanwhile the hen was making off. Perceiving her, and determined not to lose his dinner, the bold hawk left me and gave chase to her. She rushed into the bushes, which were so thick that the hawk could not fly between them. Not to be baffled by this move, he closed his wings and followed her upon the ground, in a succession of long and rapid hops, and quickly overtook her and pounced upon her back. The hen was a large and strong one, and, carrying the hawk, for nearly a hundred feet before tumbling over. I soon reached the scene and struck at the hawk with the empty gun. He dodged the blow by dropping on his back, and then flew up into a tree overhead, but was gone before I could get a cartridge. The poor hen was so frightened that she hid under a catnip plant near the door of my office, and remained there till driven away, five hours later.—C. HART MERRIAM, M. D. (Locust Grove, New York).

CAPTURE OF A SHARK.—Framingham, Mass., Oct. 15.—On the 12th inst., being at Clark's Island, Plymouth, Mass., I witnessed the capture of a large shark, of the species called by the fishermen mackerel shark (*Lamna punctata* Mitchell). The fish was first seen at some distance from shore, as the observer was about entering the island harbor in a small boat, and as the tide was nearly out, he concluded to make an attempt to drive him on shore. Strange to say, the shark seemed "agreeable," and allowed himself to be guided in the required direction by occasional taps with an eel spear, and would sometimes seem to desire to take refuge under the boat, nearly capsizing it, but never making much effort to gain deep water. Attracted by the fracas several more boats came to assist, and finally penned him up in water so shoal he could not go under. The shark then began to realize his position, and dashed continually back and forth, making the water fly furiously. Half an hour of this, headed off in every direction, exhausted him sufficiently to allow of a rope being passed over his tail, and he was soon dragged on shore and despatched. His length was about seven and a half feet, and his weight (estimated) little short of 400 pounds. (The body of this species is immensely thick compared with its length.) The fishermen proposed to cut him up for lobster bait. Nothing whatever was found in the stomach, and from his sluggishness, when first overhauled, it seems likely he was "under the weather" in some way. The specimen of this variety from which Storer (Report on Mass. Fishes, 1839) drew up his description, was taken not far from this same place. None of the fishermen I talked with had ever seen a shark of this size in the neighborhood before. —F. C. BROWNE.

THE AMERICAN TAXIDERMISTS.—At a meeting of the Society of American Taxidermists, recently held in Washington, it was determined that the third annual exhibition should be held at Armory Hall, in Central Park, New York, and that it should open Dec. 4 and close Dec. 16. A board of exhibition commissioners was elected, consisting of the following gentlemen: Jacob H. Studer, President; Prof. G. Brown Goode, Vice-President; Dr. Joseph B. Holder, Secretary; Andrew Carnegie, Treasurer; Prof. A. S. Bickmore, Robert Colgate, James C. Beard, Dr. Wendell Prime and Prof. Henry A. Ward. The exhibition will presumably be one of great interest.

MASSACHUSETTS BIRD NOTES.—The few summer birds that remain here now are the brown thrush (*Harporhynchus rufus*), catbird (*Mimus carolinensis*), towhee bunting (*Pipilo erythrophthalmus*), purple grackle (*Quiscalus purpureus*), rusty grackle (*Scolecophagus ferrugineus*), bluebird (*Sialia sialis*), cherry-bird (*Ampelis cedrorum*), song sparrow (*Melospiza fasciata*), chipping sparrow (*Spizella domestica*), and numerous warblers. The birds that remain here all winter are red-tailed hawk (*Buteo borealis*), great horned owl (*Bubo virginianus*), crow (*Corvus americanus*), bluejay (*Cyanura cristata*), golden-winged woodpecker (*Colaptes auratus*), robin (*Turdus migratorius*), black-capped chickadee (*Parus atricapillus*), hairy woodpecker (*Picus villosus*), goldfinch (*Astragalinus tristis*), ruffed grouse (*Bonasa umbellus*), and quail (*Ortyx virginianus*).—JOHN C. CAHOON.

THE WESTERN SHRIKE IN NEW ENGLAND.—Taunton, Mass., October 9, 1882.—While out with my gun September 12 I had the good fortune to shoot a white-rumped loggerhead shrike (*Lanius ludovicianus excubitoroides*). It was sitting on a telegraph wire, and as I approached it flew down and alighted on a small apple-tree, when I shot it. Its crop contained small bones and bugs. This is, so far, the second one that has ever been taken in New England.—J. C. CAHOON.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

DO QUAIL HAVE A SECOND BROOD?

NOT long since a writer in the FOREST AND STREAM took the position that quail (we call them partridge,) do not have, at any time, a second brood. If I understand him, he meant his language to impart that they nest but once during the year. Of course it is difficult for any one to prove to the contrary, and it would be equally difficult to prove that all the female birds lay at all. Inasmuch as these birds are not domesticated, no one has authority to make any assertion as to the question, and all are obliged to draw conclusions from such facts as are known.

Now we all know that in this latitude the nesting season is the month of May and early June, for during this season the nests are often found when the small grain is reaped. It often occurs, too, that in some cases the nests have no eggs in them, and in others that they have evidently been destroyed by "varmints" before hatching. It may be safely assumed, I think, that all the females, following a law of nature, deposit their eggs during the time indicated in this paragraph, and unless disturbed, incubate and hatch out a brood. All do not hatch on the same day, or during the same week or month even, for if they did all the young would be fully grown at the same time. We know that such is not the case. All sportsmen who have gone into the field on the 15th of October, have seen that nearly one-half of the coveys started are not fully grown, and occasionally one is found which cannot even fly.

On the 23d day of October, 1880, Tecee and I went to "the Gulf" in Chatham, on a bird hunt, expecting to meet some friends from Washington City, who had promised to join us, but were prevented from doing so by a railroad accident and the state of the weather. We hunted some low lands on Deep River on the morning after our arrival, and all the birds we found were fully grown. In the afternoon we chose a different locality, and shortly after leaving the house our dog, Mark, gave signs of a "taint in the air," and soon came to a dead halt. We approached, walked on, but no birds flew. He kept his position, and upon order sprang forward, and nothing rising, he looked the very personification of meanness, as he saw running in the grass near his nose several little birds not larger than wrens. These must have hatched during the month. It is certain that the eggs were not laid in May or June, and it is equally certain that they must have been early in September, when some of the young birds were so far advanced as to need no maternal guidance or aid. The hen may have raised one brood and then started another, or she may have lost the first one. It is hardly probable she did not get "in season" until late in August. From the facts given, and others within my knowledge, I think I am warranted in concluding that if birds do not raise a second brood (I think they sometimes do) they will lay the second time, if the first nest is destroyed. Chickens raise more than one brood, and the cases are rare when all grown hens do not commence laying in early spring. If not allowed to "set," and plenty of food is given or obtained, hens will commence laying again after the lapse of a few weeks. Why may it not be so with quail? It is but reasonable to suppose it should be so.

In some parts of this State the prospect for good sport with "Bob White" is excellent. Those of us who are given to an indulgence in it, are looking forward somewhat pleasantly to the time when we can visit our friends who live on the Pee Dee near Stanback's and Dumas's Ferry, and make the fields resonant with the sharp reports of our light breech-loaders, while Martin, Bickett and Tecee are striving for the belt. We hope to have plenty of dogs which have breath and speed and staunchness, albeit they occasionally break shot and engage in a lively but bootless race to catch an old cock as he whirrs off for a place of safety. If we had some of the blue bloods, trained to absolute obedience, we could, doubtless, bag more birds; but we manage always to get a fair share of them, and the hard walking gives us such appetites that we enjoy the game, whether fried or broiled, and put on no wry faces, even if the coffee is rather weak, or is wanting in the fragrance of Mocha or that indescribable article called in trade "Old Government Java."

I hope to be able to let you hear from me occasionally. After the election is over and my voice ceases to sound in behalf of what I regard the interests of the country—for I sometimes take the "stump"—I may sharpen my pen and scribble a little for the amusement of that portion of my fellow citizens who, in the field and around the camp fire, lay aside all "cares of State," and acknowledge the brotherhood of all men who are fond of the "rod and gun, the forest and stream." There all strife in regard to taxation, constitutional limitations, currency, commerce, "a free ballot and a fair count" (whatever that means) is hushed, and the "shot-gun policy" prevails. If any quarrel does spring up, it originates in a failure upon the part of some too eager sportsman to acknowledge a "fair count" of game which he has bagged, and the number of misses scored against him. The only "commerce" regarded is that which pertains to shot and shell and their accompaniments, and the only "currency" the smoking interests, which pass into the mouth and soon get below "par." As to "constitutional limitations," Cooley's treatise is unknown, and the capacity for a long tramp is used as an agreeable substitute. WELLS.

GOSSIP ABOUT QUAIL.

"JUNIATA" has no particular text to discourse upon, and no peculiar subject to investigate, but FOREST AND STREAM is so much like the other good book, that texts are too numerous to stick to one, and each one is so suggestive of others, that it is impossible to withstand the temptation to gossip, and since you have, like Oliver, boldly "asked for more," I prefer to overlook the implied "treacle and sulphur" in the compliment, and so send some notes prepared in June.

Now, as Mr. "Chas. A. Peake" says in answer to "J. E. S.," "I profess to know a quail when I see it." I am not one of the later broods myself, as I was a lover of the quail in my youth, have grown fonder of them as age comes on apace, and so have for many years made some careful watching over them and their habits. I have never been convinced that two broods are raised in one season, but that very late hatched ones are found unfit to shoot November 1, has been my experience every season. The hatching of early and late birds is discussed in June note before mentioned. But before getting so far, I would like to answer the correspondent who asked why pairs of prairie chickens were abundant before and during hatching time, then seemed to disappear for a time, reappearing with their young well feathered. Speaking to your "Sancho Panza," who is the worthy descendant of noble sires, who loved the horses well but their hounds better, and is something of a scientist, he explained the philosophy of my statement of fact, that the old hen and chickens gave out no scent and it was a mere accident if found. Thus "in old birds while nesting and brooding the secretions are very inactive and give out little scent. The glands of the feet give out the greater scent, and are not developed in young ones until nearly mature. In mammals the milk secretion absorbs the scent," and so does and fawn are protected from otherwise inevitable destruction while helpless. I have been surprised to see dogs with fine noses unable to locate the quite young scattered quail, when broods were occasionally found: so it is, I presume, with chickens.

I have not noticed any remarks upon the occasional southern migration of our own quail. In 1858 or '59, while residing in the coal region for some weeks, I drove frequently through an unoccupied valley, well wooded, and upon every trip would see droves of 20 to 200 quail, evidently moving southward, and while at my desk observed small and large crowds fly from a hilltop across the same valley to the foot of the mountain opposite. The hilltop and sides had been denuded of timber by mine operators, and of brush by the goats of operatives, otherwise the birds would foot it, as they do further up among the timber. The migratory attempts to fly across the Susquehanna below Harrisburg result in frequent failures to reach the south shore. During the winter of 1866–67 our quail were entirely destroyed, and none except some wandering "bachelors," in spring time, I suppose in search of mates, were seen or heard until 1874. In November of that year, while hunting rabbits, I found three bevies upon my farm, when there were none during summer and fall—eighteen, twenty and twenty-five to thirty in the several lots. I may have had as joyful surprises in my life, but none more so, as I had two old Bizmark pups, aged 8½ months, and there was my opportunity. For knowing they were migrating birds and would not remain, I soon had the puppies among them, and then I had another enjoyment—to see them stiffen out and back, and behave as Biz's progeny should do, and do in any case where they have seen a show of training. But, without a pedigree and no money to be made out of the strain, kennelmen and professional trainers very wisely never handled, bred and selected the best, generation after generation. Like many another good strain, it will soon be among "The Dogs I Have Had." The one Laverack I have, with the "blood of all Howards" in his veins, did not show, up wind, the least interest in a bevy of full-fledged quail which old Blanche was pointing down wind; yet he is a typical beauty—black and white and ticked, but a great disappointment; an accident of an otherwise well-regulated family. But dogs are not the subject. After shooting the two first birds which rose, and comparing them with two or three shot afterward, I was satisfied that I had the parent birds. The idea struck me that, the leaders gone, the migration would be stopped. So I went in search of another bevy, and got the old birds and two young ones. I had to go some distance for the third and largest lot, and found it at dusk, and then missed with both barrels. Next day could not, and never did find it again, but the two first bevies remained, and were fed through the winter. I found other birds and did the same. I have always tried to drop the first birds which rise in coveys, and general y find them to be the parent birds. When successful it localizes the young ones, as I find that very early hatchings, which I could find in August and September, disappear almost the opening of the season, the late ones never. The spring of 1881 was an exceptional one for breeding; abundance in July, August and September, and scarcity in the shooting season. The winter of '80 and '81 was very destructive to quail, but as soon as spring opened, by a compensation of nature, I presume, the survivors nested, and by the second week of June the young birds were numerous and able to fly. We had no rain after that time until late fall. In August the birds were strong and appeared full grown. But brooks, ponds and rivulets were waterless, no weeds had grown, there was no grass in the fields, thickets of blackberry and brush had lost their leaves, or retained only a few shriveled ones, there was no shelter or water. The hawks were as fierce as usual, the quail left, and by October 15 very few were found, and these were too young to be shot.

June 20 to July 4 is the usual time for quail to hatch out, but in 1881 I failed to learn of a single nest of eggs being found in haying or grain harvest. Young birds were plenty. During other years the mowing machines have revealed the destroyed nests. The winter of '79 and '80 was open. Breeding birds were plenty, and no doubt fat, but there were no young birds until July, and several nests were found in harvest and some were deserted. In 1880 the mower uncovered six nests in my fields—120 eggs. The effort to restore cover, and bring back the nesting birds, failed. Since then I have a standing reward to the mowers if they raise the cutter bars, save the grass and shelter the nest when they see a bird rise. No half dollar has been claimed, because no nests were found, or else they were destroyed. JUNIATA.

THOMPSONTOS, Pa., Oct. 9, 1882.

"Boss" is the name adopted by Upthegrove & McLellan, of Valparaiso, Ind., for one style of their celebrated Shooting Suits. By persistent advertising and good work their suits have become national in reputation and have many friends in all parts of this continent.—*Adv.*

SPORT IN NEW MEXICO.

FIRST PAPER.

RATHER more than a year ago I sent you a few notes upon trout-fishing in New Mexico, that you honored with a place in your columns, and I believe you afterwards expressed a wish that I would contribute a second edition. Per force of circumstances I have been obliged to postpone writing, for the very simple reason that I had nothing to write about, as I have already told you sport is not to be had in the immediate vicinity of Santa Fe, and having business to attend to, my journeys in pursuit thereof are limited. However I will give you the best I have.

I suppose most of your readers remember from their ancient mythology a gentleman of the name of Tantalus, who, having excited the ire of the gods, was doomed to suffer everlasting thirst, although a good long drink was placed under his very nose, but as soon as he stretched forth his hand to refresh himself, the cooling beverage (a purely temperance drink) receded just beyond his reach. This was what might be called carrying prohibition a little too far. Well, this poor thirsty soul's doom seems to form the model after which that of the average sportsman is moulded. But seriously, on a moment's reflection, one cannot help being struck with the similarity on a reduced scale. An experience like the following may better convey my meaning: Quoth Jones, "If you want good trout-fishing go to the West; you can't go wrong." Robinson accordingly packs up his traps and starts say for Kansas; arrived in Kansas, makes inquiries. "Oh, you ought to go to New Mexico if you want good fishing." Accordingly Robinson arrives in this Territory, say in the northern part; he is then told he should go further south; then he goes too near Old Mexico, but at last lands in Santa Fe. On inquiry he is told, "Oh, yes, plenty of good fishing on the Pecos twenty miles from here." Arrives on Pecos, is then told the best fishing is ten miles above this place. On reaching the spot at last, he finds he has spent all the time at his disposal, and so is obliged to pack up his traps again and go back East without having wet a line. This is only a slight exaggerated fancy picture of the woes of a sportsman in search of fun, and I have no doubt many of your readers have met with similar luck. This seeming destiny of the followers of either rod or gun has so frequently been impressed upon me that I can scarcely refrain alluding to it.

The southern part of the Territory (N. B., I am in the north) affords good quail shooting, but around Santa Fe they are very few and far between, like plums in a school-boy's pudding. There certainly is a large number of prairie doves that afford good fun, for their flight is very swift and often remarkably snipe-like and erratic. During my occasional rambles I have taken care to note the spots where quail have been seen, so as to try for them after September 1. On the opening of this season, therefore, I induced a friend to accompany me in search of them with intent to kill, as by putting pieces together I felt pretty confident of going to the right spot. On the way out, about twelve miles from town, we espied a covey running across the road just in front of the mules, so we alighted at once, slipped cartridges into our guns, and went as fast as we could straight up a small hill by the side of the road, round which the birds had disappeared. The running powers of the California quail are second only to that of a man ahead of a bear. Just as we reached the summit on one side they had been equally as expeditious on the other, consequently we met, and up they all went on our left, and I got in both barrels and picked up a brace. My friend was standing in such a position that he could not get in a shot. We followed them up, but could find no further trace. We next beat some marsh ground for duck and snipe, but without success, and then went to my pet ground, and soon found two coveys, but the young ones being scarcely large enough to shoot, we spared them for future sport, and turned our attention to doves and rabbits. Our bag consisted of seven quail, four rabbits, and about fifteen doves. Nothing very big, but not bad for this section.

Last June I was invited to make one of a party to go on to the Pecos, and went. A good ambulance with four mules was to convey us to the scene of operations about forty miles off. For about the first twenty miles the road is very tedious, nothing but piñon-covered plain and heaps of dust, but on nearing the celebrated Apache Cañon that has been the source of so much trouble and expense to the A. T. and S. F. Railroad, we found ourselves in a decidedly more picturesque neighborhood. A few miles further on we pass the spot where the Apache Cañon fight took place during the civil war, and the house where the noted desperado, Ike Stockton, "ran" a dance hall, and subsequently stood off a sheriff's posse. But that grand old man Time, and four strong mules, will do wonders, when working in harmony, so at last we reached our destination. Before reaching the ranch where we proposed stopping for the night, and about one mile from it, I alighted from the conveyance with one of my companions to try for a few fish for supper, I wielding the rod, he the net. Time 4:30 P. M. Quickly putting my tackle together, and mounting a cast with red hackle, yellow cowdung and a black gnat with peacock herl body, I was soon at work. The fish rose well and by the time I reached the rendezvous, at 6 o'clock, I had taken just two dozen, mostly small fish, a very good evening's work considering I fished from the bank.

An excellent supper consisting of wild turkey, fresh trout, with usual ranch et ceteras of milk, butter and eggs, was done ample justice to. During the course of the meal one gentleman, after devouring at the least computation ten of the fish, remarked on being pressed to take another (the last), that he never ate trout, because "they disagree with me."

Next the inevitable pipe followed and all hands settled down to swapping fish lies. Why is it that fishing and tall lying are usually supposed to be inseparable? I noticed a short time time ago in a Western paper the remark that it was strange, St. Peter being a noted fisherman, could not stand Ananias stretching the point a little about the church collections.

Now we are on the subject of fish yarns, I cannot refrain from giving you a specimen from Ireland. When fishing in Connemara, in the west of Ireland, some few years ago, I came upon as fine a specimen of a cold-blooded fish liar as the world ever produced—a certain first-prize taker at any international piscatorial exhibition. He was a typical Irish peasant, and river-keeper to the lord of the manor, but withal an excellent fisherman. One evening he imparted the following in such a serious manner, that to throw any doubt upon his veracity would give great offence:

"I had received orders from the master," he said in his rich brogue, "to kill a salmon for the house, and had tried for a long time without moving a fish, when on throwing my tail fly onto the opposite bank to draw it gently into the water to try and coax up a fish in that way, a 12-pounder took my drop fly with a rush, but I was terrified to see my tail fly fast on the bank. I was not long left in doubt, however, as to the cause of its remaining there, for I found I had securely hooked a fine lively hare and salmon at one throw. First one and then the other would prove the stronger, the hare trying to make off across country, and the salmon naturally making for the deepest pools. The fight, a ter lasting for about a quarter of an hour, during which all I had to do was to give line, the combatants had removed the battlefield from a rather steep bank, to a shallow, pebbly ford a little below. I saw the salmon turn up exhausted and the hare go straight away, dragging the fish with him out onto dry land. I then landed the hare, after a short struggle, and went on my way rejoicing." There! How's that?

The following morning I, being the only fisherman of the party, set off betimes and fished about two miles of beautiful water, and on returning in the evening found my bag to consist of five dozen trout, averaging one-quarter pound. I had returned a large number of small ones during the day, but was not fortunate enough to get on terms with a big one, in fact, large fish in the upper waters are not numerous.

The next day we determined to move down stream some ten or twelve miles. The weather during the night had undergone a marked change, the river had risen considerably and the wind was cold, so I had some misgivings of my success. The banks were very much overhung with bushes, so the only way to fish was to wade down the middle of the stream, which I did. All my best endeavors met with but little success, as after whipping for about two hours, and trying all the flies I could think of, my creel was as empty as the day I bought it, and worse, it was getting late, viz., four o'clock. However, knowing fish to be in a stream, I am not easily discouraged at failure at the first attempt, and so persevered, trying the deeps, shallows and ripples in turn, hoping to find where the trout were feeding. At last, after a most unexciting time, I was cheered by seeing a fish dash at my tail fly, as it passed him on a swift stretch of water, but he missed it. It was evidently a good fish, I saw enough of him for that, so I cast again and nailed him. He gave me a good fight in the swift water, but after a few minutes' play I had the net under him; weight one-half pound. With the next throw I was fast to another, and landing him, found him the exact counterpart of No. 1. I then took several smaller ones of about one-quarter pound each, after which some slow fishing ensued. On working my way through some bushes to get to the river again, I found myself in front of a fine deep hole of a trouty appearance. I soon took several nice trout, but one old fellow, out of pure cussedness or will, kept rising in a tantalizing manner every now and then right in the middle of a submerged bush. In vain I tried to coax him out of it, but he knew too much for that, so at last, as it was getting dark, I risked a throw right over him. He took it without the least hesitation, and by tightening the line on striking, he came clear of the bush by some piece of good luck. Of course he tried to make back for the bush to break my tackle, but on giving him the butt he rushed up stream, then down, then across, as only an agitated trout can do. In the end, though, he had to succumb; his weight was one and one-half pounds. I then had to reel up and go home. My basket consisted of seventeen fish of a very good size. This, considering the unfavorable start and inclement weather, was satisfactory sport.

The next evening saw me back in Santa Fe after having had a most enjoyable trip. WESTWARD HO.

GAME IN THE ROCKIES.

THIS is essentially a big game country—a vast country peopled with noble game. During the first two or three years in the life of a new mining camp the rifle and six-shooter reign supreme; then, gradually, the shotgun comes upon the field. This region has hardly yet emerged from the domination of the rifle, and to the lover of this stern weapon this is a paradise. Bear, elk, deer, mountain lion (American cougar), and wolverine are abundant. I may say that among my many acquaintances among veteran mountaineers I rarely meet one who has lost any bear—hence they rarely hunt him, although, of course, many are being killed. There are several varieties, including the genuine grizzly, the cinnamon, bald-face, silver-tip, and black—all save the latter exceedingly pugnacious, always ready for a fight, and standing up marvelously under a rain of lead, even a heart-shot seldom bringing him immediately down. In hunting them many men are annually killed.

Bear may now be found in any direction, and even in the immediate vicinity of town, and they are frequently met on the trails, but their favorite haunts are in the berry patches and along the margin of the salmon streams. Elk and deer, during the warm months, mostly ascend higher up among the lofty peaks of the Saw Tooth Range, but as this mountain chain is now glittering white under a blanket of freshly fallen snow, they are journeying down, and an ordinary fallen snow, they are journeying down, and an ordinary hunter can get deer without difficulty in any of the side cañons a mile or more from town. In fact, there is no novelty in killing them; it is reduced to a simple matter of meat. Elk, which have not the dread of snow that deer feel, have not yet come down in so great numbers, although a few days since I saw a band of about thirty come majestically over a low divide directly upon me. I waited until they were close up and then turned my six-shooter loose, simply to see them plunge away. Not having any use for the carcass, I did not try to kill. Wolverine and mountain lion are plenty, but more shy and more seldom seen.

Trout fishing is superb in the Wood River and its tributaries—in truth, the same may be said of all the Rocky Mountain streams. Coming in from Little Smoky a few nights since, my pony bolted, and his trembling and labored breathing told me of his intense excitement. I struck him with spurs, and he cautiously advanced along the trail, where, at length, directly in the trail, through the dark, I made out a huge black form slowly advancing from me and not more than six to ten yards on my front. I again struck my pony on the flanks, and reined him off upon the side hill abreast of the brute and as near as possible. Reassuring the horse by words, I halted and rapidly emptied a Colt, D. A., calibre .45, six, at the black mass, which immediately plunged into a clump of willows a few yards away, from whence I could plainly hear the snapping of the bear's jaws, and being a good snap shot with a pistol, I have no doubt that his chops were bloody. It is almost needless to add, I did not dismount or look further. JOHN H. BURNS.

HAILEY (Wood River), Idaho, Sept. 20.

CAMP COOKERY.

PART II.

IN my last I endeavored to describe how to cook game, fish and vegetables at the camp fire, without any cooking utensils whatever, and I can assure the reader that a very little experience will enable him to prepare a savory meal with no other help than the natural products and growth of the forests.

Of course the mode described in my first letter requires a good big bed of coals and time, both of which are quite a disadvantage to the hungry sportsman, who pulls into a pleasant camp ground hungry and tired, and who has not only his fire to build and his camp to arrange before darkness sets in, but fuel may be scarce, and he must content himself with a small fire, or else a cold lunch is inevitable. Particularly is this the case when hunting on the plains, where a few dried buffalo chips are often all the fuel available for cooking or camp fire.

By the following plan—which, by the way, is a favorite one with me, on account of time saved—you may prepare an excellent meal, with very little fuel and at comparatively short notice, as well as without the aid of any utensils, save something to make your coffee in.

On going into camp, start your fire the first thing and regulate the size of it by the fuel at command, for a small fire, which soon burns down to coals, will help you to your supper sooner than a big one, the latter being rather a disadvantage than otherwise, save as a means to warm by. While your fire burns and crackles, and lights up the deepening shadows of the forest, stir around and get supper as quick as you can, beginning by cleaning your trout or other fish, slicing thin a nice piece of salt pork for each fish, and husk your corn, cutting off about an inch of the silk end and the stalk end close up to the kernels. Now cut a half dozen birch sticks about three feet long and from one-half to an inch in diameter and forked at the small end. Sharpen both points of the forks long and sharp; take a trout and lay a piece of salt pork just along the inside where you slit it open, and run both tines of the forked stick clear through the pork and fish, letting a tine go through between the ribs, close to the backbone and on opposite sides of the same. I am thus explicit about the manner of sticking, because it is highly exasperating to a hungry man, just as the fish and savory, nicely browned pork is about to be withdrawn from the fire and eaten, to have it take a tumble into the coals and ashes by the tender, cooked meat giving way. This may be avoided by carefully sticking it on the birch fork in the manner described.

When the fish are on the rods, lay down on the very edge of the coals a good stone or log, so that the birch toasting-forks, being laid across it, the fish may rest from six to ten inches above the coals. Stick the other end in the ground or under a stone or log lying back of the first one, but be sure it's secure before you leave it to roast. Place all your fish in this manner, and while the pork fat hisses and splutters and runs down the sides, and out through the gills, the trout curls and twists about as if the heat almost brought back some of its former graceful turns and motions. While they are browning nicely, you cut as many more sticks as you have ears of corn to cook, but not forked ones this time, but straight, and sharpened to a long taper point. Take your knife and ream out a hole in the end of the cob about the size of the thickest part of your sharp stick, and placing the butt end on the ground between your feet, push the ears home solid on the stick, and place them across a stone or log over the fire as you did the fish. Having got the things cooking, get your water on to boil for the coffee, but don't put any coffee in it until later on, as described in my former letter. You can now watch the things over the fire, and turn them over, or taking them off for a moment, rake up some more coals under where they hang, being careful not to put fresh fuel near the food, or it will smoke or perhaps set it on fire. It is better to turn them several times before any part is sufficiently done, as they cook more easily and brown more nicely.

If your fire has been small, and you think it will need more coals to finish with, throw on some fresh fuel on the lee side of your fire, and as it turns to coals rake them over under your fish so as to avoid smoke and flame, both of which are ruinous in cooking. I have cooked trout in this way over a few little pieces of dried cedar with only a few minute's time, and thought I never ate a more delicious morsel, so hot and toothsome, crisp and brown, it was. The taste still lingers on my tongue at the recollection of it, and I can recall no better way to cook a trout, to be eaten instantly, than this. If instead of fish you have ducks or other game, you may have a *filet de canard* by cutting them in strips and impaling with the piece of pork in the same way. If your fish are too large to cook whole in this way, you may split them down the back and cook in manner already described, or take one large one, get a clean slab and make half a dozen hardwood pins or nails about an inch long, making the points sharp, and have good sized heads on them. Now, cut three or four narrow strips of salt pork, lay them crosswise the fish, which has been scored across and split almost through lengthwise from the inside, and nail the pork strips and fish to the slab; then place two stones at the edge of the fire and lay the slab across so that your fish will come over a nice bed of live coals. While your supper is cooking you may make such arrangements of your camp as you can, and at the meantime not neglect the viands over the fire. A few roast potatoes and your coffee, with the hot morsels of nicely browned trout, will, with an appetite whetted by a day's sport, afford you a supper that the gods might enjoy. Then, too, friend Doctor, comes the happy thought that there are no dishes to wash or pots to clean before you may light your pipe or cigar and throw yourself on your blanket and enjoy that rare siesta which comes only after such a meal

Another way I have is to take a tin cup and plate, with some ground coffee, crackers or bread and a little salt in your bag. This, with a good hunk of salt pork, is all that is needed for several days away from a regular camp, and can be all carried in an army haversack, either on foot or thrown in the bottom of your canoe. When hungry, or when comes on, a small fire and a few moments' time will give you a good meal, provided you have caught some trout or other fish not too large for the pan. Fry a piece of salt pork on your tin plate, and when nearly done lay in your fish, which has been cleaned, scored and rolled in a few crumbs of the bread or crackers. Turn and brown them nicely, make your coffee in your tin cup, and a good enough supper for anybody is ready in a few moments. When through, scour off your tin plate in the white sand of the shore, rinse out your cup, and you have done all your dish washing, and are ready for the next meal, which may be miles away.

Of course it is jolly enough to go with a party and to have a cook, with all the utensils, and establish a regular camp, either with tent or log cabin, especially if a long stay is desired. I enjoy it myself occasionally, but, in this way, one cannot roam as free as a bird from lake to lake, across portages, penetrating into the wildest and most romantic of nature's scenes, as I love to do, camping when night's shadows begin to fall; here to-night, and miles away, perhaps, the next. To me this is the way to enjoy the grandeur and majesty of nature, and

> "To one who in the love of nature holds
> Communion with her visible forms,
> She speaks a various language,"

which is companion, friend, instructor to the lover of the grand and beautiful.

And now, friend Doctor, if my few suggestions and experience shall enable you to prepare at some future time a repast that shall be both pleasing to your palate and acceptable to your digestive organs, I shall feel amply rewarded by the thought that I have added one atom of comfort to a "brother of the angle," and intensified the pleasures of the FOREST AND STREAM. CAPT. "DORSAL FIN."

OUR JERSEY LETTER.

FOR the first time in my life I am able to appreciate the feelings of Dr. Tanner when he seated himself at the table to end his long fast. I have just opened a package which I find contains forty back numbers of the FOREST AND STREAM, of which I am now to take my fill. Circumstances beyond my control have deprived me of my weekly rations for these long months, and a forty weeks' fast gives me an appetite like a—well, like a man, for mentally as well as physically I hold with Byron:

> "Man is a carnivorous production,
> And must have meals, * * * *
> He cannot live, like woodcocks, upon suction,
> But, like the shark and tiger, must have prey."

And that word "woodcocks" suggests that I must attend to business before pleasure, and that this huge bundle of the best sporting paper in the world was sent to remind me that you wanted to know about game and the game laws in New Jersey. First, then, to keep you and your friends out of the clutches of the game-constable, let me give you an abstract of the latest revision of our legislative enactments upon the subject. None but a Jerseyman could ever flush the exact truth out of the cover of words in which our legislators conceal it, but I vouch for the following, giving simply the open seasons and penalties:

Ruffed grouse—Nov. 1 to Dec. 30, inclusive, $15.00.
Quail—Nov. 1 to Dec. 30, inclusive, $15.00.
Rabbit—Nov. 1 to Dec. 30, inclusive, $15.00.
Woodcock—July 2 to July 31, inclusive, and Oct. 1 to Dec. 15, inclusive, $15.00.
Plover—Aug. 1 to Dec. 31, inclusive, $10.00.
Reed birds—Aug. 26 to Nov. 30, inclusive, $5.00.
Rail birds—Sept. 1 to Nov. 30, inclusive, $5.00.
Wood ducks—Sept. 1 to Dec. 31, inclusive, $5.00.
Squirrels—Sept. 1 to Jan. 1, inclusive, $5.00.
Marsh hen—Aug. 26 to Nov. 30, inclusive, $5.00.
Deer—No shooting until Nov. 1, 1884, then and afterward only in November, $50.00.

Now as to the wisdom of these laws, please don't ask me. Why woodcock should be killed on July 3 and not on July 1, or why rabbits should be lawful on Dec. 30 and not on Dec. 31, are mysteries the solution of which is known only to the O'Farrels, O'Rourkes, Von Steinheims and Von Bockbeers whom Jersey City, Hoboken and Newark send to fill our legislative halls. Their total ignorance of the English language and the game question may explain the blunders, but the above is what the lawyers say the law means when translated into our native tongue.

As to the game here and in prospect. There were no woodcock in July worth speaking of, and of course none have come back yet. A good frost and a cold storm may bring them, and fortunately their breeding grounds are wet enough for them, for once. Down Jersey they have had a brief season and a short harvest in rail and reed birds, and along the salt bottoms of Ocean and Atlantic counties quite an unusual flight of English snipe is reported. By the way, another thing past finding out is the striking of this bird from the game list, and the withdrawal of all protection from it. But so it is, and the *wilsonii* are lawful prey for the pot-hunter the year round.

Squirrels, gray, are in season and in plenty, but the entire failure of the nut and acorn crop in Middle Jersey has sent the bush tails to the ground, and makes a search for them as near fruitless as possible. But a day in the woods just now is not a day wasted, though the game bag may be brought home empty. The forests and fields have tired of waiting for Jack Frost to come and act as milliner and dressmaker and have gone to work in true economy to make over their summer robes for autumn wear, no machine and stencil work of the storm and frost this fall producing a melancholy monotony of "naked woods and meadows brown and sere," but nature's very prettiest and brightest work, all hand painted, no two alike, and we see the copious summer showers and the golden sunshine which have made the year phenomenal, embroidering with deepest tints their—

> "Mellow richness on the clustered trees,
> And, from a beaker full of richest dyes,
> Pouring new glory on the autumn woods."

The thoughtful hunter is reminded that whether the frost shall come or not, we, like the leaves, shall fall on time, and that a beautiful close can only come to a well spent life.

But about the game. Mother Bob White sings her cradle song from every thicket, and baby cottontails scamper along every wood path in the twilight. The number of quail killed here last fall was minimum, and the number of flocks this fall promises better shooting than we have had for years. Everybody is buying a hound, for the prospect for rabbit shooting, too, is the best, even the big freshets having done but little damage. But, see here, I must dive into that package now, so good-by. A.

OCTOBER 16.

MONTANA BIG GAME.—Privates advices from northwestern Montana report large game abundant on the slope of the Rocky Mountains this year. The white hunters, half-breeds and Sioux have fairly run the buffalo out of the Milk River country, and early in September they were coming up through the Bear's Paw Mountains toward the Sweet Grass Hills by thousands. The head of the herd was then within a day's ride of the Marias River. Deer and antelope are abundant. Sharptail grouse are very plenty.

HOUNDING vs. STILL HUNTING.

HAVING read the articles by "G. R. B.," "Cap Lock," "Forty-Four" and others on Hounding vs. Still Hunting, I wish to state my views in regard to the matter. I do not agree with "Forty-Four" in regard to the use of dogs. I think he is mistaken in thinking that dogs or hounds drive away the deer, and in the case that he refers to, the deer had probably changed their ground owing to the approaching storm, which took place on the next day. Deer, when driven by hounds, do return to the same ground again (if not killed), and I have known of their returning the same night. I consider hunting with hounds or a hound (for I do not believe in using a pack) the best way to hunt deer, that is, the best way for the deer; hunting with other dogs or half breeds the next best, and still hunting the worst for the deer and the best way for the hunter to obtain venison and exterminate the game. A deer does not care very much for a good hound—that is, a good, steady barking, medium running dog—only just enough to keep out of his way; but in case a cur or half breed is used, dogs which are usually poor barkers or fast runners, or both, it may then be quite another matter. A deer is very much afraid of a still-running dog, because he does not know where it is, or how near to him it may be, and therefore he keeps on running until he has put an immense distance between himself and the supposed danger.

It is very much the same with still hunting; the deer are frightened away by the continued following of a danger of which they have no warning until it is upon them. Of course, if the deer is killed at first sight, there is no more following, neither is there any more deer, only more venison. "Cap Lock" only starts a deer twice, and then takes a new track. Why? Because the chances are so much better to come up with and kill a new deer. The other is pretty well frightened already, and if overtaken a third time, if not killed, may leave the country altogether. I know of one forest in this vicinity in which the deer have been nearly exterminated by still hunting. There is another section of country here where hounds have been used principally, and deer there are still quite plenty. Deer take to water ahead of the hound, and half to three-quarters of the time that is the end of the hunt, and the deer lives, not to fight again, but to be hunted again another day. I do not agree with "Forty-Four" in saying that three-quarters of the deer killed before hounds are killed by strangers, but I will allow that only one-quarter are killed by the parties whose hounds start the game, and also that another quarter are killed by members of strange parties, but I maintain that fully one-half of all deer started by hounds escape the hunter altogether. In regard to their being killed when driven to water, we have now a law in this State (Massachusetts) forbidding it. Quantities of deer have formerly been slaughtered in that way. I am not at all acquainted with the kind of dogs referred to by "Forty-Four" as hounds that remain wherever they happen to be when the hunt is over, and then have to be hunted up by their owner. I never have been troubled in that way. My hounds—and I have owned quite a number—have always returned when the hunt is over, generally coming to me in the woods, but always returning home before morning.

To me the hound's voice is very musical, and I have often stopped to listen and enjoy the music of their voices when there was no possible chance of their coming in my direction with any game; but perhaps the voices of the breed of hounds that don't come home may not be as musical, or it is barely possible that "Forty-Four" has not a musical ear. He certainly has not for the music of the hounds. Of course it must be aggravating to a still-hunter to hear a hound in full cry running through a piece of forest and driving away a deer (perhaps to safety) which, had it not been for the hound, he might have crept in upon an hour or so later, and killed. That is just what the matter is, that and the fact that you cannot kill more than half as many deer with a hound as you can if you are a good still-hunter. I consider killing one thing and hunting another. If a man goes into the woods principally to kill, why still-hunting deer is just the thing for him, or, as "Cap Lock" does, he might even practice on his sheep; but if he wishes to have a good hunt, I don't see how he can have it without his dog, and if he starts any game, whether it is killed or not, he has had his hunt just the same. But as regards hunting sheep—well, I never tried it, and besides we don't keep that kind of a dog.

I am very happy to say that I agree with both "Forty-Four" and "Cap Lock" on one point, and that is the use of the rifle. I have both rifle and shotgun, and would gladly use the former on deer, but cannot do so in this section, as it is against hunters' law, for the reason that owing to the great number of hunters in the woods during the deer season, and the much greater range of the rifle, and the liability of a rifle ball to be turned from its course by a limb or any obstacle, it is considered too dangerous to human life to use one. But I cannot see after all why there is any more sport in the act, or why it is any more manly, or why it requires any more skill, to drop a standing deer in his tracks with a rifle ball than it does to bring one down on the full run before a hound with buckshot. Do the still-hunting riflemen refuse many standing shots? We do not get them, as we seldom see deer standing within eighteen or twenty rods, which is too far for buckshot to go with any chance of hitting a target of that size.

One thing more in regard to hounds driving off all the deer. It does not drive out other deer when a deer is driven by dogs through a section of forest. Only the deer that find themselves followed by a dog run out, the others remaining, and I have seen different deer driven repeatedly from the same ground or section during the day.

Why, deer will allow a good hound—one that barks while working up a track—to work all about in their vicinity upon their track, and even pass around them, coming quite near, and not get up out of their bed until convinced that the dog is coming straight for them, and then they will circle once or twice before running off. BUCK SHOT.

I notice that much has been written in reference to running deer with hounds, and thanks to your kindness, I have heretofore been allowed space in your columns to express my opinion somewhat on the subject. I had prepared my last and rather lengthy argument against hounding deer when I chanced to notice in your issue of September 14 a solution of the whole matter, contained in a short communication by "Cap Lock," wherein he so nearly drove the nail which I was aiming at, that I concluded to burn my manuscript and heartily endorse every word in his communication.

The effect or result of hounding deer is evident and conclusive without argument. But conflicting opinions will ever remain as to the sport. That which is sport for one may not be so considered by another. Now we know that every man has a perfect right to express his opinions, and it is right that he should. My opinion is decidedly against hounding deer. I have hunted deer more or less for the last fifty years, but have never even fired a charge of buckshot at one. I will stop hunting when I become too superannuated to shoot deer with a single ball. If I had a fat steer, I would as soon put on a pack of hounds, run him three or four hours, and shoot him down with buckshot as I would a deer. I should suppose that it would add to the flavor of the beef about as it does to the venison, and the sport would be all the same, of course. ANTLER.

PINEY FALL, Tenn.

DEER-FLOATING IN MINNESOTA.

IT was years ago. I had not as yet used the "new-fangled idea" in shape of a gun, "which breaks in a moment and is mended in half the time," but I had used the breech-loading rifle, and liked it far better than the old style.

The time set for the "enterprise" was on a quiet night, in the dark of the moon and away deep in the wilderness, where the deer were reported to visit a small lake in order to crop the pond lilies and floating moss, and drive that well-known terror, the deer fly, away, where they might bathe in the cool waters and be safe from harm of any kind.

A young friend of mine, whose name was Charley P., planned the whole affair, and said he would "paddle me up alongside a real wild deer" if I could kill it. After the sun had cast his golden rays over hill and dale, and the last lingering ray was gone, a cheery "hello!" caused me to lay aside my paper and look up, thereby catching the figure of my friend.

"Are you ready?" said he, and on my replying in the affirmative, he started off at a rapid pace for the lake, your humble servant bringing up the rear. I carried a small 7½-lbs. Allen muzzle-loading, double-barrel shotgun of about 16-gauge, loaded with six buckshot in each barrel. Charley carried the "jack" and boat fixtures, and accompanied by his old "deer dog" we jogged along. At last the bank of the lake was reached, and what should I find for a boat but an old "dug-out," made by an Indian who had lived here but a year or two before, but had now gone to live at Leech Lake, Cass county, leaving his canoe behind.

I took a careful look at the old trunk and concluded it would be a mercy if we all three boarded her, that we did not get a good ducking before the night was over, and go home with fisherman's luck—a wet jacket. At last all was in readiness, the lamp in the "headlight" lighted, the dog stowed just in front of the paddler, and with a grand serenade of ten thousand gnats and mosquitoes we launched our frail bark on the bosom of the stilly lake. I say stilly, for not a sound broke the stillness; not a gust of wind stirred the leaves which hung in silent mourning; a mid-night darkness had settled o'er all. Were you ever there? If so, you know my feelings and participate in the grandest of all sporting excitements. I sat down in the bow, my gun being at full cock, and the light shining on its rib making it as light as day. The boat "tottles" and quivers with the load and seems decidedly "cranky," but my friend is a good, steady hand at the paddle, and I sit perfectly "easy" and squarely in the center. We are now fairly out. The glaring reflector throws a bright light all along the shore, making objects as plain as day. The noiseless paddle is doing its work, and the dog lies crouched, quivering in his narrow berth; the canoe glides along on the glassy water like Macgregor's, and—

> They oared the broad Lomond, so still and serene,
> And deep in her bosom, how awful the scene!

The occasional splash of some large fish, or the plaintive note of some wild bird frightened by the fitful glare of the jack lights; the stillness almost like the grave; the hundreds of weird looking objects—Indians, deer, bear, and even ghosts—the phosphorescent light of some decaying old tree in which I pictured a wild deer glaring at me, and my gun is quickly raised, but lowered again; the scraping of a rush on the bottom of the canoe causes me to start convulsively and grasp my trusty weapon; my heart beats violently and I am unable to quet it; I think everything. Am I nervous? We round a point and head the boat for a little bay. The stillness is fearful, oppressive. I look down into the clear lake and watch the monster fishes lying so still and near, and yet so far.

A snort ahead! Now the stamping of feet in the water is heard. I strain my eyes and feel the lock of my gun, but I see nothing. The canoe glides closer to the stamping feet, and I make out an object that looks very much like Hamlet's ghost, only this has four legs, and its eyes like balls of fire glare straight into my face, but he sees me not! The canoe is within twenty yards, and Charley swings the stern to the left, in order to take the recoil lengthwise, and I raise the weapon to my face. The light gleams along its bright barrels and I place the tip sight on the deer, just behind its shoulder. The boat comes to a halt, my nervousness leaves me; I press the trigger. A blinding flash and a thundering report ring out on the still night air and echoes from hill to hill and back again. The dog whines and is told to "go!"; he is overboard in an instant and is on the bank. A joyful bark announces "game!" We paddle quickly to shore and take the light and go up the bank, and there he lies in all his glory. Man has conquered; inquisitiveness has ruined him. A nice yearling and some of the finest jerked venison you ever tasted repaid us for our trouble. As I write my mind goes back and it seems as though I could taste that same venison, and in fact feel as I felt that memorable night, deer-floating. DELL.

VELOCITIES OF PISTOL BALL AND SOUND.—Light House, Saybrook Point, Conn., Oct. 6.—A boating party had encamped for the night on the shore, say a quarter of a mile from the light house. In the morning they were amusing themselves by practicing with a pistol. During the time they were shooting (it being low tide) I went into the water on the flats near the light house to take up a basket of oysters from a bed I had planted there, carrying with me a very heavy and thickly-woven willow basket. As I was bending down, picking up the oysters from the water with one hand, the basket hanging on the other arm, I heard a report of the pistol, then the "ping" or singing of the ball (and the thought flashed through my mind, "That ball is going a long distance"), then the "spat" of the ball into the basket close beside my ear, the force of it so far spent that it did not go through the basket, but remained sticking in the side of it. Thus it will be seen that I heard the report of the pistol, the "ping" of the ball, and had time to think before the ball reached me. The ball is conical, half an inch long, and five-sixteenths of an inch in diameter.—RICHARD E INGHAM.

TENNESSEE GAME NOTES.

AFTER my regal repast of bass, I got into the phaeton with my friend Marsh Pinkard, and away we drove across the suspension bridge to the White's Creek pike, and on it to the charming country lane which leads down to the creek proper. I wish I had words to express the lovely and elevating influences the beautiful scenery produced upon me. The fat sleek, cattle and horses grazing upon emerald clad pastures, or resting leisurely under the shade of majestic oaks and sycamores, fields of golden-hued corn, adorned with their rich orange-colored fruit (the pumpkin), birds singing, Bob White calling, doves flying, and the domestic *gallopavo* flitting around in the undergrowth, trees alive with chattering squirrels, each and every one vieing for the supremacy of cheerfulness and contentment. The country church bells were summoning the devout to their holy walks to worship and return thanks to Him who gave us all this world's goods besides the grand assurances for the hereafter. Dear little children, on ponies, in char-a-bancs, and on foot, dressed in their gayest Sunday attire, were skipping gayly along, inspired by, if unaware of, their delightful surroundings.

Soon we reached the creek, and after crossing the first ford came into a more densely wooded portion of our drive, and where game began to be more abundant. Among the bluffs which at intervals occur along the meandering creek, innumerable foxes have their holes, and once started, the adjacent country offers the finest opportunities for rare sport anywhere to be found. The cornfields swarm with doves, fieldlarks, and occasionally wild turkeys. Squirrels by the hundreds congregate in the vicinity of the same places to feast on the bountiful corn harvest, while rabbits and quail are scared up from every thicket of briar patch met with. Possums are numerous, but they are scarcely worthy the name of game, and are seldom seen in the daytime.

Col. Akers says that he owned a dog not long ago which had the novel way of running his tail down into a possum's hole, and when the animal caught hold of it he would pull him out. This is a new departure in possum hunting, which I will not swear to, unless I see in the FOREST AND STREAM a similar experience from other game contributors to its columns.

On our way home we passed the house in which the notorious Frank James lived for two years. Now that he is in custody there are many who lived in the neighborhood of where he lived who have vivid recollections of him, Jesse James, and Dick Little. He was clever enough, however, to escape detection, and now laughs at the apparent stupidity of the citizens and the utter worthlessness of the detectives who were after him. J. D. H.

PENNSYLVANIA GAME.—Notwithstanding the early part of the rail shooting season proved poor, take it all in all a number of birds have been killed. We have had no extraordinary run of big scores at any of the grounds, but since the flight of birds came on, which was later than last year, good steady shooting has been had, and I doubt if any one will complain if he counts the number of rail he has boated during the season. The overflowed meadows on the Delaware and Schuylkill still afford attraction for the plover. In some places the corn is under water. There have been more blue-winged teal shot on the Delaware this summer than for many years. Snipe are now being shot on our marshes, but there is so much open and uncovered feeding ground for them that they are wild and will not allow approach. Reports reach me that quail will be very plentiful this season in the Cumberland valley, Pa. Especially in the county of Franklin, near McConnellsburg, I am told they are numerous. Wild turkeys likewise have bred well during the past summer in the same section, but on the more elevated portions, and two or three large droves have already been seen at the foot of McConnellsburg Mountain. A young Mr. Stinger, of the last mentioned place, is the most successful turkey hunter of this section, last year seldom going out without killing one or more, and on one occasion four. No doubt he would be pleased to show any sportsman who has proper credentials where the wild turkeys live, for he is not a professional. I am told just now the ruffed grouse fairly throng the lower hillsides there, attracted thither by the wild grapes which are now ripe. The early appearance of snowy or Arctic owls in upper Pennsylvania, where three or four have lately been killed, would indicate we are to have a severe winter this year. It may be best not to attach too much importance to their coming to us so soon this season, when last year but few, if any, were shot; but I am always inclined to argue that the appearance of a more than usual quantity of ice-loving birds and fowl would indicate intense cold weather on the approach in the far north. When brant appear, be on the lookout for the black-breasted variety among the flocks, then, indeed, we shall have biting frost and closed water courses. An early migration from the north of all the goose and duck tribe would also point that way, but I am no prophet. I hope for an open winter for the quails' sake.—HOMO (Philadelphia, Oct. 14).

THE FLESH OF THE MUD-HEN.—Chicago, Oct. 13, '82.—It seems that several of your correspondents have been carrying on a wordy war against the defenceless mud-hen. I therefore feel myself obliged to come to the front and defend this bird. "B. H. P." especially berates them, saying that they are worthless for the table. I know many people who prefer them to ducks as being sweeter and entirely destitute of the oily taste of ducks. I have eaten them myself, and although I do not think them quite as good as ducks, still they are first-rate when rightly prepared. I never before heard of anyone getting sick from eating mud-hen. Another correspondent claims that they are not gamy. I see little difference between approaching them and doing the same with ducks. One is as hard as the other. I never got nearer than sixty yards to a flock. It is also very handy to always have them to shoot during the middle of the day while waiting for ducks. If what "B. H. P." and others say is true, the mud-hen here is different from others.—BLUE WING.

QUAIL SHOOTING WANTED.—Kingston, Ontario, Oct. 10.—Will any of your correspondents kindly imform me through the medium of your journal, where self and friend could get some really good quail shooting in November? It would be necessary that we should be able to engage the services of a native sportsman with one or a brace of good dogs, as neither of us own setters or pointers broken to quail. The man to show us the ground and hunt his dogs. Please state what such a man and his dogs could be hired for per diem, and give full directions by what route to get to the place, and where we could be boarded and for how much, while there.—QUAIL.

COOT SHOOTING IN NEW ENGLAND.—New York, Oct 12.—In the last number of FOREST AND STREAM "M. H. Able" asks if the "coots" which the Eastern gunners work so hard to get are the same as the mud-hens of the Western States. One day's shooting in line would convince our friend that he was not shooting mud hens, but that big, sturdy seaducks, that were worthy of his lead, were carrying off ounces of his No. 4s, just for ballast. The ducks which are called coots along the coast consist of three or four species. The male surfducks are called skunkhead coots, and their wives and children gray coots. The velvet scoter is known as the white-winged coot, and the American scoter is the butter-billed coot. The eiders, also, are dragged into the "genus coot." In no sort of shooting do hunters ever get aroused to so high a pitch of excitement as while gunning for these same seaducks. The birds are always abundant and are constantly on the move from one feeding-ground to another. The fresh ocean breezes key the hunters up to the last degree of manly vigor, and as the light boats ride the long swells as gracefully as a swallow floats through the air, the boom and roar of the surf among the rocks on the shore inspires the gunners with the freedom of the sea itself. The boats are swinging on their long anchor-lines twenty rods apart; the ducks are flying swiftly through between the boats, and every moment the heavy ten-bores are ringing out loud and clear, and the puffs of thick smoke are borne rapidly away on the breeze. Here a whitewing, the leader of the flock, stung with the No. 4s, halts and falters and plunges headlong into the waves; there a skunkhead, proud in his speed, wilts suddenly high in the air—down, down, down he comes, and the spray flies in every direction as he surges heavily into the water, while a few feathers float back on the breeze. Men are shouting, ten-bores booming; wings are whistling, feathers flying; coots are splashing, bounding, diving—while the rush and the roar of the breakers in the rocks keep time to the riding of the boats.—MARK WEST. [Additional local names for "coots" along the New England shore are—for the velvet duck, "bell tong" coot, and for the black scoter "copper-nose." We quite agree with what our correspondent says—coot shooting in line is most exhilarating and exciting sport.]

GAME PROTECTION IN MICHIGAN.—East Saginaw, Oct. 11.—*Editor Forest and Stream:* I have excellent reports of the work of our Game Warden, C. W. Higby, as you doubtless remember. The State Association hired him to act as missionary to the heathens that regard no law relative to our game, and in the past three weeks he has organized sixteen game protective clubs, and prosecuted two different parties for having red-coated deer hides in their possession. In one of these prosecutions the defendants were convicted and in default of payment of fine were locked up. We have no sympathy for them, as they were killing the deer merely for their hides. We are confident that the proper way to enforce the game laws is to educate the people to their usefulness and the forming of clubs in the small villages of the State is rapidly doing this. Mr. Higby says, and his labors prove it, that he can form three to five clubs a week in the northern part of the State. All we now lack is money to keep the men in the field. Game is fairly plentiful this autumn, deer plenty, ruffed grouse are reported scarce in this section. The few birds shot seem to be old cocks. But quail—our colin—are in millions everywhere, the fields and stubbles are alive with them, and the shortening of the season from Oct. 1 to Nov. 1, will help keep them plentiful. —WM. B. MERSHON, Secretary Michigan Sportsmen's Association.

MASSACHUSETTS.—Plymouth, Oct. 14.—The change of weather the past week caused a great flight of coots along our shore. On the 12th and 13th, although the sea was very rough, many boats were in line at Brant Rock and Manomet Point, just north and south of Plymouth, and obtained from ten to twenty-five per boat. I notice the inquiry of your correspondent at Sandusky as to the identity of the coot of the seaboard with the coot of inland waters. I would say for his benefit that his coot or mud-hen, *Fulica americana*, is the only coot proper, the so-called coots of the coast comprising three species of sea ducks, the velvet (*Melanetta velvetinus*), the surf (*Pelionetta perspicillata*), and the scoter (*Œdemia americana*), called by gunners respectively whitewing, skunkhead and coppernose coots.—F. C. BROWNE.

SQUIRRELS IN ILLINOIS.—Charleston, Oct., 1882.—Hunting has been very poor here during the last four weeks, on account of the dry and hot weather. John Cartright has made the largest bags that I have heard of lately: On the 24th ult., twelve squirrels; 29th, nine squirels, and on the 6th inst. nine squirrels. Cartright says that the squirrels are fifty per cent. less than last year, quail twenty-five per cent. less.—FOX SQUIRREL.

SOUTHERN GROUSE.—Our correspondent "Wells" tells us that one of the grouse killed on a recent hunt, described in previous issue, weighed one and three-quarter pounds; a young one weighed one pound. An examination of the craw showed that they were feeding upon what are called gooseberries.

NEW YORK.—Hammondville, Oct. 14.—Ruffed grouse are more plenty in this section than for some years, and one may secure a fair bag without very hard work.—M. H. T.

PUBLISHER'S DEPARTMENT.

A New York man, desiring to commit suicide, shot at himself four times without hitting. He will probably be given a position on the American Rifle Team in the next international shooting match.—*Norristown Herald.*

"I am spending $500 in a sporting outfit, and am buying all my things of the FOREST AND STREAM advertisers." So writes an Indiana correspondent, under date of Sept. 18. This only shows that it pays to advertise in the right place, and that the FOREST AND STREAM is that place.

THE RAZOR-BACK HOG.—To the traveler through Texas one of the strangest and most peculiar features of landscape is the razor-back hog. He is of Swiss cottage style of architecture. His physical outline is angular to a degree unknown outside of a text-book on the science of geometry. The country razor-back prowls around in the woods and lives on acorns, pecannuts, and roots; when he can spare time, he climbs under his owner's fence and assists in harvesting the corn crop. In this respect he is neighborly to a fault, and, when his duty to the owner's crop will allow, he will readily turn in and assist the neighbors, even working at night rather than see his crop spoil for want of attention. Crossing the razor-back with blue-blooded stock makes but little improvement. The only effective way to improve him is to cross him with a railroad train. He then becomes an imported Berkshire or Poland-china hog, and if he does not knock the train off the track, the railroad company pays for him at the rate of $1 a pound, for which they are allowed the mournful privilege of shoveling the remains off the track. The ham of the razor-back is more juicy than the hind leg of an iron fire-dog, but not quite so fat as a pine knot.—*Exchange.*

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN OCTOBER.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Grayling, *Thymallus tricolor and T. montanus.*
Blue-backed trout, *Salvelinus oquassa.*
Land-locked salmon, var. *sebago.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius.*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca fluviatilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, 2 species.
War-mouth, *Chænobrytus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bream, Sunfish, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga anitis*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscyon regalis.*
Smelt, *Osmerus mordax.*
"Sea trout," *Cynoscyon carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

An ingenious Spaniard says that "rivers and the inhabitants of the watery element were made for wise men to contemplate, and fools to pass by without consideration." And though I will not rank myself with the number of the first, yet give me leave to free myself from the last, by offering to you a short contemplation, first of rivers and then of fish, concerning which I doubt not but to give you many observations that will appear very considerable. I am sure they have appeared so to me, and made many an hour pass away more pleasantly, as I have sat quietly on a flowery bank by a calm river and contemplated what I shall now relate to you.—*Izaak Walton.*

THE FISHERMAN'S WISH.

I KNOW 'tis no use wishing,
But if I had my wish,
I would not be a-fishing,
But I would be a fish.

For when you think you've caught her,
And all but touch her nose,
A splutter in the water,
A plunge and off she goes

To live at "rack and manger"
Upon the deep sea-ground,
Without the slightest danger,
Or dread of being drowned.

Whereas, some poor old sinner
Like me, who leaves the shore,
And strives to get a dinner
From ocean's finny store,

Suppose he simply doubles
Across the bows; oh, dear!
He splutters and he bubbles,
He feels so jolly queer!

He gasps, and clings, and clutches
At nothing in the dark,
And everything he touches
He's sure must be a shark!

Before, in my opinion,
They blessed such chaps as me
And put to our dominion
The fishes of the sea.

Forseeing what we wanted,
And where our mission fails,
They really should have granted
A set of fins and scales.

So that we could have followed
Our silly subject things,
And caught, and killed, and swallowed
Them up like *real* kings. RED FISHERMAN.

GALVESTON, Texas.

TIM POND AND THE SEVEN PONDS.

ON the 15th of August I started with my family for Maine, arriving in Mt. Vernon on the 16th. I spent the next few days fishing, boating, riding and in forests and fields, and gained in health daily. On the 28th my companion of last year, Simon, with his private team, started for the ponds. The weather was favorable. The scenery was not less beautiful because we had seen it before. We had a gay chat and Simon cracked his best jokes. We spent the first night at a farmer's in Kingsfield. At noon next day we arrived at the Smith Farm. I need not say we were hungry. Old Mount Bigelow, Saddleback, Abraham, Kennebago and others in sight seemed to give us a heartier welcome through the clear air than ever before. We put our horse in the stable, then partook of a hearty dinner; after which our tackle and guns were placed on the two-horse buckboard wagon, and driver Rackliff started with us for Tim Pond. The law still protected the ruffed grouse; and as I was not yet very strong, I rode nearly the whole distance, and from the condition of the road and the careful reining of the driver, it was a refreshing ride of nearly three hours to the new cabin of peeled spruce logs that Edgar had prepared for us. We sought to entice trout that evening, but had not great success. After tea we had a merry hour or two with old friends from several States. Next day was hot, not a cloud or ripple, and all was right for large strings, and large strings we all caught.

Friday the driver started quite early with us for Seven Ponds. When we had gone a mile or two up went a flock of partridges and we knocked down seven. Further on we found more grouse; some we got and some we missed. Soon after one o'clock we reached our cabin, put in order for us by Supt. Lambert. Here was our good home for one week. We had trouting to our heart's content, principally on Big Island and L. ponds. During the time we visited Rocky Pond and viewed the dam and other work by beavers. One day we took the trail from Big Island to Little Norwest Pond, then a short trail to Big Norwest Pond. Arriving on its shore we were met by Mr. Haines, of the firm of

Haines & Crosby. He took us to their cabin and entertained us liberally for the night. I did not take my tackle, but Mr. Crosby kindly caught us a fine string. We shot partridges in the vicinity; and so time sped quickly as we fished, hunted and rambled and feasted on the view of water and mountains till a week had fled, and we reluctantly started on our return. Various excursions are executed by the robust sportsman to Beaver Pond, Alder Stream Pond, etc. The trouting has been all we could wish, though much of the weather has been warm, bright and calm. Guides and drivers told us there were many broods of grouse to be seen early in July, but when September came but a moderate number could be found. If "chicken cholera" took them, as your correspondent suggests, why did we not see the feathers of the dead?

During the season a large number of guests have visited these resorts. Many, like myself, for the double purpose of sport and regaining health. More grateful persons I never saw than those who came in part to be cured of hay fever. They all soon found relief and wished the world to know it.

The largest number who registered at the Seven Ponds in one week was forty-five, at Tim Pond fifty-six. Several were there for the fourth, fifth, and sixth time. C. W. Smith, Esq., of Worcester, was there, taking with him fourteen friends as his guests. Senator Hoar was in the party. They spent much time sight-seeing and ascending Mount Bigelow, and I, on my return, imitated their bold example. In five weeks from the time I reached Maine I was not more weary than others of my age. The 15th of September we were back to Mt. Vernon. I was seven pounds heavier and so much stronger I could tramp in the woods all day and eat three or more square meals. Others gained as much. Some invalid sportsmen have the right idea.

During the year much labor and money has been expended on boats, roads and cabins. Smith is to continue the good work during autumn and spring. Another class of sportsmen are there now with their rifles for deer, caribou and moose. I had good sport at Mt. Vernon. It is a pretty country village, with numerous ponds in and around it. I caught pickerel, white perch and black bass from them in fair numbers. The village has a hotel. Now I am home again and ready for hard work, as I have not been for more than a year. J. W. T.

New Britain, Oct. 10, 1882.

LIGHT OR HEAVY RODS.

In a recent article in the New York *Journal of Commerce*, Mr. W. C. Prime writes of light and heavy rods, and from his article we extract the following: The question, which is constantly put is, "What should be the weight of a fly rod?" This is a fruitful subject of discussion, and much has been written on it. The controversy has been between "light rods" and "heavy rods." I frankly confess I cannot take either side of the dispute, because I do not know at what weight the distinction begins, and therefore do not know exactly the difference between a light and a heavy rod. Since the middle of May last I think there have not been more than two or perhaps three days (Sundays always excepted) on which I have not taken more or less fish with the fly, sometimes casting only a half hour of the day, sometimes spending the whole day on the water. I have used during this time various rods, according to circumstances, weighing all along from five ounces up to twelve. I suppose the arbitrary distinction between light and heavy comes somewhere along in the list of six or seven rods which I have used, and which I ordinarily use.

For the angler who goes a fishing once a year for a week or two, and does not wish but one rod, I fancy the best advice is to buy and use a seven or eight ounce rod. But if he have opportunity, let him try lighter and heavier, and then adopt and use just what suits him best. It is absurd to be dogmatic in such matters. You can catch minnows with bean poles if you know how, and you can kill five-pound trout with a five-ounce rod if you know how.

Lovers of very light rods love them very much. There is great satisfaction in using them, and, in skillful hands, they will do heavy work. The theory of angling is that the rod is only a stiffening of the line, up to the hand, enabling you to manage it; and the reel is a means both of bringing the fish in and of allowing the line to run free and prevent a sudden strain of the fish on the hook. The same gentle pressure may be applied with a heavy as with a light rod, if the reel is properly used. The bend of the rod is the application of a spring which keeps the line "taut" and holds the hook in its place gently without such force as to tear it out.

Light rods will not stand steady and constant angling from day to day. If one expects to take large and strong fish on each successive day of fishing, he needs either a fairly heavy working rod, or two or three light rods. This is specially true in wet weather. Three days' fishing and taking black bass, in rain, will ruin a six or seven ounce rod, unless it be carefully straightened by hanging it from the tip with a weight on the butt or in some other way, and allowed to dry while the fibre recovers position.

In brief, the proper weight for a rod depends on what you want to do with it. A few days ago I was casting for trout where it was necessary to get out an occasional cast against the wind. I was using a five-ounce Norris rod, and it worked delightfully till the wind became so strong that it became useless in my hands. Perhaps a better angler could have put his flydown accurately against the gale with that rod. I could not, and so I went ashore and got a seven and a half-ounce rod, wherewith I could and did accomplish what was desired.

For a new beginner it is advisable to purchase a rod weighing eight or nine ounces, and let him learn to cast with it. He will be sure to smash it. That cannot be avoided. Therefore, it is a waste of money to start him with an expensive rod. One who has learned to cast with a nine-ounce will easily use a five or six ounce afterwards, while on the contrary, persons accustomed to very light rods, find difficulty and fatigue in using heavier ones. It seems to me that every one who goes a fishing frequently, or from year to year in various waters, should have two rods, one not over seven ounces, and one not less than nine in weight.

There is no mistake about the great delight of using a very light rod in some weather. Of a still day, on a lake, with light rod, light line, gossamer leader and the smallest gnats, one may enjoy sunshine, air and skillfull angling to his heart's content. But if one be fishing a rapid river, and has struck a two-pound trout in the rush of the stream with a five or six ounce rod, he will, if he loves his little rod, wish he had left it at home that morning.

For steady use no one need think of buying a cheap rod. With rods as with guns, you may, by buying four or five cheap ones, hit on one which is good and lasting. But if you wish a useful, trustworthy article, go to a first-class maker and pay a first-class price. Some men object to paying a lawyer, a doctor, a mechanic, an engineer, or any one, a high price for his reputation. This is nonsense. The sensible man knows that the reputation entitles the high charge, and guarantees the purchaser or employer. I count eleven trout and bass rods in my rod case or hanging in the cabin. These have cost variously from $25 to $65 each, and the higher priced rods have done ten times the work of the cheaper. I believe that the ordinary cost of a first-class trout rod, by a maker of reputation, now-a-days is from $25 to $40, according to quality, extra pieces and finish.

CAMPS ON THE WAY.

II.—AT THE PICTURED ROCKS.

"But in vain, for Pau-Puk-Keewis,
Once again in human figure,
Full in sight ran on before him,
Sped away in gust and whirlwind,
On the shores of Gitche Gumee,
Westward by the Big-Sea-Water,
Came unto the rocky headlands,
To the Pictured Rocks of sandstone,
Looking over lake and landscape."—*Longfellow.*

On our return to Peshtigo, the voice of business called George home, while Ed., Oscar and I kept on our journey. For many a season I had thought of a visit to the upper peninsula of the Badger State, and now I had in my pocket a ticket calling for one "first-class passage" over the "D., M. & M. Railroad," which, opened to the traveling public not yet a twelvemonth, ran from Marquette on Lake Superior to St. Ignace at the Straits, a distance of 120 miles, passing through the region of all others I most desired to see.

At Marquette we stopped over a couple of days to let the boys see the sights, to get supplies, and see the railroad officials and get stop-over privileges. The sights were seen, I suppose, the supplies bought, I know, and after an interview with Mr. Thomas McKeown, Gen. Superintendent, and Mr. Frank Milligan, Gen. Passenger Agent, our tickets were indorsed in such a manner as to allow us to stop off wherever we desired. These railroad officials not only responded to our wishes in this particular, but they gave us valuable information concerning the country we were to pass through, and I was afterwards led to think that the friendship and kindnesses received at the hands of others after that was in some measure due to their good words.

On the 3d of August we left Marquette for Munising station, forty-two miles distant. An Train was one of the places at which we had intended stopping, but a further inquiry had led us to believe that while that place would give good deer hunting on the Au Train Lake a short distance from the station, and also splendid bass fishing, yet for trout we would have a tramp through the woods of an uncertain distance; and so as we were not caring for deer or bass just then, we concluded to pass the place by.

The Detroit, Mackinaw and Marquette Railroad runs through a region that was peculiarly interesting to me. Leaving Marquette the track hugs the Marquette Bay shore for several miles, when it takes a straight cut for the lake at Au Train, and thence on to Munising Station, which is four miles from Munising Bay, the site of old Munising, which is the place where we were to embark for a sail to the Pictured Rocks. For ten or fifteen miles after leaving the blue waters of Marquette Bay, a series of narrow and parallel ridges, from thirty to forty feet in width, with alternating depressions between of a like width, resembling ancient and dry canals, was a conspicuous feature of the landscape. As our train sped eastward these ridges and canals became wider, the one higher and the other deeper; and although ancient pine trees were growing here and there amid the thickets of jack pines, thus testifying in some degree to the great length of time since the ridges have been cast up, still it was evident that at some period more or less remote the lake had done this work. The curious feature of the matter was the symmetrical system of canals and ridges left by what must have been the great lake's subsidence or a grand continental upheaval, or both.

After going beyond the canals and ridges the road enters a densely wooded region, and in some places a peculiarly stony one. At one point in particular the earth was strewn with broken and unworn stones, from the size of a campkettle to a tent, and so thickly strewn were they as to suggest an Almighty hand sowing them broadcast. What great cataclysm rent the "everlasting hills" asunder and hurled the stony fragments broadcast over this part of the earth man may not know, but it cannot be otherwise than that the concentrated powers of nature have at some time in the past burst forth and sown the plain with a hail of broken rock.

Amid these stones, and over and even on them, was growing a forest of large and small trees, and to an inhabitant of the alluvial lands of the Mississippi Valley it was curious indeed to see how the trees had sprouted from the thick, damp, mossy covering of rocks, and as they had grown in size had sent their roots outward and downward and were now firmly planted in the earth below.

At Munising Station we had to await the return of a teamster from old Munising, who set out for that place immediately on our arrival, and we did not reach the latter shore until about half-past three o'clock. Old Munising was once the seat of flourishing iron furnaces, but the work has long been suspended, and the few inhabitants of the place look to the fisheries principally for their support. Fifteen or twenty houses, all of which still belong to the iron company, built at random without reference to the North Star, but generally facing the winding road, house the good people who make up that town. A quarter of a mile or perhaps more from the village of the white people is another Munising, the Munising of a band of Ojibwa or Chippewa Indians, and the village contains about fifteen wretched bark-covered cabins, which house about seventy redskins. I took a stroll on my return trip through this village; and while their cabins to an outsider appeared to be altogether insufficient to afford a comfortable shelter to the inmates, yet the most distinctively Indian aspect of the place was the undisturbed condition of the smaller timber and underbrush that grew in the town. There were no streets, no alleys, nothing but winding footpaths leading through the brush from cabin to cabin; and while every villager could hear every other villager's dog bark or rooster crow, not one could stand in his own doorway and see another's house. The village was in ambush.

In the wagon that carried us over rode Mr. W. J. Palmer, a genial North Carolinian who has wandered up to these high latitudes and is doing service as some sort of general agent or chief clerk of a lumber company, with his headquarters in old Munising. Mr. P. at once entered into the spirit of our little enterprise, and, characteristic of him, not only gave us valuable information, but set about planning ways and means to help us on our journey. In accordance with a suggestion of his, we determined to take a boat at once and sail down to Miner's Creek, six miles east of Munising, then dismiss our boatman and await the arrival of Mr. P. himself, who, with a party of friends, would make the tour of the Rocks the following week.

While at Marquette we had heard a great deal about the dangers attending the navigation of Lake Superior in the vicinity of the Pictured Rocks, and quite a number of persons had advised us to go in a boat sailed by an Indian, for the reason that Indian sailors were far less reckless than their white brethren, and accidents consequently less apt to happen to them. An accident had happened to a sailing party a Sunday or two before we reached Marquette, in which a Detroit young man had been drowned, and with that calamity fresh in our minds we felt doubly anxious as to the character of our captain; and so, when Mr. Palmer suggested Captain Jim Kish-ka-tog, who was the owner of a good boat, as a proper person to carry us to Miner's Creek, we gladly accepted his suggestion, notwithstanding he threw out certain hints indicating on his part a total lack of confidence in Indians in general.

In due time Captain Kish-ka-tog was found, when Mr. Palmer told him we wanted to go to Miner's Creek, and asked him if he could take us. Jim, who was of short make and rather "bench-legged," was looking meditatively at an adjacent hilltop during the Captain's discourse, and without lowering his eyes he drawled out in answer to his question, in a tone decidedly African, "Ya'a-a-s," in which he sounded the *a* as in hate.

"Well, how much will you charge them?" asked Mr. P.

"Four dollar," in the same soft voice, and the eyes still fastened upon the hilltop.

"Why, Jim, that's too much, isn't it?"

"No-o-o!"

Then Mr. P.'s look of surprise gave way to one of disgust, while Ed., who never failed to keep a prudent lookout at the purse-string, fairly snorted his dissent from the opinion of his red brother.

Mr. Palmer had told us before we met the navigator that two dollars a day for man and boat was the price commonly paid by strangers, and, with this knowledge at hand, I gave the rascal to understand that I wanted a private chat with him, and so we stepped to one side. "See here," said I, "there are but three of us and we have a light load, and we want you to take us to Miner's Creek, which will not take you, at the outside, over half a day, and we will pay you a day's wages—two dollars—if you will take us."

"Ya-a-a-s," said the soft voice, while the eyes were once more fixed on the crest of the neighboring hill.

"Well, you'll take us to-night for that, will you?"

"Ya-a-a-s."

"Well, go and get your boat at once," and away he went. And I wonder yet whether he would not have gone the same, had I said one dollar instead of two.

In a short time Jim rowed up to the dock, and after we had bought a three-pound whitefish, nicely cleaned, for ten cents, we went aboard the craft and gave the stern to the town.

The time consumed rowing down the creek was nearly four hours, for the wind was contrary, but there was much to occupy our attention on the way. A mile below the village quite a cluster of old and dilapidated houses stood upon the lake shore, and we learned that there was a mineral spring there, and that once upon a time a man with "speculation in his eye" had thought to found and build up a summer resort here, and to that end had built these houses. But guests did not come, and his enterprise fell through. A party of ladies and gentlemen from Chicago had taken possession and pitched their tents in the lawn about the old houses, and were having a merry time of it.

A mile or so further on we passed the Indian graveyard, on a sandy ridge near the water's edge, and from our places could see the little white flags waving at the newly made graves. Jim would not or could not explain the meaning of the flags, which is evidently a survival of savagery. Longfellow alludes to this Chippewa custom in the lines;

"Flags on graves and great war captains
Grasping both the earth and heaven."

After rounding Sand Point, which was half way to our destination, the white cliffs—the outlines so to speak of that wonderful range of sandstone—the Pictured Rocks came in to view. Stretched along the shore as far down as the inequalities of the shore line would admit of us seeing, rose from out the water the rocky wall of Potsdam sandstone. At our request the boat was rowed in close to the wall, and a good view was thus afforded us. The first of the series of charming and oftentimes startling views was a huge buttressed wall, that rose sheer from the water's edge about eighty feet high, and which at a distance challenged the belief that it was the remains of a Cyclopean structure of a long past age. Succeeding this came a long line of rocky wall, the top of which was covered by a growth of orchard-shaped trees, which at irregular intervals sent trailing down the wall side long vine-like branches; and at a distance of half a mile away the illusion was perfect that there stood a part of a great wall, to attest the site of a great city that has long since fallen and disappeared from the earth. This city-wall like structure extends a mile or more, and is succeeded by a series of cliffs rising perpendicular a hundred feet above the water. In these cliffs, niches, recesses and narrow shelves often appear at varying heights, where grasses, flowers, and even shrubs find root, hold and live. At their bases at unequal depths through the clear, blueish colored water, may be seen huge blocks of sandstone, which have fallen from above and lie in confused heaps on the bottom of the lake. Along the water line great holes, caverns, grottoes, and arched ways, have been cut in the walls by the ever restless waters, and when a "sea is on," the deep boom of the waves as they beat into the cavernous depths sound like Old Ocean's roar. The next and last object of interest before reaching Miner's Creek, is Castle Rock, a sharp headland a hundred feet high, which has been rounded, cut and carved until at the proper distance it presents a striking resemblance to a mediæval castle with its towers, bastions and battlements.

At Miner's Creek there is a gap in the "rock-ribbed hills," where the land drops down to an altitude of twenty or thirty feet above the lake's level. This gap is triangular in its general outline, each of its three sides being a little more than a mile in length. Along the lake side extends as pretty a beach of white sand as one ever saw. On the west side

Miner's Creek meanders, backed by a cliff, rugged and impassable in some places and easily scaled in others. The remaining side is bounded by a rock wall of great height and which cannot be climbed by deer except in the gorges worn by tiny streams of water. At the angle furthest from the lake and where Miner's Creek comes in, the two ranges of hills are prolonged inland from one and a half to two miles, and lying in the valley between is a lake a half mile or more long and nearly as wide, and at the angle where the two ranges meet, Miner's Creek makes a leap over the cliff, and falls about sixty feet. The lowland comprised in the triangle, and also in the prolongation of the two hill ranges inland, was once a part of the lake. The evidences are indubitable that at some period in the past the moss-covered cliffs that bound this lowland, were cut and carved into their present shapes and outlines, when the waters of Lake Superior had a level of not less than fifty feet higher than the level now, and perhaps a hundred. We made our camp not far from the lake shore and where the sounding of the waves could ever be heard. The triangular tract of land I have described was made up of white sand, which had quite an uneven surface and once had borne a fair growth of merchantable pine, which however, had been lumbered off, but it was still covered with jack pine, thickly in some places and thinly in others.

As soon as we were landed Captain Jim left us for his home. I had been told that there was splendid trout fishing in the pool at the foot of the falls, but no one had thought it necessary to tell me how to reach the falls, and now, when I asked Jim, he said there was a trail leading to the place. The liar! What a time I did have finding the falls! I set out early the next morning, and, taking the trail, I followed it till it ended in the creek a mile or more from camp, and, though I listened for the sound of falling water, no other sound came to me but that of the waves of the great lake dashing against the sandstone cliffs. After a search in vain for a trail leading up the stream, I undertook to make my way up through the brush, but after a half-hour's effort trying to force a way through a cedar swamp I changed my mind, and concluded to cross over and go down stream in search of the falls. No one had told me more than that there were falls, and for aught I knew a mate to the one a couple of hundred yards from the mouth might be at no great distance above. Wading, scrambling through brush, and crawling through cedar thickets, another hour or so failed to bring to light any falls, and so I left the creek and ascended to the plain, thinking to return. But as I came to the trail, as good luck would have it, some white men and two Indians were passing, and while I was very much surprised at the apparition, I have no doubt they were still more so, for now I come to think of it I must have cut quite a comical figure after my adventures in the brush thickets during the morning. After an exchange of civilities the stereotyped inquiry came, "What luck?" Whereupon I not only said none, but told them of my unsuccessful search for the fall, and the upshot of the matter was they were on their way to the place I could not find, and to my offer to accompany them they assented. Their Indians, after a short search, found a boat into which the three gentlemen, who were Chicagoans, and myself entered, and by dint of a good deal of paddling by all, and some wading and pulling and pushing by myself, we finally made our way up the creek and out into the lake, and running through that we came to the inlet, where we left the boat, and one of the gentlemen, who carried a gun, and the other two and myself, went on up stream afoot in search of that fall.

While forcing our way up the creek, I got out several times to help the boat over shallow places, and one of these times I handed the rod I carried that day, a plain Oconomowoc mounted with a No. 3 Kentucky reel, to one of the gentlemen to hold, and noticing the reel for the first time, and, no doubt, struck with my unkempt appearance as I emerged from the brush a short hour before, he was lead to say to his companion in a tone not intended for my ear, but nevertheless loud enough to receive it all the same, "Why, he has a Kentucky reel!" And no doubt he queried within himself, "How in this world did that gray-muzzled, pot-bellied old duffer ever come by that reel anyhow?"

Well, we found the fall, and a beautiful one it was, with a round deep pool at the base of the cliff, and being a little piqued at what I imagined to be the insinuation when the reel was looked at and which I altogether justified, I nevertheless "took in the situation" at the pool, got the course of the sun and selected my position accordingly and began fishing at the same time my companions did. At any other time I should have deferred fishing until the beauties of the fall were taken in, but this day I fished, and for forty minutes the sport was excellent. I took seventeen trout during the time, some of which ran up to fourteen ounces, and though I didn't count the fish my comrades got, I thought I was getting as many as both. And when in our return I inquired the number they had taken and was answered, "I have not counted, but I think both of us have about half as many as you," I could not help but think, "How are you, old pot-belly!" Ah! but the heart of man is desperately wicked. Those gentlemen kindly let me be of their party and thus helped me to that which I had not been able to help myself, and when my outlandish appearance excited their curiosity, and justly so, as I was ready to own. I was, nevertheless, enough piqued to be glad when they said I had twice as many fish as they two. But I have repented me.

D. D. BANTA.

COLORADO TROUT STREAMS.

DENVER, Col., Oct. 4, 1882.

I have just come back from a hasty, eight-day run to Middle Park. Took my wife and a niece along. Latter had never seen mountains within speaking distance before, and to say that there was one young lady wild with delight is putting it very mild. It was worth the journey alone to witness her enjoyment. But aside from that we had such grand, glorious days, and beautiful nights; such delicious, bracing, crisp air; and the great slopes were so beautiful in gorgeous autumn dress, that the trip was a perpetual delight. And then I had two fragments of days trouting, the first, except one day, in four years.

The first was part of an afternoon with Barney Day, a typical frontiersman at whose cabin we were guests, and the place Grand River where it courses through his meadow in the western edge of the Park. He had wading boots, but I had not, so he mounted me on Blucher, his fishing bronco, and I made my first cast from horseback. We caught only ten trout, but they weighed fourteen pounds, the largest three and a half, taken by Barney; then two of two pounds each; the others about a pound a piece. No small ones were to be seen and the visible large ones were not numerous. Water clear as the air and cold as just melted ice. My horse stood like a rock in any kind of water and at any depth I saw fit to put him.

The next day we fished up the river, as I had to move homeward, both on horseback, and Barney with his four-year-old boy behind him. We got only six fish, but they were beauties of about two pounds each. We wasted a good deal of time trying to take some three or four pounders out of a deep swirling pool, but they viewed all our tricks and devices with disdain, and only one of the smallest came out to my rod. They would not take a fly of any kind. Little fall grasshoppers were the best lure, and helgramite next—the latter found under rocks at the edge of the water.

Two days later we went to Grand Lake expecting to have a day's sport there, but daylight brought a driving snow storm, and as all prospect for out-door enjoyment was thereby cut off, and a sense of duty was constantly calling me home, we very reluctantly started in that direction. They were still having good success on the lake with flies—black gnat and hackles—and the fish were larger than those caught in the summer. A Mr. Roe, of your city, was devoting his days to the sport and doing grandly. Three days after our return we received from him (supposedly) by express a box of beauties packed in grass, indicating that as soon as the storm was over the fish took hold with new vim—a common rule in the autumn.

Elk, deer, etc., are abundant in the park, and beyond. Hunters say more so than years ago when the Indians roamed over the country. B.

IN FLORIDA WITH DR. HENSHALL.

I AM in transit back to my old home in Texas, on my way from Florida, where I left Dr. Henshall and the rest of the party. Have stopped here a few days to rest, and therefore will only write a few rambling lines, as I am rambling myself, and just off the Rambler, Capt. Strobhar's schooner. It is unnecessary that I go into detail regarding my sojourn in Florida, so far as the St. Johns and Indian rivers are concerned, as that has been so amply done by others gone before me.

Doctor Henshall, his wife, and myself, with the Captain, went on board of our boat at Titusville, and went down Indian River and cruised around that country nearly a month, and returned, and still none of the party we had waited for had come except Mr. Mayor and wife, and he was obliged to return, which left us to fill our party as best we could. We then succeeded in getting Messrs. Norton and Ward, of Bristol, Conn., to go with us. This made our party up to four, besides the Captain, who is a whole team himself, and we then concluded to go on and make the best of it. After having made satisfactory arrangements with Captain Strobhar, and laid in stores of provisions, we set sail again down Indian River Sound, stopping in all the most important fresh-water streams that flow into the sound from the west side, and the various inlets, creeks, or "cuts," coves, bays, etc., on the east, or ocean, side, where we fished, hunted, and enjoyed ourselves to our hearts' content. Besides our ample stores, we had all the tropical fruits we wanted, without cost—the finest oranges, bananas, lemons, limes, pineapples, etc., yam potatoes, tomatoes, fish and oysters "until you couldn't rest."

I went to that country to angle for black bass, and to be with Dr. Henshall of black bass fame, and to obtain of him such information or what there was in the bass that I had not yet learned, and I believe that I fully succeeded in the whole thing. For I found the Doctor, and found the black bass in any desired abundance and size, and as black as bass could be. My reasons for not going the whole trip were that I only had about three months to spare, and two months were already gone, and knowing it would take three or four months more to complete the cruise, I gave up the trip in despair, a circumstance that pained me more than anything that ever befel me. On my return I stopped a few weeks in Clarke county, Ala., to rest and shoot turkeys, but there I had the fortune to slip off a log as I was crossing a creek, and falling with my left breast across the log, broke three of my ribs just over the heart. It was some time before I could regain the action of the thorax so as to breathe, but I went on, determined to get my "gobbler," and did so, but the injury soon became too sore and painful to do much hunting, and hence I only killed nine, though fine ones, and I remained in that country until I came here to rest awhile. I am better now, but still unable to hang over a table and write long at a time.

Now for the black bass of Florida and my little rod. There is no use in telling you where to find the bass in Florida, only that you go there and fish for them in any of the fresh-water streams and lakes that you find. If you go to Indian River and ask for bass they will tell you, "Oh, yes, thousands of them—some forty to fifty pounds," etc., when there is not a bass in Indian River. And there is where so many of your readers are confused by the reports of "bass" in Florida weighing twenty-five to forty pounds. What they call "bass" in Indian River is the redfish or channel bass, well known everywhere, and is a salt-water fish, whereas the black bass (*Micropterus salmoides* or *Micropterus* "dolly mule," is strictly a fresh-water fish, and should never be confounded with so common and degraded a fish as the redfish. The natives there call the black bass "trout" (when they don't see the Doctor standing around in hearing); but I believe they will come to it after a century or two. When we wanted redfish, crevaille, sheepshead, sailors' choice, snappers, sargeant fish, sharks, crabs, oysters and other disreputable fish, we repaired to the east or ocean side of Indian River, and fished the inlets at flood or slack tide, when we would take them in "world without end."

Just get you a lot of "fiddlers," anchor or tie your dingey over or near a deep place, and drop them a line, that's all. They will attend to the rest. I cut the foot-stalk of a palmetto, trim off the sharp edges, and use for a rod, hitch on a strong cotton or any kind of line, hook, sinker and crab, fiddler, throw in and pull, or hold and let them pull. Sometimes one sort will bite, then another, until your flexors are worn out. When your boat gets too full, stop and throw them out and start afresh, until you sicken and quit. We always threw back all except what we wanted to eat as soon as taken off the hook. I would not allow such fish the pleasure of tugging at my nice bass rod, for I only had one, and no scrub fish could ever strain its joints with my consent. The others seemed to enjoy the salt-water fishing, but I didn't, and I always disliked it when it came our turn to go over to the ocean side of the river, but when we were to go to the Sebastian, Elbon Creek, Turkey Creek, Santa Lucie, etc., then I was in my own pickle.

When once up one of those streams, there I wanted to remain always. Never want to leave. The tall cabbage palm, bending its mop-like head in the breeze; the wide-spreading live oak, with limbs draped in clustering vines and the eternal air plant; the tall and small bronze and Venetian ferns in countless variety from two to fifteen feet high, wound and bound in vestures of every shade and hue of tropical shrubs, vines and weeds, all tangled and warped in endless and chaotic confusion; then the dark, clear, amber water, flowing, like oil, by you, as you row along up the silent stream where painful stillness reigns, seldom broken, save by the rustle of the tall rushes on either hand, as a monster saurian, having heard you, comes gliding through them to the river; or some big bass makes the amber fluid boil near you as he "goes for" an innocent shiner or a luckless bream; or by the piercing scream of the bald eagle as he sails by, hunting some poor, industrious osprey to rob him of his earnings. Now look down as you glide along and see the lily-pads, the few fallen cabbage logs, with their beautiful fringe of rich, glossy and emerald mosses and curlvines and eel grass—beautiful, fairy home of the fishes, where lurk the festive bass and fickle bream, who dream away their lazy lives in freedom, plenty and undisturbed repose—undisturbed save when perchance the villainous troll or quivering spoon invades their realms and attracts them from their lovely abodes, and hurls them into the upper world, and perhaps into the fry-pan.

As Ward and I were trolling up one of these streams one afternoon, the scenery became too imposing. I drew in my line and spinner, and told Ward to put down the oars and let us give our eyes a feast. He agreed, and we stopped. To look up and around was simply grand, romantic, enchanting—then to look down through the clear water and see the great bass, from two to seven pounds, within three feet of the boat, scarcely moving when you prod them with an oar; then the countless number of copper-nose and blue bream, sunfish, *et id omne genus*. I tell you the sight fairly made our eyes hang out on our cheeks. Had it not been that my heart beat more rapidly from the lively interest I was taking, together with "Ward's" talking to me, I would have thought myself in dreamland or the "happy hunting grounds," and this spot my paradise.

As it was now near sundown, I took the oars and told Ward to troll and I would row back to camp. I asked him what he thought of the scenery. He said: "It is beyond the language of man to describe," etc. I then took the oars, turned the boat, and struck down the stream at a lively rate.

Had not gone fifty yards, when we ran over a school of enormous bass. I told Ward, as quickly as I could, to drop his spoon over, which he did, and as the quivering lure passed over them, with not over six feet of line out, a seven-pound bass was struck and soon landed in the boat. I kept rapidly on down to camp. Ward took many more fine ones, but threw them all back, not even taking time to weigh them, only saving what we could eat. I did not chance to go up that stream again. It came on to rain that night, and the stream got on a "big spree," and we left as soon as the storm was over; but I want to visit that place once more, that's all. I will not tell everybody where it is, unless they ask me or go with me there; but that is nothing, one place there is as good as another, and "better too," with one exception. There is a certain bend, in a certain creek that had no name, but from the success I had there I dubbed it "Jordan's Creek;" and as that circumstance will close this tale, you will be patient and hear it.

It was on February 8 last. All the rest of the party had gone to hunt deer in the piney woods. I was very anxious to see how big a bass I could take, and to try the strength and efficacy of my little eight-ounce rod. The Doctor had given me a bran new braided silk line, that he said no bass could break "if properly handled." I thought by this time I could do the handling, as I had got about all the lessons out of the Doctor that were in him, and to put all his sense and mine too into one head without bursting it, was a feat few could accomplish. I had all the time been using medium size minnows or small perch, and could take all the bass I wanted up to five pounds, but the Captain kept telling me to use the half-grown bream and even the grown ones if I wanted to catch the big bass, so I concluded to act upon his plan once. I went up "Jordan's Creek" some two miles, and came to a beautiful bend in it, and a nice place to cast from. The water near the banks on either side was fringed with huge bonnets or lily-pads, and the water was 15 to 20 feet deep and about 75 feet wide—an enchanting spot—a spot fit for an angler to die in.

Having tied my little Stranahan canvas boat to a snag on the shady side of the stream just below a line of bonnets, I took my minnow hook and some venison for bait, and soon had a dozen half-grown bream in the bucket. Next rigged my little delicate ash and lancewood rod, reeled on my new blue silk line, a small ringed sinker, then a good sprout hook on double gut. I then clipped off the dorsal spines of a bream, three inches wide, running the hook in the mouth and out at the nostril, and dropped the bait overboard while I reel up for a cast, but on reeling up I found that a huge bass had taken the bream the moment it went over, and was tugging at the line. I let him have line as he desired until there was no reason in it, then by a good solid wrist movement hooked the "boy." Oh, "you bet," he was a "daisy." I had left my landing net in camp, and hence had greater delay in getting these monsters in, but as I got them tuckered well, I would reel them in and take them by the under lip and lift them in the boat. If any one could have been near and beheld me working these fellows, it would have been worth all the "Barnum shows" on earth. It took a half hour to the fish. I had taken seven, six of them black bass and one dogfish or "grindle," and I was giving out. I was nearly dead. I began about two o'clock P. M. I had not moved, nor did I have to wait three minutes for a new bite after landing one, before the next began to "recite."

The second fish I failed to hook, although I yanked him several times as hard as I could, yet he would get up within two feet of the top and swim across the river in front of me, and "chaw" on my perch, with one eye on me, the other on the sun, to see what I was trying to do with him. I would jerk and he chaw, until at last he felt the steel a little, when he arose leisurely to the top as I cast hook, bait and all from his mouth, and with supreme disgust swam away. "Dog-on-you sir," I said, "I'll put on something that will fix you big-mouthed fellows," and I put on a No. 7 "barbless" hook and fixed on a perch, same as before, after which I never failed to hook one or land him when hooked. When I had taken seven in all I was broken down. My poor little rod was worried to death. My flexors and extensors were nearly done, the sun was getting low down the sky, my last live minnow was gone. I had a few dead and stiff ones left. Thought I would make one more cast and then quit. I took one large perch or bream, over half grown, dead and

stiff. I hooked him on without trimming, and made a cast some sixty feet down stream, and as the bait sank I reeled slowly in. Not long ere I felt, with emphasis, the familiar "tug," and placed my thumb on the coil to feel his weight. Found him to be a "rouser."

I began to reel him in slowly to get him near me before hooking him, as I was afraid to hook him with fifty feet of line out, when seventy-five was all I had on. I succeeded in getting him within fifteen feet of me when he began to pass me and swim slowly up stream, pulling heavily on the line. I watched his every movement with the vigilance of a hawk, and let him have line stingily until some forty feet off, when he arose to within a foot of the surface and swam along, across me, the sun shining on his great pied sides revealed the form of the largest bass I thought I ever saw, and he "chawing" my poor dead bream villainously. I now watched him closely, his huge mouth on the bream and turn to swim slowly from me. I knew now was my time, and with a twist of the wrist I struck him with all the force that I thought the slender "lancewood" would bear. I felt that the steel had gone fairly home in the left corner of his capacious jaw. His first tactics were to turn and swim slowly back toward the deepest water and stop. I feared this to be ominous; I pulled on him to start him again, when, for the first time, he discovered anything wrong, and now he began to attend to business with energy and enthusiasm. His rushes now were long, strong and furious. Sometimes at the bottom, then out of the water, shaking his head like a mad bull. He would now swim into the sunny places as though to show off his proportions, then stand on end and shake his head; but the little "barbless" held him fast. He now made for a cluster of bonnets and an old brush top. "That won't do." I nearly cried. I thought rod, line and fish, all were gone. I pressed the coil until my thumb blistered. I took both hands to the little rod, which had now assumed shape of the figure 6, and just as I thought all was gone and my biggest bass lost that I had gone near 2,000 miles to catch, I felt him stop! I then slipped my hand to the crank, and, as tenderly as possible, I began to recover some of the line. I soon had him turned head toward me, and having taken in half of the line, he made for the bottom and under the boat. I plunged an oar down ahead of him and turned him toward the middle of the stream. I now found that his strength, as well as my own, was fast failing, and in a few minutes more I had my thumb in his mouth and laid him in the boat beside his companions. I took out my pocket scales and applied them. They drew eight and a half pounds, but that did not satisfy him; so I just called it nine and let it go. I was now completely played out, and returned to camp to show my catch to the others.

In going down Inlet Ward in the dingey. He said that he had had the same kind of luck, and while talking to him I saw him land a six-pounder. We then returned to camp. The Doctor and all were pleased with my luck. The following are their respective weights, in the order of taking, and they were black bass—*Micropterus dolimieu* (Henshall)—and not redfish. I weighed them all but the biggest one, which I could not weigh, but called it 9 straight. Here is the order in which they were taken—7, 6, 5½, 5, 5, 7, 9 lbs. After this fight was over, I looked at the little rod with affectionate admiration. It is the "coming bass rod," and if it can be improved, I can't see how. My reel is perfection itself: My boat is a cloth boat. I would want no better. We caught thousands; but that evening's catch, the whole thing considered, was the best I ever experienced. I could write you a bushel of these yarns, and all be true; but I will not encroach further upon your space. C. L. JORDAN.

PELAHATCHIE, Miss.

TENNESSEE NOTES.—Nashville, Oct. 10.—At every Sunday market there is a sale of river fish at the wharf, and sometimes the display is remarkably good. Yesterday morning I strolled down there just as day was dawning, and found at least one hundred colored men, women and children already assembled, besides a few of the Caucasian race. The fishermen, to the number of a dozen, had their fish in cars and were selling them as fast as they could deliver them. The system of "guess weights" was used, and in consequence the buyer had to pay for the seller's "guess," which invariably went one way. This mode of dealing out the brain food caused it to bring not less than fifteen cents per pound, and not a mill too much, for handsomer specimens of drum, perch, bass, channel cat, and buffalo were never taken from any stream. The reflection of the early sun upon their beautiful scaly sides brought out as dazzling colors as would a crystal prism, and of their freshness and health the wriggling bodies of the unsuspecting and innocent creatures gave ample assurance. One of the fishermen, recognizing me in the crowd, presented me with a three-pound bass, which my good old cook, Aunt Harriet, broiled equal to one of Soyer's best efforts, and sent in smoking hot by faithful little Sallie. Perhaps some disbeliever in the ichthyophagist diet may question the deliciousness of the morsel, but no one else. I have eaten of almost every variety of food fish known in Europe and America, and if there is any one of them much better than an American black bass, fresh, and properly broiled, and dressed with a sprig of parsley, salt, pepper and rich Jersey butter, then I do not remember it.—J. D. H.

POSITION OF THE REEL.—I was interested in the description of his first fishing with a light rod and reel, by Mr. C. L. Jordan, in your paper of Oct. 5. As a new convert to this style of fishing he is quite enthusiastic, and there is no danger of his going back to his old ways "fo 'mancipation," as he expresses it. The reel behind the hand bothered him though, and he changed it after the line burned his fingers. He says, "I don't see the sense of a reel behind the hand, or where the idea ever came from." It did not occur to him that this was another thing for him to learn, and that the burning of his fingers was due to improper handling. For his benefit I will say that this position for the reel is the result of the observation of anglers for a long time, that a reel in front of the hand adds to the apparent weight of the rod, and one behind the hand tends to balance it. If Mr. Jordan will restore his reel to the old place and learn to use it there, he will never go back to the obsolete custom of placing it in front. That was another custom "fo 'mancipation."—FLORIDIAN.

PRACTICAL PROTECTION OF TROUT.—A Maine paper says that through the efforts of Fish Commissioner Stanley and the Oquossoc Angling Association, men are now hired to guard certain points where the trout gather in large numbers on the spawning beds. From these places, unless guarded, trout might be slaughtered in large numbers by unprincipled fishermen.

FISHING IN NEW YORK BAY.—Bergen Point, N. J., Oct. 13.—I read the statement of my old friend G. H. Wild in regard to the fishing here, and I can state that the striped bass are quite plentiful as yet. Last week a large number were caught, and my friend Dr. Payn, who is fond of the sport, was very successful. A large string of fine fish repaid him for a few hours' fishing—one weighing six pounds. Besides the fishing, ducks are sought after, and our sportsmen are enjoying themselves on the Newark Bay and salt meadows.—NEELLIK.

Camp Fire Flickerings.

"That reminds me."

A MINISTER of the gospel, an excellent shot, admirer of a fast trotter, lover of a good dog, and unreservedly appreciative of a good joke, tells the following good one on himself, in a vastly more humorous style than any of his admirers have ever repeated it.

Promise of better pay induced him to take charge of a new flock in strange pastures. It was not long after his establishment before his sporting proclivities cropped out. Belonging to the fold was a wealthy, intelligent and highly-accomplished farmer, who could comprehend the consistency of genuine sportsmanship with gentility and even Christianity, and the pastor cheerfully accepted an invitation to share a day's shooting over a well-broken brace of pointers.

As they proceeded to the fields the host courteously inquired of his guest what should be the agreement as to their shooting. Always ready to run a joke on a friend, and imagining himself able to wipe the farmer's eye at will, the opportunity appeared too good to be passed unimproved; so the parson suggested a miss-and-out run, and that each should mark and carry game for the other. "Nuff ced."

As a matter of course the guest was expected to "wade in" when the first bevy was found. Bang! bang! on the rise, but not a feather to the parson's second barrel. The farmer gathered and pocketed the single bird, and with a matter-of-course air which "cast no shadows of coming events before," proceeded to take his turn.

The performances of the dogs were as harmonious as the machinery of a perfect b. i., the cover unexceptionable, and the farmer proceeded to grass every shot so beautifully that the shepherd soon discovered that there was little of the eye-wiping lesson to be taught that lamb, and that his best behavior would be necessary to escape carrying a lion's share of the game. Bevy after bevy was found, and every shot was such an easy one that the hunt was becoming a little monotonous and tiresome to the preacher at lunch-time; but "hope sprang eternal," and there was still a supposed chance for redemption. "Alas! the uncertainty of human calculations," etc., even though the calculator be one of the elect.

As the sun crept closer and closer to his western couch, hope that a bird could be flushed which wanted to escape that preacher's pockets grew fainter and fainter, till it flickered out when that exasperating lamb began adding hares to his shepherd's load with a nonchalant assurance that at the close of a day's sport "I generally shoot a few rabbits, to be fed to the dogs." Early in the day he entered the fields in an exuberance of delight which bubbled over in anticipation of the jolly laugh at supper, when he should have demonstrated to an unsuspecting rustic the capabilities of a good shotgun in expert hands. At sunset he trudged wearily under a cartload of game, thoroughly crushed in spirit and pride, maintaining a cheerful air, though, as an old mud-sill happily expressed it, "completely 'kuored' of sucking eggs."

Never a hint of the joke was dropped by the farmer; but, when reaction followed, it was "too good to keep," and when told on himself he was met on every hand with the gratifying (?) assurance, "I could have told you that would be your fate." J. T. B.

SLEEPY HOLLOW, Ky., 1882.

In conversation with an old Northwoodsman lately, the writer was amused by the following true story of a green darkey sailor's ingenuity to escape rebuke and punishment for his poor management of the helm during part of a night on the Upper Mississippi in a river boat.

The captain of the craft had ordered the darkey, named Sam, to take close notice of a particular bright star, and to steer his course by that star until he received other orders; then he went below.

Sam assented, and for awhile all went well, but soon sleep overcame his eyelids, and he slept the sleep of the just, never letting go his hold on the helm. Some irregularity in the movements of the craft attracting the notice of the captain, he started to come on deck again, but Sam heard him, and at once taking in the situation at a glance of his now wide-awake eyes, he yelled down the companionway, "Say, boss, come up yere an' pick out anoder star for dis child, we is done gone past de first one right smart, sure."

SAWBONES.

Answers to Correspondents.

SUBSCRIBER, New York.—We do not know of a purely bred Scotch terrier for sale.

H. D.—Your plan might work, and if it did, would be terribly killing. We should think.

J. G. W., Coxsackie, N. Y.—Manton's "Taxidermy Without a Teacher" will probably answer your purpose. Price, 50 cents.

G. H. B., Watertown, N. Y.—The second volume of the N. A. K. C. Stud Book is not published yet. We cannot say when it will be.

LONGBR, Castleton, Vt.—1. Does this volume include the sum and substance of "The Modern Breech-Loader," by the same author, or not? 2. Is there any one standard work which deals thoroughly with camping out, cooking, etc.? Ans. 1. Yes, practically. 2. "Wrinkles; or, Hints to Sportsmen and Travelers upon Dress, Equipment, Armament, and Camp Life," price $2.40; or "How to Camp Out," price $1; also, "Camp Cookery," price 50 cents—may be what you want.

F. B., New York.—1. My gun, a new eighty dollar 12-gauge Parker, right barrel modified, left full choke, leads at the breech and muzzle after firing forty or fifty times, what is the cause of it? 2. Please give a receipt for taking the lead out of barrel. 3. Will mercurial ointment take it out? 4. Please give your method for cleaning inside of gun barrel after a day's shooting. 5. What would be the proper charge of powder and shot for trap shooting, etc? 6. Give directions for loading paper and brass shells. 7. My gun gives a pattern of 204 pellets with right and 256 with left barrel, one and one-eighth ounces standard shot being used; distance, 40 yds.; target 24in. Is the pattern good? 8. What is the best shot to use, chilled or soft? Ans. 1. This is a common complaint about choke-bore guns, although powder residuum is perhaps as often to blame as lead. 2. Use scratch brush and oil. 3. Yes. 4. Use benzine or alcohol with flannel rags, then dry and oil slightly. Look after the gun twice a week for two weeks and if it begins to rust attend to it. Then you can put away. 5 and 6. You don't give weight of gun. 7. You don't give size of shot. 8. Chilled shot is highly thought of by many, but by some is thought to wear out the choke very fast.

Fisheulture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORDFISH.

BY G. BROWN GOODE.

[CONCLUDED.]

THE CAPTURE OF THE SWORDFISH IN THE MEDITERRANEAN.

"THE following table gives the number of fishermen, and boats engaged in the swordfish fishery on the Sicilian and Calabrian coasts:

1. *The harpoon fishery.*

	Calabria.	Sicily.
Large boats (or feluche)	6	52
Small boats (dontri)	26	52
Small boats (barche)	...	52
Fishermen	275	364

2. *The gillnet fishery.*

Boats of three tons burden	80-90	50
Fishermen	650	400

"The fishery is extremely productive. On the coasts of Sicily a gang of fishermen frequently capture fifty fish, each weighing from 100 to 200 kilograms, in a single day, and on the Calabrian coast 20 fish.

"The following table shows the average annual catch in Sicily and Calabria:

1. *The harpoon fishery.*

	Kilograms.
On the Calabrian coast	60,000
On the Sicilian coast	40,000

2. *The gillnet fishery.*

On the Calabrian coast	25,000
On the Sicilian coast	15,000

"The products of the fishery are consumed principally in Sicily and on the mainland of Italy. A portion, however, is preserved in salt or oil, and sometimes exported. The flesh of the swordfish is excellent when fresh, and is not so liable to become soft when canned as that of the tunny or horse-mackerel. It therefore always commands a high price.

"It has been claimed that, in order to prevent a decline in the fishery, hook-fishing should be prohibited from the middle of January to the first of April, and that a fine should be imposed on those who capture the young fish. It has been suggested, also, that no nets should be allowed to be set in the Straits of Messina within 300 meters from the shore.

"The result of the experiments in artificial hatching of swordfish in certain inclosures and marshes in the vicinity of Il Faro appears to be somewhat uncertain; but, at all events, they may open the way for more practical and successful operations in the future."

RECORD OF A GLOUCESTER SCHOONER FOR THE SEASON OF 1878.

As an example of the manner in which a season of swordfishing is passed, and of the yield of a very successful period of work, a record is here given of the trips of the schooner Northern Eagle, of Gloucester, Capt. George H. Martin.

TRIPS OF NORTHERN EAGLE, CAPT. GEORGE H. MARTIN.

No. of trips.	Date of start.	Length of trip. Days.	No. of fish taken.	Where sold.	Price. Cents.
1	June 7	10	16 (9,000 lbs.)	Boston	3
2	June 19	7	22 (6,600 lbs.)	do	4½
3	June 30	14	12 (3,700 lbs.)	Newport	2½
4	July 13	11	20 (5,800 lbs.)	Boston	3
5	July 27	18	37 (9,000 lbs.)	do	5
6	August 15	15	28 (6,500 lbs.)	do	3
7	Sept. 1	16	16 (5,600 lbs.)	do	(2)
8	Sept. 20	14	14 (4,500 lbs.)	do	(3)
			163 (46,700 lbs.)		

RESULTS OF TRIPS BY OTHER VESSELS.

Capt. Benjamin Ashby went swordfishing in the schooner N. H. Dudley two successive years, in 1877 and 1880. In July and August, 1880, he took 108 fish; the next year 88.

The schooner Yankee Bird, of New Bedford, boarded in Provincetown Harbor, August, 1879, had already that season taken 60 fish.

Mr. Earll reached Portland in the progress of the fishery census investigation, July 29, 1880. On this day, he writes, 35 to 40 fish were brought in, and on the 1st of August 200 more were landed, 60 by one vessel.

STATISTICS OF CAPTURE.

It is at present only possible to give estimated statistics of capture, though a year hence, when the returns of the fishery census, at present in progress, shall have been tabulated, much more accurate figures will be attainable. Putting the number of vessels regularly employed in swordfishing at forty, estimating their annual catch at eighty fish each, which is only half the quantity taken by the Northern Eagle, as shown in the preceding paragraph, the aggregate number of fish taken would be 3,200.

Competent authorities estimate that each vessel in the mackerel fleet captures and brings in an average quantity of eight barrels of pickled fish, or perhaps eight fish each. The number of vessels in the mackerel fleet is at least four hundred. Allowing four fish to each, there is an aggregate of 1,600 fish. Estimating one for each vessel in the halibut fleet yearly, we add fifty more in the aggregate.

Mr. Earll judged that in 1878, as for several years previous, 2,000 swordfish had been brought into Portland, Me. Allowing 1,000 of these to the regular swordfishermen and the mackerel vessels, we have a remainder of 1,000 taken by the occasional fishermen of Portland already spoken of, and to be added to the aggregate, which now amounts to 5,850.

Add 150 more for the coasters, seabass fishermen, and pound-tending vessels of southern Massachusetts, Rhode Island, and Connecticut, and the sum is 6,000.

The average weight of a swordfish dressed is estimated by several persons, Captain Ashby, Mr. Earll, Mr. Thompson, and others, to be 300 pounds, and that this is not far from the truth may be seen by referring back to the records of the Northern Eagle. If the average weight is assumed to be 250 pounds, the aggregate weight of a year's catch of swordfish amounts to 1,500,000 pounds, valued at $45,000, the average price being estimated at three cents per pound.

To estimate the number of men employed is almost impossible, since the season continues only four months, and many are employed for a much shorter period. The crews of the forty vessels number from 160 to 200; the number of men employed for shorter periods it seems scarcely necessary to estimate.

In 1874 the annual catch for the United States was estimated by Mr. E. G. Blackford at 2,000 fish, weighing 1,000,000 pounds.

SWORDFISH AS AN ARTICLE OF FOOD.

"The small swordfish is very good meat," remarked Josselyn, in writing of the fishes of New England in the seventeenth century. Since Josselyn probably never saw a young swordfish, unless at some time he had visited the Mediterranean, it is fair to suppose that his information was derived from some Italian writer.

It is, however, a fact that the flesh of the swordfish, though somewhat oily, is a very acceptable article of food. Its texture is coarse; the thick, fleshy, muscular layers cause it to resemble that of the halibut in consistency. Its flavor is by many considered fine, and is not unlike that of the bluefish. Its color is gray. The meat of the young fish is highly prized on the Mediterranean, and is said to be perfectly white, com-

pact, and of delicate flavor.(42) Swordfish are usually cut up into steaks, thick slices across the body, and may be broiled or boiled.

Considerable quantities of swordfish are annually salted in barrels in Portland, Gloucester, Boston, New Bedford, and New London. Swordfish pickled in brine is in considerable demand in certain sections of the country, and particularly in the Lower Connecticut Valley, where a barrel may be found in almost every grocery store. By many persons it is considered much more palatable than salted mackerel.

MARKETS.

Mr. Thompson remarks: "Previous to 1862 the market for fresh fish was limited to New Bedford, Fall River, Providence, and the adjoining towns, and a large proportion of the fish then taken was salted and shipped to the West Indies and the Southern States. This was especially the case with those taken about Noman's Land and Martha's Vineyard. Now nearly all are consumed fresh, and the average price is somewhat higher than formerly."

The Gloucester *Telegraph* of September, 1850, contained the following item, which shows that swordfish were eaten in Boston at least thirty years ago, and highly esteemed:

"A swordfish weighing about 250 pounds was caught near our cape on Tuesday. It was taken to Boston and retailed out from Quincy Market, by Messrs. Covill, at 12½ cents per pound. The sword, measuring from the to eye the tip, is 37 inches in length."(43)

Mr. John H. Thompson writes: "At present the great bulk of the catch is sold fresh. Most of the fish are brought to this port, and a few are carried to New London. Until within a *very* few years nearly all were disposed of in this vicinity. About 1864 a few were sent to Boston on trial, and the consumption of swordfish in that vicinity has since rapidly increased. Still, the principal market for swordfish and tuna may be said to lie between New London and the eastern end of Massachusetts. Providence, R. I., consumes a large quantity."

Mr. Earll writes: "About 2,000 swordfish, averaging in weight 300 pounds dressed, have been landed yearly in Portland for several years. Most of them are sent to Boston fresh, and the remainder are cut up and salted here."

Mr. Eugene G. Blackford informs me that the swordfish are not much esteemed in New York market, and that in 1874 not more than 3,000 pounds in the aggregate were consumed.

PRICES.

Regarding the price of fresh fish at New Bedford, Mr. Thomson remarks: "When the fish arrives here it is eagerly sought at 20 cents a pound, retail. In 1873, within forty-eight hours of the arrival of the first one, fifty-two were brought in, bringing the general retail price down to 8 and 10 cents. At this price, clear of bone, they are usually retailed throughout the season. The wholesale price is about 12 cents for the first catch, falling rapidly to 2 or 3 cents. This is for 'clean fish,' without head, tail, and viscera. Fish from George's Bank are sometimes brought here from Boston. They then retail at 15 and 20 cents."

According to the record of the Northern Eagle, the price in June, 1878, ranged from 2 to 4½ cents, in July from 3 to 5 cents, and in August from 2½ to 5.

In July, 1879, Mr. Earll found the price in Portland, Me., 4 cents, but the arrival of 200 fish on August 1 brought the price down to 1½ cents. He estimates the average wholesale price at 2 cents.

In New London, according to Captain Ashby, the price has varied within his recollection from 3 to 8 cents, the latter high price being paid in 1877.

According to Captain Martin, the price of salt swordfish in Gloucester is always about the same as that of No. 3 mackerel. In July, 1878, there being no mackerel in the market, they were valued at $7 a barrel.

42. The flesh, which is much esteemed by the better classes at Palermo, is dressed in almost as many modes as that of the tunny and fetches a higher price. During our sojourn there it was as two to one. The fiber is invitingly white, and the round segments look, as they lie in rows along a table, so many fillets of veal. Four to six feit is the usual run of those taken off the Trinerian coast and displayed in the fish markets of Sicily.—*Badham.*

43. A swordfish weighing over 700 pounds was one of the sensations at Faneuil Hall Market last week.—*Gloucester Telegraph, August* 13, 1850.

ENDURANCE OF CARP.

SINCE our editorial note on this subject was in type the following letter to Fish Commissioner Blackford was received. It relates to the same fish, and we publish it as part of the same singular story:

MIDDLE HOPE, N. Y., Oct. 12.

Mr. Eugene G. Blackford:

Thinking some additional facts in regard to the carp sent you last week by Mr. Hurr, of Newburg, would be interesting, I have taken the liberty of writing. The pond situated at Creek Hill Cemetery was emptied in February, 1881, by the giving way of the dam, and remained dry until the following June, when I re-built the dam and allowed it to fill. It is fed by springs and is not connected with any other pond or body of water. I have mentioned these facts to show you that there was no possibility of there being any fish in the pond at the time it was stocked with carp, or that they could have got in since. On the 5th of November last I received a can of carp from Commissioner Baird. There were twenty-seven of them, the largest not more than two inches long. They were placed in the pond and not seen again until June 1st, when, as near as I could judge of their size by looking at them in the water, they were about four inches long. During the recent freshet the bank of the pond gave way and let out all the water, so, of course, we lost our fish. The one sent you was picked up about ten rods below the break in our pond, and no doubt came from there. Yesterday one of my men caught another of about the same size of yours. There are two more of about the same size in a small pool below the pond, that can be easily caught and will be put back in the pond as soon as the bank is repaired.

WM. B. WESTERVELT.

CARP IN TENNESSEE.—Nashville, October 12, '82.—Col. Goodsell has just finished a carp pond at his farm, ten miles from this city, and intends stocking it with that variety of fish. It cover over one-half acre, and varies in depth from three to ten feet. At one end of the pond he has left a large space of marsh, in which grows luxuriantly a species of wild rice, and where, he thinks, by flooding it, the fish will go to spawn. If the plants growing there should prove to be suited to the carp's food, a discovery will be made which will be worth millions to this country. The supply of water in this pond comes from two or three springs which were uncovered during the process of building; the temperature of it is not too low, and doubtless the fish will thrive in it. The same gentleman has two other ponds supplied with water from a very cold spring, in which he has placed a large number of native game fish. He says they have grown enormously within the last few months. The other day a bass weighing full a pound jumped into a canoe that was floating on the pond, which he says was in splendid condition. Young Mr. Gray told me yesterday a most fabulous story of the growth of some carp which he placed in a pond one year ago. One of these, weighing a pound when placed in his pond, has grown to be a monster, and he thinks he would weigh not less than ten pounds, while the smaller ones have reached from twelve to fourteen inches in length and would average two pounds apiece. He has let them regularly since he got them, and as the last winter was exceedingly mild, I believe his statement not exaggerated. Captain Frank W. Green has been the most successful grower about here, his ten original pair having multiplied until he has now thousands of them for sale. His pond is very small, but he is untiring in his care of the fish, feeds them regularly, and now his reward has been won. The majority of the fry shipped to this State by the U. S. Fish Commission have been lost through negligence and want of common sense treatment.—J. D. H.

DEATH OF CARL LINDENBERG.—It is with regret that we read in the *Fischerei Zeitung* that Mr. Carl Lindenberg, of Berlin, is dead. Mr. Lindenberg was one of those few large-hearted dealers in fish who take an active interest in fish-culture, and the fine display at Berlin was increased by his liberal exhibit of live fish in aquaria, which obtained the second prize of honor given by the Emperor. He labored hard, until he finally obtained the removal of obsolete restrictions on internal commerce, and Germany was allowed to obtain good sea fish at cheap rates. He was but thirty-nine years old, and his loss will be severely felt.

CARP IN NORTH CAROLINA.—A correspondent writes us that Mr. S. G. Worth, Superintendent of Fisheries of North Carolina, has nearly finished a set of carp ponds near Raleigh for increasing the supply to the builders of fish ponds in North Carolina. The verdict from all sources regarding the carp is unanimous in its favor, both as regards rapid growth and flavor.

ROVINGS BY HAL HUNTER.

WHAT is nicer than an October morning for a ride through the country! Nothing, we thought, as we started from East Orange for a twenty-mile drive to Morris Plains. "Fox Farm," as it is familiarly known to New Jersey sportsmen, was our destination, with the pleasure ahead of seeing the canine favorites, and a run with our own that were summering at the farm. We sped along, enjoying the morning air and beautiful country, until we came to Milburn, where we rested our team and "took in" a very substantial morning meal. Three-quarters of an hour spent, but both horse and man were fresher, and along we go while it is cool. Chatham is passed; Madison next, and at this pretty little place the good people are astir. It is a good road from Madison to Morristown, and we quickly find ourselves among the beautiful residences of this handsomest of suburban townships. Slower through here, please, that we may enjoy the lawns and homes of many sporting gentlemen. Dogs are everywhere to be seen, prominent among which are the little silky terrier. Truly this may be called "the land of Skyes," for they abound, and they are all nice ones, too. Setters also are very plentiful. Pointers we saw but few of. The setters bespeak their family at once, and one notices the Raymond and Merford strains are the choice with gentlemen who keep them for work. We are nearing Morris Plains. The great asylum, with its new coat of paint, forms a grand background for the plains; and there, just down the track a bit, we see the cottage of Fox Farm, the property of Charles H. Raymond. It contains about seventy acres of good land, and is provided with an unusually large amount of outbuildings. It has been Mr. R.'s kennels farm for many years. It is now leased by Mr. J. Trego, who runs it for a boarding kennel, dairy for his little herd of Alderneys, and his home. Too much cannot be said in praise of Mr. P.'s cleanliness in the care of his kennel, of his judgment in cases of sickness, nor of his liberality to his dogs. His belief seems to be that his dogs do as well in good flesh as in a half-starved condition, and with the aid of mush and Alderney milk he carries out his idea to a nicety. The barns are admirably adapted for his kennel, and well filled, each dog having an abundance of room, many occupying box stalls. They are all liberated once a day and given the freedom of field and wood.

But to the dogs. First we find in the public stud the old thoroughbred Brough (Pride of the Border-Fairy), who though at present out of condition, has the blood nevertheless. Brough is of the first litter whelped after Mr. Raymond imported the grand old brace, and is of the somewhat questioned color, the liver and white; but from what we learn of him his color does not handicap him in hunting any, as he is every inch a field dog. He should make a grand cross on either Laverack or native bitches, especially of a light build.

Next we are shown the old favorite and brother to Brough, Guy Mannering. Guy is all right in color for the friends on the no liver side of the question. He is looking well and healthy, and will, we trust, last for many a day yet. He is still good in the field, but of course has lost the fire and dash of his youth. He enjoys the best that Fox Farm affords, as does his kennel companion and brother, Rhoderick Dhu, who is looking better, if anything, than Guy. We had the pleasure of Rhod's company for a stroll, and to see the old dog go in his quiet Laverack way is a pleasure indeed. Mr. P. tells us he is a superior dog on partridge, and the old fellow took us in the mountain to two places where the birds had been. Rhod. and Guy are in the private stud, and have proven themselves to be two good ones. Their puppies are very uniform in size and style. They are all field dogs, though we would like a little more speed than many of the youngsters possess. We would not fancy either for heavy bitches or those of a slow turn, except for the blood, which no one can deny is worth seeking after even at the expense of a little speed. Rhod. is the lighter and the one for the heavy class, while Guy is a grand old dog for light wiry bitches. It seems a pity they are not brought more to the front as stud dogs before it is too late. With Brough, Guy and Rhod, Fox Farm has a grand showing of the Laverack blood. Mr. Panot won't hear anyone say that the Lavericks lack "bottom," but acknowledges that—as our idea, and always has been—the crossing of the Laverack blood into the native bitches make the more nearly perfect dog.

We are next shown the well-known orange and white dog Max Harkaway. Max, if we remember right, is a son of Quimby's Nellie; his sire is Guy Mannering, one of the Jersey favorites. Max we thought to be looking better than when we saw him last, and he seemed very happy in a large box stall by himself. We were told he improved every year at his work, and he impresses one as being a gentleman's dog.

We next noticed Mr. Bebee's Cona, a black and white by Rhod, or Guy, out of Mina, the bitch Mr. Bebee lost. Cona is a fine size, but of too curly a coat to suit our eye. He has not been broken and is consequently untried, but his sisters, Pope's Loui and Bebee's Blue Belle, are said by Mr. P. to be good ones in the field. It is a pity to have Cona left untried. He is in the prime of health and condition.

We next noticed the young native dog Doud, the property of E. A. Spooner, of New York, by champion Jersey Duke ex field trial winner Daisey. He is a good looker and will be handled this season. His breeding entitles him to field ability.

We are next shown the coming star dog of the farm, Mr. Raymond's youngster Punch, by Brandy, a son of Pride of the Border, ex the famous little bitch Lemonade. Brandy and Lemonade mixed in this style cannot help making Punch. Punch is said to be the best stayer for a five months old puppy Fox Farm has ever produced, and points nicely also. He is orange and white, and although not quite right in the joints, is fast, through Mr. Panot's attention, getting over it. He reminds us of his mother. There is also a pointer, liver and white, whose name and pedigree we do not recall.

We are next to notice the bitches. First we notice the Laverack bitch Magnet, who is boarding at the farm. She has trouble with her eyes and shows her age, but will still make a brood bitch. She is, we think, the property of Mr. Westcott, of Philadelphia, and was bred by Mr. Laverack, being by Bailey's Victory out of Blue Daisy, and is about six or seven years old; but there are still hopes of getting a litter from her, which is greatly to be desired.

Cecile we are shown next. She is a sister of the famous Paul, who died so suddenly, and if anything of his kind should be highly prized. The brother was by Morford's Don out of Fairy. The blood is of the winning kind. Here we have the native and Laverack cross again, and had Paul lived, he would have shown what the cross will make for our dogs. Cecile is a nice bitch, one that pleases the eye, attracting attention at once. She is the property of Mr. Raymond.

Next comes the grandly-bred one, Floy, also Mr. Raymond's. She is by Lincoln out of Fairy, and should make a grand brood bitch. We remember her at our first visit to Robbins Island. She did not do herself credit there, but we were informed could do so with ease. She is an orange and white, of fine size, possibly a little heavy, if anything. We would fancy a cross for her with Mr. Goodsell's Phantagnet.

Next we call upon Blue Belle, Mr. Bebee's little winner. She is a sister to Cona, before mentioned, and Loui. She and Loui have been kennel companions until lately, when Mr. Pope took Loui and her brother, by Thunder, home for a while. Blue Belle is a very pretty bitch, indeed, fine disposition and easy to handle, and wants only work to be a star field performer.

Next we find Girl, a sprightly bitch and granddaughter of old Pride. She is of the disputed color, but looks to be speedy, and possibly a little headstrong.

There are two young things to be handled this fall. First, and probably one of the best young bitches of the present season is the black, white and tan native setter bitch Duchess Diamond, the property of Mr. Fred. H. Wetmore, of Orange, N. J. She is a sister to the young dog Doud, being by champion Jersey Duke out of Spooner's Daisy. She is a very nice little bitch, and will be broken for a gentleman's hunter. She is very fast and level, fine nose and very pleasant in minding. We shall expect to hear from her again. Both Mr. Panot and Mr. W. think well of the Duchess.

Then we find a nice little bitch, the property of Mr. Raymond. She is called Miss Cynthia Waters. She is by Rhod out of Whirlwind. Her dam we saw once at Fox Farm, and she was a fast one. Cyn, as she is called, promises well, but we think will lack dash, though it is difficult to say as yet. She is a handsome little thing, especially her head. We think she favors her sire in build.

Next we look at Mr. Spooner's orange and white bitch Zoe, by Morford's Dou out of Mercilliot's Pet and litter sister to the late champion Grace. She is a fine, large bitch, a true and natural hunter, and for the age and flesh that are on her she possesses a power of speed. She has been summering at Fox Farm and was looking finely. She has been bred twice in succession to Warwick, but both litters were lost. She will now be bred to a Laverack of her own color.

Lastly we are shown the famous little bitch Lemonade, the property of Mr. Raymond and dam of many good ones. She is looking and feeling finely, and will receive her share of attention this fall. She is an orange and white, of good size, and a great pet with her owner. Lemonade's puppies should be much sought after by sportsmen, for she is never bred but to raise hunters. After the dogs were looked over we took Zoe, Duchess, Cyn, Doud, and old Rhod invited himself, and were off for a tramp to the top of Whatnong. It was a lovely day in the woods, and the dogs enjoyed it with us. Going up we met Mr. Raymond and a friend with Lemonade, Cecile, Floy and Punch, and after a few words of greeting pushed on. The orange and white are the color for the field, as we realized as Mr. R., friend and quartette left us. On down the hill, on to the top, where we enjoyed a view of the Passaic valley, then home to a sumptuous dinner, such as only Mrs. Panot can serve to hungry trampers. One more look on the dogs all round, we jump into our buggy, and with a promise to come soon again start on our lovely drive home, sorry that a day of so complete rest should end so soon.

HAL HUNTER.

DENVER BENCH SHOW.

DENVER, Colo., Oct. 7, 1882.

The first annual bench show under the auspices of the Colorado Industrial Association, took place at Denver on the 5th and 6th inst. The different classes called forth many blooded animals from all parts of the State, and a goodly number where represented, and compared very creditably with the Eastern show in point of quality of dogs.

Too much credit cannot be bestowed upon the manager, Mr. Meek, for his untiring interest to make this the first annual bench show a success, and, judging from the comments of visitors upon the management of the kennels and classification of dogs, it was certain to make him feel amply repaid for his ardent labors.

The kennels, fifty in number, where constructed in the open air, in the form of an "L." They were large, clean, and as neat as could be in point of architecture, and nothing was left undone for the comfort and convenience of the dogs exhibited, and in conclusion it can safely be said it was a success, and every lover of the brute creation was satisfied with its success and the judging of the different classes. Following is a list of the awards:

Class 1.—Miss Van Vleet, best Newfoundland, $5.00.
Class 2.—Stuart Taylor, best English mastiff, $5.00.
Class 3.—Mr. Hackney, best greyhound, $5.00.
Class 4.—J. Winfield, best greyhound bitch, $5.00.
Class 5.—Wm. Dingle, best Llewellyn, $5.00.
Class 6.—C. B. Wolff, best Gordon bitch, $5.00.
Class 7.—C. W. Feickert, best red Irish bitch, $2.00.
Class 8.—Clifton Bell, best French poodle, silver necklace.
Class 9.—Mrs. Rogers, best French poodle bitch, silver necklace.
Class 10.—Ed. McClintock, best Scotch terrier, $5.00.
Class 11.—Mrs. Wm. Evans, best Maltese terrier, $2.00.
Class 12.—J. Martin, best bulldog, $5.00.
Class 13.—Stuart Taylor, best bull bitch, $5.00.
Class 14.—Mrs. D. M. Pomeroy, best English pug, silver necklace.
Class 15.—Mrs. D. M. Pomeroy, best Scotch terrier, $2.00.
Class 16.—Ed. McCarthy, Jr., best Mexican, fancy bracelet.

C. W. F.

PHILADELPHIA BENCH SHOW.—There is some talk among the sportsmen of Philadelphia of holding a bench show in that city some time next winter or spring. We trust that more than talk will come of it, as Philadelphia has demonstrated that she can have a first-class show, and we cannot have too many of these.

MR. EDWARD ODELL'S LIVER AND WHITE TICKED POINTER DOG "BOW."

BOW.

OUR illustration this week is of the liver and white ticked pointer dog Bow, owned by Mr. Edward Odell, of New Orleans, La. Bow was whelped Sept., 1874. He was bred by Mr. S. Price, Bow, North Devon, Eng., and is by Price's champion Bang out of Davey's Luna. He was brought to this country early in 1878 by Mr. T. H. Scott, of Kilvington, Thirsk, Eng., who exhibited him at the bench show held in St. Louis soon after his arrival, where he won third, although in very bad form and afflicted with surfeit contracted on shipboard. He was purchased by the St. Louis Kennel Club, who brought him out in grand form at the New York show a few weeks later, when he won first and the special prize for the best pointer in the show. The following is a list of his winnings in England: In 1877, second Agricultural Hall, first Exeter, second Tavistock, and third at Bristol. He has won in this country on the bench: Third St. Louis, 1878; first and special for the best pointer, also, with Sleaford, the special for the best brace at New York, 1878; champion prize at St. Paul, 1879; first and special for the best pointer at Detroit, 1879; champion prize and special for the best pointer, also, with Faust, the special for the best brace at Boston, 1879. His field trial winnings are: Divided second with Nellie in the all-aged stakes, and, with Faust, winning third in the brace stakes at the National American Kennel Club's field trials at Patoka, Ill., 1879. Bow is a very good-looking animal, powerfully built, with plenty of bone and muscle. He is a capital field dog, possessed of a good nose, and has lots of hunting sense; he is also quite fast and very stylish on game. As a stock dog he has proved a success, many of his descendants turning out grandly, both on the bench and in the field. Although eight years old, he looks scarcely more than half that, and appears to be good for several years to come. The cut is from a photograph, and is a very good likeness.

THE HAUNTING HOUNDS.

"My hounds are bred out of the Spartan kind,
So flew'd, so sanded; and their heads are hung
With ears that sweep away the morning dew.

Slow in pursuit, but match'd in mouth like bells,
Each under each. A cry more tuneable
Was never hallo'd to, nor cheer'd with horn."
—*Midsummer Nights' Dream.*

YES! The haunting hounds. They do, and will ever, haunt me, like the sweet dreams of youth—now so far away in the past—like the sweets and lollipops of life, dissolving on the palate of experience, and leaving their essence with memory to hold, in sanctuary, for us to retreat to when the cares, the ills and disappointments of life press upon too surely. It is blissful to be haunted with pleasant memories, and one such I shall dwell upon, "by your leave, sweet sirs!" It being apropos to the season and in accord with the "scarlet," I will make no apology, and "hark! forward!"

The westering sun was casting long shadows when I was set down in the very purlieu of a huntsman's paradise—the kennel of a breeder of beagle hounds. It was the goal of a long day's wearisome journey by rail, and a fond lover, posting to the welcome of his sweetheart, could not have felt more impatience than I to be within hail of the music of the hounds. In vain, for a time, did my host, the breeder, invite me within doors—dust, weariness, and every carnal need had been forgotten at the sight and sound of the well-ordered kennels, and I begged to "run riot" and glance at all ere I accepted the hospitality of within doors and its refreshment.

What is more beautiful, than a well-bred dog? possibly a "lovely woman," yet the chances are the steadfast faith that enhances the beauty of the dog may be lacking in her, and beauty without faith is as a flower without scent. Well, here I was in canine "clover," with so much to see and admire, and felt that I actually stood "at gaze," beset on every hand with "champion" dogs, beautiful brood bitches, and playful puppies. There was Lucy's litter of ten whelps, so evenly marked, so well developed and so sportive that they beggar description and defy comparison. To see them in their gambols was like looking through a kaleidoscope, every moment wrought a change in combination of color or feature.

Then a stride or two away was Music's comfortable litter of five, splendid specimens of English basket beagles they were, too! This breed was the favorite one of "Good Queen Bess," and her kennels were celebrated for specimens of diminutive size, and for peculiarly musical voices. Music, I trow, must have some of their blood in her—her size and tongue both warrant the assertion, for a more fertile bitch and a more musical it were hard to find. One of her puppies was of peculiar beauty, as to markings and points, and like the best and loveliest of earthly things the first to die has gone the way of all the living—a sacred and blessed memory to the writer. Peace to him and to all like him forevermore.

Look yonder! There are seven puppies of noble Ringwood's "get," and with them a pair so perfectly alike each other, that they ought (and will) always to "hunt in couples." High-crowned, broad-chested, beautifully marked and mottled, they do credit to their sire and their dam as well. On the bench and in the field they will yet make their "mark," if life and promise fail not.

It were vain to enumerate the various excellencies of the nearly three score of puppies that I then and there beheld. The gravity of Ringwood, Gold, King and Flute, full of "blue blood" and celebrated the world over, showed itself in amusing contrast with the playful abandonment of their progeny, and the tender care of the brood bitches for their fatty whelps made a picture I shall never forget, and which I love to recall. As I think, in these after days, of those now scattered puppies, and of the pride of their new masters in their possession, I wonder what possibilities their lives may develop. In the still watches of the night I seem to hear the music of their tongues as, on those memorable nights, I did hear the "tuneable" cry of the old hounds in that far-away kennel of my friend.

Again I fancy myself there, in that beautiful country, now made more glorious by the gorgeous hues of autumn, and, in fancy, I see the well drawn pack strain in the leashes ere the word be given to "find" the swift-footed hare as it leaves its "form" and rustles through the fallen leaves. My face flushes, my heart quickly beats, and my books vanish away, as I seem to follow their "lead" and listen to the music of their cry—the incomparable music of stanch beagles in the field. Our voices are harsh in comparison, but we shout cheer on cheer, and as oft as we do so—

"The hounds shall make the welkin answer them,
And fetch shrill echoes from the hollow earth."

O. W. R.

FOOD FOR PUPPIES.

YOUR correspondent, "O. W. R.," is sufficiently explicit as to the manner in which he fed his puppy, to enable me to point out just where, in my opinion, he took a wrong course. He started with a fixed belief that his puppy was "a very delicate piece of handiwork," and this inevitably led him to too great an anxiety concerning the health of the puppy, as well as to a constant watchfulness to discern the slightest irregularity. This is bad, for the reason that such an owner is quick to notice the slightest symptoms of anything outside of the regular habits of his puppy, is quick to magnify the consequences of the symptoms, and is driven, by his anxiety to do something for his pet, to resort to dosing, and dosing pretty surely means death.

"O. W. R." fed his six-weeks-old puppy on "boiled cow's milk, on broth, on puddings (corn and oatmeal)" etc. The effect of boiled cow's milk upon the bowels is well known, and is directly opposite what I consider a beneficial habit in the puppy. Do not boil the milk, or even heat it beyond a point sufficient to take off the chill. Omit the broth entirely, if by the word a meat broth is meant. Cook corn and oatmeal mush thoroughly, boil, mash and mix into the mush a few potatoes. Stir mush and milk well together. If this is not done the puppy will form a habit of drinking the milk and ignoring the mush.

Give the puppy daily all the thick sour milk he will eat. This last I consider very important. Do not stuff him with mush and then offer him the sour milk, but mix the two, or better still, give him the thick milk alone before his regular breakfast. Worms will appear long enough for the longest Latin name that scientific minds can invent, but there is no occasion to worry, and above all things do not give any drugs.

There will be days when the puppy will eat little, or perhaps decline to eat at all. Man is said to be the only animal which does not know enough to refrain from eating when sick, ever the hog being his superior in that respect. At such times, do not tempt the puppy with meat. Let him alone; he will come back to his mush when he ought to eat anything. My opinion is against the feeding of meat to puppies.

Beagles are not particularly hard to rear.

But all that I have said, and much more, every bit of which is law and gospel, has been laid before your readers in the article of "Shadow" on "Rearing Puppies," and is told over to them week after week in your "Answers to Correspondents."

How a man can read the article referred to, and the answers which from time to time appear to questions upon this very subject in your columns, and then have any doubts as to the proper way in which to let his puppy grow up, passes my comprehension.

To "O. W. R." or anybody else asking the questions which he asks I would say, read the article on "Rearing Puppies" above referred to, and fighting a little shy of that portion which speaks of occasional meals of boiled meat, sufficiently so to make them very occasional, follow the rest of the letter, I have practically demonstrated the truth of its every assertion.

NAT. HOWE.

BLACK GREYHOUNDS.—Mr. H. W. Huntington, of Brooklyn, N. Y., has purchased of Mr. L. C. F. Lotz, of Chicago, his celebrated pair of greyhounds, Doubleshot and Dorothée. These, with the black bitch Clio, also owned by Mr. Huntington, make a leash that we do not believe can be surpassed in this country. Mr. Huntington informs us that his kennel will in future be known as "The Master McGrath Kennels.' Doubleshot is a grandson of this celebrated dog, and the only one of the blood in this country, and judging from what we have heard of his performances in the field, he reflects no discredit upon his illustrious ancestor. We understand that Mr. Huntington gave a long price for these dogs, and we trust that he will have full opportunity to indulge in his favorite sport of coursing. In this connection we would suggest that lovers of this sport form a Coursing Club, and procure from the West a supply of jack rabbits and stock the eastern end of Long Island. This plan, if feasible, would afford an unlimited amount of healthful recreation for the lovers of this old-time sport.

OTTAWA BENCH SHOW.—There will be a bench show at Ottawa, Canada, probably in March next, although the time has not been definitely decided. It is the intention of the management to give a model show, and they will offer about $4,000 in prizes. No effort will be spared to make it the event of the year.

TO COCKER BREEDERS.

UNIVERSITY OF MICHIGAN, Oct. 10, 1882.

Editor Forest and Stream:

Since you published my series of articles on "The Dog," and especially my strictures on the lamentable condition of the cocker spaniel, I have been addressed personally by thirteen different parties, all of whom are breeders and lovers of the cocker spaniel, asking me to establish or organize a new cocker club. In answer to these persons, who have expressed their dissatisfaction with the present status of the A. C. S. Association, and who are readers and patrons of the FOREST AND STREAM, I will state that steps have been taken to issue a circular to all cocker breeders and lovers of this little dog in his purity, in the United States and the Canadas, for the purpose of getting together all or as many of such who are willing to lay aside all selfish considerations and unite to form a cocker organization for the preservation and elevation of the old-time cocker spaniel.

Whatever interest centers to-day in the welfare of the cocker, originates from what we know and have read of the many good qualities of the old type of this valuable and faithful companion of the sportsman.

If any one will take the trouble to investigate from books, steel engravings and paintings by the best artists of the times, what constituted the old type of cocker, he will be abundantly satisfied that such type of cocker is quite a different dog from those attempted to be brought to the front now by selfish and interested partisans. I do not include all the members of the A. C. S. A., or even perhaps a majority of such members, but I refer to certain leaders and selfish propagandists, who have, rather by force than persuasion, given bent and direction to the errors surrounding it, which if continued will injure and eventually destroy all that is good in the old-time cocker.

An organization is called for which shall give to this little, active friend of the sportsman that which rightfully belongs to him uncontaminated by baser matter, and I as the uncompromising friend of the true cocker have been called upon by these thirteen lovers and breeders of this dog to take such steps as will insure his defense and protection from all false friends or enemies in disguise.

In accepting this task I wish to say most explicitly that I will act in all things for the best interests of the cocker spaniel, and will do my utmost to restore him to his primitive quality and usefulness, having no friends to reward or enemies to punish.

As soon as the circular is prepared for publication I will send it for distribution to all friends of the cocker both in the United States and the Canadas, and shall expect from them such assistance and co-operation as their letters to me abundantly promise.

I regret that absence from my home during the past three months has delayed on my part a more prompt and willing response to those who desire justice to be done to the beautiful and intelligent little cocker.

E. C. FRANKLIN.

NATIONAL FIELD TRIALS.—Memphis, Oct. 12, 1882.—*Editor Forest and Stream:* The field trials of the N. A. Kennel Club, at Grand Junction, Tenn., commencing December 4, no doubt will have the largest number of entries in both stakes of any previous trials either in America or Europe. Many of the very best dogs of the country are already coming South to go in training for these trials. The club has secured about twice as much ground as they had last year, had it liberally planted with buckwheat, peas and sorghum, especially to feed the birds with. All who were there last year know that there were plenty of birds left for another trial without any being hatched. They have been rigidly protected, have hatched and raised well, and will be ample for all purposes, and both stakes can be run entirely through if we have good weather before the end of the week. I know of several new contestants who will make their debut this year, and if the veterans don't keep both eyes wide open, some of these "green ones" will get first money.—D. BRYSON, Secretary N. A. K. C.

BLUE BORDER.—Mr. Thomas F. Ryan, of New York, has purchased of Mr. John E. Long, of Detroit, Mich., the blue belton English setter dog Bolus, to take the place of Prince Taxis, who died last June. Bolus is a great-grandson of Pride of the Border, and Mr. Ryan has very appropriately, both as regards color and breeding, changed his name to Blue Border. He is a magnificent animal, and will, when fully developed, be heard from again.

EASTERN FIELD TRIAL ENTRY BLANKS.—Those in want of entry blanks for the Members' or All-Aged stakes of the Eastern Field Trials, also the rules and regulations, can procure them at this office, or by addressing the secretary, Mr. Washington A. Coster, Flatbush, N. Y.

OFF FOR THE SOUTH.—Mr. Wm. Tallman, of Worcester, Mass., passed through this city yesterday with a string of nineteen dogs on his way to Rock Hill, S. C., where he will locate and prepare his dogs for the trials.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Juno III. By Mr. Samuel Clark, Kennebunk, Me., for red Irish setter bitch, whelped July 26, 1882, by Guy II. (Grouse—Juno) out of Juno II. (Knock—Diana).

Silent Partner. By Dr. A. M. McCollom, New York, for lemon and white pointer dog, whelped Aug. 30, 1882, by Tally Ho (Snapshot—Elf) out of his Gertrude (Snapshot—Elf).

Bachelor. By Miss Carrie E. Taft, Bedham, Mass., for red Irish setter dog, whelped May 7, 1882, by Jack (Elcho—Meg) out of Jill (Elcho—Meg).

Biff. By Mr. C. N. Daly, Bergen Point, N. J., for black setter bitch, whelped July 3, 1882 (Chance—Topsy).

Belgrade. By Mr. J. H. Winslow, Baltimore, Md., for black spaniel bitch, whelped Aug. 8, 1882, by Success (Bachelor—Salus) out of Bonfanti (Ned—Daisy).

Belmont. By Mr. J. H. Winslow, Baltimore, Md., for black spaniel dog, whelped July 30, 1882, by Success (Bachelor—Salus) out of Rhea II. (Bub—Jenny).

Rolt. By Mr. C. E. Gilchrist, Charlestown, Mass., for black and tan Gordon setter dog, whelped July 13, 1882, by his imported Rex out of Mr. S. A. Coleman's Flora (Tom—Chloe).

Lorie. By Dr. M. H. Turner, Hammondsville, N. Y., for liver and white pointer bitch, whelped April 17, 1882, by Ned (Sensation—Queen) out of Pan (Prince—Flirt).

Victor. By Mr. Frank C. Phillips, Milford, Mass., for liver and white cocker spaniel dog, whelped July 11, 1882, by Colonel Stubbs (Captain—Flirt) out of Fly (Snipe—Princess).

Clip. By Mr. Frank C. Phillips, Milford, Mass., for orange and white cocker spaniel bitch, whelped July 12, 1882, by Colonel Stubbs (Captain—Flirt) out of Pet (Grip—Flirt).

NAMES CHANGED.

☞ *See instructions at head of this column.*

Bolus to Blue Border. By Mr. Thomas F. Ryan, New York, for blue belton English setter dog, whelped May 7, 1881, by Blue Dick (Blue Dash—Jolly May) out of Belmore (Lord Downe's Duke—Belle).

BRED.

☞ *See instructions at head of this column.*

Judy—Count Bendigo. Mr. T. Donoghue's (La Salle, Ill.) imported Irish water-spaniel bitch Judy (Drake—Duck) to his Count Bendigo (Bob—Bridget), Aug. 21.

Lark—Tweed II. Mr. Geo. H. Whitehead's (Trenton, N. J.) tawny

red Scotch collie bitch Lark (Rex—Jennie Nettles) to Mr. Thos. H. Terry's champion Tweed II., Oct. 10.

Rose.—Mr. J. F. C. Lucas's (St. Louis, Mo.) imported liver and white pointer bitch —— to Mr. Edward Odell's champion Bow, Sept. 20.

Brighton—Rolla. Mr. E. H. Smart's (Bainbridge, Ga.) blue belton English setter bitch Gretchen (Mac Leod of Dare—Brenda) to the Limestone Kennel's Rolla (Lofty—Maud Muller), Aug. 19.

Jessie—Tweed II. Mr. Wm. R. Hill's black and white collie bitch Jessie to Mr. Thos. H. Terry's champion Tweed II., Aug. 18.

Maggie—Tweed II. Mr. Chamberlain's black, tan and white collie bitch Maggie (Neil—Jess) to Mr. Thos. H. Terry's champion Tweed II., Sept. 10.

Minnie—Tweed II. Mr. C. Flemming, Jr.'s collie bitch Minnie to Mr. Thos. H. Terry's champion Tweed II., Oct. 5.

WHELPS.

Little Pet. Mr. E. F. Mercilliot's (New York) imported pug bitch Little Pet, Oct. 9, five (three dogs) by his imported Rex.

Fanny. Mr. E. F. Mercilliot's (New York) imported pug bitch Fanny, Sept. 30, four by his imported Rex.

Lucy. Mr. R. T. Wanderwart's (Pittsburgh, Pa.) liver and white pointer bitch Luck (Lock of Eden Hall—Ready Money), Oct. 2, four (two dogs) by his Don (Bang—Peg).

Daisy Starlight. Mr. H. W. Durgin's (Bangor, Me.) English setter bitch Daisy Starlight, Oct. 8, nine (eight dogs) by Dashing Dan (Lofty—Maud Muller).

Grace. Mr. A. W. Pearsall's red Irish setter bitch Grace (Hill—Donna), Sept. 10, five (two dogs) by Scout (Plunket—Carrie).

Norah O'More. The Rory O'More Kennel's (Albany, N. Y.) red Irish setter bitch Norah O'More (Berkley—Tilley), Sept. 24, eleven by their champion Rory O'More.

Quail III. The Rory O'More Kennel's (Albany, N. Y.) red Irish setter bitch Quail III. (Red Gauntlet—Quail II.), Oct. 9, ten by their champion Rory O'More.

Daisy. Mr. W. J. Percival's (Palo, Mich.) beagle bitch Daisy (Rattler—Baker's Fan), Sept. 30, two (one dog) by his Dandy (Rattler—Sill).

Trinket. Mr. Wm. Tallman's (Worcester, Mass.) English setter bitch Trinket (Dashing Monarch—Fairy II.), Oct. 11, four (two dogs) by Dashing Rover (Dash II.—Norna); one dog and two bitches since dead

SALES.

☞ *See instructions at head of this column.*

Darkness. Black, with white on breast, cocker spaniel bitch, whelped May 2, 1880 (Wildair—Little Buttercup), by Mr. M. P. McKoon, Franklin, N. Y., to Mr. W. S. Thomas, Birmingham, Conn.

Little Maudie. Liver and white ticked cocker spaniel bitch, whelped July 23, 1881 (Brag—Feather), by the Riverside Cocker Spaniel Kennel, Claremont, N. H., to Mr. H. H. Groves, Scotland, Mass.

Brag. Black cocker spaniel dog, whelped May 1880 (Wildair—Little Buttercup), by the Riverside Cocker Spaniel Club, Claremont, mont, N. H., to Mr. G. W. Schenk, Burlington, Ia.

Black Prince. Black spaniel dog, whelped July, 1881 (champion Benedict—Madcap), by the Hornell Spaniel Club, Hornellsville, N. Y., to Mr. A. C. Wilmerding, Whitestone, L. I.

Bounce. Black, white and tan beagle bitch, whelped June 12, 1881 (Leader—Fan), by Mr. A. C. Krueger, Jr., Wrightsville, Pa., to Mr. Chas. A. Fales, Central Falls, R. I.

Jerry—Snowflake whelps. Pointers, whelped July 11, 1882, by Mr. Wr. W. J. Percival, Palo, Mich., a bitch to Mr. Frank Willard of the same place; a dog to Mr. Wm. Bishop, Shiloh, Mich.; a dog and bitch to Mr. C. B. Macken, Wellsville, N. Y.

Doubleshot. Black and white greyhound dog, 34yrs. old (Riot Act—Sunflower), by Mr. L. C. F. Lotz, Chicago, Ill., to Mr. H. W. Huntington, Brooklyn, N. Y.

Selma. Blue belton English setter dog, whelped May 7, 1881, by Blue Dick (Blue Dash—Jolly May) out of Belmore (Lord Downe's Duke—Belle, E. K. C. S. B. 5,052), by Mr. John E. Long, Detroit, Mich., to Mr. Thomas F. Ryan, New York.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Success—Bonfanti whelps. Solid liver spaniel dogs, whelped Aug. 8, 1882, by Mr. J. H. Woodlow, Bellaire, Mich.; one to Mr. Harry Devries and one to Mr. Henry Bach, Jr., both of the same city.

Lorie. Liver and white pointer bitch, whelped April 17, 1882 (Ned—Fan), by Mr. Chas. H. Foote, Crown Point, N. Y., to Dr. M. H. Turner, Hammondville, N. Y.

DEATHS.

☞ *See instructions at head of this column.*

Rex—Fanny whelps. Four pug puppies, whelped Sept. 30, 1882, owned by Mr. E. F. Mercilliot, New York.

Rifle and Trap Shooting.

MATCH DEDUCTIONS.

Editor Forest and Stream:

After reading your "Why and Wherefore," on the defeat of the American Team, and having some ideas of my own in regard to the match; also, being somewhat expert with the rifle, I venture to advance a few ideas differing somewhat on certain points from those already expressed in regard to the rifle. There is no question in my mind that, if the rifles with which the team were armed were held on the bullseye at 200yds., the result would be bullseyes or close 8s. But just look at the magpies and outers and misses on the American side at this range. This thing at once struck me as the work of the guns themselves or of bad ammunition—consequently the men were at fault. Also, remember that this is the range in which the captain of the team stated to the reporters, he could not assist or help them to any improvement. Could the American Team have cleaned their guns after each shot, there is no question but that the scores would have been closer, and the result, possibly, have been different. Conceding this, we assume that the rifles were perfectly constructed and their capabilities for fine shooting perfect. You strike the keynote, how ever, when you say: "But the twelve were definitely selected only a few days before the match." One reason why the men shot less accurately than before the selection of the team was from the fact that it had been impressed upon them over and over again that they must deliver everything at the match, and my opinion is that in some respects the American Team was actually "coached" to defeat, and if the scores made do not imply this, I am no judge of what the scores do indicate.

In conversation with one of the English team, I remarked, "Why is it that you had no one to coach your men on the strength of the wind in the match?" He replied, "My mate and I have shot together so often that we know for a left wind he takes just ten inches more than I do for a zero day; so I ask him what he feels for the left wind, he takes two feet ten inches for the same; that is all we want to know. One man watches the flags while the other shoots; that is all the coaching we require, and you fellows utterly befog and break up a man who attempts to shoot or the opinion of any one not actually engaged in the contest."

I see you make no mention of the "gain twist" in the rifling with which each Metford barrel is cut. There may or may not be an advantage in this, and if so, the question may be, should the gunmakers, but to look at the steady work made by this English team it would seem to imply the former. It actually is a serious thing to American rifles to shoot seven shots without cleaning. I believe, also, that the British marksmen used a powder of which the combustion was a great deal quicker, and from that fact it developed almost its entire force inside the rifle barrel, giving less chance for a decomposition of the gas and consequent dropping of the sediment to the bottom side of the grooves in the barrel. I venture to predict that ere with the next year is laid by in the magazine, if the ammunition was properly fitted and tested, a vast improvement in the scores of the marksmen, and it may be that even totals of such a high character as would win the match could be shown. SMALLBORE.

OCTOBER 7.

Editor Forest and Stream:

I have read much that has been written in explanation and in criticism of the late International rifle match, but nowhere, so far as I have seen, have the glaring absurdities of some of the conditions governing that match been fully shown up. These contests were to be a test of both rifleman and rifle. If both countries were satisfied with the service weapon which each had adopted, increased skill in the use of the arms being the only object sought, then the match should have been fought with the service rifle and cartridge adopted by each country, and no variations in any particular should have been allowed. If improvement in the shooting qualities of military arms was also to be desired, then the utmost liberty in bore, cartridge and sights compatible with the requirements of military service should have been permitted. The rules adopted are absurd in either case. Cartridges and sights are permitted which are totally unfit for military service. Imagine a soldier in skirmish line with a detachable vernier and paper-covered rear sight, pencil and eraser in hand, and with cartridges the exposed grooves of the bullets of which are filled with a soft and danby wax. All these unmilitary things are permitted while a practical lateral moving rearsight is prohibited. When the English permitted the slide of the rear sight to be turned upside down and lines to be cut on it for different ranges, I fully conceded the whole question. If any sort of a wind gauge was to be permitted, then the one most practical and best adapted to the requirement of military service should certainly not have been ruled out.

The form of sights proposed by Sir H. Halford, a cut of which appeared in FOREST AND STREAM some weeks ago, might have proved a decided improvement over present forms; certainly there was no reason for pronouncing against their use, as they are calculated to withstand the rough usage of actual service. If a better form can be found and has adopted them, if inferior we could have let them alone and thereby have gained a point in our favor. Between the simplicity of both N. R. As. rifles is little to choose and I fear little to be hoped for in the way of improvement unless something can be done to reform one of their respective cuts. If it is permitted to improve rifles and ammunition, why not sights as well. Much has been said of the necessity of team practice and mutual aid, but how can the American team system under which American riflemen train so much be made available when the sights are such that no fellow can tell just where they are aimed. With any military rifles in use to-day I believe the American team system would prove but a delusion and snare to any team attempting to shoot upon that plan. Improve the form and set the rear sight as near the eye as possible and something might be gained by such a system. PEABODY MARTINA.

RANGE AND GALLERY.

ALBANY, N.Y.—The fifth annual fall meeting at the Rensselaerwyck range drew a good company of spectators and contestants on Thursday morning last. Besides the local riflemen there were present representatives from Adams, Pittsfield and Springfield, Mass., Hudson, Cossackie, Catskill and Troy. The day was all that could be wished for by the riflemen. The air was cool and bracing, a gentle breeze was blowing, while the sky was overcast with gray clouds during the whole of the day. The meadow had lost none of its bright green, and the wooded hills around the range were gorgeous in their many hues of autumn foliage. The riflemen seemed to feel all the influences that surrounded them, and spent a pleasant day before the butts. The arrangements were all perfect, and at nine o'clock, precisely, the flags were lowered, and an instant afterward the first shot of the fall meeting was fired and the bullet sped on its way and made a white spot on the freshly painted black bullseye. From that time, with the exception of the noon hour, the reports of the rifles at the various points were heard almost incessantly. The first match was the Directors' match, at 200yds., open only to the directors of the association. There were seven entries in this match and it was won by Charles H. Gaus as follows:

Chas H Gaus, Bal S	....4544535—31	Wm E Fitch, Bal S	....4554414—30
Wm T Miles, Hep S	....4544451—30	Wm J Reinick, Bal S	....5435544—30
Leonard Geiger, R S	....5414544—30	Samuel L Ward, Bal S	....4545165—29

At 11 o'clock the short range 200yds. military match was called. There were seventeen entries in this match, and the scores were very good, the eight highest men having thirty points and over.

James I Miles, S M	....5454455—32	Wm J Reinick, R M	....4444554—30
Chas H Gaus, S M	....5545455—32	Charles Keller, R M	....4444554—30
R B Spelman, Jr, S M	....4445455—31	Wm E Fitch, Bal S	....4554554—30
Andrew Donner, R M	....4544554—31	C Edw'd Wendell, S M	....4434444—27
Wm T Miles, S M	....4545454—31	A G Judson, Spg M	....4543245—27

At 2 o'clock the short range team match was called. The targets had been freshly painted for this match, and considerable interest was manifested. Two local teams entered and the Adams (Mass.) Rifle Club had sent over a team to make it interesting and win first place if they could. There was not much choice in teams, as they were all composed of first-class men, and a close contest was looked for, and the spectators were not disappointed. The Adams team shot evenly and well, winning the first place, with two points to spare, as follows:

Adams Rifle Club.

H K Cooley, May S	.5	5	5	5	4	4	5—33
A B Crandall, Bal S	.4	4	5	5	4	5	5—32
R A Whipple, Bal S	.4	4	4	4	4	4	5—29
R B Dean, Bal S	.4	4	4	5	4	5	4—30—125

C H Gaus, Bal S	.5	4	4	5	4	5	5—32
J I Miles, Bal S	.4	8	5	4	5	4	5—30
J G Newbury, R C	.4	4	4	4	4	4	4—28—123

Third Division Rifle Association.

B R Spelman, Jr, Bal S	.5	4	5	5	5	4	5—33
W T Miles, Hep S	.4	5	5	5	5	4	4—32
L Geiger, R S	.5	4	4	4	4	5	4—30
R J Williams, Bal S	.5	3	4	4	4	4	3—27 122

During intermission between the completed matches, a large number of scores were made in the short and mid-range continuous matches, both of which were continued until the close of the meeting. An examination of the score cards and pool tickets show that 1,250 shots were fired during the day, and not a disputed shot came up for decision, showing that the marking was first class.

The second day of the meeting at Rensselaerwyck was well attended. Six matches were shot and completed. The Third Division match was shot in the morning, and the Tenth Battalion team won, with a good score. The Sixteenth Separate Company, of Catskill, with a only competitor of that corps, they did very well, but showed considerable nervousness, as it was the first competition they had shot in. They had the material for a first-class team, and with more practice in competitions will overcome the nervousness and prove a formidable team. The scores in all the matches were good, the skill and nerve of the riflemen holding up to the last. Everything during the meeting has been conducted fairly, and the competitors speak in the highest terms of the arrangements. The details of the second day matches are given below:

Mid-Range Match—600yds.

The Wolverine Sportsmen's Club, at its meeting in the evening, decided that, instead of the annual hunt and bird supper, they would meet at their grounds and have a glass ball and pigeon shoot. The losing side are to pay for the dinner, to be had near their range. The Marlboro and Westborough Clubs are to be invited, and a right good time is expected.

GARDNER, Mass., Oct. 10.—At the last meeting at Hackmatack range, the conditions were 200yds. off-hand, with inch ring and Creedmoor target combined. The score tells the story:

	C.	R.	C.	Totals.

W G Loveland	63	38	72	44—134 82

MICHIGAN STATE TEAM.—The members of the Michigan Rifle Team recently visiting Creedmoor were delighted in good shape, well satisfied that they were as good marksmen as any of the prize winners, though they were unfortunate in many respects. The report at home on the doings of the team at Creedmoor is interesting, as showing the odds against which the men struggled, and how near they came to overcoming them all. The report says:

"Judge Webster, as captain of the team, was of course required to coach each individual member, and no one deeming it necessary to coach him he stepped to a firing point, and through a mistake in relation which the one coaching him would have to deliver, stepped to the 200yd. target, scoring 0. Even with these unfortunate odds against him, by scoring five bullseyes and four fours, he made 41 out of a possible 50.

In the Hilton Trophy match, in which some wonderful individual shooting was done, Michigan was in all fairness the winner, a fact generally conceded by those who were present during the contest. The Pennsylvania team closed with a score of 986, the Michigan boys being credited with 984, but 984 plow very unjustly, the latter were given a second place will appear from several facts, in support of which any amount of reliable testimony can be adduced. It is customary for each contestant to have what is called a warming shot before firing at the target for the purpose of warming the barrel and giving it an equal temperature throughout. This is generally taken by firing a cartridge into the ground, but one of the Pennsylvania men took his position at the firing point, deliberately aimed at the target and fired three shots. It at once was noticed that this was his warming shot, and the scorer, being notably prejudiced in behalf of that team, acted in accordance with this claim, and at the next shot the contestant made three, which was scored instead of the 0, to which he was alone entitled. Again one of their shots struck the ground so that all the witnesses saw the dirt fly, but the ball ricochetted and struck the target, scoring a three where 0 should really have been scored. Again, one of the Michigan team scored a 3, plainly denting the target, but the scorer declared a miss, and it was so recorded. Had a correct judgment been rendered in any one of these instances, Michigan would have secured the trophy, and even had then been time to enter a protest there is no question that Michigan, not Pennsylvania, would have been the winner. As it was, the international contest had crowded everything else over, both the Inter-State and Hilton trophy matches had to be shot that day, it was absolutely necessary that the Michigan men should get away that evening, so that the time and expense of staying over could not be incurred.

The shooting of Judge Webster in the Hilton trophy match is said by old riflemen men at Creedmoor to be the best ever made with a military rifle, either in this country or England, and a review of it bears out the statement. He made it recorded 49 bullseyes, one 4 and 33 out of a possible 35; at 500yds. he made seven straight bullseyes, all possible; at 600yds. he made four bullseyes and three fours, 32 out a possible 35, making a total in the match of 100 out of a possible 105; certainly a remarkable score, especially when it is remembered that he had the whole team, and no wonder he took time to determine the elevation for the balance, the light, the wind and all other influences having to be considered. His judgment proved equal to the emergency, however, and he "got on to" the bullseye right from the start.

Even with all the advantages taken by the Pennsylvania team and allowed by the scorer, Michigan would have been the winner had Root, of Kalamazoo, done anything like the shooting expected of him. At 600yds. the score made by Root was but 80 out of a possible 35, and just when the boys were jubilant in the anticipation of winning, their dependance went all to pieces. Root was put last because of his supposed nerve and coolness, but he wasn't the man for the emergency. Had he even equaled his record here would have been a tie and a good chance of winning, but he strung out the ciphers and lost the trophy.

Some of our men are wanted in the national team, and whether they go to Creedmoor or not we feel sure that in the next international contest Michigan will not only win, but see that she is not left after doing the best shooting."

WELLINGTON, Mass., Oct. 7.—The annual fall day of the Massachusetts State Glass Ball Association was observed on the grounds of the Malden Gun Club at Wellington to-day. The attendance was fully equal to any similar days, and the interest was somewhat increased over the last meet. There were eleven events, the winners of which are subjoined: In the first event, at trap No. 1, H. W. Eager of Marlboro, G. J. Rugg of Worcester and D. J. Howe of Westboro worked first prize, W. E. Perry of Worcester and C. A. Sampson of Ayer the third, and H. H. Francis of Randolph the fourth. The second event at the same trap showed W. S. Perry and F. T. Noble as first prize winners, while J. Clark of Lynn took second, followed by T. Howard of Stoughton and T. Reading of Marlboro as third and fourth prize winners. The third event was a two-man team match. H. W. Eager of Marlboro and G. B. Clark of Westboro were the winners of the first prize; T. T. Beaubry and G. J. Rugg were second; A. Perry, W. E. Perry, Noble of Malden and D. J. Howe and J. B. Valentine divided third honors, and A. Keating and G. H. Wurn fourth. The fourth event was taken by W. S. Perry first, T. Howard and J. B. Valentine second, H. W. Eager and J. Clark third, and E. T. Smith and F. Loring fourth. The fifth event was at five pair of doubles, and W. S. Perry and L. H. Parker of Ayer led off with first prize, while J. B. Valentine, T. Howard and F. T. Noble followed with second, third and fourth. The sixth event was also very contested, the first prize being secured by E. T. Smith, of Worcester, and W. H. Sheldon of Providence, G. B. Clark, of Westboro, and J. S. Sawyer, of Cambridge, walking away with second, C. Wilbur, of Brockton, and J. B. Valentine, of Providence, dividing third, and W. S. Perry taking fourth. The seventh event was a three-man team match, twelve teams contesting, the winners being Messrs. Sheldon, Valentine and Crandall, of the Narragan-

setts. Eager, Clark and Berry, of the Marlboros, Fielding Smith and Clark, of the Maidens, and Francis Wilbur and Howard, of the Randolphs, won in the order named. In the eighth event, first prize was won and divided by T. Howard and J. B. Valentine, second by S. D. Green, of Providence, and T. J. Beaudry, third by A. H. Jones, and fourth by Messrs. W. H. Allen and G. H. Leach, of Brockton. In the ninth event, J. B. Valentine was number one, while Messrs. Boyd and Sheldon fixed second position, Noble and Fielding divided third prize and L. J. Carson secured the remainder. At the close of the regular matches two consolation matches were shot off as follows: No. 1.—T. J. Beaudry and L. J. Carson divided first, J. M. Bean and L. Cook second, and A. C. Adams third prizes. No. 2.—E. W. Law, J. H. Whitman and W. Henry secured the prizes in the order named.

WELLINGTON, Mass., Oct. 13.—A pleasant party of gentlemen, members of the Raymond Club, met the Flies clubhouse at Wellington to-day, and had a most delightful shoot. The day was not as fine a one as could be wished, and a place beside the stove was quite desirable after shooting a few birds. Mr. D. Kirkwood, secretary of the club, has just perfected a new glass-ball trap, which was used for the first time, and which threw the ball very swiftly about fifty-five or forty yards. The following are the scores made at twenty birds, fifteen yards:

D Kirkwood	15 A Dafferin	14
J F Witherell	12 F O Bennett	11
J S Sawyer	12 S J Philbrick	11
S J Brown	12 T Ellman	10

In the glass ball match—ten balls, eighteen yards—the following scores were made:

D Chambers	8 J S Sawyer
J F Witherell	7 S Smallwood
O F Belcher	7

A tournament will be held by the club on Wednesday next, opening at 9 o'clock, the conditions of which are:

Three single seven birds' sweeps, entry $1, and three single seven birds' sweeps, entry 50 cents, from trap No. 1; six single seven-ball sweeps, entry 50 cents, and continuous 25 cents' sweep shooting from trap No. 1, using double-ball match from trap No. 3, entry $1. Prizes in all matches, 40, 25, 20 and 15 per cent. of entries. The gun match will also be open to members of any clubs. The prizes in this match are as follows: First, breech-loader, top-snap, value, $85; second, telescope, value, $18; third, square leather gun case, $12; fourth, Peshand & Wentworth sporting pistol, value $10.50; fifth, 30 U. M. C. best shells and 100 wads, value, $8; sixth, leather bound shooting coat, value, $6.50; seventh, one 25-pound keg powder, $6.50; eighth, two bags shot, $4.50. Entries, 50 cents to members of the Fly Rod and Gun Club; entry $1 to others. Conditions of shooting posted in the club house. The new ball trap will be used, which throws a low, quick ball.

This will be one of the greatest shotgun contests held since the passage of the law prohibiting the killing of pigeons, and a large number of entries has already been received from the leading old-time trap shooters.

NEW YORK GUN CLUB.—The following matches will be shot at the club grounds, Bergen Point, on dates given:

October 14, at 3 o'clock P. M.—Second match for the October Prize. Should a second tie result, the third match should be absent from this match, the executive committee shall have power to postpone the shooting off, provided that the absentee can give good reasons for his absence.

October 21, at 2 P. M.—Second match for the 1882 Autumn Cup.

October 28, at 2 o'clock P. M.—Cup, or money, $75. Seven birds; handicap rise. Entry $3. Re-entries allowed as far as time will admit up to 4 o'clock, but only one score to be allowed in shooting ties. Ties at one bird; 20 per cent. of entries to second.

November 4, at 2 o'clock P. M.—Third competition for the 1882 Autumn Cup.

November 11, at 2 o'clock P. M.—The November Prize, value $50. Same conditions as the October Prize.

November 18, at 3 o'clock P. M.—Fourth competition for the 1882 Autumn Cup.

November 22 and 23.—The 1882 Autumn Meeting. Programmes will be issued in due time.

November 25, at 2 o'clock P. M.—Second competition for the November Prize.

Thanksgiving Day, at 11 o'clock.—Prize, value $50, or money. Teams of four each; no man to shoot on more than one team; seven birds each; 30yds. rise. Entry $10 each team. Ties at one bird per man. Competitors to be drawn by lot.

December 3, at 2 o'clock P. M.—Fifth competition for the 1882 Autumn Cup.

December 9, at 2 o'clock P. M.—The December Prize, value $50. Same conditions as for the October Cup.

December 16, at 2 o'clock P. M.—Sixth competition for the 1882 Autumn Cup.

December 23, at 2 o'clock P. M.—Second competition for the December Prize.

December 30, at 12 o'clock M.—The "Old Year" Trophy, a china punchbowl, with glasses; value $100. Seven birds. Entrance $3; handicap rise. Re-entries allowed so far as time will admit up to 4 o'clock P. M., but only one score to be allowed in shooting ties. Ties at one bird; $20 per cent. of entries to second. It is hoped that this may be made the occasion of a general reunion of the club members. Lunch will be provided at the clubhouse at 1 o'clock.

In all the above matches entries will be received up to 4 o'clock P. M. on each day.

WALNUT HILL FALL MEETING.—The Massachusetts Rifle Association will hold its fall meeting at Walnut Hill Oct. 20 and 21. The following is the programme of the matches:

All conners' re-entry match—200 yards; decimal target; rounds 7; three scores to win; entries unlimited; entry fee, 50 cents to run through; entrance fee, 50 cents to second. It is hoped that this may be made the occasion of a general reunion of the club members. Lunch will be provided at the clubhouse at 1 o'clock.

In all the above matches entries will be received up to 4 o'clock P. M. on each day.

WALNUT HILL FALL MEETING.—The Massachusetts Rifle Association will hold its fall meeting at Walnut Hill Oct. 20 and 21. The following is the programme of the matches:

All conners' re-entry match—200 yards; decimal target; rounds 7; three scores to win; entries unlimited; entry fee, 50 cents to run through; entrance fee, 50 cents to second. Prizes, trophies, each in number, to the total value of 70 per cent. of the entire entry fees apportioned as follows: 10, 9, 8, 7, 6, 5, 5, 5, 4, 4, 4, 3, per cent.

Limited re-entry match—200 yards; Creedmoor target; open to all except persons who have made full match scores of seven shots, or upward. Other conditions same as No. 1.

Visitors' match—200 yards; Creedmoor target; open to all, except members of the Massachusetts Rifle Association and non-members who have made full match scores of seven shots or upward. Other conditions same as No. 1.

Single score decimal match—Open to all; decimal target; rounds, 10; one entry only; entry fee, $1. prizes as in match No. 1; to be shot Friday.

Single score Creedmoor match—Open to same competitors as No. 2. Creedmoor target; other conditions same as No. 4.

Repetition of No. 4 on Saturday.

Repetition of No. 5 on Saturday.

There should be a big rallying of Creedmoor men at this meeting. They will be sure of a cordial greeting from the Walnut Hill shooters and probably a good defeat.

BOSTON, Oct. 14.—There was no record kept of the shooting at Walnut Hill range to-day, as the weather was so stormy that no regular strings were shot.

A NEW RIFLE.—The Winchester Repeating Arms Company are now making a .32 calibre repeating rifle, built on the same plan as their model of 1873. It is considerably lighter than the model of 1873, and is especially designed for small game at short range. The length of barrel is twenty-four inches. The cartridge is center fire and contains twenty grains of powder and one hundred and fifteen of lead. One of these rifles is now being used in Conlin's gallery, and good scores have been made with it.

THE TRAP.

ALGONQUIN VS. JERSEY CITY HEIGHTS.—The return match between these clubs at glass balls took place at the grounds of the latter club at Manton, N. J., on the 30th inst., and again resulted in a victory for the Jersey City Heights. The match was ten men a side, twenty balls each, thrown from a rotary trap. Owing, somewhat, to a high wind, but more, perhaps, to its being the first trial of the Algonquins at a rotary trap, small scores were made, some of their best shooters failing to "catch on" or get the hang of the "uncertain thing." When about half the score was shot out the spring broke and the clay pigeon trap was substituted for the remainder of the match, and this seemed to bother the Indians full as much, as also some of the rebuilds of powder and one hundred and fifteen of lead. One of these rifles is now being used in Conlin's gallery, and good scores have been made with it.

The referee and umpiring of Creedmoor men at this meeting. They will be sure of a cordial greeting from the Walnut Hill shooters and probably a good defeat.

One of these rifles is now being used in Conlin's gallery, and good scores have been made with it.

The return match between the Midway Gun Club and the Jersey City Heights will take place at Mattawan, on the grounds of the former club on the 25th inst., 25 men each club, 7 pigeons each man, Mattawan (or Burlingham rules, nearly) to govern. Trains leave Pennsylvania Railroad, Jersey City, 9 A. M. and 12 M. Match to commence at 11 sharp, in order to get through in time. From the reputation of the two clubs and the closeness of the last match, an exciting contest is expected. We understand the Midways have blood in their eye, and will do their level best. As the secretary of the Midways says in his reply, "We want a good time, and may the best men win." "We hope, and hoping, believe."—JACOBSTAFF.

ROCKFORD (ILL.) GUN CLUB, Oct. 3, 1882.—Clay pigeons, thrown by hand, 18yds. rise.

The large sales of W. & C. Scott & Sons' $35 gun are unprecedented. Send for circular to Wm. Read & Son, Boston, Mass.—*Adv.*

Yachting and Canoeing.

MONTAUK'S SPARS.

Editor Forest and Stream:

I have read with much interest your argument in last week's issue, proving that the schooner Montauk to be a narrow vessel. The same argument, if applied to case of Maggie and Vixen, would prove the larger vessel. It also proves conclusively, as I have always affirmed, that the Elsworth vessels are of less cubical contents in proportion to their dimensions than all others, notwithstanding arguments by interested "scientific" yacht designers. Regarding rig of Montauk, the spars were placed in that vessel by her designer in a common sense and practical manner, no attention being paid to so-called scientific notions or English ideas. The science involved in placing mainmast well forward to obtain large area of mainsail (an idea copied originally by the English from Capt Robert Fish), is in my opinion the veriest humbug. The fact of mainmast being well forward necessitates foremast being placed near forefoot or foresail is lost. Consequently, if foremast near forefoot cases a schooner in a seaway, or makes her more westerly according to your scientific theory, I want none of it. Mr. Philip Elsworth, who undoubtedly stands at the head of yacht designers in this country, by reason of his unvarying success, in his new design of schooner for Mr. L. A. Fish, N. Y. C., has placed spars still further aft than in Montauk; it is needless to say that speed is expected in this vessel. As to your bug-bear and reputed wind-jammer, the English schooner Miranda, "distance lends enchantment to the view." Were she to make her appearance in these waters, in my opinion she would be distanced like the Maggie by one of our good second rate top sail scheming vessels.

JOHN G. PRAGUE.

[Whether mainmast be placed well forward or the foresail made large, the underlying idea is in both cases the same, the object being to make a double-headed rig approach as near as possible that of the sloop or cutter. In Elsworth's plan the foresail is considered the principal driving sail, and the mainsail is reduced accordingly. Foresail and headsail may be regarded as the rig of a sloop, with the mainsail added to be of secondary importance. Carried out to its full, this plan ends in the yawl or ketch, in which the foresail has practically grown and the mainsail of the schooner shrunk, until the rig has become essentially a cutter. The other plan—that of stepping mainmast well forward—seeks pretty much the same object, though in a different way. The foresail is reduced until it becomes a baby stay, and the schooner's mainsail takes the place of the sloop's mainsail as nearly as practicable, as in Seabelle and Miranda. Experience in the British fleet has very conclusively proved the advantage of such a rig over the old fashion of stepping the spars in a schooner. The Elsworth plan, on the other hand, is still something of an open question. In the Montauk's case the test has not been crucial enough to draw inferences. She has met nothing of her tonnage really first or even second class. Of the two methods to consider the weight of the spars better disposed after the English style, which, by the way, was not copied from Bob Fish, but originated in Scotch waters long before Capt. Fish's name had ever been heard of in foreign countries.]

THE FABLES ABOUT THE GLEAM.

THE last number of the *London Field* to hand, lays Mr. F. Gower, the American schooner cutboat fiend, over the editorial knee and administers to that romancing person such a castigation that he will not be necessary for him to apply for admission to yacht matches abroad next year. We have seen fit to deal in plain words with the imposition practised upon the American public through the foolish correspondence in the newspapers of a professional liar, who, it appears, was almost a tissue of fabrication from first to last. We have nothing to do here with Mr. Gower personally. Our object in exposing his highly colored bombast in the Providence *Press* and Providence *Star* last week was a plain purpose in view and that is never to yield to that section of the public whose interests we represent. Untruthful fables concerning the doings of any boat only serve to becloud the horizon and obscure the true light experience should throw upon the question of model and rig. Mr. Gower did his best to create false impressions at home, and we have stripped his wild flights of fancy of their influence by holding them up in these columns for just what they were worth. That Mr. Gower should find it possible to palm off a web of fergiversation and such clumsy misrepresentations upon the Providence *Press* and the *Spirit of the Times*, and Providence *Press*, is perhaps not to be wondered at. Those journals lay no claim to being technically informed upon yachting affairs. But it remains to be seen whether they are sufficiently under Mr. Gower's control to prevent the retraction or correction due to the public. We take the quotation below from the *London Field* we dismiss Mr. Gower's case as too petty and unsavory for further consideration in these columns. The *Field* says:

In the letter there is the following statement: "Mr. Prescott Westcar, a gentleman greatly interested in boating, had ordered a boat to be built on the Gleam's lines, as nearly as they could be ascertained, excepting only that he would not adopt the centerboard." We are in a position to assert that there is not a word of truth in this statement. Mr. Prescott Westcar never intended, as the *Times*, in per haps not to be wondered at. Those journals lay no claim to being technically informed upon yachting affairs. But it remains to be seen whether they are sufficiently under Mr. Gower's control to prevent the retraction or correction due to the public. We take the quotation below from the *London Field* we dismiss Mr. Gower's case as too petty and unsavory for further consideration in these columns. The *Field* says:

In the letter there is the following statement: "Mr. Prescott Westcar, a gentleman greatly interested in boating, had ordered a boat to be built on the Gleam's lines, as nearly as they could be ascertained, excepting only that he would not adopt the centerboard." We are in a position to assert that there is not a word of truth in this statement. Mr. Prescott Westcar never intended, as the *Times*, in a letter dated from Rockford, Illinois, on the 3rd inst., to the Gleam when he ordered the Mocking Bird to be built, and her designer never thought of the Gleam in making the design. In fact, Mocking Bird is a deep-bodied, heavy displacement boat compared with the Gleam, of the Heben Ferry type, but that Mr. Gower declined both these unequal contests, and, not wishing to leave his boat at the moment, intrusted an English friend with the duty of meeting Mr. Westcar and negotiating. That friend, either from an error in judgment or an over confidence in the abilities of the Gleam to sail a leeward race with a boat twenty per cent. longer than herself, agreed to sail over one of the very courses already mentioned and declined. Accordingly the race was sailed over a twenty-two mile course, of which eighteen miles was free or fair wind. In an exceedingly full and detailed report of the race the *London Field* the statement is made that the Gleam's pilot made a mistake in one of the turning buoys, turned the wrong one, and had to go back to the right one, thus losing several minutes. The Mocking Bird gave no allowance for her twenty per cent. greater length, and came in winner. A figuring of the ordinary time allowance would have given her the victory by forty-four seconds, and if the time lost by the pilot were to be counted out, the Gleam would have won by several minutes under the usual allowances."

The best answer to this astounding piece of perversion about the pilot and turning the wrong buoy is to quote what was actually said in the *Field* report of the match:

"The Mocking Bird had a reaching but not hanging to windward quite like Gleam, fetched the buoy without another board, and gybed over all right and got out splanacker. The Gleam had to make another hitch on starboard tack, and stood too far; in running back to gybe she missed the buoy altogether, losing two or three minutes, and not rounding the buoy at all. . . . The Mocking Bird won by 12min. 35sec."

We may state that the Gleam made the "short hitch" referred to, not because she could not weather the buoy as the Mocking Bird had done (she weathered the buoy all right), but because she could not be gybed without some risk, and was stayed to starboard tack instead. While doing this she was carried away so far by the tide that she would now have had to gybe to port tack to pass the buoy in the right way (it had to be left on starboard hand), and not doing this, she left the buoy on the wrong hand, that is, not rounding it at all. We understood at the time that Mr. Gower thought his pilot, Jim Lepe, mistook the Lepe buoy for some other buoy; but such a story is about as ridiculous as saying a city policeman mistook St. Paul's Cathedral for some other church. All we can say in reference to this extraordinary piece of misrepresentation is, that it is the custom of Englishmen to take a beating good-temperedly, say as little about it as may be of explanation as possible, and make no attempts to belittle the prowess of a successful adversary. Most of the English yacht clubs have a rule which excludes centerboard boats from competition. It would serve no good purpose to now discuss the disputed ability or continuing this rule; but, at least, it is not likely to be abolished at the dictation of the owner of a Hudson Island catboat; and it is unlikely that any one will care about making a match at all with such boats if their owners cannot take a beating in a better spirit than the owner of Gleam has.

THE AMERICA CUP.

WE have not only duly pointed out why the present conditions of the Challenge Cup are unfair and unsportsmanlike, but we have from time to time quoted foreign journals in support of our dedare for a modification. The hesitation of the New York Y. C. has induced the owner of a forty-ton cutter we had expected to see beaten to sell his vessel. A famous schooner is now awaiting action on the part of the club. Are we to lose this chance for an international match, too? There is not a yachting journal which does not agree with us on the necessity of revising the conditions which by any ordinary common sense would require to be exactly equal to both sides. The New York Y. C. not long ago found certain conditions in the deed of gift as it stood uncongenial to its views. No time was lost to change the cup and bringing Mr. Ogden Goelet to doctor, the deed "to carry out the intentions of the original donors more thoroughly." Now the intention of the original donors was to promote, not to prevent, international matches. We have shown by quotations from the *London Field*, *Bell's Life*, *Yachting Gazette* and by the action of foreign yacht owners, that the deed in its present shape deters them from recognizing the cup as an international trophy. The circulars issued to yacht clubs abroad by the secretary of the N. Y. Y. C. have not even received the dignity of recognition. We know they were received with open arms, at least one instance. We have published correspondence from well-known yachtsmen abroad in which exception was taken to certain unfair stipulations.

We honestly believe that in face of all this the New York Y. C. will long refuse to take action in accord with the feelings of fair dealing by which we know the club to be actuated. Granting for the moment that the deed as it is may really be claimed tolerably fair after a good deal of straining and voluminous explanation, it would certainly be far more creditable to the club and to America's yachting generally that the stipulations of the challenge should be placed beyond even the semblance of partiality so that the present suspicions attaching to the trust could have no grounds for existing. The New York Y. C. did not hesitate to have the conditions of its very popular medal, it did not even stop at ostracising clubs its equal and even superior in some respects, when its own convenience was at stake. Why then should the club any longer refuse to give five minutes of its time to considering certain changes to make its rule of the yachting world, without in the least sacrificing the holders' rights. Such action would be far better evidence of the club's desire "to carry out the intentions of the original donors" than the past efforts to relieve itself of duties knowingly assumed when the trust was accepted. The club is well aware that foreign yachts will not and cannot be expected to challenge as the conditions now stand. Yet the club professes to be anxious and ready to meet any visitor from abroad. There is no consistency in its acts and professions. We trust the time will find the conditions of challenge for the America Cup put into shape equitable to both sides, so that another season may not pass by without a trial between our yachts and others from abroad. To that end our efforts will continue to be directed.

DON QUIXOTE ABROAD.

AS we had supposed, the buncombe which Mr. F. Gower, owner of the catboat Gleam, caused to be published in the Providence *Star* and *Press*, turns out to be to a great extent devoid of truth. When Mr. Gower returns to England next season he will probably find all the laurels he looked to himself cast at his feet. He may be unable to appreciate the cause, but others will not find it difficult to assign a proper enough reason. We quote from the London *Yachting Gazette*:

"A very extraordinary letter appears in the Providence *Star* about the American cutter-rigged boat Gleam. The whole matter is too utterly absurd to treat seriously; we, however, give prominence to a letter on the subject from a correspondent."

To the Editor of the Yachting Gazette:

SIR—I have before me the Providence *Sunday Star* of Sept. 3, and find that about two and a half columns of its space have been devoted to a Rhode Island boat Gleam. I certainly was astonished to read such sensational headings as "Rhode Island's Famous Catboat Creates a Panic in England," "A Résumé of Her Splendid Record in the British Waters," but was taken more aback in regard to some of the grossly and unfounded statements set forth. Without doubt Mr. Gower had a substantial grievance in respect to the collapse of a match proposed in the columns of a contemporary by "Feard." This gentleman, I believe, wished to pose as a representative yachtsman—without the slightest substantial claim so to do—and the only credit he had an opportunity to borrow to meet the Gleam was an itchen ferry boat (ten years old, leaky, and rough outside, while *perhaps*, too, the sinews of war were wanting. The Belle Lurette and Weasel business is purely Utopian, while it is worse than folly to think that centerboard racing is a fashion in England. I am quite certain that Mr. Westcar had no idea of matching his boat against the Gleam when he gave the order to build, and the midship section of the two boats is, I know, as unlike as well can be. Mr. Gower gave a prize at Cowes for self-glorification, and had a miscellaneous fleet opposed; and I believe the weather was very light and fluky, yet perhaps a better racing day than on the opening of the Southampton Regatta. I believe there were a number of boats that beat the Gleam all to pieces on Southampton water, and perhaps a few replies may be elicited by the publication of this piece of buncombe in the *Star* from those who were there. Yours, etc.,

HAMBLE (Southampton), Sept. 20, 1882. S. R. C.

THE AMERICA CUP CLAUSE.

ONLY a lunatic would think of competing.—*London Saturday Review.*

No English yacht owner would be soft enough to challenge.—*London Field.*

The conditions are 100 to 1 in favor of the American.—*Bell's Life.*

Indignation was felt at their absurdly one-sided character.—*Saturday Review.*

FOREST AND STREAM has hit the right nail on the head.—*Yachting Gazette.*

And so on throughout the yachting and sporting press. Enough, we should suppose, to influence even the New York Y. C. to the instant return of the obnoxious deed of trust to Mr. Schuyler with the intimation that as he has been kind enough to alter the conditions to suit the easy-going convenience of the club at the outset, and old and reputable Canadian organizations, a few more changes rescuing the cup from a laughing stock abroad and investing it with a truly international character would be equally acceptable to the present trustees. As a close corporation the New York Y. C. may brave adverse public opinion till doomsday if it so chooses. As trustees of a cup offered to all countries (bar one most likely to prove a troublesome adversary, and therefore black-listed) the wisdom of standing sponsor to a challenge described inferentially as a piece of lunacy by the *Saturday Review*, and practically as one very generally, especially if the nature of the challenge conditions reflects upon all American yachtsmen instead of only upon those directly responsible for their promulgation.

NEW CRUISER.—Mr. Eaton's little cutter, building by W. P. Stephens, at West Brighton, S. I., is advancing well. She is now planked up, and though but 21ft. on load line, shows the room of a hotel inside. There will be standing room in the cabin, a forecastle and closets between bulkheads. Stephens has made a very fair job of the boats, as her model was laid down full size on the mould loft floor and faired up with great care. In point of build, the cutter is an example. She is framed lightly, with steamed timbers and a sawed timber every third frame. Copper-fastened throughout, all nails clinched on inside. She will probably be rigged as a yawl for single-hand cruising. This type of boat, deep and of fair beam, flush deck and metal keel, is fast finding favor among the sailor element.

CLUB SIGNALS FOR CANOES.—An excellent plan has been adopted by the New York Canoe Club. In place of the usual distinguishing burgee, a colored device is displayed near the peak of the sail. This club has chosen a red ball or disk, about 6in. diameter, stitched to the sail, making a distinguishing mark easily caught by the eye and remembered. Other clubs are likely to follow with blue disks, crosses, etc. The N. Y. C. C. is about to close a very active season, during which many members and canoes have been added,

SINGLE HAND YACHTS.

THERE is a peculiar charm in the indefinable feeling of undivided responsibility to which the single hand cruiser becomes a willing slave as he roams over the high seas in his wee barkie, free from care, far from the harassing annoyances of this world's artificial life, his own master, in close relations with a boon companion, his ever ready, trusty little ship. Though friends be left behind in dusty cities, he finds a fresh and congenial substitute in the intimate acquaintance of his boat, for soon he learns to invest his floating home with a personality, causing the boats character to appeal to his appreciation as though being endowed with actual life. He discovers the brave, sturdy qualities his ship may possess and approvingly recounts them over and over to himself. He finds she is not perfect and seeks to correct her weaknesses and caprices. He handles her tenderly and with care. She becomes the apple of his eye. There are no "guests" forever asking to be put ashore, wanting to catch an impossible train or boat, nuisances who no sooner board the yacht than their selfish thoughts are concentrated upon the best method of fetching up where they came from. There are no croakers, no nervous lubbers chafing at a few hours' calm, fretting about getting somewhere in the least possible time, as though the yacht were a tiresome prison and the sea and its ever changing attractions tasteless for heroes of the barroom, billiard cue, or for dandy knights of the carpet. There are no side shows under way, no cards down below, no boisterous skylarking under the lee of the mainsail, no store clothes to mar the ideal of amateur life at sea, nothing to interfere with the devotion to the cause and the realization of the dream fancy has perhaps depicted to the longing tar through dreary months of waiting. His ship, his world—the rest of the world his convenience.

There is no better school for the sailor than the tiny single hander. Not only does it introduce the amateur to all sorts of work he would escape in larger vessels, and many a practical lesson which might never be learnt but for the demands of cruising alone, but life in these small yachts develops in man or lad an innate love for blue water, a spirit of restless adventure, a longing for "going foreign," which distinguishes the real sailor from the sham article, best described as the "excursionist." The quarters may be cramped, but the very necessity of making small room go far affords as an offset great pleasure in seeking by cunning devices and economical planning to circumvent limited space. Serving up three meals a day in courses is certainly impossible, but what may be missing in seductive variety an honest appetite derived from sea air and hard work will more than make good. It is an old and true saying that appetite is the best sauce, and many a time have we had occasion to verify this adage. Perched up on the weather quarter, peering into the darkness for a landfall after a heavy day's bouting with the sea, the inner man ready to chew rope or old shoes in satisfaction of a twelve hours' fast, how grateful then even such a modest, commonplace article as a biscuit or even forecastle hardtack, spiced with a lump of cheese, washed down with a hasty pull at the flask. Not for the finest feast a Delmonico factory or an epicure's larder affords would we exchange the grateful sensations of such a moment, supreme with satisfaction, unknown to aught but those who have earned their appetite by serious toil. And then when the mark you have laid your course for all day at last looms through the dark, wet night, and the successful close of your work and care for the day is announced by the racing of the chain through the hawsepipe, and the final clink as the turns fall about the bits for a full due—such welcome music from the rattling links sends a thrill of victory to the heart of the weary mariner, to which the trumpeting of a brass band ashore is perfectly insipid. And the cosy feeling of snugness as you find your pet riding quietly under a lee after the rude buffeting of the day, as you push back the slide, light the pretty little cabin lamp below, and start the kettle sizzing for a feast at leisure upon the best your ample, well-selected stores afford, topping off with the soothing pipe, all that makes up a combination of bliss unapproached, much less equaled, by anything else we have ever experienced in the pursuit of enjoyment.

The mind plans and the body executes. You set yourself a task, and in its accomplishment above all difficulties lies your reward. It is play, yet it is work. It is pastime, yet it is a school of instruction. It is theory and practice in the same instant. It is recreation but also health. It may at times seem like coarse, vulgar work, downright labor, yet its influences are broadening and refining. It may strike the casual observer as a waste of time. Those who have tried it know better. Even from the sordid standpoint of the money grubber, the time is capital well invested with heavy interest in vigor, boldness, circumspection and the habit of looking before you leap.

The single hand cruiser has his annoyances, his disappointments without doubt, but the endless opportunities for solid, rational enjoyment, study, observation, experiment, and the unlimited range for self improvement in body and mental capacity, coupled with a dash of romance and the spice of adventure, so far outweigh adverse considerations, that we need not hesitate in counseling the beginner, no matter what his wealth, to start in at the bottom of the ladder, to ship as skipper, crew and cook aboard the right kind of single-hand yacht to become a yacht sailor and more than a mere yacht owner. We publish herewith plans for a small cruiser designed by W. P. Stephens, of West Brighton, Statan Island, and next week will produce the sail plan, and enter into detailed consideration of form and rig most suitable for the purpose intended. The illustrations will readily explain themselves. The yacht is 14ft. load line, 17ft. on deck 5ft. beam, 3ft. 3in. draft, 2ft. 2in. least freeboard, displacement, approximate, 1½ tons, iron on keel 750lbs., iron inside, 850lbs., area of plain sail 250 sq. ft., length of cabin 6ft. 6in., depth 3ft. 10in.

SINGLE HAND CRUISER Designed by W. P. STEPHENS.

LONG LAKERS AND FEATHERWEIGHT CANOES.

Editor Forest and Stream:

In your issue of Sept. 28 appears an article signed "Gus Syphert," in which I am pretty sharply taken to task on the question of boats and canoes, etc.

The first count is that I compare, very unfavorably, the "Long Lakers" with the Rushton canoes.

Second—I offer to paddle a ten-pound Rushton canoe over a twenty-mile route (most of it unknown to me) for a wager.

Third—It is admitted this is not a challenge, but is "a good deal to brag and bluster about Rushton's canoes, and what 'Nessmuk' thinks he can do in one of them. It is also intended as a fling at our Adirondack boats of the Long Lake model."

Fourth—G. Syphert gets off his base badly. "He knows 'J. R., Jr.,' very well. Has known him for years * * * * * knows that he makes no pretensions as a boatman; is physically unfit to row for any distance, etc." That is the sum of it. And then Gus thinks it ought not be unless to stop in and take his place, because for the last thirteen years he has handled the Long Lake boats and ought to know what they can be made to do, etc. Then, having lost his head altogether, he proposes to race over the course beforenamed, I in a ten or twelve-pound eight-foot Rushton canoe, he in a sixty-pound Long Lake double-ender * * * * and beat me through by forty-eight hours to the Forge House. He gets enthusiastic. "He will make a match with any other man, not a professional, for a six days' race, he in a Long Laker, but built at Booneville, the other man in a canoe built by Rushton." He wants it understood he is not a professional, as he understands it, that is, a man who makes it his business to row for money. "But the whole drift of 'Nessmuk's' communication is so loudly in praise of certain canoes as being the *sine qua ultra* of a boat to sit in that one is inclined to think the Adirondack boat a flat-bottomed scow."

Ah, Gus! you never wrote that. You may have lent your signature; but you know better. To begin at the beginning.

First—I do not and never did compare the light cedar canoe with the Long Lake rowboat. Such a canoe would be of no more value to a North Woods guide than a bread-tray. And a 50 or 70 lb. Long Laker would be as useless to me as a stone-boat. You might as sensibly compare a Penny Bridge catboat to a seagoing yacht. Each has its uses; each is good in its place. There is simply no comparison in question.

Second—My offer to paddle a long cruise, for a wager, was neither aimed at "J. R., Jr.," nor "Gus Syphert;" but it was made for the benefit of many friends and critics who predicted disaster when I first went to the North Woods for a cruise in the 18-lb. "Nessmuk" took "extra hazardous" policies on my life, and repeated it when I went again in the 16-lb. Nipper. The Nipper was, and is, probably, the lightest cedar canoe ever made and used as a single cruiser, of her dimensions—but not fast. Each of these canoes had a carrying capacity beyond my expectations, and I planned a still lighter one, to weigh about 10 lbs., and of only 34-inch beam, with 8 ft. length. Such a canoe is, of course, experimental. I have my own doubts about her staying qualities. She would be limber as a handbox, and might double up like a gum overshoe. Rushton says, in answer to an order for such a canoe: "I can make it as light as you please; but I will not warrant it for an hour. It may go to pieces like an eggshell." Other first-class builders say the same in effect.

My boating and canoeing friends are more than sceptical. They want to know when I propose to start. They are ready to insure me in the extra-hazardous list, etc. And it was to steady their nerves that I made the offer of a wager, which still holds good—not for a race, but for a long, leisurely cruise, in a lighter and more fragile canoe than any man has ever built or paddled. Such a canoe—if she could carry the canoeist and live, which is by no means certain—would be necessarily slow. She would go, under easy paddle, about three miles an hour. Any attempt to hurry her would result in her wallowing and "snaking." She would be no racer; but she might be a very pleasant companion for an amateur cruise through a region like the Adirondacks. A working guide-boat is one thing; an amateur canoe is a different affair altogether.

"J. R., Jr." stubbed his toe against a little canoe at Third Lake, turned it up, and read the name on it, "Nessmuk." He at once proceeded to lecture, advise and instruct me on going in a boat where I could stretch my legs, sit at ease, etc., etc. As I had over fifty years' experience in ships, brigs, schooners, sloops, sail boats, row boats, dug-outs and canoes behind me; and as I had paddled the canoe against which he stubbed his toe 550 miles in the summer of 1880 without serious mishap, I felt it right to put up my hands in self-defense. Hence my article of August 10th, which drew forth the grandiloquent challenge of G. S.

As to the propositions distinctly noted above, "Gus Syphert" is not fool enough to accept either, although they are all the propositions I have made. He cannot afford to spend "a month or more" on a leisurely cruise for the chance where five days' work would be from six to eight miles per day, and over a course that has nothing new to him. Nor is he likely to lay a wager against "what Nessmuk thinks he can do in a light canoe." His so-called challenge is idle; it is naive; it is ridiculous and one-sided.

He knows—no man better—that, other things being equal, a narrow 16ft. boat has all the advantage over a little eggshell of 8 or 10ft. in length, and that oars can and ought to beat the single-bladed paddle four to three, while the single blade beats the double blade just about as badly—the double blade being the slowest, as also the most pleasant mode of oaring the water.

He knows the route perfectly which he proposes to go over, while a stranger would be certain to get fogged every day on the intricate and often dim and drowned out channels, outlets, inlets, carries and landings.

This point alone would make it a dead sure thing for G. S., though his opponent might be able to outrow or outpaddle him five to four. And yet, with thrilling gallantry, he offers on these conditions, a six-days' race to "Nessmuk or any other man."

Gus, I think you recollect me well. I believe you were at the Forge House one fine morning in July, '80, when I stripped for a race from the boat house to "Bullhead Rock," about 200 rods. My opponent, with his single blade, took a narrow Long Laker, double-ender, I paddled a 10-foot 18-pound canoe. You will bear me witness that, although beaten from the start, I paddled through like a man and took my defeat cheerfully. The single blade beat me nearly forty rods, and you could have beaten the single blade as bad, or worse, with oars. At the canoe regatta, Lake George, in the summer of '80, there was a Kanuck guide who, with the single blade, could beat any double blade on the lake four to three, and oars could beat him nearly as much. In view of such facts it is putting it mildly to say that your challenge savors a little of bombast. You are a muscular, skilled oarsman and guide. You may not be a professional, but you are accounted a crack oarsman in Brown's Tract. You so account yourself, and a boat race is nothing new to you.

If you are spoiling for a race you can well afford to challenge for it on equal terms. As boat against boat, oars against oars, canoe against canoe, paddle against paddle, and over a neutral course equally well-known to both contestants.

In such a race the Long-Laker out to be well to the front. She is the fastest model of an inland working boat I have seen, and I found that the Northwoods guides were disposed to make speed a *sine qua non* in a boat. They ought to know what they want. I always gave her the credit of being speedy, but think her cranky and tiresome to ride in. I never compared her to a scow. She is probably the best guide boat ever adopted by the Adirondack guides. But she would be better were her siding of white cedar instead of pine, and if her ribs were of light, elastic red elm, placed one and one-half inch apart, instead of spruce knees far enough apart to allow a clumsy boat keel between, by which the sides is likely to be shivered.

She is a lapstreak, clinker-built cedar boat. The Long Lake builders told me their boats were lapstreak. So they are, but they are not clinkers. When the lap is worked off to a smooth skin, the boat is much weakened. To test this fairly, take a strip three-sixteenths cedar or pine, 6in. wide and 10ft. long. Balance it on the center, and try its strength by carefully bending to a given point. Now lap it lengthwise, lap it an inch, and fasten precisely as in boat building. Test it as before, and you have gained 20 to 25 per cent. in strength. Now work the projecting edges of the lap down to a smooth skin of uniform thickness, and test the strength once more. You will find it weaker than at the first trial.

One Long Lake builder told me that the projecting edges of the clinker streak resisted the water and slowed the boat. The theory is correct, but practically untrue, however. There may be a difference of a minute in a mile. I can wait a minute. I go to the blessed woods to rest and recreate—not to race or run. I have a sensible letter from "J. R., Jr." He says:

"But, really, I must give in beat when you talk of getting me to row you or any other man over the course you name. In fact, I am no good at that business. I have got to the time of life when it is a great deal nicer to let some one else do the rowing, and physically I am not able for it," etc.

He seems to infer that there is some element of racing in my proposition. A minute's reflection will set that inference aside. I proposed to meet him between Paul Smith's and the Forge House, for a cruise around by the Tupper's, Beaver, Twitchell Lake, etc., the cruise to cover a month or more. As he would go in on the eastern and I on the western side of the woods, I could not expect him to come beyond Kellogg's, on Long Lake—perhaps Mother Johnson's would be about fair; but we will say Kellogg's. This would give a cruise of less than 200 miles, with thirty-one days or more in which to do it. Does that look like racing? About six miles daily. I should say he might do it yet—say, next summer. Kerry, of Raquette Lake, can make him a boat, with a light pair of oars, to weigh about 35 lbs.; other builders of Long-Lakers can do the same.

Rushton can make him a cedar boat still lighter, seated for one. He will find it pleasant, going over such a route independently, paddling his own canoe, stopping when, where and how he pleases; laying off, maybe, for days together in some delightful nook, taking no note of time, and letting the hours go and come unnoted.

Once for all, I do not discount or decry the Long-Lakers, the builders thereof, or the Northern wilderness. The boats are speedy and good for the uses to which they are put. So long as speed is the prime factor in a guide boat they are not likely to be superseded. But they can, and probably will, be improved. The builders are, so far as I have known them, manly, hard-working, skilled mechanics. Some of them are guides, and good ones. And the Adirondack region is the best I have ever found for a summer cruise by boat or canoe. It is also very healthy, but will necessarily become less so if dams and drowned lands are allowed to increase. I have said this before. But it is the first duty of one who writes for the public to speak the truth as he sees it, also to give both sides of every question, though he pinches his own corns thereby.

Such writers as Murray and the author of "Camp Lore" have done some bad work for the North Woods. The gentleman who is writing "Adirondack Survey Notes" does infinitely better. He may not induce an army to go there for pleasure and come out disgusted, and forever after go somewhere else, but you can tie to what he says. As for myself, I expect to go there again in a very light canoe, of about twelve pounds. I trust to be in better condition physically than on my last cruise. I do not go to fish, hunt, or race. I can find as good fishing and hunting nearer home, and about three knots an hour is as fast as I care to go through this world. Nor for health. It is just as healthy on the high lands hereabout. I go because I have an unquenchable fondness for cruising over strange waters in a wilderness land, in a light canoe, and alone. I well love to fish and hunt a little, just enough to save needs, but the chief requirements are a love of nature, canoeing, and the free forest life, and in my routings I trust, next summer, to meet "G. S.," "J. R., Jr.," and many others, of whom I retain most pleasant remembrance. NESSMUK.

WELLSBORO, Pa., Oct. 3.

THE CUP WON BY THE AMERICA.—That there has been considerable improvement of late may be proved in the most absolute manner, not by attempting to compare old and new yachts, or by pooling the *data* of necessarily friendly and partial, of English nautical critics, but by reference to the action of our only rivals in yacht building. The Americans are fond of vaunting the superiority of their vessels to ours; but what Americans say need not always be taken seriously by any means, perhaps is sometimes hardly meant to be taken seriously. What Americans do, on the other hand, always deserves attention; and what has been done with regard to the America cup shows how well convinced Americans are that our yachts have now become decidedly superior to theirs. It has been made a challenge cup, not to be removed from New York, and such conditions are laid down for matches to be sailed for it as must deter any English yacht owner, not a lunatic, from thinking of competing. When these conditions appeared, some little time ago, a slight indignation may have been felt by yachtsmen at their absurdly one-sided character; but, as a matter of fact, they are the best possible compliment that Americans can pay to Englishmen. They show that, in the opinion of those best able to judge, America cannot produce seagoing vessels to race on even terms against ours; and that the type of our best racing yachts, also double, in part, to the Atlantic, is decidedly superior to the American type. It must be remembered that the conditions under which a famous English yacht sailed in her races with the American craft have been the subject of much severe comment in the United States, and it was to be expected, therefore, that the American Club would, if they thought it safe, issue even conditions. They have not done so, thereby admitting the superiority of our present racing yachts to theirs; and, as the type of our vessels has been considerably changed of late, it seems abundantly clear that there has been improvement. No reason, however, exists for supposing that final perfection has been reached, or that no further improvement is possible. On the contrary, there is every reason to believe that, in the course of time, even better vessels than those which sailed this year will be planned by the highly skilled men who now devote their attention to yacht building.—*Saturday Review.*

TORONTO CANOE CLUB.—The combined paddling and sailing race took place Saturday, Oct. 7, over a triangular course of one and a half miles, twice over, first round under paddle, second under sail. The start was off the yacht club house. Five canoes came to the line, the commodore in Boreas, Mr. Kerr in Mabel, Mr. Coleman in Elma, Mr. Mason in Fairy, and Mr. Nicholson in Sadie N. Breeze fresh and water lumpy. Sadie N. carried away her mast, and the substitute rig, hastily obtained, discounted her chances materially. Mr. Coleman took the lead under paddle, but lost to Mr. Nicholson by mistaking the turning mark. When sail was made on the second round the commodore made up, took the lead and won with plenty to spare, taking club challenge cup and a camp bed presented as a prize by Mr. J. H. Mason.

CRUISE OF THE ORION.—The cruise of the 19-ton yawl Orion from Thames to Wolf Rock and home, published in our last issue, has been read with great interest. The log brings out in strong relief the manly character of the sport as pursued in Great Britain, and the effeminate substitute of Sound drifting we are told in some quarters to consider all that Americans ought to aspire to. We have, however, greater faith in the future of the sport, and know that cruising of the real sort, involving outside work, is appreciated by a very numerous class here quite as much as in England, and that as fast as the leisure is at our disposal, cruising at sea will be indulged in by preference. It is to paddle drifting what the oil painting is to the chromo, or what the contents of the founder are to the label. Even now a dozen yachts go to sea where a few years ago but one ventured along the coast. The wretched qualities of our butterly models and fittings were a damper upon ardor for the ocean, but the defects and deficiencies of the old fleet are rapidly being supercseded by abler and more trustworthy craft, and with safe vessels a wider range of possible enjoyment opens to the more venturesome, which they are not proving slow to turn to account. One day's experience at sea, one day's log outside, is worth a week's dawdling in narrow waters. Mr. R. T. McMullen, the author of the Orion's cruise, in endorsing the course this journal has taken looking to the encouragement of safer yachtsmen, has kindly offered to answer any demands which may be made upon his ripe experience as a yachtsman of the seagoing stripe.

SAFE SAIL AND ROW BOATS.—We have received a handsome set of photos from F. Joiner, boat builder, of Glen's Falls, N. Y., showing his latest models for a combination row and sail boat which cannot sink and shall show good qualities under sail with reasonable speed under oars. Joiner's ideas seems to secure an excellent combination, for his boat will evidently not crab to leeward under canvas nor can she be a hard puller under ash breeze if form counts for anything.

A CUTTER CLUB.—We hear that probably three small single-hand yachts will be built by Stephens this winter, on lines similar to those published this week, and that a new 3-tonner is also in prospect. It has also been proposed to organize a special club in the interest of small yachts of this class. The model of the lines published can be seen at Mr. Stephens' shops, West Brighton, S. I., and is certain to be found very taking in type and appearance.

MIRANDA.—There is a faint hope, should the New York Y. C. take action to redeem themselves from the charge of seeking to prevent international races and offer fair terms to challengers for the America Cup, that we may find the Miranda, schooner, making her number in our waters next year. She started in 29 races this season, won 14 firsts and 11 rig prizes, the value of which foots up $7,300.

NEW SCHOONER.—Work will be commenced by Poillons, of Brooklyn, on a new schooner for Mr. Latham A. Fish, of the Agnes, A. Y. C. The new vessel is to be a cross between Comet and Montauk in type, we hear. Over all, 91ft. 6in.; water line, 81ft. 6in.; beam 23ft.; hold, 8ft.; draft, without board, 6ft. 2in. Joiner work and fittings from designs by Mr. John G. Prague.

NEW CRUISER.—The tendency to narrow boats for cruising receives another illustration in the cruising cutter now building by A. Hayna & Son, Southampton, from designs by Dixon Kemp. Length on load line, 61ft.; beam, 12ft 6in.; draught, 10ft. 6in.; displacement, 60 tons; lead on keel, 12 tons. Named Beluga.

DAUNTLESS.—Time of passage to Cowes by Mr. Colt's schooner was 14 days, 6 hours. She is already pretty well known in English waters as a fast down-wind flyer, though to windward a score of British schooners could weather on her without trouble.

SANTA CECILIA.—This British steamer, hired for a season's cruising, by Mr. Chas. G. Franklyn, of this city, has returned to English waters after four months' cruising along the Eastern coast and St. Lawrence Bay. She arrrived at Cowes September 27.

WRECKED.—In running home from a fishing trip last Sunday, the sloop Carrie Taylor, of Jersey City, ran ashore on Sandy Hook spit and soon broke up in the surf, the crew of six barely escaping by making for the beach through the undertow.

HAULING OUT.—Wait for an easterly blow and high water; beach at top notch and haul clear of all danger, shore up well, strip and protect the hull from the weather. For detailed directions see FOREST AND STREAM, Vol. 17.

NEW YACHT.—Poillons are building at their yard a new yacht for Mr. Morris Ketchum, Jr., to be cutter rigged. In model she will be like the Elephant, but with the counter run out 18in. Elsworth furnished the block.

VALLIANT.—This 5-ton cutter has returned to her old moorings, off West Brighton, S. I., after a whole season's extensive cruising in the Chesapeake and about the coast as far down as Charleston and Savannah.

WHAT THEY SAY OF IT.

FOREST AND STREAM, New York city. This splendid standard publication on all matters pertaining to sporting matters, has become so popular, and succeeded to so much patronage, that it has been obliged to largely increase its size and capacity to furnish its readers what it considers valuable and serviceable. The paper is handsomely printed, filled with interesting matter and indicates by its fresh, live appearance that it is edited with special intelligence and singular ability. We heartily commend it to sportsmen who are fond of adventure in field and flood. The prosperity of our old friend, FOREST AND STREAM, *nee* ROD AND GUN, is a matter of special pleasure to us, and the *Planters' Journal* wishes the charming paper a splendid and successful career.—*Planters' Journal, Vicksburg, Miss.*

London gamins have discovered a new mode of amusement. They attach fire-crackers to the legs of pigeons, and ignite them as they let the birds go.

"Oyster betting" is becoming fashionable in French seaports. The company repairs on a bright morning to the oyster-bed, where the creatures are opening themselves to the sun. Each chooses his oyster and puts a napoleon between the shells, and the fortunate gambler whose oyster first closes upon the coin nets the whole pool. —*Evening Post.*

THE VISIONARY ROBIN.—A happy robin was one day chanting a requiem over the deceased summer in the forest. Having finished, he said; "And now I'll away to the balmy land, where all the year the magnolias are in bloom, and humming-birds, where—" In response to the bang of a gun in a small boy's hand, the robin concluded not to go south, and two days after it was sold for a quail on a railroad lunch-counter for a dollar. Moral—Don't sing too loud until you are out of the woods.—*R. K. M., in Puck.*

DOGSKIN LEATHER JACKETS.

A SPLENDID GARMENT.

Our Own Pattern and Selection of Skins a Specialty.

TOTALLY UNLIKE ANY OTHER IN THE MARKET.

Impervious to wind and water. Soft and pliable as a kid glove. Lined with flannel. Not shrunk or injured by water. A complete protection to sportsmen, or any one exposed to cold or wet. Entirely waterproof and windproof. We have furnished many of these to Chesapeake, Currituck, and other clubs, and they are in great demand, not only for shooting, but a driving jacket worn under the coat. They have side and breast pockets, double breasted and finely stitched. Brown Grass Colors. Our own pattern, and very different from the common leather jackets of poorer quality leather, which latter becomes stiff after wetting. For sleighing and driving they are much used. These finest skins allow a free use of the arms in shooting and driving, being more pliable than the ordinary quality.

A Quality, of the finest and softest skin, - $18 00 B Quality, not as soft, - - - $15 00

☞We take the entire product of the Manufacturers of above Finest Jackets, and this make cannot be obtained elsewhere in this country.☜

Other makes as are commonly in the market we have, and can furnish at less prices, as $10.00 and $12.00, etc., but they are not as pliable skins nor as nicely made.

Send measurement around chest. Will be sent by mail prepaid, on receipt of price.

☞These must not be confounded with the many Leather Jackets advertised and sold. We will at any time send on approval, and if not found superior to others and entirely satisfactory, they can be returned at our expense and money refunded. During the past fall and winter we had difficulty in filling our orders, and it is advisable to order before cold weather. For ordinary use of driving and walking in cold weather, worn under the overcoat, they make a handsome garment, and are much used. We have lately received the finest skins we have imported for years.

BIG BARGAIN.—BRAN NEW E. JAMES & CO. best B.L. gun, English make, all improvements, fine Damascus barrels and handsomely engraved, 12-bore, 3in., 7¾lbs. Price $60. Address GUN, Bloomfield, N. J. oct12,1t

TO SPORTSMEN.

For Sale.—Four or five islands containing upwards of four hundred and fifty acres, situated in what is called the Back Bay of Currituck Sound, all within three hundred yards of the main island, having over five miles water front, with boats and decoys, also one portable house suitable for six or eight persons, with mattresses, cooking utensils and stove, cutlery and crockery, where there is plenty of swan, geese, canvas backs, red heads, sprig tails, ball pates and widgeons, black and all other kinds of fresh water ducks. It is the best snipe ground in the vicinity. I have started over two hundred in two hours within a half mile of my house on the main island the first of December; they are there all winter, and ducks from October to April. The best sporting ground in the United States; a grand place for a club or a hotel. Price $2,000 cash. I will be at the Mansion House, Norfolk, Va., on Monday, the 20th day of November next, and show parties the grounds at Currituck Sound. If not disposed of at that time it will be sold to the highest bidder. For further particulars address A. ARKERSON, No. 12 Park st., Cambridgeport, Mass.

P. S.—Convenient to stores and steamboats. oct12,4t

Duck Shooting. Duck Shooting.

"SUSQUEHANNA FLATS."

Woodcock and Quail shooting in season contiguous to the celebrated perch-fishing grounds at Betterton.

For sale with immediate possession, one of the best locations for canvas-back and redhead shooting in the State of Maryland. The property comprises an extensive and well-built brick mansion, replete with every comfort and convenience. Heaters and gas in every room and well furnished throughout. On the shore is a new house for steward's residence and club room with boat houses underneath. Yacht, skiffs, batteaux, two sink boxes (one double, one single), about 350 decoys, and everything necessary for sportsmen's outfit. Connected is a farm of 150 acres, in the highest state of cultivation, farmer's house, large barn, ice house, and all necessary out-buildings. The farm is well stocked with choice cattle and new labor-saving implements.

Will sell the whole just as it stands, or will reserve cattle and implements. Address HAMILTON DISSTON, Front and Laurel, Phila., Pa. oct19,4t

The Parker Gun.

Again Victorious at the late Exposition at
MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Show Rooms: 97 CHAMBERS ST., N. Y. **PARKER BROS., Meriden, Conn.**

JUST LOOK!

This Rifle sent to any address on receipt of $8.00, by post office money order or in registered letter. This Company manufacture, for portable and permanent use, Depots for Railroads, Sheds for Steamships, Churches, Hotels, Dwellings, Schools, Boating, Boat and Club Houses; also Summer Cottages, Farm and Out Buildings of every style. Suitable for all sections of country and climates, at moderate cost, within the means of all. Warm in winter—cool in summer—ventilation perfect.

For further particulars see illustrated circular, or apply to the office of the Company,

31 Wall Street, New York City, N. Y.

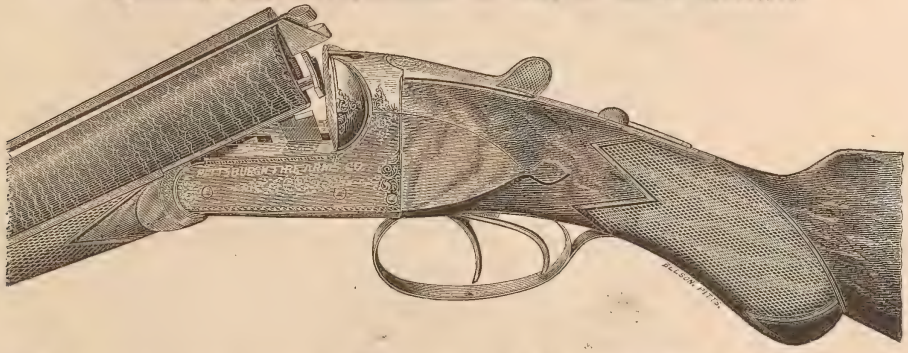
The Parker Trap Gun.

We are now prepared to supply the **Parker "Trap Gun,"** for which we are sole agents. These guns have top lever, extension rib, rebounding locks, large strikers and pistol grip. They are simply superb. The Parker Trap Gun should not be confounded with the regular Parker top lever guns, which, although excellent guns, do not approach the Trap for close, hard shooting. Every genuine Parker Trap Gun has the rubber butt plate with a flying pigeon beautifully embossed upon it, as shown in the above cut.

We have a small remnant of Webley's heavy ducking guns, mostly 10-bore, of various qualities, at about half price. Address

P. O. Box 1114. **H. & D. FOLSOM, 15 Murray St., New York.**

DOG TRAINING;



—BY—

T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

FOR SALE AT THIS OFFICE. PRICE $1.00.

THE PITTSBURGH FIRE ARMS CO.

Would call attention to their new double

Hammerless Breech-Loading Gun.

This new gun is made under the Anson & Deely patent with automatic safety bolt, so constructed that the triggers are effectively bolted whenever the lever is moved to open or close the gun, thus preventing any possibility of accidental or premature discharge.

The breech action is top lever, double bolt, with Westley Richards' extension rib, making the strongest possible breech fastening. The barrels are of fine Damascus, choke-bored on the most approved system for close, hard shooting. The stocks are English walnut, with pistol grip and horn butt plate. The fore ends are made with the Deely & Edge patent snap fastening. The frame and guard handsomely engraved and case hardened. The proportion and symmetry of the gun is perfect.

In placing this hammerless gun on the market, we shall deal direct with sportsmen, and no trade discount or deviation in prices will be made UNDER ANY CIRCUMSTANCES. The quality of material and finish is equal to any other gun in the market selling for $200.

PRICES:

12, 14 and 16 Bores, - - - - - - $135 00 10 Bores, - - - - - - - - - - $140 00

PLEASE NOTE.—This gun has no outside lock to weaken the stock and frame as is the case with nearly all other hammerless guns.

We will send one of these guns to any responsible party, giving privilege of two days for examination and trial on receipt of $5, as a guarantee for express charges.

Enclose stamp for new 48-page illustrated catalogue, containing descriptions and prices of all new and useful improvements in guns, rifles, revolvers, implements, &c.

PITTSBURGH FIRE ARMS CO.

Pittsburgh, Pa.

WILLIAM READ & SONS.

DEALERS IN FINE GUNS, 13 FANEUIL HALL SQUARE, BOSTON.

AGENTS FOR

W. & C. SCOTT & SON.

Furnished by us to Capt. Bogardus who for years has used none other than the SCOTT GUN, and won with it the championship of the World.

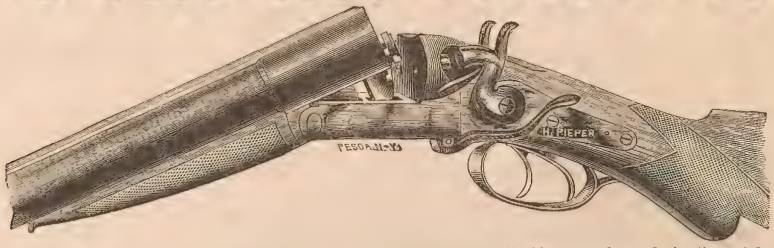
Their New Gun.

$85.00 With Latest Improvements.

None genuine unless bearing the full address, W. & C. SCOTT & SON.

Description.—Top snap, double bolt, extension rib, pistol stock, rebounding locks, snap fore stock, large solid strikers, low hammers when cocked, horn butt plate, Damascus barrels, choke bored. 20-bores, 5½ to 6lbs.; 16-bores, 6½ to 7lbs.; 12-bores, 7 to 9lbs.; 10-bores, 8 to 11lbs.

To meet a want for a really fine, good breech-loader at a medium cost, Messrs. Scott & Son have now put this gun into the market at above price (a great reduction from the figure such quality has hitherto been offered at), and the demand thus far shows that it is thoroughly appreciated.



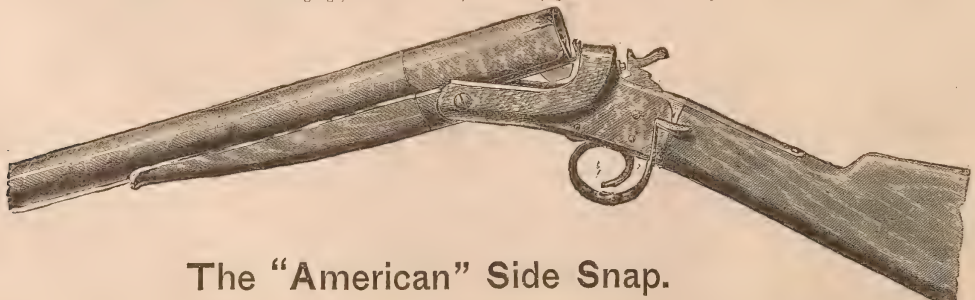
Every Gun Warranted in Shooting and Sent on Trial.

Scott's Hammerless, with Crystal Apertures and Block Safety Attachmemt, All Sizes, Constantly in Stock.

If to be sent C. O. D. on trial, inclose in every case $3.00 as a deposit for expressage in case gun is not taken, which, if too much, we will return the difference. If you send whole amount with order, we will include at no charge, a waterproof gun case; and if gun does not suit on receipt, you can exchange, or we will return your money on return of gun, less expressage. Hence there is no risk in inclosing whole amount.

SEND STAMP FOR OUR GUN CIRCULARS AND SECOND-HAND LIST.

THE PIEPER SIDE SNAP.



This Gun is made by the *same manufacturer* and on the *same system* as the now celebrated **Diana,** advertised in these columns during the past four weeks. (Orders for the Diana's have come in so rapidly that the factory cannot keep pace with them). One reason they give so much satisfaction is that by this system every gun shoots to center, and shoots just where you hold it. Dealers are asked continually for a good, cheap gun, one that they can recommend. The Pieper Side Snap is the only gun that will fill the bill. Barrels are fine twist, locks are steel, rebounding and good quality, stock is oiled, finest walnut, pistol grip, butt plate rubber, patent fore end.

What Our Customers Say About Them.—"It is the best cheap gun I ever saw."—Thos. Golcher, Philadelphia. "They sell beyond my expectations."—W. H. Colvert, Beloit, Wis. "Every gun sold has given the best satisfaction."—D. T. Seeley, Bradford, Pa. "Have sold the twelve received; send twelve more at once."—E. T. Allen, San Francisco. "I have always been opposed to selling cheap guns that haven't given satisfaction, but the Pieper Side Snap suits me."—F. P. Taylor, Chicago. Numerous others of the same purport.

Samples sent without solicitation have resulted in large orders. *In fact there is no other gun in the market that can compare with it.*

Price List:

No. 586.	12-gauge, fine twist barrels, 8¼ to 9lbs.,	$30 00
No. 586.	10-gauge, " " 9 to 9½lbs.,	30 00
No. 587.	12-gauge, Damascus barrels, double bolt, 8½ to 9lbs.	35 00

The "American" Side Snap.

The reinfore breech and joint lump are one solid piece of case-hardened iron, fine twist barrel, case-hardened mountings, rebounding locks, oiled walnut stock and fore end. These guns are made by C. S. Shattuck, Hatfield, Mass., and are choke-bored by the "Shattuck Process," which gives the most remarkable results.

Price, 12-gauge, 30 and 32in. Barrels, $14.00.

Sole Agents, SCHOVERLING, DALY & GALES, 84 and 86 Chambers Street, New York.

Agents, Importers and Jobbers of all kinds of Guns, Pistols and Gun Goods.

We sell at Wholesale only. If your local dealer does not have the above goods in stock, get him to order them for you.

N. M. MUZZY,

45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

[Extract from FOREST AND STREAM, July 7, 1881, p. 414.]

* * * This flight so nearly resembles the actual motion of birds that the Clay Pigeons afford excellent practice for wing shooting. We commend all sportsmen to test its merits. * * *

CLAR (Dash III. ex Diana), black and white, 2½ years old, vhe and special N. Y., 1882; vhe Boston, 1882; well broken by McMurlo.

YOUNG BELTON (Rock ex Vixen II.), black, white and tan, three years old, vhe N. Y., 1881, well broken, first-class quail dog.

GLENWOOD (Glenmark ex Girl), lemon and white pointer, second at N. Y., 1882, well broken, very fast and good nose.

TULU (Blue Mountain ex Blue Queen), black and white bitch puppy, nine months old, yard broken and has been worked some on chickens.

Reasons for selling—I have no use for them.

Address GEO. H. TOUSEY.

oct12,3t. Burlington, Iowa.

FOR SALE.

LADY LAVERACK, lemon belton, won third prize New York Bench Show; whelped June 19, 1879, by champion Thunder ex Peeress. This bitch is a good one, pure Laverack, and was broken by E. S. Wanmaker.

LADY RAPID, (imported) Gordon setter bitch, by Old Reuben ex Rosa, winner at the following bench shows: New York, St. Louis and Pittsburg; whelped May, 1875. Invaluable for a brood bitch.

RUBY, champion pointer bitch, own sister to champion Rose (bred by Mr. Orgill, New York) by Flake ex Lilly, whelped April, 1876. Very handsome, a splendid breeding bitch, unbroken, a winner on show bench, hard to beat, imported, bred to champion Donald.

For particulars and price, address A. H. MOORE, 1711 Spring Garden st., Philadelphia, Pa. oct12,2t

FOR SALE.—A CHOICE BRACE OF LEMON and white pointer pups (males), that were selected from a fine litter of eight. Age four months; price $20 each. A. McDONALD, Rockland, Me. oct12,1t

Rough St. Bernard.

A genuine pure bred imported bitch pup, six months old, for sale. This breed is the coming fashion, one having been sold at last New York dog show for $2,500. For reasons which will be given this bitch must be sold at once, and the first offer of $50 gets her. Her dam is now in New York, and has just whelped twelve pups, four of which have already been sold for $250. JAS. WATSON, care of this office. oct19,1t

YORKSHIRE TERRIERS FOR SALE.—TWO of the smallest and best specimens ever brought to this country. Winners at most of the principal shows in England. These dogs are from the celebrated kennel of Mr. Foster, of Bradford, England, and cannot be beaten anywhere; weight 4lbs. Also the champion bulldog Blister, winner of 1st prize, Pittsburgh, Pa., 1st London, Ontario, 1st Lowell, Mass., 1st Boston, champion class and special at Pittsburg, Pa. Reason for selling, owner giving up exhibiting. JAS. MORTIMER, 3 Morris street, N. Y. City. oct19,2t

Black Spaniels.

Having a larger number of stud dogs than we can use to advantage, we offer to breeders a chance to purchase at a reasonable price. You can choose which you like of our four best dogs, two of which are to be sold. Terms cash. The first three being well known will not be sent on approval; they are in the best of health.

CHAMPION BENEDICT, sire of Black Prince and Madge. Two services reserved. $150.

DASH, 1st Cleveland, 1882. A coming champion. $100.

BUB, by Brush ex Rhea. $60.

IBRAHIM, 20lbs, has never been exhibited. A sure winner. $100.

Discontinuation

—OF—

"THE BLUE STAR KENNEL,"

—OR—

THE COCKER SPANIEL KENNEL,

FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,tf

OLEOUT COCKER SPANIEL KENNELS.—FOR Cockers of all ages and colors, dogs, bitches and puppies, address with stamp, ROB'T WALKER Franklin, Del. Co., N. Y. July2l,tf

Sportsmen's Goods.

THE BEST

DOGSKIN LEATHER JACKETS

AND

"BOSTON SHOOTING SUIT."

Dogskin Leather Jackets, windproof, flannel-lined, pliable, durable, indespensible! We are importers and manufacturers, and can supply the very best leather jacket or vest that is made.

Last season we sold nearly one thousand jackets at retail alone. This season we have manufactured very largely *to supply the trade.* Send for samples of material and special circular, with rule for self-measure. These leather jackets and vests are supplied in either *black* or *tan colors.* To all who are exposed to the inclemency of the weather, to sportsmen, drivers, brakemen and professional men, they are highly to be recommended!

The "BOSTON SHOOTING SUIT," which is shown in our illustration, is the standard suit for sportsmen in America. It is made from waterproofed duck, and is practically indestructible.

Special circulars descriptive of this suit, with samples, can be had by any one who sends address.

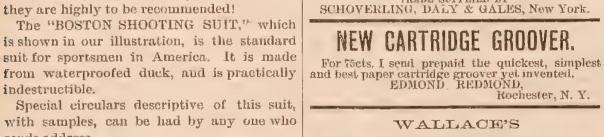
Climax Gun Cleaner.



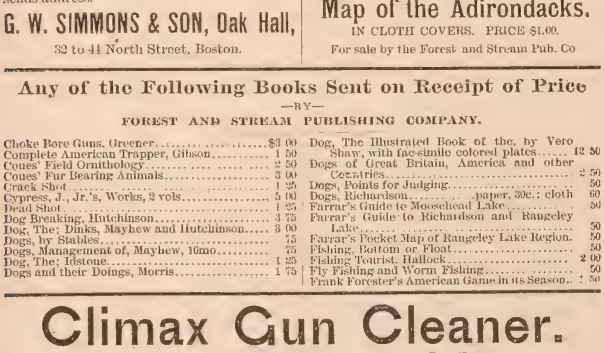


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR,

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device halls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

THE ANGLERS' TOURNAMENT.

THE tournament has passed into the history of angling contests as the best one ever seen. It exceeded the expectations of its most sanguine friends in the wide-spread interest taken in it by the brotherhood of the angle, and it culminated in the formation of a society, which will be a national one, and an account of which we give elsewhere. The tournament can be improved upon in many respects. We have learned some things which will be remembered and will be of use another year. Among these was the fact that the contests for delicacy and accuracy need not take place from the platform and delay the next contest, an idea that did not occur to any one until the second day; and another thing which will grow into a serious evil if not checked, is the jealously of rival makers of rods, some of whom regard these contests as merely places to test rival rods instead of the merits of men.

In future the tournaments will be put on still higher ground if the proposition of the National Rod and Reel Association, to buy most of their prizes and to discourage special classes, is carried out, and there seems to be every assurance that it will be fulfilled. The Association may consider it well to accept a limited number of prizes, if freely offered, but the practice of soliciting them is not a good one, in the case of an association which can avoid it.

One thing needs to be accomplished. Some lake in Central Park should be set apart for the people to practice fly-casting on, and the new organization can obtain this privilege. There are many gentlemen who have expressed a desire to use the park for this purpose, and the only objection is that a hook might encounter a lady's dress when the line was recovered, or a boy be hooked in the ear, as happened when Mr. Ramsbottom was casting. This objection could be overcome by the erection of a permanent stand of handsome design out in the lake, where several persons might practice at the same time. On such a stand a new rod could be tried and selected, a matter that involves some difficulty to the city dweller at present.

Among the surprises at the tournament, and there were several, none was greater than to see the slightly-built Mr. Hawes lift eighty-two feet of line with a rod weighing only four and a half ounces, and recover it until it stood at an angle of thirty degrees behind him, without its ever falling to the water in the back cast, and this was done with a most charming rhythm. That alone was worth going miles to see, and was a lesson to many an angler of twice the age of Mr. Hawes. We do not hesitate to pronounce it the finest handling of a rod that we have ever seen, and we thought that we had beheld all that could be done by the masters of the art. To our mind there was not much delicate casting done, although others differed from our standard. We would not call a cast a delicate one where the line touched the water before the flies fell. We have seen casts made in which the line made an upward curve and the flies were the first to break the surface of the water, but in speaking of this to some good anglers, we find that they do not seem to attach the importance to it that we do.

The casting in the champion class was also a surprise where so many men beat the record, and here we must say that the old records of the New York State Sportsman's Association are not strictly reliable, some of them being acknowledged to be distances guessed at. The casting of Mr. Leonard, who threw ninety feet with a recovered line, and only fell a foot short of Mr. Prichard's rolling cast, was also astonishing, for no one supposed that all previous records were to be beaten, or that Mr. Leonard would out-cast Mr. Hawes on the third day. Those who missed seeing the tournament can form little idea of the interest and enthusiasm which these contests awakened, an interest that bids fair to be kept up for years to come and to grow until fly-casting will be considered part of the education of every boy who evinces a fondness for the rod which cheers but never castigates.

CHANGING THE CONDITIONS.

THE committee in whose care the conduct of the international match has been committed, so far as the American interests are concerned, have been casting about to find an easy road to victory. They have opened their campaign by begging some changes in the match conditions, and certainly the proposed amendments are in the right direction, only it is a trifle unfortunate that instead of coming in their place when the conditions of the original match were under discussion early in the year, they should come up now as privileges begged for by the beaten team. The conditions of the match were absurd from the start, and were so made because the marksmen at Wimbledon had gained great skill in the use of that nondescript arm known as the M. B. L. on the English programmes. These military breech-loaders were in small degree military, but in this year, 1882, they were antiquated. The clumsy front sight was insisted upon simply because it had been found on the earlier military rifles, and the stiff, ungainly hind sight was likewise retained because the English riflemen felt sure that no set of marksmen could get as much out of the contrivance as they could. It is ridiculous to permit a soldier to arrange his rear sight for elevation and prevent him fixing it at the same time for windage. The old plan of pushing off the sight bar by a sort of rule of thumb is imperfection itself, but every rifleman now knows that, unless the allowance for wind is made at the same time, the shooting becomes the wildest sort of chance. The arrangements for governing wind allowance on a military rifle have been so simplified by American ingenuity that it will not do for the objection to be urged that the arm is made too complex. Good marksmanship is not a matter to be picked up in an hour's time. There must be brains in the shooter if he is to do the work demanded by our present rifle matches, and the soldier of to-day must use his head fully as much as his strong right arm.

Though the British Council may object to any changes of conditions now that the double match arranged last winter is but half finished, and insist upon the second part of the contest under the same rules agreed upon for the first, there can be no dispute as to the propriety of the recognition of modern rifle-shooting such as the changes in sights imply.

Touching the third point urged about allowing the National Guard of the United States to be packed for the match, this is a clear, unmistakable confession of weakness on the part of the Americans, and may be more. It may mean that a nice little club of gentlemen, who have thus far thought it not worth their while to act as citizen soldiers, will add their names to some company roster, or be added as ornamental members to some staff, and then, when the conditions of selection appear next spring, these same gentlemen will be the members of the team ready for a jaunt abroad. Of course they will necessarily be good shooters, and there is plenty of work in the programme as laid out above. The proposed change will, we doubt not, add strength to the coming American team, and we do not know that any such pretty little scheme as the foregoing is on foot; still the confession of weakness should be enough to throw out this condition. The National Guard of the United States can furnish a good representative team, and that is what is needed. Let the rank and file of the Guard be carefully looked over without any preconceived determination that the team must be made up from this or that organization, and then when the men are chosen let them be made into a compact working team with real, honest coaching, not a few statuesque "motions to satisfy the public," and there will be no reason to fear the result of an encounter with the British shots. Such a course will be honest and fair to the working bona fide members of the National Guard. It will reflect American fair play and not the politician's trickiness to get around a reasonable restriction. A year in the National Guard is not a severe rule, but a perfectly just one, and we do not believe that the committee fairly represents our Guardsmen when they give the impression that a dozen shots equal to the task of meeting the Englishmen cannot be secured from the men now on the rolls in almost every State of the Union.

The proposal to go to English armories to purchase rifles to place in the hands of the American team fitly follows the proposition to pack the Guard to get a team. We can name a dozen private gunsmiths fully equal to the task of duplicating the English rifles and improving on them, while the committee must be very much out in their reasoning if they think that our great American armories, whose work is seen in every army of the world to-day, are not able to furnish a weapon which will fill the conditions which the British have laid upon us in this unmilitary "military match."

COLLIES.

IN the Kennel department will be found an interesting report of the sheep dog trials of the Northwestern Counties Association, England, with a full description of the work of the dogs. We would suggest to the lover of the collie in this country that an association be formed under the name of the American Collie Club, for the purpose of holding trials and improving the breed of this intelligent and useful animal. Not least among the benefits resulting from the work of such an association would be the wide-spread knowledge gained by the public as to the virtues and intelligence of their favorites, and this would win for them their rightful place—now usurped by the worthless cur—in the heart and by the fireside of the farmer.

It is perhaps needless to say that FOREST AND STREAM will willingly lend its aid for the furtherance of the objects of such an association, believing that much of good may be accomplished by bringing more prominently to public notice the many good qualities of the gallant collie.

Mr. Hugh Dalziel, in his "British Dogs," says: "There is no dog that excels the collie in good looks, high intelligence, and unswerveable loyalty to his master; and to these qualities does he owe his high position as a general favorite with the public, while his many practical excellencies render him indispensable to the shepherd." Idstone, in his admirable work on the dog, says of him: "To my mind he is one of the most perfect animals extant." Stonehenge also speaks very highly of their intelligence. "Only those," he says, "who have seen one or more of the public sheep dog trials, or have privately seen these animals at their usual work, can realize the amount of intelligence displayed by them."

Innumerable anecdotes of their wonderful sagacity and intelligence have from time to time appeared in print, and, although many of these tales are almost incredible, we have invariably found that none were so ready to avow their belief in their truthfulness as those who know the collie best. As the assistant of the shepherd and herder he stands without a rival. As the servant of the farmer, a protector of his property, and a companion for his children, he is the peer of any of his kind. As a retriever for the sportsman we believe him to be singularly well adapted. As the pet of the parlor, his great beauty and affectionate disposition, combined with his almost human intelligence, eminently qualify him for the place. In the British Islands the collie has long been an especial favorite among nearly all classes, and we are pleased to notice that within the past few years he has rapidly gained in public favor in this country. We trust that the day is not far distant that will see him installed in his proper place among the first of canine favorites throughout the land.

THE PAPERS ON "Bird Migration in the Mississippi Valley," the last of which appeared in last week's issue, have proved of great interest to ornithologists. The observations of Mr. Widmann have been conducted with great care, and the intelligent way in which these notes have been made and collected reflects great credit on the two gentlemen by whom the paper was prepared. It is to be regretted that the list includes only the *Passeres*, for we should have been glad to see a similar series of observations carried out for all our birds. It is to be hoped that the plan adopted by Mr. Widmann, or something similar to it, may be adopted by other collectors, and that through such efforts an intelligent comprehension of the phenomena of migration may ere long be had. It is discouraging to think of the vast amount of energy that is wasted by the ill-directed and unintelligent, though sincere and earnest, efforts of observers in all fields of science. The present observations are far in advance of most of those made by collectors, and we are glad to know that they are to be continued. We are glad to learn that Mr. Cooke purposes next season to conduct a similar series of observations. He desires that any and all persons residing in the valley of the Mississippi who are willing to keep notes of the movements and doings of birds, communicate with him at once by postal card. His address at present is Jefferson, Wisconsin. We have now in hand another series of notes on the same subject from the pen of Mr. Cooke, which we shall shortly lay before our readers.

WOODCOCK are now making their appearance in New England.

THE AUTUMN EXHIBITION OF PAINTINGS.

FRIDAY last being Varnishing day at the Academy, the press was allowed a private view from 2 until 5 o'clock, after the contributors had put the final touches to their works.

We are not able to ascertain exactly why this special autumn exhibition of paintings is held, but it seems probable that the rejection of so many works of merit last year, on account of want of space, had a good deal to do with this fall showing. The idea, we believe, is to have an exhibition, in the autumn, of work done by the artists during the summer, so that the regular spring exhibition will simply be of fall and winter work.

The present display of pictures shows that the artists have been busy during the summer, and that they have done a great deal of work, much of which is very creditable.

There are several works that are quite remarkable, the most impressive of which, we think, is "Planting Rape in Normandy." This occupies the place of honor on the large south wall. The picture represents a number of men and women working on a hillside, the men ploughing, the women bending over and planting the seed. The whole effect of this picture is remarkable. The figures are very strongly painted, the atmosphere is very fine, and the light on the horses gives a very realistic appearance to the whole. To the left of this is a picture of two children blowing bubbles, by Doop, which we think is much below his ordinary work.

On the north wall is a very ambitious picture by James Powell Hey—"The Virgin Mary and Mary Magdalene at the Tomb of Our Saviour." This picture comes very near to being a masterpiece. No. 380 is a pretty picture of "Deer in the Adirondacks," by A. F. Tait. No. 371 is "Maternal Solicitude," also by Tait. This picture is very good, with the exception of the St. Bernard dog, which is very badly drawn. No. 330, "Among the Weeds," by J. G. Buren, is a picture of a very pretty girl, admirably painted. No. 327, "Clearing Up," by De Haas, is a very vigorous seascape. "Disappointment" (382), by Charles Sprague Pierce, represents a woman in the last century. The texture of the silk and lace is extremely well brought out. "An Accident" (344), by M. J. Shaw, shows a serving maid who has just broken a vase. The interior is excellent, and the expression of fear and regret on the face of the girl is admirable. Wordsworth Thompson's "The Belated Travelers" (333) represents two wayfarers in the costume of the Revolution, stopping at a queer old country tavern. The leader of the party is being met by the inn keeper, who wears a white peruke, and on the narrow verandah are seated two or three trappers, who regard the travelers with an air of suspicion. The figures are extremely life-like and the whole picture remarkably well painted. "The Fox Family" (333) is by I. Sellmayer. This picture represents a vixen surrounded by four or five cubs near their hole in a wood. The fur is extremely realistic, and the expression on the face of one of the little ones, whose attention is attracted to a squirrel on the limb above him, is very life-like and amusing. The only criticism to be made on the picture is the drawing of the hind leg of one of the cubs, which is faulty. "Preparing for a Shave" (390), by E. L. Henry, is a small canvas, wonderfully painted, after the style of Meissonier. "Widowhood" (401), by Constant Meyer, is a fine subject, but is not well treated, the figure being poorly drawn. "The Duet" (397), by J. G. Brown, represents an old man instructing a boy on a violin. The subject is well treated in the artist's usual happy style. "A Future Poet" (346), by Douglas Volk, represents the young aspirant in a hay loft with a pile of books and some flowers on a box before him. On his face is a very peculiar expression, which is conjectured to be the outward and visible sign of the true poetic fire which smolders in his breast. "On the Thames, near Gravesend, England," (337) is a canvas treated in Arthur Quartley's best manner. "My Old Hunting Ground," by A. F. Tait, represents a scene in the Adirondacks. The artist and a companion, seated in a canoe, are aiming from behind some rocks at deer on the opposite side of the pond. The atmospheric effect is very good, the figures are lifelike, and we expect every moment to hear the report of the gun. Portrait of the late William B. Astor (after death) (247) is a very carefully painted miniature by Carl L. Brandt. "Grandmother" (223), by P. T. Ryder, is a capital picture of an old woman sitting by a stove. "All's Well that Ends Well" (366) represents a frog sitting on the edge of an overturned bucket, about to spring at a grasshopper impaled upon a fish-hook. The picture, although unpretentious, is very true to nature as well as amusing. "The Milkmaid" (183), by Leon Moran, is a young girl wandering through the fields. The figure is very well drawn, and the effect is very pleasing. "The Studio" (193), by Percy Moran, represents his brother Leon painting the last named picture in his studio. The drawing is very good, but the whole effect is cold. On the west wall of the North Gallery hangs Blashfield's "Modern Rebecca"—an Arabian woman in a street handing a horseman a cup of water. The peculiar light effects of the hot Eastern atmosphere are remarkably well shown, the horses are very well painted, and the figure of the black one which the rider is leading shows the pure Arabian blood. "Dar's no Place like Home" (179), by Alfred Kapps, is a scene in a Southern cabin. Supper is just over, and the old aunty is about to clear off the table, while her husband has just taken down his banjo to have a little music after the hard day's work. The whole effect of the picture is very warm and pleasing to the eye. "Sunset on Lake Conway" (176), by Georgine Campbell, is a charming picture; the twilight atmosphere is exceedingly well rendered. "Ophelia" (132), by Clarence Boyd, is an attempt at a very difficult subject, and a failure. An "English Roadside Scene" (157), by G. J. F. Cropsey, is a fine subject, but the effect of the picture is marred by the coloring, which is very untrue to nature.

In the corridor, "Mexican Cattlemen" (117), by William Hahn, shows us two vaqueros treated in a very lifelike way. The cattle are excellently painted, and the atmospheric effects extremely good. "Smoked Bloater" (93), by Milne Ramsey, is capitally painted; one could almost imagine the real fish to be hanging before him. Mr. N. N.'s team, "Harry and Sheila" (91), by Carl J. Becker, shows us a neat little team of trotters. "In the Rye Field" (57), by Carl Otto, is a fine example of the Munich school; the sunlight glinting through the standing rye produces a very charming effect. "Begging at the Monastery" (14), by C. Milender, is another example of the Munich school. The figures are all capitally painted, but the beggars, with the exception of the old man who is at the door, all seem very cheerful.

We have noted only a few of the more striking pictures among many excellent works. We think, on the whole, that it is a good idea to inaugurate this autumn exhibition, and certainly the number of good works here represented ought to be very gratifying to those who have promoted it. Of course the standard of work is not up to that of the spring exhibitions, but still we hope that the results will be sufficiently encouraging to induce the management to make the fall exhibition a permanent thing.

The Sportsman Tourist.

"NUTMEGGERS" ON THE OTTAWA.

THIRD PAPER.

MONDAY, the 25th, we left our tent on the north shore, and crossed the lake to our present camp, in a boat very kindly placed at our disposal by Mr. Geo. H. Rochester, who is just establishing a lumber camp a few miles beyond us. Our camp is a very comfortable one for these cool nights, being a log-cabin 20x30, with good tight troughed timber roof, with smoke hole in center, and fireplace underneath, 6ft.x8. The internal arrangement of our new home, so far as convenience is concerned, is admirable, and calculated to delight the heart of any young housekeeper. The cellar, kitchen, dining-room, pantry, library, parlor and all the sleeping rooms are on the first floor, all of uniform size, 20x30. An open fire in every room, and every room so closely connected that the creaking and slamming of doors is an utter impossibility. Our first duty upon arriving was to arrange and bough down our bunks, chink up the cabin, start a fire, build table and seats, arrange our china closet, make customary remarks about previous tenants, etc., etc. Our party use sleeping bags, and are very favorably impressed with their superiority over blankets. They are especially valuable to "kickers" in a cold night. Ours are made seven feet long by two feet six inches wide, with six pounds of batting quilted in between the cotton lining and flannel covering. Duties about camp are performed alternately by the different members of the party. Each considers himself a first-class cook, though Miner, by reason of his longer experience in camp life, is called upon to get up all the swell dinners. Arrangements were made to have a team follow us with canoe and supplies, but, unluckily, the road was too much for the wagon, and it broke down twenty miles back, and supplies came through without the canoe, so we are obliged to use the boat which is a little "togy" for fast traveling.

On Tuesday our party came near being financially and physically wrecked. A little spark full of incendiary intentions found a resting place in the soft cotton of Brady's sleeping bag, made a total wreck of it, and set fire to the cabin. Luckily it was extinguished before the remaining bedding, provisions, or the "safe deposit vaults" were reached. Now the loss of a sleeping bag does not seem upon the face of it to be such a heavy financial embarassment, but that a person of Brady's constitution and nerve ought to bear up under it, but he seemed to take the matter quite to heart, and somewhat resented jocular remarks and queries about which corner he proposed to stand up and sleep in for the next week or two, and carried about quite a suicidal expression until bedtime, when Dorsey proposed to share his bag with him. Now a two-foot-six bag is a very comfortable fit for one man, but it required considerable outside pressure to force in a second one; nevertheless the feat was accomplished, not without remonstrances and murmurings from the occupants, but they soon found that there was no room for argument, and scarcely room for alternate respiration, and the right of secession without the aid of outside powers was in this case, as in that little attempt of 1861, demonstrated to be a failure. The "union" being a necessity, it was effected and preserved on succeeding nights until a relief party brought blankets from the distant lumber camp.

On Thursday, Miner, while on a tour of exploration, discovered a little crystal spring-water lake, teeming with speckled trout, and Rerdell discovered his little mink trap closed and teeming with what the Indians call "seecawk," and we all discovered six million cubic feet of atmosphere about camp seemingly just as teeming with "seecawk" as the trap was. Brady walked cautiously down to the trap and fired two rifle balls in quick succession through the "seecawk's" head and "ran for dear life." It was a long time before any of the party dared attempt to extricate him (not Brady but the seecawk) from the trap, although he seemed, to use an expression, "dead as a door nail." They are smaller than the black bear but larger than we care to handle in large numbers, and they are a wicked creature to meet face to face. The same animals roam the forests of New England to a certain extent, and are much feared and avoided by the bon ton. The natives spell him there s-k-u-n-k. This is shorter and we think just as correct.

Mink are plenty about here. Rerdell trapped a fine one Wednesday night. They march boldly into camp and steal our partridges and fish, but we prefer to let them steal to their hearts' content, rather than trap any more "seecawk." We were advised that unless our dog was accustomed to the habits of moose, we would certainly lose him—so, as he was quite a valuable dog, we left him at Pembroke, expecting to find Indian guides with dogs. Failing in this, we find ourselves in rather a bad predicament for capturing large game. Moose, bear, and deer are all about us in great numbers, as evidenced by the numerous tracks, but on account of the thick growth of underbrush and dense foliage we are unable to still-hunt with any degree of success.

A house on the shore of this lake, having a few good guides with dogs, would convert this locality into a sportsman's paradise almost.

The lake abounds with black bass and salmon trout, and the Little Mattawaska, which empties into it about one mile from our camp, is full of speckled trout of large size, as are some of the small lakes or ponds just over the ridge back of camp. Every marshy cove and small lake has its complement of black duck. The woods furnish ruffed grouse, so tame that we could almost sprinkle salt on their tails and knock them off the trees with a stick. When out watching for deer, and not wishing to fire a gun, we tried chasing the grouse around with sticks, but having neglected to bring the salt, we, of course, did not get them. Blueberries of excellent flavor grow all about the lake in enormous quantities. This, of course, brings bears about here at this season of the year in great numbers. Had we brought traps, we would have had no difficulty in capturing some.

We discovered a cranberry swamp only a short distance from camp. Cranberries we have always found to be a very valuable acquisition to camp life, and we always make calculations when taking in our supply of sugar, for sweetening a cranberry swamp, partridge with cranberry-sauce being a dish which, like a popular drama, will bear repeating and draw a full house every time, with frequent and hearty encore.

Fishing about here, as we said before, is excellent, incomparable. We are told that a little Frenchman from some of the lower settlements came up here last fall, caught and salted fourteen barrels of speckled trout and black bass. The distance from a settlement and the difficulty in getting teams through, of course, is a serious drawback to this location for parties who contemplate camping with ladies; but for gentlemen who are not particularly out of health, we think it all the better for being entirely isolated from civilization. We would not come again, and we would not advise others to, without an Indian guide, with dogs and bear traps. It is somewhat aggravating to feel and know that you are in the midst of as good a game country for bear, moose and deer, as the continent of North America affords, and still lack the two articles necessary to capture them. Four weeks later in the season, still hunting could be successfully carried on here without dogs; but then the weather is too severe for pleasure parties, and none but the practical hunter and trapper would think of camping. Speaking of still hunting, we are told that one hunter, Haskins by name, who is known all over Ontario as the champion deer-slayer, shot seventy-four deer last winter in this section inside of ten days. This seems like a cruel, cruel slaughter, as it certainly was, but to those who have visited this great northern wilderness, extending on the north to Hudson Bay and beyond, and to the Pacific coast on the West, the idea of exterminating the game even by such fearful slaughters as quoted above seems utterly impossible for ages to come.

Canada has within the past three years thrown off her lethargic sleep, and awakened to a realizing sense of the magnitude of her dominions, and to the importance and advantage of railroad enterprise. More miles of railroad are under construction to-day than would have been embraced in the fond imaginative dream of a Canadian Gould or Vanderbilt five years ago. Since the confederation or union of the Provinces, the Dominion of Canada embraces more territory than the whole of the United States, and yet her four millions of population are almost wholly settled on a strip of land say 100 miles in width along her southern boundary, thus leaving the great north and west an unbroken wilderness, dotted here and there by an occasional squatter, settler or trapper. Of course the marks of the lumberman are visible, for go where you will on the earth, you are pretty sure to find that the lumberman has been there before you. Should Canada take a start, which she is now making a mighty effort to do, and increase her population by immigration equal to the United States, which is a highly extravagant supposition, the game of Canada will still have this great northern wilderness to gradually withdraw to, the whole northern part being of too sterile a character for settlers to encroach upon. The Canada Pacific road (of which we will speak more fully hereafter) will, when complete, open up and bring into market a great territory in Canada's southwest—a large proportion of it very excellent land. We saw newly cleared land along the Canada Pacific, bearing oats equal to the best cultivated and most fertile lands of New England. But to return to camp. I will pass rapidly over the remainder of our stay at Travere Lake, one day's sport being about a repetition of another. One day Brady came near having a little private interview with a bear. He was watching for deer in a tamarac swamp, when a bear approached within about twenty-five feet of him, but he was nearly hid from view by the thick underbrush. The bear's smelling apparatus served him a good turn, and a loud snort and immedi

ate stampede on his part, and an uprising of the "back hair" on the part of Brady, was the only result of the encounter.

Our leisure hours were spent principally in fishing, shooting black duck, partridge, etc., and in little voyages of exploration up and down the river. And a great deal of pleasure was experienced each evening as we gathered around our cheerful camp fire, and compared notes or related to each other the encounters, discoveries, and successful feats of the day. What mirth and enjoyment, jokes, anecdotes and comparisons; what solid comfort and perfect relaxation from business cares and perplexities a rousing camp fire will bring forth. And then, while in this happy state, as thoughts of dear ones at home creep in, how tenderly kind acts and words are cherished, and how lightly the bitter ones are passed over. A man cannot spend many evenings in the wilderness in company with a party of moral social friends about a glowing camp fire, and still hate his "mother-in-law." And then as conversation wanes and the fire flickers, each retires to his bunk with naught but pleasant recollections, and the waves on the beach sing his lullaby. How the re-operative powers of sound refreshing sleep seem to build up and strengthen a man until he can almost feel the hardening and growth of additional flesh and muscle. And then, in the morning, what keen appetites await the breakfast signal, and how the plainest of food disappears, is relished, and perfectly digested. If perfect peace of mind and contentment could be put up and sold by the dose, I believe it would soon run out the sale of pepsine.

I will not dwell upon the breaking up of camp or the long march to the settlement, but will immediately transfer the scene to the village of Mattawa, a mushroom village, evidently built somewhat after the style of the Irishman's axe handles, which he had split out by lightning in a thunder shower. It is situated at the junction of the Mattawa and Ottawa rivers, about 400 miles above Montreal. A trading post or fort, as it is called, of the Hudson Bay Fur Company, is located here for the purpose of trading and exchanging goods with the Indians for furs and skins. Here, on Tuesday, October 4, the advance guard of our party, consisting of Rerdell and Dorsey, might have been seen negotiating with a big Indian (Jawbone by name) to guide and assist in paddling us up the river about seventy-five miles to Lake Temichtemuug. Brady and Miner were to join the party on Wednesday, when arrangements were to be completed for an early start Thurday morning, but at this time they were down the river about thirty-five miles at Bissetts Creek. Speaking of Bissetts Creek, reminds me that a settler on the northern shore of the river killed two large moose while we were there, and we had a chance to test the quality of some broiling pieces. B. G. A.

OTTAWA RIVER DISTRICT, Ontario, Oct. 3.

BELOW QUEBEC.

SIXTH PAPER.

IT is sixty miles from Gamache Bay, or Ellis Bay, as it is oftener called, to the Southwest Point lighthouse, which has for many long years not only served as a guiding beacon to many a ship, when dark fogs shroud land and water, but also as a haven of rest and Christian charity to scores of unfortunate nearly starved and frozen sailors, whom the merciless waves have more than once wrecked within sight of it. Mr. Pope, the keeper of the lighthouse, is perhaps better and more generally known than any other person along the whole coast line, as he has resided here for near a generation and has raised a large and promising family, which, in point of intelligence and culture, is in truth phenomenal. But not only is the distressed mariner sure of a kindly welcome, but the straggling naturalist, sportsman and tourist are alike cared for. The government geologist, Mr. Richardson, expresses in his report his obligations to Mr. Pope for much valuable information, which, at least on this island, could not have been well obtained from any other source, as Mr. Pope himself is by no means a novice in geological science and is familiar with the position and contents of the rocks on his island. There are many features about his model home which admirably illustrate what a home education may accomplish if backed by the proper solicitude on the part of the parents about the improvement of their children.

Three of his daughters are full grown, and have, beyond an occasional visit to their nearest neighbors, or asphyxiated Gaspé, never been a mile from the barren rock upon which their round house is perched. Yet they are in all respects as refined and cultivated as any young ladies who have had all the advantages our best educational systems can bestow. Their only instruction has been by means of a governess, who for a short term of four years taught to them only the elements of writing, reading and arithmetic. And yet there stands a piano, which is not allowed to crumble away unheard; a bookcase, containing a small but carefully selected library, and indicating by the titles of the works the tastes and bent of their minds. The table is fairly littered with the better sort of current literature, while a telegraphic instrument clicks upon another, all disposed in the little concave room, which serves for the threefold purpose of study, sitting-room and post-office. The oldest daughter is not only a valued contributor to several of our magazines, through some of her graphic sketches concerning the natural resources, vegetation and mode of life on the islands; but her services are also highly valued by the central weather office at Toronto, to which she telegraphs daily the details connected with the changes of the weather upon this exposed cape. By her careful attention and complete mastery of the principles as well as the manipulation of the telegraph, she has been advanced to the post of chief official of the Anticosti telegraphic section, as no one else here is competent to correct any disturbances which may interrupt communication. How to evolve all of these various practical accomplishments out of the wilderness behind and the waste of waters beyond is a conundrum the solution of which concerns those psychologists who base their views of mental superiority upon the theory of transmitted intelligence. The precept and guidance of a refined and intelligent mother may perhaps have been of more substantial service to her daughters, growing up in this desert like female Caspar Hausers, than the most rigid and systematic school training could have wrought.

There are almost as many instructive novelties about the premises of the lighthouse as inside of it to interest the casual visitor. Two large and beautiful jet black Newfoundland dogs are the guardians and team of the family, while a tame, though still very mischievous, young raven keeps the feathered occupants of the neighboring poultry yard in perpetual alarm. This bird seems to be possessed of almost human cunning; knows every inmate of the house, never loses an opportunity to pilfer anything which suits its fancy, whenever any of the windows of the room are open for a moment, and is a careful hoarder of his ill-gotten plunder, whether eatable or ornamental. The boat landing place is a long rifle shot from the tower, but the moment I landed, this bird of ill omen was promptly on hand, inspecting like a vigilant custom house officer every item of my variously assorted baggage and appropriating expeditiously for its personal use, among the rest, my fresh eggs, which had been the objects of my special solicitude.

If nothing else had claimed the time at my disposal, I could have contented myself for weeks, instead of days, at the lighthouse. The roar of the surf breaking into milky sheets of foaming water against its rocky base sounds like sweet music in the cozy room of its upper story, from which we can survey complacently the wild play of the great rolling white-crested breakers, as they vainly hurl themselves in their maddened fury against the frowning, stubborn cliffs. But there are only a few more days to spare, and the time is rapidly drawing near when the vessel I expect from Gaspé will call to take me off, and beyond all of these interesting sights.

A visit to the Jupiter had formed above all a most important part of my original programme, and to carry it out, a man and boat were engaged at the lighthouse to row me up to the mouth of this river, which is about eight miles to the westward of the Southwest Point. But my preparations were inadequate, as two men with a good canoe are needed to ascend it, and I stood therefore on the shores of the Jupiter, making cast after cast without even getting a single rise. It almost seems incredible to come from such a long distance to the best trout stream on this coast, and to leave it again without hooking a solitary fish. They had migrated up stream to its pools, where they assemble in dense packs to spawn. Here I could have caught hundreds of them with the shreds of my shirt, as a substitute for flies, as has been done by the natives on more than one occasion. The mouth of the river is, however, an excellent collecting field for fossils, which abound in the loose debris at the foot of the cliffs on the east side. There was also a great number of black guillemots breeding among the rocks, and the red-throated divers were exceedingly abundant. The white-bellied swallow is just now, Aug. 20, preparing to migrate, and collect each morning in great flocks near my camp, which fronts the river shore. These species, along with an occasional wild goose, constitute just now the greater number of the birds to be seen. A little later the aspect will change, when the migratory swarms will arrive to rest here a few days before they venture to resume their southern journey.

It requires fortunately but little time to choose a site for a camp and leave it again when game and fish becomes scarce, and as neither were abundant we made a quick shift for our next projected point, a small river about twenty miles east of the Jupiter, where we had been assured of fair prospects in the line of fishing.

The sea is as smooth as glass and we arrive in a few hours at the mouth of Riviere du Berg, as this creek, which is not laid down on the map, is called by the natives. The spot looks promising and wild enough to suit any one's fancy, though, perhaps, not that of the luckless captain whose ship lies stranded on the reef within a few miles from my tent. The wreck is a large black steamer which ran ashore here last November, and though exposed all this long time to the fury of the wintry gales, has defied all assaults of the hungry sea, which has been unable to dislodge this adventitious rock of iron. She lies here still as upright as when she stranded on that unfortunate November night, and, whatever damage her bottom has suffered, no effects of it are visible above the water-line. There is at present a wrecking crew from Halifax on board of her under the superintendence of Mr. Howell, an experienced and competent engineer, and busy men are swarming about her sides and decks like a lot of wasps when some damage is inflicted upon their nest which calls out the whole force to repair it; only that the nest is magnified into the great iron leviathan which had to come such a long way from across the sea to rest in this rough bed from the fatigues of her journey. Her name is the Lartington, of London, and the contractors who have undertaken to get her off, are sanguine of success, although a stiff southwester may blast their hopes in a single night and upset their calculations. I am indirectly in a round-about way indebted to her for several days of splendid fishing, as I probably would have never thought of any such thing as Riviere du Berg if this steamer had not stranded near its mouth to become *pro tem* an objective point for vessels coming and going, among the rest the schooner upon which I depend to get off the island, and which in virtue of her contract must call here with supplies at least twice a month.

This creek for once fairly swarmed with trout when I arrived, but they unfortunately disappeared again in a few days for parts unknown to my great regret, no less than that of the wrecking crew, who found our large messes of fat sea trout sent to them, an agreeable change from their rough bill of fare. To retrieve my bad luck I determined to follow up the fish to the nearest pool, which I learned was about eight miles up the river, as in this way I could also obtain a glimpse of the interior, which is utterly inaccessible, unless the explorer avails himself of the water courses, which are the natural highways cut out by the force of their swiftly running waters. The scenery of Anticosti along the sea shore is monotonous in the extreme, as the island appears like a long, gently rounded-off mass of land, covered with a uniform growth of low spruce trees, but only a few miles inland matters change surprisingly quick. In place of an impenetrable growth of stunted scrub which I had expected to bar our progress, I found my surroundings of an entirely different nature, after I had advanced a mile or more inland by following the bed of the river.

In the place of anticipated low matted pine scrub there are stern rocky walls rising up vertically to nearly double the height of those forming the famous gorge of the Niagara, and greatly surpassing them by their wild, romantic aspect. At every turn of the river, of which there are many, high rounded off buttresses vary with the uniform walls, reminding us by their aspect of the pictures which portray the castellated towers of the far West. And at the lowest depth of the gorge runs the ice cold swift stream, bordered here and there by white gravel beaches, which are just now glowing with a variegated carpet of delicately fringed asters, blue and white lobelias, golden rods, pitcher plants, false aronica and lady slippers, all raising their tender blossoms to light, and gallantly maintaining the struggle for the existence against the crushing agencies of a cold, uncharitable climate, in which the glimpses of sunshine are few and far between.

I had started upon this present excursion on a frugal breakfast of a salt mackerel and a few hard biscuits, as the larder was running low, but the senses were too occupied with the pleasing novelty of the continually shifting panorama to heed the silent protest of the stomach, which has no susceptibility for any other poetry save that of nutrition. As long, however, as the trout pool was still in the distance, the cravings were unsatisfied, as its prospective charms, graphically described to me by an adventurous engineer of the Lartington, were after all my final goal. But it was long past noon before the sight of a bald eagle, soaring high over the wooded cliffs, indicated the proximity of this crowded fish pond. In the course of many years it has been my good fortune to visit no few streams, where I have filled my creel in a little while, and satisfied all pardonable cravings for a big string, but then I had to work hard for it under even the best circumstances, while here dense packs of great hungry sea trout were so closely massed together in a small basin, that the time needed to unhook them was in excess of that it took to catch them. The very first cast with three flies tied to the leader promptly yielded three large trout, the management of which was relegated to my attendant, who, though he had lived on the island several years, had never yet thought it worth while to explore the pool of this stream. In order to ease his work, two of the flies were promptly cut off, and yet the remaining one, a Jock Scot tied to a double leader, never allowed him a moment of rest, as it no sooner touched the water than there was a run for it by a dozen or more of hungry fish. Never have we enjoyed one single hour of fishing as much as on this present occasion, as we left the spot in the very height of the sport. The pool itself, along with the surroundings, constituted a picture of surprising natural beauty. Fancy dark-gray vertical cliffs, surrounding it like a lofty rocky amphitheatre, the center of which, instead of the arena, was occupied by deep emerald water, so still that it seemed to be frozen. The bottom of the pool was one solid dark mass of great sea trout, which probably had never been disturbed.

Here also occurred what all along I both wished and dreaded, to wit, the hooking of a salmon, which caused no small trouble to secure it, as my rod hardly weighed six ounces, and gaff and landing net were wanting. I had noticed six or eight fair-sized salmon while making a general inspection of the thick, black mass of sea trout on the bottom of the pool, but although one or another of them now and again made a dash to compete with the swarms of the trout for the fatal feathery prize, they failed in their efforts, and quietly sank down again into the depths of their crystal home.

At last there was a great splash, followed quickly by large, widening circles, and the next moment the singing of my little reel admonished me to pay close attention and cunning if I had any hope to see my big prize safely landed. Three times it made most desperate efforts to free itself from its feathery moustache by flinging itself bodily out of the water to a height of over six feet, but for once nothing yielded, and the little braided line could not have stood better the strain if it had been made of steel wire. I have heard of many instances where the salmon angler spent hours before the fish was sufficiently exhausted to be netted; but in this present case hardly a quarter of an hour passed when I succeeded in coaxing this salmon into shallow water. No sooner was this accomplished than my Frenchman, who had already watched with intense interest the progress of the game, pounced upon it like a hawk upon the turtle dove, and, clutching it with a vise-like grip, threw it high on the beach beyond all reach of possible escape.

He solved for me at least, thereby, the conundrum so often proposed, and yet so difficult to answer, what constitutes happiness. My own feelings came, for the time being, as near its realization as is possible in this troublesome world, and nothing was lacking to it when the silvery prize flounderd upon the dry gravel. It was the first salmon in my own experience which ever rose to a fly not designed for him. He was a small one after all, of only about sixteen pounds' weight, but compensated for this defect by gallantly maintaining to the last his fight against misfortune. He filled my cup of happiness, and also to overflowing the coarse sack, which had been taken along as the next handy substitute for a fish basket, and into this he was squeezed, amid a hecatomb of stiffened trout. The latter were here of extraordinary beauty, of deep golden brown color with the brightest of scarlet specks. Their belly was red and on each side of it a broad dusky band extended from the gills to the ventral fins. They were, without exception, the most handsome sea trout I saw anywhere, and their rose-colored flesh equaled, in point of firmness and flavor, that of the salmon. Neither was a pound of it wasted, as the crew of the Lartington utilized every eatable scrap. But the labor of carrying on our backs such a great load of them along the rough, rock-strewn bed of the stream was no child's play, and taxed to the utmost the endurance of my powerfully-built man. Before the sun disappeared behind the cliffs flanking the deep gorge, which was already darkening before the advancing shadows of the night, I capped my good luck by bagging two fine ptarmigans, which are rare at Anticosti, and were the first and last I saw there.

The arrival of the long expected schooner raised at last, the very next morning after my salmon adventure, the involuntary blockade which had so long detained me, somewhat against my will, on this island, and relieved me of all anxiety I had entertained on account of her long absence, as she was overdue.

I have endeavored in these hasty sketches upon the aspects of nature along the shores of the Gulf of St. Lawrence to dwell chiefly upon those only which are the most striking to the visitor and are peculiar to these parts. I have also purposely avoided entering into the discussion of any details connected with the fisheries, the only industry along this coast, as time and space were lacking to do it full justice. The condition of the people engaged in it demands a more careful attention on part of the Dominion government than it has thus far seen fit to bestow, unless it prefers to continue to respond gratuitously to their calls for aid and relief, which could be permanently and more efficiently afforded by equitable adjustment of the relations between them and their employers, who have monopolized their services and hold them in a state of bondage not better than that of the Russian serf.

Much more remains to be said concerning the details of outfit which is needed to make a trip to the lower Gulf as pleasant as circumstances admit, but the individual views of sportsmen differ so widely on the questions that all suggestions are gratuitous, since the majority will follow their own bent, dictated to by the experiences of more comprehensive nature than my own have been. I can only mention what has been of best service in my own case and let the reader take the benefit. As far as arms are concerned I found a light breech

loading rifle of .38-calibre the best tool as it comes; time and again into requisiton where seals are abundant. There is during summer but little feathered game on the gulf and double-barreled shotguns are therefore an almost needless encumbrance. I have therefore always used a single barrel breech-loader, as many of them are excellent shooting guns and carry shot as far as can be reasonably expected. It is advisable to take along a couple of pounds of good powder and a corresponding quantity of fine shot, as both are unobtainable below Quebec. If it be desirable to make collections it is also necessary to add some tools and preservatives for skinning and preparing of the specimens. Rubber goods of all description including blankets, boots, bags, are indispensable, as the weather is not always fine, and rainy days are not uncommon. The outfit for fishing itself can hardly be too comprehensive. It is easily carried and will last moreover for several years. For large-sized trout, salmon flies are preferable, notably the Jock Scot, silver doctor and golden pheasant.

Provisions of all kinds are best secured at Montreal or St. Johns, where they are of good quality and variety. The tourist can best reach the lower St. Lawrence by going by way of St. Johns, N. B., and thence by the Intercolonial road to Campbellton. Here a steamer runs to Gaspé twice each month, and connects with a mail schooner which runs to several points along the north shore. If the Quebec route is chosen, there are two lines of communication open. The first is by the Intercolonial Railroad as far as Campbellton, and beyond by the same transportation as above mentioned; the second is by the coasting steamer Otter, which makes semi-monthly trips from Quebec to many good points along the shores of the Gulf, wherever there is freight and passengers to land or take on board. Mingan is the terminus of her journey.

All help, canoes and rough camping outfit can be got at Gaspé, and should be secured at that point, as there is a wilderness beyond it. All streams of the north shore, where there is any good salmon fishing, are now leased, and special permits from the lessees are needed if any one desires to indulge in this kind of sport. Trout, however, may be taken without any permit as far as the tide runs. The smaller trout streams are free to all comers, and some of them, like those in Anticosti, yield better sport than the majority of the large rivers. The highest benefits of a journey to the lower St. Lawrence accrues, however, from its pure and invigorating air, the effects of which, in case of all digestive derangements, are unsurpassed. No other stretch of coast line in summer time equals it in this respect, and the day is not far distant when the great surging crowd of the languid, spoilt devotees of fashion will invade these still primitive and romantic solitudes, and reduce them to the level of the many faded, insipid seaside resorts which form an almost unbroken net from Virginia to Maine. L.

SPORT IN NEW MEXICO.

SECOND PAPER.

IN a former letter I gave you in short my views on the relative efficiency of large *vs.* small flies for trout fishing in streams. I can now offer you additional evidence in corroboration of those statements. A gentleman who has fished the trout streams of the West for upwards of twenty years, and so is no novice at the sport, only repeated the warnings I had had from so many other fishermen in this country, viz., your flies are too small. However, I induced him to try some of them, which he did, and pronounced his sport to be improved at least fifty per cent., not only in numbers, but also in the true sport of landing heavy fish on delicate tackle. I tied him a dozen or so of flies, with which he has caught about 600 trout, saying that he has never equaled the take in any previous season. For my tail flies I use number 11 Limerick hooks on the finest trout gut obtainable, and the drop flies on number 13, or even smaller. My theory of fishing is that by suiting the strength of your tackle to the size of trout you expect to catch, as good sport may be had with half-pounders as with two or three pounders. How often has my heart been brought nearly into my mouth by the first rush of a lusty pounder on a number 13 hook; and the care and caution used to bring him to net has worked me up to a pitch of excitement unequaled in any sport. How differently we regard the same fish on a large hook, coarse, strong salmon gut, and a two-handed rod. Instead of admiring his proportions and pluck after a long tussle, he is yanked out by mere strength, and ignominiously counted among the small ones. Sport in its true meaning is the more enjoyable the more difficult it is to be successful, and the more the skill and knowledge of its seeker are called into requisition.

The Santa River, so called from courtesy, is really nothing but a small creek, that loses itself entirely in the sand just below the city. I had heard, though, that a few small fish were to be had in the upper waters, so I determined to test the accuracy of the assertion. So, one fine afternoon, I set out, with a companion, to try my luck; but I found the stream almost unfishable on account of the scarcity of water and extreme brightness thereof. By selecting the smallest flies and finest gut I managed to land about one dozen, two or three scaling one-half pound, much to my astonishment. The Santa Fe Waterworks Company have erected a dam on this creek, which, with a little judicious stocking, would prove a glorious place for supplying the whole river with trout, and would afford excellent sport in time to come. By getting power to preserve the stream for a few years and strictly enforcing the existing laws as to illegal fishing, many a pleasant evening might be spent near Santa Fe, without having to go so far for a bit of fishing.

I now come to my last expedition, thus far, this season—destination again the Pecos River; purpose, capture of trout and hunting the wily deer, or eventually fighting off a bear. For as we had lost no bears, we concluded not to hunt them. Traveling this time over the same road in a buckboard, myself and co-angler left Santa Fe about 1 P. M., and reached the old town of Pecos at nightfall, where, having secured good quarters, we put up for the night, but hurried on, the first thing in the morning, to reach our first point of attack on the trout. Five miles of even rough hilly road are soon traversed with strong mules and a buckboard, so at about nine we had made camp and were busily engaged in preparations for wading the stream. The first thing to be done was to soften up the wading-boots—so, filling them with stones, they were placed in the river to soak; next, the rods were put together and casts of flies attached, and those also placed so as to get a good soaking (*i. e.*, the line, and not the rod); then pants discarded for knickerbockers and stockings. By this time the boots are soft enough to get into, so they are put on, and then away we start, ready for any fish that may turn up.

It seems strange that the wind should have such an influence upon the success of fishermen, but that it is so cannot be denied; and that this fact was observed years ago is shown by the following verses, long known among the people of England. They run something like this:

"When the wind is in the north
No fisherman will rally forth.

When the wind is in the east
It blows no good to man or beast.

When the wind is in the west
Fishing then is at its best.

But when the wind is in the south
It blows the bait into the fish's mouth."

Simply denoting that a warm wind is good and a cold one bad for fishing. On the particular morning in question the wind was cold for the time of year, and no flies on the water, a bad omen. And after fishing carefully and steadily for some time without so much as getting a rise, I was beginning to think of the advisability of devoting that day to hunting, when walking along the bank near a long still pool I heard a splash, and on looking round saw the tell-tale rings on the otherwise placid surface of the water, denoting that something had disturbed it, but whether it was a fish or no I could not tell; so I sat on the bank, a watcher, and soon saw two or three little fellows, rising without any apparent object close to the water's edge in the neighborhood of where I first heard the splash. Fully making up my mind that these were not the ones that had attracted my attention, I began carelessly casting over them for amusement, but keeping my eye firmly fixed on an old log lying across the stream a short way below, where I expected my old friend to hang out, and sure enough, after about ten minutes waiting I saw the unmistakable signs of a good fish feeding, and right against the logs as I suspected, for the best fish invariably look out the most inaccessible places to live in. My first cast right bang up against the tree "fetched" him, for up he came and lazily sucked in my tail fly, when I struck sharply, led him up stream gently, and slipped the net under him before he knew whether he had a hornet or hook in his mouth. He weighed three-quarters of a pound honest. He did not make much of a fight, but I kept well out of sight and handled him so as not to scare him. I then caught about half a dozen, foul looking some, they came so short. By one o'clock I had only caught twelve, and only one good fish. During the afternoon and evening I supplemented this with another dozen, besides a few small ones I returned. My companion had caught one dozen as his day's work, which, considering it was his first attempt, I call a remarkable good take, throwing the state of the weather and water into account.

The next morning broke with a more promising aspect in spite of a light frost, as the sun was shining brightly, and the river had fallen considerably during the night. So after a good breakfast of trout we buckled on our armor once more, with the intent to fish up stream toward the ranch I stopped at on my last visit, some six miles above our present camp, and let the buckboard pick us up on the road and take us the remaining portion of the journey. Sport was indifferent until two P. M., when I happened to spy some light-colored flies that the trout seemed to be taking. On hunting through my book I found some green gnats that I had tried just a few days before starting, and soon caught a nice lot of fish, but very small, so I returned nearly all of them, feeling confident of filling my basket with good ones yet. But I was doomed to disappointment. For some reason or other the large fish remained anchored at the bottom, and in leaving off I found myself with the insignificant total of three dozen, very few touching the half pound mark on my spring balance. Thus only began my troubles, for through some misunderstanding the buckboard failed to put in an appearance, so there was nothing left but to set off to tramp five miles to the ranch. If any of your readers have tramped five good square miles in the dark over a very rough road, in places even dangerous, in the dark, with wet shoes and legs, after standing in the water for upwards of nine hours, they will remember it; so there is no need to say how pleased I was to see a hospitable light in the ranch window, being assured of a hearty welcome. I was not long in getting rid of my wet things and a good substantial supper, and showed equal expedition in climbing between the sheets.

I will give you the dressing of my pattern of green gnat, as I found it a good one to kill and not difficult to tie. Hook number 13, body green silk, finished with a few turns of white hackle tinged with black near the hook. A couple of hairs from a mallard's wing feather would be an improvement on the above as a tail.

While seated at breakfast on the following morning the missing buckboard with companion arrived. It seemed it got dark before a start could be made, and the road is not a good one to travel over at night, so he concluded to stay where he was for the night.

We were soon busy discussing the programme for the day, and at length decided to start off on a hunt and explore the upper waters of the Pecos. Having no pack animals we determined to make the best of a camp out without blankets, only carrying some provisions with us in our fishing creels. After about an hour's walk we came to a spot where the river forks, so taking the left-hand branch and striking out onto the mountain side, we soon fell in with a well-worn trail, generally supposed to be the old Apache route to Taos. We continued on the trail for about five miles through the most beautiful timber pasture and picturesque scenery without, however, seeing anything to shoot at. About noon we discovered a small log hut that we found to be occupied by two young fellows who had located a ranch. They evidently showed good judgment in their selection of the quality and quantity of the grass, if abundance of timber and water counts for anything. We were most kindly received, as is invariably the case out West, and were given all the information as to the best locality for game, etc. We therefore concluded to stay there the night and hunt round the ranch in the evening. We visited several licks and walked carefully over a good many mountain sides, but saw only one deer, that got out of the way before a shot could be got in. There were plenty of fresh tracks round, but we were not fortunate enough in coming upon the deer.

In the evening, in the course of our chat after supper, our host mentioned a singular circumstance that I think deserves noticing. Being one day in search of some cattle that had strayed away he came upon the remains of a "mountain lion" and bear lying side by side. There was no mistaking the identity, as portions of the skin was still sticking to the skeletons. He brought away the claws with him as a proof. His theory is that they must have killed each other. If this is so it is remarkable and interesting as showing the extraordinary power and strength a mountain lion must possess to be able to cope with a full-grown bear on even terms. Bears and lions are by no means uncommon in this section.

In the morning we concluded to hunt back to our old quarters and resume fishing, as in order to successfully hunt deer a better knowledge of the country is essential than we were possessed of. On the road we again came across a deer, but in this instance also we were unable to get a shot, for although he was but a few feet from us at starting, the underbrush was so thick that we could not afterward catch a glimpse of him.

On arriving at the ranch we found a letter necessitating our presence in Santa Fe the next evening, so we determined to set to work and catch a good basket of fish to take into town with us. I used my same cast of flies, viz., red hackle, green gnat and black gnat; time, 1 P. M. In the first swim below the house, I caught four fish in about as many minutes, only keeping two, however. They rose fast and well, so in the first hour I had taken eight and returned about twelve small ones. I was then standing above my knees in water at the head of a shallow dam, when my "pard" came up. I immediately invited him to enter the water by my side and fish down together. By the time we reached the end of the dam, we had taken upward of two dozen fish out of it by four o'clock. The next two hours were occupied in fishing the next mile of river, and when we reeled up, our united take amounted to upward of six dozen, not counting the numerous small ones returned. The next evening saw us back in Santa Fe, nothing having occurred to mar the pleasure of the trip.

I am quite startled at the length of my letter, but the pleasure of re-killing game or fish is so great, that one runs on without the slightest thought of the pain caused thereby to other people. In conclusion, I may say that if anyone wishes good trout fishing he can have it here—such as I have described—but if shooting, he should seek some more favored spot. WESTWARD HO!

Natural History.

CHARACTER OF OUR NATIVE SNAKES.

THERE has been so much interesting discussion in recent numbers of FOREST AND STREAM, upon our native snakes, that a statement of what is fact and what is fiction in regard to them may not be amiss, and may be of use in estimating the credibility of the snake stories which will doubtless appear in the future as they have in the past. Perhaps none of the common animals of our woods and fields is more imperfectly known, and at the same time more persecuted and misrepresented than the snake. There are many interesting features in the natural history of serpents, but the general dislike felt toward them is a great obstacle in the way of arriving at a knowledge of their habits. People either come down on them with a heavy heel, or shun them altogether, supposing all snakes to be more or less dangerous. There is little excuse for this, as all the serpents of northeastern United States, with but two exceptions, are perfectly harmless. The two venomous species—the rattlesnake and the copperhead—have movable poison fangs in the upper jaw, instead of the ordinary solid teeth of the harmless snakes, which have both jaws fully toothed.

It is surprising with what credulity the most absurd snake stories are received. This is due to ignorance of their habits. Viewed with the practical eye of the interested observer, they are very ordinary animals after all. Many persons are familiar with stories of milk snakes (that milk cows), and of hoop snakes (that with tail in mouth, progress hoop fashion) and other "old wives' fables," equally absurd. Such yarns, when weighed, are always found wanting. They are fabricated by persons whose love of the marvellous preponderates over their regard for that quality which, the poet says, when crushed to earth, will rise again.

The power of fascination which has been ascribed to serpents is a fallacy which has given way before the inquiry of the naturalist. Many accounts of this power as accorded to these animals have been recorded, but are always traceable to other causes; for instance, the frantic actions of the distressed mother bird, when the insidious reptile is too near the nestlings, have doubtless often been the grounds of charging the serpent with mesmerism. There are actual accounts of fluttering birds finally being seized by snakes, but they had been previously bitten, and the poison was merely doing its work. Toads are sometimes seen to crawl in a half stupefied manner before snakes. Their confusion is due to natural terror rather than the mesmerism in the eyes of the snake. There is, indeed, a paralyzation from fear, which is of itself sufficient to explain instances of this kind.

The popular belief that snakes swallow their young is now believed to be supported by the facts. This is not a literal swallowing on the part of the parent, however. The young when surprised merely seek a temporary refuge in the gullet of the mother, from which they emerge when the danger is past. This singular habit is recorded of several species of our snakes, and is probably common to all.

Serpents live solely upon animal food, which is swallowed intact. They frequently succeed in swallowing animals of greater diameter than their own necks. This process is accomplished by the aid of recurved teeth and expansive jaws, the bones of the mouth being united by elastic ligaments. The teeth of snakes are not formed for crushing or tearing, but are rather a series of small hooks, which prevent the escape of prey which has once been seized. The reptile advances the teeth of one portion of its loosely constructed jaws, and having secured a firm hold hitches the others forward and thus gradually works himself over his victim. The process really resembles this as much as swallowing. As the Westerner says in regard to his dram, "He gets himself outside of it." The writer once teased a water snake to make it disgorge its dinner, the presence of which was very apparent from its distended stomach. The lump was finally thrown out in the shape of a frog, which gave signs of life. It soon recovered itself and hopped off to the water, apparently not much the worse for being swallowed alive. Frogs and toads, owing to their passiveness, are not much injured by the swallowing process, and sometimes pass into the snake before the breath is out of their bodies.

The rattlesnake and copperhead are now almost banished from the cultivated portions of the country. The former is neither an active nor aggressive animal, and if not mo-

lested or cut off from escape, glides under cover and gives the right of way. I once killed a large rattlesnake which my companion, who preceded me along a mountain path, had unwittingly stepped over, the snake making no movement whatever. Persons coming upon them suddenly are not infrequently bitten by them, but their habit is to give timely warning of their presence by rattling angrily.

The use of the rattle is a mooted point in natural history. It is said to be simply nature's warning against a dangerous animal, the "snake-in-the-grass" cry that the wise will heed. *"Frigidus, O pueri fugite hinc latet anguis in herba."* Virgil says. Certain it is that men and beasts instinctively sheer off when this alarm is sounded. One very probable use of the rattles is to call the sexes together. Some naturalists explain it all according to the theory of natural selection. The rattles are added at irregular intervals, and are frequently lost. They can afford no index to a snake's age. The copperhead is a much more vicious serpent, and strikes whenever its retreats are invaded.

The real use of the fangs to all venomous serpents is that of procuring food, not defense. Snakes of this class are, as a rule, sluggish, having none of the agility of the non-venomous species. Without this means of obtaining food, they would be but ill adapted to the struggle for existence. These fangs lie flat, when not in use, but are provided with erectile muscles which throw them forward when the serpent becomes excited. The contraction of the poison glands, which lie beneath the fangs, forces the venom through the canal of the latter into the wound. Let no one think that by depriving it of its weapons, the deadly serpent may be converted into a harmless pet. Behind them lie tiny germinal fangs which soon replace the lost ones, and the dormant faculty of destruction springs into new life.

The food of our native snakes consists of mice, frogs, lizards, young rabbits and young birds, the smaller species sometimes feeding on beetles and other insects. The water snakes are excellent swimmers and fishers. The serpent, in common with other reptiles of temperate regions, hibernates in the winter. Its skin is shed at intervals, depending on the condition of the animal. In casting, the old skin breaks first on the head, and is peeled backward until entirely thrown off. When found thus, it is, of course, inside out.

Really we have nothing to fear from creatures as helpless as the common non-venomous snakes. So far as danger of venom is concerned, they can all be handled with impunity. The writer has been bitten repeatedly by water snakes and garter snakes, with less inconvenience resulting than from the scratch of a kitten.

The indiscriminate slaughter of snakes is a practice which should be discouraged, for many of the inoccuous species are useful destroyers of vermin.

"For nought so vile that on the earth doth live,
But to the earth some special good doth give."

C. H. TOWNSEND.

COTTONMOUTH and WATER MOCCASIN

Editor Forest and Stream:

In your issue of Aug. 24, in reply to a question from a Georgia correspondent, you say "the water moccasin and the cottonmouth, we think, are the same snake, as we have found both names applied to the *Ancistrodon piscivorus* in the South." I do not agree with you that these snakes are the same. In my boyhood days I was very well acquainted with the water moccasin in North Carolina, where he was a very common denizen of the creeks and branches. There were two kinds there, both, if I recollect aright, marked exactly alike, except that one was long, slim and tapering to a fine point, while the other was more heavily built and inclined to be stumpy at the caudal extremity. This latter was a venomous rascal, and the former was harmless except as to frogs and minnows. Now the cottonmouth, which I never saw in North Carolina, and don't believe exists there, is a very different snake. He is a rusty, blackish, dirty looking fellow, very much of the color of swamp muck. He has some markings, but these cannot be perceived without close inspection. His habits also are quite different from those of his North Carolina cousins. The latter lives almost entirely in running water, while the cottonmouth avoids that sort of water. He prefers, and according to my observation, sticks exclusively to pools or ponds, and the dirtier and more stinking these are, the more are they to his liking. Though I have seen hundreds of them in Texas, I have never yet seen one in running water. You will find them about the little stagnant, grassy pools along the water courses, but never in the water courses themselves. Moreover, the water moccasin is nearly all the time in water; he is strictly a water snake; while the cottonmouth is rarely seen in the water, but always very close to it. If you attack the water moccasin on land, he speeds to the water as quick as he can; if you attack the cottonmouth in water, he gets to the land as quick as he can. Though always about water he is not really a water snake.

The water moccasins, both the venomous and the harmless, are lively, active snakes, and seem to be imbued with a good deal of intelligence. The cottonmouth is a sluggish, slow-moving villain, and seems to be an infernal fool, to boot. He does not regard a man with any more respect than he does a beast, and stands in no awe of harm whatever. When he sees you approaching he will hardly put himself to the trouble of coiling up as other venomous snakes do, to give you a warm reception, but usually lifts his head high up, his body stretched out at length, and opens his mouth at you just as wide as ever he can pop it. He will stay in this position, with head erect and mouth popped wide open, a long time. When you begin to stone him, he will strike venomously at every stone that comes. He will stand square in his tracks and take all that you can give him. You cannot make him yield an inch; he will die right there. I do not lay this to the credit of his natural bravery, but rather to his thick-headed, dense, impenetrable stupidity. He is so great a dunce that he does not know what you are doing when you are killing him, and does not seem to care a row of pins for it either. Of all helpless, irredeemable fools, I think he can "take the cake." He gets the name cottonmouth from his singular habit of popping his mouth open at you, and keeping it open, whenever you approach him. His mouth, also, when held open, is quite white as compared with the rest of his body, so that some one said that it looks as if it had been lined with lint cotton. He is certainly a very different snake from the North Carolina water moccasin. I question if they have any relationship with one another. We also have in Texas the poisonous water moccasin of that State, but he is somewhat darker than the North Carolinian. We also have a harmless water moccasin here, but he does not at all look like his N. C. cousin, if they be cousins. N. A. T.

EL PASO, Texas.

"BYRNE" ON THE MUD-HEN.

THIS very pretty, cleanly, nicely behaved, tame, confiding, greatly and very wrongly abused, little water fowl, is not near so bad as some would make him. The bird known everywhere West as "mud-hen" is properly the coot, *Fulica americana*, of the subfamily *Gallinulæ*, of the family *Rallidæ*, while the mud-hen proper is the clapper rail, *Rallus virginianus*. This entire family of birds are edible, some of them the most delicious of birds. The coot or miscalled mud-hen, *poule d'eau* (water-hen) of the Louisiana creoles, and generally of the extreme South, is perhaps the least palatable of the whole family. The flesh of the old birds is very coarse and dark, but without any bad flavor, while that of the young birds, nicely broiled, will pass muster anywhere, and has done so thousands of times, when the partakers of it were served with it as teal duck. These are facts, and give a true test of the edibility of anything. This bird, (mud-hen) if you will have it so, is so far as I have observed, entirely a vegetable feeder, feeding principally on fresh water algæ, mosses, weeds, and other aquatic plants and reeds. In proof that it is quite strictly a vegetable feeder, is the fact that it is furnished with a very large and very muscular gizzard. I have opened and examined a large number of their gizzards and have never found any animal matter in them at all, except an empty snail shell in one. Many assert that they feed ravenously on fish. I do not believe this, and give the facts as I have found them, and feel confident that those who have, as they supposed, seen the coot eating fish, were mistaken, and mistook for it the "pied-billed grebe," "dabchick," "dipper," "diedapper," "water witch," (*Podilymbus podiceps* Less.) a somewhat similar looking, smaller bird, generally numerous in the same waters with the coot. It is also known by the euphonious title of "hell-diver" on the Illinois River, Ill.

This little bird is a ravenous eater of small fish, and is I think as edible as most of the ducks if properly prepared. What birds are not if young and in good condition? Byrne would say none except those that feed exclusively on carrion, and I will not except young, fat, tender hawks, owls, and herons (*Ardeidæ*). But I might be willing to except after trial the *Steganopodes*, the pelicans, cormorants, et cetra, for these may be young, but are never fat. With them, wind, simple air, takes the entire place of fat in other birds. I could give a good many curious and interesting facts about persons partaking of many different birds not generally used as food with great relish, and pronouncing them "very good," "delicious," when they supposed they were eating some bird well-known as a fine game bird. BYRNE.

CROCKETT'S BLUFF, Arkansas Co., Ark., Sept. 30.

THE BREEDING OF QUAIL.

Editor Forest and Stream:

In reference to quail breeding a second time I have this to offer: I was shooting in Jackson county, Iowa, about two weeks ago, and while drawing a field my two dogs pointed; a friend and myself advanced and flushed one bird, which I killed. Upon the report of the gun another rose, which I covered, and was about to shoot, when my friend cried, "Halt!" and I dropped the gun. I inquired the cause, and he showed me, running among the rag-weeds, a full covey of young quail, so young, indeed, that they could not fly. In the same field another covey was found which were not quarter grown. About a half mile from same place another covey was flushed, which appeared to be made up of two hatchings, as some were fully as large as the old ones, while others were not over half grown. These coveys were all found on the same day, Tuesday, Oct. 3, 1882. I do not know whether these young birds were the first or second hatching, but I do know that I saw them on the day mentioned and that they were bona fide "Bob Whites." OCTO.

JOHNSTOWN, Pa., Oct. 17.

"J. E. S." is right, quail often rear a second brood, and the peculiarity in regard to it is, that after the eggs are laid, the male bird sits on the nest and hatches the brood alone. Your correspondent, "James Wright," has already been informed through your columns, that I had eight eggs hatched out of ten. All the birds are strong and lively, and full feathered out except the heads, they are far more gentle than young chickens, and fight with each other for the possession of the flies that my little five year old girl feeds them from her hand. Mr. Wright's manner of feeding is good, but let him also add a peck of sweepings from the hay mow occasionally, for in it are nearly all the small seed that quail feed on, and beside it furnishes them with the amusement that they like—scratching. I also feed ants' eggs for dessert, but they are imported dry ones and not so good. I don't think there is the least doubt about the ability of anyone to raise quail in confinement, plenty of room, air, variety of food, and above all, perfect cleanliness, being the requirements. I am unable to make out where "Wright" hatched his birds, indoors or out, as he speaks of "brush." Would like to know where he got his old birds and how he arranged the place of the confinement. My birds still occupy my conservatory to the exclusion of my plants, and while I hesitate what to do, I fear that some day Jack Frost will decide the matter in favor of the quail. WILLIS.

WINFIELD, N. J.

BREEDING QUAIL IN CONFINEMENT.—The reply a few weeks since through the FOREST AND STREAM to my inquiry about breeding quail in confinement, gave me but little encouragement to try any such experiment, as I had in contemplation in that direction. I had about concluded to abandon any such project, when fortunately a few days afterward, I accidentally overheard a conversation between a gentleman from Williamsburg and one or two others, in which he detailed the successful hatching of two settings of quail eggs under two small bantam hens, one producing eight quails, and the other six. The one with eight was kept in quite a large coop where she could get up on a roost, and the result was a loss of all the brood but one, which was put with the hen which had six, which was kept in a smaller coop without a roost. These latter were at the time of the conversation six weeks old and getting along nicely. The information thus obtained, with the subsequent articles in the FOREST AND STREAM on the same subject, gave me fresh courage, and I at once set about building accommodations for two pair of quail, and have just completed them. And all I now lack to begin my experiment is the quail. I should very much like to get those that have been bred in confinement if possible, as I think they would be much more easily domesticated. The Williamsburg gentleman, above referred to, also related quite an interesting experience where the quail herself was engaged in hatching. During the process of incubation, having missed the female quail for several days, he began an investigation and found her lying dead beside the nest and the male bird performing her duties. This he continued to do until the eggs were hatched and one quail produced. Having asked the gentleman whether he had given FOREST AND STREAM what I have detailed, and receiving a negative reply, I thought I would do it for him, believing that it would be of interest to its readers. I would like to get the address of Mr. Willis, whose article on the above subject from some other paper was published in FOREST AND STREAM a few weeks ago.—R. P. W.

HOUSE WREN A NEST ROBBER.—Le Roy, N. Y., Sept. 25, 1882.—In one of your late issues a correspondent asks if any one has observed the house wren robbing the nests of other birds. My observations show that he is rather inclined that way. For several years the bird houses in my garden were appropriated first by the bluebirds, who built their nests and laid their eggs in peace. At about this stage the wrens arrived from the South, and after some sharp battles, drove off the bluebirds, carried away their eggs and broke up their nests, building their own in the bird houses. Perhaps this proves nothing, as they undoubtedly wished the houses for their own use; but in addition they removed the eggs from the nests of one or two pairs of chipping sparrows, and, if I am not mistaken, took one or two robins' eggs. These eggs they carried off into the fields back of the house and dropped, their only apparent motive being the destruction of the eggs or the driving away of the other birds. It was very amusing to place the cat on the tree with the wrens' nest and see the wrens attack her.—F. M. C.

IS IT SOMETHING LOCAL?—Long Island City, N. Y., Sept. 22.—I would like you to explain the reason of the northward flight of swallows during the month of August and the early part of September. During the past few years I have noticed that, during those months, large flocks of swallows came from the south every evening, all flying directly northward. Some evenings there are thousands of them, and they keep coming up until it is quite dark. I have never seen them flying southward in such numbers, and cannot account for the reason of their northward flight.—SWALLOW.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

IT IS OCTOBER!

WHEN frosty nights succeed the sunny days,
And hunters range the gleaming forests over,
And round the mountains hangs a purple haze,
It is October.

When anglers lay their rods and baskets by,
Pack leaders, reels and flies with faces sober,
And lock them up, with many a wistful sigh,
It is October.

When partridges steal softly from the woods
At eve, to seek their food amid the clover,
And in the sunny glades the woodcock broods,
It is October.

When timid does put on their coats of blue,
And antlered bucks forsake the thicket cover,
To roam, with listening ears, the forests through,
It is October.

When forests burn in crimson, gold and dun,
And hounds with mellow throats track woodlands over,
When round the lakes is heard the booming gun,
It is October. PENOBSCOT.

PHILADELPHIA NOTES.

ON the 10th and 11th of this month, many migratory birds began to move southward during the murky and easterly weather that occurred on those dates. The flights have been gradual and continued ever since. Your correspondent has distinctly heard the notes of the rail bird as it passed over head during the night, and there is no doubt that on the dates I have mentioned, a portion of the rail left our marshes, although some may remain until we have cooler weather, which will in all probability follow the present foggy season. At Barnegat, N. J., and all along the New Jersey coast, duck shooting has opened, and ducks are reported as having appeared there in fair numbers, though not in such great quantities as would be seen if the weather was colder. All the varieties are tame now and stool readily, as the young among them do not yet know the deceptive decoy as well as they will in November. Brant have not shown themselves either in Tuckerton or Barnegat bays, and are not expected till next month. From all accounts, quail will be fairly plentiful in Pennsylvania this fall. Running birds have been seen this month in many of our small towns. At Brighton, N. J., one covey was observed on the move within the town limits last week. Years ago when quail were more numerous than now, it was very common to have shooting at running coveys, or at running coveys that were pushed until they would lie to the dogs on the borders of Philadelphia (the season opened earlier then); and within at least twelve years your correspondent has had quite good sport for an hour or two, when he found it rather difficult to steer clear of the houses in shooting. Woodcock are beginning to drop in throughout our near counties from the north. The flight will be gradual, and has not been large. We need a little cool weather before they will be well on the move. Our rivermen expect a renewed visit of the snow-geese, or white brant, to our bay this fall. For the past three or four years these fowl have appeared every spring and autumn in the same section below Bombay Hook. Very few have been killed, and yet they are superior to the Canada goose, or brant, on the table. The burned meadows on the bay shore seems to attract them, and every year their work can be plainly seen where the grass has been pulled up by the roots. The rail shooting this year at Port Penn (Sim Lord's) seems to have come all in a bunch. During the early part of the season few birds were killed, but during the storm tide of September tremendous scores were made. It takes plenty of water to get on the high grounds in this section, but it pays to wait for it. HOMO.

PHILADELPHIA, Oct. 21.

Although the demand for W. & C. Scott & Son's guns is enormous, Wm. Read & Son, of Boston, are prepared to fill all orders.—*Adv.*

BEHAVIOR OF RUFFED GROUSE.

Editor Forest and Stream:

A few days since while strolling through a swale at the edge of second growth timber, I stopped beside a soft maple tree with offshoots growing at the base in a bushy manner. At the moment I stopped walking a ruffed grouse arose from the other side of the bush, distant not over eight feet from me and probably about six, and flew straight away. A second later another arose, and another and another, until eight had so arisen and quickly placed a safe distance between themselves and an imaginary foe.

So sudden and noisy and confusing was it all, that, had I been possessed of a gun, I believe I should have neglected to use it. There was even a thumping set up inside me, and I felt dazed, as though I had suddenly dropped down beside a threshing machine. Why did these birds allow so near approach? If I had not stopped walking would they have allowed me to pass entirely by them? It seems that a mental calculation must have been made as to the probabilities of danger, and a conclusion reached that the visitor was not bent upon mischief, and that no notice need be taken of him other than to watch closely as a measure of prudence. The other alternative is that the partridge is a fool and does not know when it is in danger, or what its own mind may be. There is perhaps intermediate ground for this explanation, that the partridge's instinct leads it to hide always and to take to wing only as a last and sole resort, believing that the greatest danger lies in taking to wing.

However, the pretty and tempting sight, as they flew across an open space to shelter beyond, led me to a determination to procure a gun and return as soon as possible and seek to secure some of them. Some ten days passed before an afternoon placed itself at my service, and I then sought the same spot, causing the first bird to arise very near the original locality and at a distance of some fifty feet from me. I approached the place whence she had flown, a tangled clump, very cautiously, and got within some five paces of same. I then paused, doing my best to detect a bird before it should leave on that exceedingly rapid and loudly beating wing that so illustrates the inexperienced marksman. The swale grew high and was intermingled with flowering and seed-bearing plants and shrubs, as well as bushes, so that my effort was fruitless. Summoning great determination to do immediate slaughter, I advanced one or two paces, when whir succeeded whir, the clattering of wings upon the twigs and leaves being answered by a double roar from the battery, and all excitement, I peered about through the blue smoke that so calmly floated in the still air, in the vain effort to detect wounded or dead victims. There were none. The engagement had ceased, and absolute quiet reigned upon the field of action. The partridges —seven of the original eight—had sought all points of the compass, and the question presented itself, What next was to be done?

Now, I had always understood from various hunters of the town, wise or otherwise, and had supposed it to be true, that a bevy of such birds, being flushed and scattered from a given place, would return to the same locality and re-assemble as a family again. As these were evidently of the same brood and had held to this locality for ten days to my knowledge, it seemed to me very reasonable that the rule, if true, should now operate to my great advantage and the better enable me to keep a rash promise made of wild partridges for a Sunday dinner. It will be seen right here that I was a veritable "pot-hunter," and for which I cannot now stop to apologize. I was after partridges "to eat," of course. I had the alternative of seeking them among the grass and bushes, thereby securing more "wing shots" and firing again into a blank and gameless void, or quietly awaiting the prospective return, and "taking them off" as they came in on tell-tale wing and all unconscious of my presence. The more thought given this plan the more it grew in favor. It seemed like a strategic move in military affairs. The enemy were to be surprised—the greatest of all desired results.

I took my station, located beneath a screening bush, at 2:30 P. M., making a note of the time that I might observe how long each bird was in returning. An hour passed, as I thought probable would be the case, and no birds. The day was a pleasant one and I felt quite content. Another hour and the momentary expectation of inflying partridge caused me to be prepared, hammers at cock and gun in ready position, ears open and eyes peering in every direction. After still further time I grew tired of my conveniences for comfort and bethought me of rolling in a piece of log that lay near for a more convenient seat. While so doing I might, if I would, have heard a whir of wings but a short distance to my left, but I would not listen or pay it attention. I had covered that particular spot with my eyes and a large left ear more attentively than any other locality about me, as it was more open and exposed, and it could not be that a partridge had flown in there and escaped my knowledge. I therefore discharged all evidence on the subject and sat me on my newly arranged seat in renewed expectancy.

It began ere long to grow darkish, and their coming could not be delayed much longer, as, of course, all such fowl go "to roost" early. I knew that fact, and had thought, allowing for extremes of timidity and shyness, that darkness at least, or the approach of it, would bring to my net the coveted plunder without chance of failure. I was now somewhat discommoded by the arrival of mosquitoes in large numbers, but the interest in the hunt could not now be allowed to flag, and I took favorable and observant positions, and dealt with the mosquitoes as quietly and gently as possible. My wrath now at the indulgence of those blood-thirsty pests, allowing them to get in bites quite frequently before giving them any attention, and then quietly shooing them off instead of bringing a trip hammer blow down upon them, knows no appeasing, and will wreak itself with dire effect another time.

The dark shades continued to settle about me, and no birds flew in or flew up to perches in the low timber around; there was silence everywhere and silence only, with the exception of the voices of a pair of red squirrels that repeated to each other a peeping call from nearly opposite directions.

Anxiety came creeping over me; the pot-pie dinner was resting upon a very boastful and unreliable man's promises; the plan that was "best laid" was fast failing, and was likely to lose an advocate and supporter forever.

Four hours had I remained as a statue, or a soldier on guard, in cramped positions and amid other discomforts, and had seen no sign. But in the next half hour preceding absolute darkness, a light, a great light, came to me like a flash, and I felt creeping through my veins or tingling through my nervous system, the peculiar sensation that comes to all raw youths when sold, and when realizing that he, particularly he himself, is an egregious—fellow. Another red squirrel had chimed in his peep with the ones mentioned, and as they thickened and came from all about me, I knew they could no longer remain squirrels, and that they were, well, I think it needless to say just what. It was an out of the way place for squirrels anyway, and almost anyone else than the fellow that was there would have known and appreciated the fact long before.

There seemed to be peepers fifty, thirty, twenty feet from me, and selecting the nearest, who seemed also to have a companion I sought in the almost total darkness to creep up to them and make out their outline in the grass and weeds, and so secure a last chance. But I could not see although I could hear them so distinctly and with a final determination to take a "wing shot" again, I boldly advanced upon them to cause them to arise and take flight, when lo, no more would they arise. A charge here and there in desperate eagerness failed to accomplish the desired purpose, and quite filled with disgust at the incomprehensible behavior of some animals, and partly, also, because I could no longer see where my gun might be pointing, provided I wanted to point it, I left the field and hied me home.

Now, instead of going by the aerial route, for which they are so well adapted and equipped, will a partridge "go afoot" preferably, and sneak along through the grass like a barnyard fowl? Instead of going to roost in accordance with supposed instinct, will they pass the whole night hidden in the weeds and skulking about? It seemeth to me so. Still, I do not assume to say that I know much of anything of the ways of partridge. A friend has claimed that they are incalculable and unknowable, and I am disposed to allow that affirmation to stand. Possibly a person may run directly anent them, so as to raise them with his foot, and then again he may not, and the ways otherwise will be too numerous to mention. J. QUAY.

[They will go afoot, and your friend is right.]

WILD RICE IN ENGLAND.

So many questions are asked by our correspondents about the culture of the wild rice, and so much interest is expressed in the subject, that we take great pleasure in laying before our readers a letter from a gentleman, who is conducting experiments in South Wales with a view to acclimatizing this valuable plant in Great Britain. The letter is addressed to Mr. Charles Gilchrist, of Port Hope, Ontario, whose interest in the introduction of this plant to waters where it is not indigenous is very great. A vast number of essays have been made to grow the *Zizania aquatica* in lakes, rivers and ponds all over the country, and while some of these attempts have failed, many have been crowned with success. There is no question as to the value of the plant as a food for fowl, and no doubt about its growing anywhere in our Middle and Western States where the soil is right, and the seed is properly sown.

The letter from England is as follows:

BULCHBYCHAN, LLANGBYTHEN, N. S. O., SOUTH WALES.

My Dear Sir—I fancy you must have been rather surprised at my long silence about the success of the wild rice, but the fact is, all our experiments last year, 1881, were a failure; I gave it to several friends, but none seeded excepting in one instance, two or three very small weak seeds being the result. The seeds you kindly sent me by post last fall, and the bushel subsequently sent, I again divided. The first seed sent by post, began to sprout in February, in the house, and I sowed some of it in small tubs which I placed out of doors, and some in pans in the house. The later sent, or at least what I kept myself of it, I sowed thickly in a pond, but it has not done any good. That put out of doors, in tubs, has much of it blossomed, but there does not appear to be any chance of seed forming. Either it is too cold, or the winds we have had have blown the flowers off. I am glad to say, with what I have in the house, in a cool room, I am succeeding quite beyond my expectations. Some of the plants have grown quite five feet high, and, to my intense delight, two or three days ago I discovered that seeds were forming on several of them in quite an unexpected way. I looked for the seed at the lower part of the truss of flowers, whereas, I find they all form at the point. I expect to gather from fifty to one hundred seeds. They fall most quickly, I find, and I have been obliged to put something under to catch them. In one of the ponds in which I sowed a lot of seed, both last year and this, there is no sign of anything, and I much fear the rats and water-hens have taken the seed. The former are terrible nuisances, and if by any chance they can get at the pans and tubs they will go right under water for it. I sowed some of the seeds you sent me in the spring of 1881, in another pond, but none came up, so I did not put any there this year; however, to my astonishment, about six weeks ago I noticed five or six plants showing above the water and looking well and healthy. Alas! in one week's time they were all nipped off either by rats or water-hens. I was down at the pond this afternoon, and there are now about twenty plants up, but I fear it is much too late for them to do any good; in fact, never were two summers more against the experiments—wet, cold and stormy, and scarcely any sun. A friend to whom I gave some in Berkshire succeeded very little better with the first seed I gave him than myself, his gardener getting only two or three weak seeds. I again sent him some of the last seeds, and when I paid him a visit on the 13th of July his gardener had a number of strong and healthy plants growing in a pot in a well-sheltered pond, and one or two were then showing for flower. I have not heard the result, but am in great hopes to have a satisfactory account in a day or two. I must say I am now (as we get a little more acquainted with the habits of the plant) very sanguine as to acclimatizing it with your kind assistance. Am determined to persevere. I think one mistake I have made in the pond is the sowing it in deep water, and so there is not sufficient heat to make it vegetate early enough. Now, if you would kindly send me, as you did before, every fall a little seed by post, I will not leave a stone unturned in the way of experiments. The seed comes really cheaper that way, and I suppose from being a shorter time on the road no doubt vegetates sooner. I fear I am rather late for this year's seed, but hope not, and look forward anxiously for some, as perhaps next summer may be a hot one. Of course I will pay all postage.

I beg to remain, yours faithfully,

JOHN PUGH VAUGHAN PRYSE.

GAME SEIZURE.—We learn that Mr. Wm. P. Dodge, one of the game protectors of the State of New York, recently seized two boxes containing fifty-four ruffed grouse (N. Y. "partridge") near Camden. The birds had been snared, and were consigned to two dealers in New York city. Mr. Dodge has been quite active in the performance of his duties. A short time ago he had three men arrested in Herkimer county, one for shooting woodcock before the season opened, another for killing deer last February, and a third for killing deer in July. There is need of more such men who will do their duty fearlessly and make the poaching rascals afraid to follow their nefarious business.

"HUNTERS' LUCK."

Now, westlin winds and slaughtering guns,
Bring autumn's pleasant weather,"

SANG Burns, but one-half of this, Virginia's—land of lovely autumns—most beautiful season, has past and no "westlin wind" nor impatient frost have been felt. He who paints the autumn landscape has mixed his colors from the rays of the spring's sun in the colorless water-filled arteries of the trees and flowers, and his pictures are more evanescent than those traced by human hand. Yet the latter has never found the Divine art of making the picture grow even more lovely as it fades and disappears.

What a grand specimen of these pictures, by nature's artist, a friend and myself beheld the other evening! The foliage, untouched by winds or frost, still clung in full profusion on the forest trees. We sat upon horseback on the summit of one of our highest mountains, which we had ascended on our way to the wild valley that lay below for a "deer drive." The sun was swinging low westward, leaving the spurs of the surrounding mountains bright golden-tipped, set in sombre background of the gorges' shadows beneath. Way yonder east on the gradually rising, but towering heights, was the untouched, verdant balsam forest, the deer's delightful home, up through which, here and there, grew high the oak and maple, with their inimitable habiliments, in front the kingly black pine looking down from its eternal throne of rocks in majesty over its myriads of fantastically uniformed, diminutive subjects. The "Laurel fork," whose lazy, clear waters, in shrinking modesty, were almost hid by the variegated foliage of the beech, the hemlock and the laurel twining lovingly over its banks. See yonder in the west that water mirror which has the sun's angle in our faces, and but for which it would be far beyond sight!

It is not to be wondered at that the Indian, whose birth and home was amid these places, should be famous for his wild and thrilling "whoop." It is the stirring response to wild nature.

"Graeme," said my comrade, with a comical twist in his saddle, "we are growing too romantic to have a real deer out of these fancy woods to-morrow, they are too much creatures of imagination now to leave scent; big hunts make a flunk often."

"Very good, what if we don't. Does not this pay you for your ride? or are you after scalps and venison?"

"What do you speak to me in this way for?" said he, "I'm no more of a savage than you, but it would keep the boys from poking fun at us if we could take some venison and a pair of deer horns back with us."

"It's the truth, Will," said I, "when we are high up and expect much, we seem oftenest to be disappointed, but I imagine this has nothing to do with luck, it is simply because we fall lower from high hopes than when we are careless and expect less."

We spent the night, or part of it, by invitation, with our old farmer friend, who had three sons dwelling round him in the mountains, and long before the break of day we were aroused by the horn of one of the boys, which brought forth two like lusty responses from the 'doubles" of the mountain high up, accompanied by the far off voices of the 'pack." As the sun crept thro' one of the lowest gaps the stands were filled.

This is the least attractive part of the hunt. Perfect quiet must be kept, and a sharp lookout. A seat must be made of some old, rough wooden chunk laid at the foot of a tree, and then your seat has no springy back. Still this has its charms. Solitude brings reaction; and the undefinable yet pleasant poetic gloom of autumn steals over you. Thoughts, acts, and images shoot with lightning speed through your mind. As the spirits are light, these thoughts are of boyhood and youth—the tinkling ripplets of the stream suggest the melody of some old song, still echoing in Aileen's enchanting voice—itself, in turn, the prolific source of a thousand bright fancies. Again, we think of manly faces, manly forms, friendships of bygone days; then a quick review of some injury; finally, as you weary, you grow in thoughts to mature manhood. The day is then lengthening; you experience a little sense of hunger—time the deer was coming, and every sound is transformed into the imagined baying of the hounds—you half drowse, and at the raven's distant weird croak you seize the gun. Now, a little disgusted, you feel that you would not dislike to have dinner—the rustic seat grows hard; your horse stamps and grows restless; some herdsman away in the distance is calling his cattle or sheep in the range right on the run. Finally, you despair, and just then (for I was not exempt from these fancies) I heard the hounds in full tilt, and every ridge gave back the echo of their cager cry. I seized my gun, and the click of the locks demonstrated how confident I was of a shot; but this was the day of "hunter's luck." The deer ran as none had been known to run, and, swift as the wind, it flew across the valley, over the mountain, where to follow on horseback was impossible, and all was gone. Footmen follow with aim only to reclaim the hounds, and weary, disappointed, and a trifle "blue," I mount my horse and start for home with our equally disappointed host.

Why does this trifle annoy us? Why reflect that a day has been lost from the stern demands of business life? It has passed and nothing done. Suppose a client has been to the office on important business? What if we are thought to be in a trifling business by the sturdy farmer we pass? We must have a decent respect for his solid opinion. I should be at home to-morrow. We reach our lodging and there enjoy a palatable supper.

A change came over the spirit of my dreams. "Well, Graeme," said my cheerful host, "you lost a shot at that deer, my boy tells me, by that noisy fellow calling his cattle. We'll get one to-morrow, my word for it. The day will be splendid." My spirits were perfectly restored, and the pleasures of hope, the hunter's friend, turned my philosophy into these thoughts: "I have worked incessantly for a long year; the days of this hunt will never be charged 'Lost;' 'tis all in a lifetime; I am harming no one, am only losing the days, and the way I'll work when I return will more than compensate for them. Then think of the splendid run to-morrow, how my horse will dash after deer and hounds; think of how the deer will run to points of land and water he has never seen, but which I have learned he will make for; unbroken sleep and sport the next day beyond anticipation, and the prophecy of 'mine host' fulfilled." GRAEME.

SOUTHWEST VIRGINIA, Oct. 16.

Any person sending their address to H. R. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

CALIFORNIA NOTES.

WE hear a great deal now about game and shooting, and the signs are plentiful that the present fall will be one of great abundance as to deer and birds. Some snows in the mountains have driven down the deer toward the foot-hills, and many have been seen and a number killed. A dairyman residing in Squaw Valley, near Truckee, killed seven deer near there one day last week.

The Sutter *Farmer* reports that E. M. Thomas, E. D. Rickets and Wm. Thomas returned from a hunt in the Coast Range last Saturday. They killed thirteen deer and two small brown bears.

I give some other extracts, bearing on the abundance of deer, from the local papers, just to bear out my statement that they are plenty. Thus the Calaveras *Chronicle* says:

"Ed. Zumwalt, of this place, saw six deer Thursday morning last while out hunting about a mile from town. The late storm probably drove the animals down from the mountains."

And the Nevada *Transcript* has the following:

"Deer are beginning to come down from the upper country in search of warmer regions to spend the winter in. Several have been killed recently in Pleasant Valley, a few miles east of this city. August Rapp got two there the other afternoon."

Much more to the same purpose might be quoted.

The State Sportsmen's Association have recently appeared as prosecutors in two trials of one F. D. Ross for killing a spotted fawn in Marin county, such killing being by the statute illegal at any time. The jury in both trials disagreed, but it is said that the cases will be brought up again, and a strong effort made by the prosecution to secure a verdict. However, the offender has been punished, though not by the law, for the California Gun Club, to which he belonged, passed upon the case, found him guilty and expelled him. Of course action such as this is far more effective than any decision of the courts could be, for the disgrace of such an expulsion cannot fail to touch a man more deeply than any fine that might be imposed would. The action of the California Gun Club cannot be too highly praised, and shows that sportsmen on this coast are thoroughly in earnest in their attempts to protect the game. A San Francisco paper voices the universal sentiment among sportsmen when it says:

"The club is deserving of all praise for this action. It will have a wholesome effect all over the country, as showing our gentlemen poachers that, though they may escape legal punishment of their offenses, there is still a moral responsibility, among their peers, to be faced which they cannot escape. It is chiefly in this way that our sporting clubs are going to be beneficial in future. Let the example be followed throughout the State, and the gentleman poacher will soon cease to exist. The sentiment created by such action in our clubs, from which there is no escape and no appeal, is worth a score of legal tribunals, governed by technicalities, influenced by personal considerations, and deaf to the claims of justice."

It is too early yet to say much about the quail and duck shooting, though in Nevada, up among the mountains, the latter is good. Reports of slaughter from Battle Mountain, Nev., come to us here, and it is said that a party of four at the sink of the Humboldt killed 652 ducks in thirty hours. I hope that the story is not true, but I fear it is. Will write again later. NON.

SACRAMENTO, Oct. 15.

HOUNDING vs. STILL HUNTING.

WHILE this important subject is being discussed through the columns of your paper, I beg leave to add my own experience and observations of nearly forty years. I was born and reared in a little settlement in the heart of the Adirondack wilderness. It being a good locality for deer, they were very plenty. They would come into the fields of grain, and seemed inclined to huddle about the clearings rather than be frightened away by the settlers.

Before I was allowed to shoulder a rifle, in tending my traps set for mink, around the borders of the woods, I would find many tracks of deer in the fresh snows of November, and would often follow them a short distance, and see them stand, looking at me as if they knew I had no gun. O! how I longed to arrive at that age when I should be pronounced old enough to handle the rifle. That age at length arrived, and since that time I have not missed hunting more or less during the month of November. Although I, in common with other good hunters who lived in the place, hunted most of the time during November and December, as the law then allowed, and a great many deer were killed within four miles of the settlement, and six or more hunters were constantly on the ground, yet deer did not seem to diminish or leave the neighborhood. They were often plentier at the close of the season than in the early fall, for they would come down from the high lands to winter. The law was against hounding deer, and the settlers, especially the hunting portion, took good care to have the law faithfully executed in some way.

By and by, people became too indolent to travel the deer's native haunts, and try to match their skill against the cunning wiles of the wary game. They began to think that they must hunt in a more sportsman-like (!) way, that is, to sit in a boat on some lake or pond, and let the hounds drive the frightened deer into the water, to which nature has taught him to flee to avoid his canine enemy, and when in the water, being deprived of all means of escape, he is attacked by the sportsman (!) in his boat, and often shot in the head while the guide holds him by the tail. At all events the shooter has him as effectually as if in a trap; he can murder him in any way he pleases.

But I have digressed.

Finally one of those sportsmen moved into the place, and with five or six hounds hunted constantly until the 15th of November, and the consequence was that when there came a good tracking snow, no deer's tracks were to be found within three miles of the clearings, and when once started they would seldom stop until they went into water. I have always found the deer plenty about this place just in proportion to the amount they had been hunted with dogs. I know that hounding deer will cause them to leave their grounds. They have an instinctive fear of the canine species. Who, with any knowledge of the habits of deer, will say that a pack of wolves coming into their range, will not cause them to quickly vacate their accustomed feeding grounds for other quarters not infested with their most dreaded enemy. And it is the same when their grounds are infested with dogs. I firmly believe that still hunting does not drive deer from their accustomed haunts. They seem to have no intuition that their speed and endurance is much greater than man's. They will seldom take to water, unless previously driven by dogs, or lead far away, but play about from hill to hill, depending on their quick ear, keen eye, and sensitive nose for safety. And I know from experience that these protectors are very effectual.

I have often, on a poor hunting day, followed the same deer from morning till night, and never have found myself at night more than two miles from where I started him.

I well remember two instances. One was an old buck, making an enormous track, and I determined to make a desperate effort to secure him. I started early in the morning. There was only about an inch of snow covering the ground and the leaves were frozen so that it was very noisy under foot. I started him many times during the day, following him through swamps with the water and snow both a foot deep, but his ears and eyes were too much for me. I did not even get a glimpse of his receding tail until about sundown, when he crossed a creek, waded down it a short distance, and went out on the opposite bank and began feeding. This was my last chance, and I advanced slowly and with the greatest caution. I had not gone far on the track when a loud snort and the heavy crash of his bounds told me that he had become aware of my presence. I quickly jumped upon a log by me and saw a little hill about a hundred yards away, which I knew he would have to go over. In an instant he was at the top and halted a moment to look back. He was so covered with trees and bushes that I could see only a small spot the size of one's hand. In an instant I brought my rifle on to this spot and pulled the trigger, and the dark spot quickly vanished. I went to where the deer stood and was delighted to find hair on the snow which had been cut off by the bullet. I followed him a short distance and found him stretched upon the ground, one of the most noble specimens of its kind I ever saw. O, the thrill of pleasure and satisfaction I then experienced. An all day's tramp, wading through the snow with moccasins, wet and cold feet, were all forgotten. I felt more than rewarded as I viewed his noble form and wide spreading antlers, which I cut off and preserved, and shall be happy to show them to any of the readers of FOREST AND STREAM who may favor me with a call.

Another instance: I followed a young buck all day, and just at night got a shot and killed him within one hundred yards of where I had started him in the morning. I fully endorse the opinion of "Cap Lock" and "Forty-four," and agree with "D. R. B." that if the hound is used at all the hunter should watch on the runway and catch the deer on the jump. But do not, for Heaven's sake, murder him in the water. Why, I would as soon set a steel trap for a deer and then knock him in the head when he is struggling for his liberty. I do not see much difference between the two.

LEWIS COUNTY, N. Y., Oct. 16. MUSSIT.

OVER THE RANGE.—Wilmington, Del., Oct. 13.—Your issue of the 12th inst, containing a communication from "R. T.," of Del Norte, Col., has to me peculiar interest. I should much like to make the acquaintance of "R. T.," and from him learn more of the present Del Norte, and particularly of a 6ft. 2in. auctioneer, whom I formerly called Uncle Frank. He called several times daily at our camp on the north or east side of the Rio Grande, by which means we became quite well acquainted. Perhaps "R. T." can place him, when I say his language was not always fit for ears polite, but was expressive withal. The communication alluded to brings forcibly to my mind an experience, covering, among others, his section in 1874. Being then in Denver, Col., and desiring an extended hunting and fishing trip, we outfitted April 14, and started to Baker's Park. We crossed the Sangro de Christo range over the Moscow pass, into St. Louis Valley, thence west of Old Baldy, left Fort Garland to our left, and eventually arrived at Loma and Del Norte. For a side issue several of us started north and visited the "city" of Sagwache. From Del Norte we went up the Rio Grande twenty-seven miles to Wagon Wheel Gap, catching a few trout and killing a few sandhill cranes. "R. T." says there are hot springs at Wagon Wheel Gap. I can corroborate that, as I tried the pool where it was dammed for bathing, and got out with alacrity. After remaining at the Gap for a few days, we pushed on to Antelope Park, killing on the way some geese, grouse and ptarmigan. Here we were compelled to leave our wagons and pack for Baker's Park. Without egotism I can say I have been in every State, and with one or two exceptions, every Territory in this United States, have thoroughly tried the roads of the John Brown Tract and South Woods, and I think I know something about bad roads, and I am willing to be placed on record, that the worst road I ever did see is over the Cunningham Pass, over the main range. By referring to my diary, I find some twenty-seven of us built a bridge over the Rio Grande before reaching Antelope Park. While at work on the bridge, our most successful hunting afternoon netted us one goose and seven grouse, with two ptarmigan. With me on this trip were some excellent sportsmen, notably Bill Crandall of Detroit, John Gunther of Dayton, Tom Walker of Prince Edwards Island, and Jonathan Paxon of I never knew where, all good campers out and caterers. I should like to meet them again. I trust to live sufficiently long to again try a hunt in Colorado and Montana, and to kill sufficient only for necessity.—M. U. SKRAT.

HOW THEY DO IT IN IDAHO.—In the Wood River (Idaho) *Times* of September 21, appears an account of the killing of a black bear by a mother and daughter which well exemplifies the courage and self-reliance of the women of the mountains. It is as follows: "Last week Mrs. Marston, during the absence of her husband, was doing the week's family washing in the back kitchen of their home, near Galena, when she heard a great noise among the pigs in the yard. Opening the door she saw a large black bear trying to walk off with one of the pigs. The other pigs had climbed out of the pen and scattered in every direction, and two large dogs that had been out on several bear-hunts stood at a safe distance, perfectly cowed. Mrs. Marston rushed for the boiler of scalding water, which she emptied upon the head of the bear while it was trying to retain hold upon the pig. Her daughter attacked the bear with an ax and the two dogs came to their support. Mrs. Marston does not know how it occurred, but in five minutes the bear was dead, with a dozen deep gashes from the ax in its head and shoulders, its hide nearly peeled off by the scalding water, both of its eyes scalded and closed, and the dogs hanging to it. That night the old man was asked if he would have pork chop or bear steak, and couldn't make it out until the affair was described. He now says he will match his wife and daughter against all as bear-killers."

DUCKS AT MANAHAWKEN BAY.—New York, Oct. 21, 1882.—On the 16th inst. a double-reef breeze from the northeast brought the ducks down Manahawken Bay in numerous flocks, and having secured a good point on the lee side of Thoroughfare Island, we prepared to give them a fitting reception. We had enjoyed a good night's rest, and eaten a good breakfast on board the Ark, which was moored in a neighboring creek to be used as our home during the week, and we felt confident of giving a good account of ourselves should the ducks come within range of our ten-bores. Had the wind been more easterly, it would have suited us better, but after all, when we had to stop shooting on account of the high tide early in the afternoon, we had bagged over thirty good fat ducks, besides loons, cormorants, and coots. The coming season, or rather the present one, promises to be very good, as plenty of birds are on the wing, passing up and down the bay (trading, the local gunners call it) to the feeding grounds. Black ducks, especially, are very numerous and stool well. The recent very high tides have overflowed the meadows, forming numerous ponds, which are much frequented by the ducks. Plover, yellowlegs, and snipe are also abundant, and we secured a fair share. Only two flocks of geese were seen during our stay, but more will be coming as the season advances. The winds and tides are an important factor in duck-shooting in Manahawken Bay, as in other places, and thrice happy is the man who finds both favorable one day out of three, but that one day of good shooting will fully satisfy any sportsman, and a fair shot is pretty sure to secure enough game to supply his own table and that of many of his friends. Frank Oliphant and Dell Crammer have one of the best ducking outfits in the bay, and the proximity of their floating home ycleped the Ark, to the ducking grounds, is a great advantage. On the main land, quail and rabbits are very plenty, so good shooting will be in order after November 1.—J. E. M. L.

GAME PROTECTION IN WYOMING.—The circular printed below explains itself. It is in keeping with other good work in the same direction in this young but growing Territory, and we trust that some material results may follow the many promises that have been made about the protection of game in Wyoming. We believe that such results will follow. The circular is as follows:

CHEYENNE, Wyo., Oct. 3, 1882.

Dear Sir—An association has been formed and incorporated under the name of the Wyoming Game Protective Association, whose object is the protection of wild game throughout our Territory by enforcing our laws affecting the same. You are earnestly invited to aid us by lending your name to the roll of members. An early answer is requested. Respectfully,

M. C. BARKWELL, Secretary and Treasurer.

P. O. Cheyenne, Wyo.

J. H. Lord, Thomas Sturgis, M. C. Barkwell, Moreton Frewen, Harry Oelrichs, Board of Trustees.

EXTRACT FROM THE BY-LAWS: Every candidate for membership must be proposed and seconded by two members of the association, which application must be forwarded to the Secretary at least ten days before any meeting of the Board of Trustees, and must be accompanied by the entrance fee and first year's dues. The entrance fee to this association shall be $5; and the annual dues $5; payable in advance.

NEW YORK.—Fire Island, L. I., Oct. 19.—Several flocks of geese passed here Oct. 1, and also four brant. There are a great many coots in the bay. Mallards are coming on I hear. They are very seldom seen here. I saw yesterday (18th inst.) some black ducks and also a number of broadbills, the first I have noticed this season. Sheldrakes have been here since Sept. 10. Prospects are good for plenty of duck shooting in the bay this fall. At Bay Shore, L. I., the nearest station to the bay, good accommodation can be had, and men can be hired with boats and decoys.—B.

HORNELLSVILLE, N. Y., Oct. 23.—Squirrels, black and gray, have been very plentiful here this fall. Thousands have been killed within a few miles of the city, but nearly all have now migrated or been killed. Ruffed grouse are very scarce. Several fine specimens of the snowy owl have been shot, and that is said to foretell a cold winter. My brother shot a crane whose wings spread seven feet eight inches, and my son, eleven years old, shot a hawk or buzzard that weighed nine and a quarter pounds. Silver and Conesus lakes are said to be alive with ducks.—J. OTIS FELLOWS.

DAKOTA.—Crow Creek Agency, Oct. 19.—Ducks, geese, and cranes are very plenty at Red Lake. Mallards, redhead, a few canvas-backs, and a number of other varieties, are there in abundance. I have had some splendid shooting there, though at present the birds are a little wild, as most of the ducks living there were bred on the lake. There is a new flight coming in soon, and if any of the friends of the FOREST AND STREAM wish to get some good shooting, let them take the Iowa and Dakota Division of the C. M. & St. Paul R. R. to Chamberlain, D. T. From there it is only six miles to Red Lake. There is a good hotel at Chamberlain and plenty of livery teams at the stables. I think I can guarantee good shooting to any person that can shoot. I find that my canoe works to a charm. The center of the lake is filled with large weeds and it makes a good blind. There are two or three large points that put out into the lake, and there is good shore shooting from them. Every morning and evening there is a large flight of geese, brant, and cranes out of the lake to the neighboring corn and grain fields.—LOWER BRULE.

CAMP COOKERY.—A reader of FOREST AND STREAM asks for information on plain cooking without the usual store furniture. Fish and birds require a covering to keep the coals from charring them; paper around the fish will do, to be dipped in water, then placed in coals. Clay may be used for the birds; these may be baked with feathers on and undrawn, if so desired, the feathers coming off with the clay. Clay may be found under gravel on lake shores, also under muck in swamps. Corn is roasted in the husk. Corn cake is simply meal, water and salt placed one inch thick on an iron plate before the fire at angle of 45 deg., turned as it browns, then wrapped in wet cloth when hot and laid by for a couple of hours to soften by the steam. Miner's bread is composed of flour, water and salt, wrapped around a stick, turned as it browns until all done. Hawker's advice for tough birds, such as gulls, fishy ducks, and all birds, if time will not permit the natural ripening, is burying in earth ten to twenty hours.—H. H. D. (Canandaigua, N. Y.)

"Boss" is the name adopted by Upthegrove & McLellan, of Valparaiso, Ind., for one style of their celebrated Shooting Suits. By persistent advertising and good work their suits have become national in reputation and have many friends in all parts of this continent.—*Adv.*

ILLINOIS.—Charleston, Oct. 18.—About 11 A. M., 13th inst., William Jeffries, John Mitchell, Richard Curd and Walter Kennedy started out for an afternoon's shooting. They were eight miles northeast of here, on the prairie. It was nearly clear all the afternoon, and the wind was blowing a gale from the northwest. When the hunters returned home at night they counted out seventeen prairie chickens, eight quail and eight blue-wing teal. That was a large bag for this locality, considering the scarcity of game.—FOX SQUIRREL.

CONNECTICUT.—New Haven, Oct. 19.—Quail and ruffed grouse are said to be quite plenty over toward Clinton and Westbrook. One of the passengers on the Shore Line road brings twenty-five or thirty birds to this city every morning. Mr. Frank E. Long shot quite a number of English snipe in the vicinity of the South Cove, Essex, on Saturday last. Ducks are still abundant off Branford, and there will be a line Saturday, Oct. 21. Coots are still plenty, and the old squaws may soon be expected.

OLD BREECH LOADING RIFLE.—A recent number of *Blackwood's Magazine* gives an account of a curious rifle used in Ferguson's (British) corps during the revolutionary war. The inventor did some good shooting in the presence of the King, fired six shots in the space of one minute, "poured water into the pan and muzzle of the piece so as to wet the powder, and then in the space of half a minute fired her as well as ever without removing the ball."

NOVA SCOTIA.—New Glasgow, N. S., Oct. 16.—Moose are very scarce this year; several parties have been out, but only one cow has been killed so far. Bears are plentiful. Can you tell us what kind of dogs are used in the States for bear hunting? There are some caribou out on the barrens, but are seldom hunted. Plover have come and gone. Ducks are here, and brant and geese coming.—J. H. C.

NEW JERSEY.—Weehawken, Oct. 21.—The shooting has been better on the Hackensack meadows during the past few weeks than for years. A well known sportsman recently killed and bagged in one day sixty-one ducks, mainly blue-winged teal. The rail shooting has been very fair.

MISSISSIPPI.—Sardis, Oct. 16.—Birds and squirrels quite plentiful hereabouts, with a good sprinkle of deer and bear in the Mississippi River bottom. Fishing (with net) is anything but good. I worked hard for some of the finny fellows last week, but nary a bite did I get.—DAVY.

GEORGIA.—Macon, Oct. 16.—Our supply of quail is very fine, and from all reports they are much more plentiful than last year. Turkeys are plentiful in some sections, and we are now having a few ducks on our market.—I. H. J.

SOUTH CAROLINA.—Rock Hill,—Quail are very abundant here, and a little later the shooting will be fine.—B.

ROPER, FLORIDA, can hear of some No. 12 Roper shells by writing to this office.

Camp Fire Flickerings.

"That reminds me."

THE conversation had somehow drifted to the dogs, and after the small dogs had had their day, the large ones were given a show and each one who had ever seen a sizeable dog trotted him out, and displayed his gigantic proportions to the utter confusion of all who had preceded him. After the figures had risen from a good size to rather an extravagant height, and a huge fellow of nearly two hundred pounds had been produced, utterly silencing all competition, Cud was asked how heavy a dog he had ever seen. This, of course, put him upon his metal, and as there was much at stake, he assumed an air appropriate to the importance of the occasion, and clearing his throat he remarked that he had once seen a very large dog, in fact a perfect monster, but that it was so long ago that he had forgotten his exact avoirdupois, but that his owner, in response to an inquiry, once sent his weight in a letter, and the postage was over seven dollars.

A country editor from Nova Scotia was lately doing the States and was much struck with the "cheek" of the inhabitants. One day on the train, near Boston, an American came into the car, looked around, and seeing a vacant seat by our friend stepped up and, finding it not engaged, seated himself. "Here now," thought our editor, "is another of them confounded inquisitive Yankees; however, I'll fix him." Barely had the American touched the seat before he began:

"What is your name?"

"S——," replied the Nova Scotian, telling the truth.

"Where are you from?" continued the Yankee.

"Stoke-on-Trent, in England," lied the Bluenose.

"What are you doing out here?"

"Shooting. I am now on my way down to Nova Scotia moose hunting, and then go to Cape Breton for duck shooting."

"What make of a gun do you use?" went on the inquisitive one with new interest.

Now, our editorial friend had never fired a gun in his life, but he had heard some of the gun club boys learnedly discussing the different makers. "Any way," he thought, "not likely this sucker would know a gun from a horse-pistol," so, with the air of a professional, he returned:

"I am using a hammerless Parker at present, one of our best London makers."

"Indeed," said the Yankee with an innocent smile, "choke or modified?"

"I generally use her full choked, but she screws up or down to any gauge."

After a few seconds' silence the Bluenose continued:

"These hammerless guns are so handy there is no trouble cocking them. Whenever you shove in the ramrod back go the hammers and she is ready for action. What, you are not going, are you?"

"Yes," said the American, rising, "this is my station; I hope you will have a pleasant trip, though the hotels in the Provinces won't add much to it. I am glad I have met you. By your accent I would take you for an American. Good-bye, and good luck to you. My card; oh, yes! I am Mr. Parker, of the gun works, Meriden.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN OCTOBER.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Grayling, *Thymallus tricolor and T. montanus.*
Blue-backed trout, *Salvelinus aquasso.*
Land-locked salmon, var. *sebago.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y., pickerel), *Esox lucius.*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethrum.*
Yellow perch, *Perca fluvintilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, 2 species.
War-mouth, *Chænobryttus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscyon regalis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*
"Sea trout," *Cynoscyon carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*
Weakfish or squetague, *Cynoscyon regalis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Tautog or blackfish, *Tautoga onitis*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Striped bass, *Roccus lineatus.*
Sea bass, *Centropristes atrarius.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

What the long-roll is to the soldier the reel-click is to the angler. It is the call to battle and stirs the blood like the sound of a trumpet. * * * The moment, however, the fish feels the sting of the hook he shoots off with a rush, causing, by his rapid movement, that whiz and whir-r which, to the angler, is the most thrilling music that ever falls upon his ear. The deliberate click, click, which succeeds the strike is the measured prelude to the grand chorus which follows when the astonished fish enters upon his mad career. * * * There is but one sound in nature, animate or inanimate, which at all resembles the whir of a reel in full play—the rattling trill of a kingfisher when on the wing. It is a singular coincidence that the music of the best angler known to ornithology finds its most perfect counterpart in that which man finds indispensable to *his* successful pursuit of a pastime that constitutes *its* life-long vocation. They are in great numbers on the Cascapedia, and more than once my reel and this feathered angler have joined in a duet, to my great amusement and delight. They were in as perfect accord as if brought into concert pitch by the hand of the same master.—*George Dawson, "Pleasures of Angling."*

THE ANGLERS' TOURNAMENT.

THE First Annual FOREST AND STREAM Anglers' Tournament opened at Harlem Mere, Central Park, New York city, on Thursday, the 19th, at 11 A. M. The place selected was on the eastern side of the Mere, on Fifth avenue, near 110th street. Here there was a large open space, with graveled walk, next the water, and a substantial platform had been built thirty feet out into the water, giving an opportunity to cast in three directions, according to the wind. This platform was originally intended to be two feet above the water, but by request of the bass casters, some of whom cast with the point of the rod below the feet, or "underhanded," it was placed at an elevation of three feet. The day opened in a lowery, clouded manner, but there were many persons present, and a few ladies graced the scene. Mr. Jones, Superintendent of the Park, had kindly provided seats for 200 persons, who could have a fine view of the casting. From the south to the north side of the lake, close to the east shore, a line was stretched, to which buoys were attached five feet apart, each alternate one in order from the stand being marked with the number of feet distant from the platform. In a boat outside the line the judges and referee were paddled about when the contests were going on, enabling them to keep abreast of each cast and thus correctly estimate its length. When the turn came for casting for accuracy and delicacy, which followed the casting for distance, a single buoy of six inches diameter, anchored forty feet to the south of the stand, was made the object of aim.

This buoy was nicely made and presented by Mr. B. F. Nichols, and it was so evenly balanced that only a ring showed above the surface. The first thing on the programme was the light rod contest, which had been proposed by makers of light rods to show what they could do. The result was a surprise, as no one thought that over sixty-five feet would be cast with them. Mr. Hawes, a workman in Mr. Leonard's rod factory, cast eighty-two feet with a four and a half ounce rod. He is a pupil of Mr. H. L. Leonard, who did not cast at all in the tournament, on account of illness. The latter is probably the handsomest fly caster in America with either single-handed or salmon rod. The retrieving of Mr. Hawes elicited warm commendation. On his back cast the flies were up in the air at an angle of thirty degrees. The following are the scores:

LIGHT ROD CONTESTS.

Judges: James Benkard, Prof. A. M. Mayer; G. W. Van Siclen, referee.

Class A.—Open to all. To be cast for with rods of 5¼ ounces in weight or less, made with ferules and reel bands, and of two or more pieces; rods to be not longer than ten nor shorter than nine feet; six to nine feet leaders with two flies.

Scale of Points—Distance, actual cast; accuracy and delicacy, twenty-five each.

Winners to have choice of prizes in the order of their awards.

1. A split bamboo "Catskill" rod, reel and line, given by Wm. Mills & Son, 7 Warren street, New York $50 00
2. Members South Side Sportsman's Club, cash 25 00
3. One year's subscription to FOREST AND STREAM 4 00

	Length of Rod. Ft. In.	Weight of Rod. Ozs.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
H. W. Hawes	10 0	4½	82	12	20	114
R. C. Leonard	9 11½	5¼	73	20	20	113
Reuben Wood	9 6	5¼	70	17	15	102
George S. Hier	10	4½	4½	67	15	15	97
H. Prichard	9	7½	5¼	67	9	20	96
E. S. Osgood	9	6	5¼	58	10	18	86
James Annin, Jr.	10	4¼	4¼	64	9	10	88

CLASS B.—To be cast with full mounted rods of two or more pieces, with metal reel bands, weighing not more than four and one-half ounces; leaders to be six to nine feet, with two flies. Judges and scale of points as above.

1. Members' South Side Sportsman's Club, cash $25 00
2. William Mitchell, rod maker, 26 Vandam street, New York, offers a three-piece fly rod, duplicate joint and three tips, four and a quarter ounces weight, or similar rod with metal reel plate one ounce heavier, if winner prefers, value 30 00
3. One year's subscription to FOREST AND STREAM 4 00

	Length of Rod. Ft. In.	Weight of Rod. Ozs.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
H. W. Hawes	10	4½	78	10	24	112
G. S. Hier	10	4½	66	20	18	104
James Annin, Jr.	10	4¼	60	14	20	94
T. B. Mills	10	4½	60	8	16	84

Mr. Annin cast very prettily but failed in distance.

B. F. NICHOLS' CONTEST.

(Single-Handed Fly Rods.)

Judges: James Geddes, Dr. A. Ferber, Francis Endicott, referee.

Scale of Points.—Distance, delicacy and accuracy, thirty-three each. Open to all. Each contestant to use the same rod, reel and line, which will be furnished. (Rod 10ft. long and weighing 6¼oz.) Each competitor will be allowed three minutes practice with the rod before casting. The scale of points in this class will be distance, accuracy and delicacy, thirty-three each. The line must be retrieved after each cast. Two flies to be used on leader. The casts for accuracy shall be at a distance of forty feet. Accuracy and delicacy shall be judged perfect when the stretcher-fly strikes in the float at every cast (after reaching it) without splashing and before the body of the line strikes the water. All the prizes are donated by B. F. Nichols, manufacturer, 153 Milk street, Boston, and all in grooved wood cases.

1. Split bamboo salmon rod, 16½ft., 27½oz., with two tips, German silver mountings, ($12.00). Also one split bamboo trout rod, 10ft., 7½oz., German silver mountings, value $20.00. Total $32 00
2. Split bamboo trout rod, 11ft., 8½oz., German silver mountings, two tips; $20.00. Also one similar rod, 10ft., 7½oz., $20.00 ..... 40 00
3. Split bamboo fly rod, 11ft., 9½oz., two tips, German silver mountings 20 00

	Distance cast.	Allowance for cast.	Delicacy.	Accuracy.	Total points.
H. W. Hawes	71	32	30	28	99
Reuben Wood	67	28	30	31	88
Ira Wood	64	23	30	30	83
James Annin, Jr.	62	22	30	30	82
R. C. Leonard	74	33	28	20	81
Geo. S. Hier	60	32	25	33	80
W. Holberton	56	20	33	25	78
Dr. M. E. Elmendorf	55	19	25	28	72

Here again Mr. Hawes was a winner with a cast of only 71 feet against the 67 by the veteran champion, Reuben Wood. Both these gentlemen, it will be seen by the terms of the contest, were using a rod they had never seen before. Ira Wood followed with 64 feet and James Annin led such casters as W. Holberton, Geo. S. Hier and Dr. Elmendorf. Mr R. C. Leonard made the longest cast, 74 feet, but failed in delicacy and accuracy. By the time this contest was called the rain began to fall heavily and rubber coats and umbrellas were out in great numbers. Still many not provided with these articles stayed, and even some ladies remained on the seats until the close of this contest, which ended the sport for the day.

FRIDAY, OCTOBER 20.

This day opened fair with the wind from the northeast, and the buoy lines were shifted to the south. Baffling winds were in order all day. Still good casting was done, and previous records beaten. The committee were asked to bar out the winners of yesterday from the amateur contest, but did not see their way to do it under the rules. This kept out many gentlemen who felt that they could not compete with professional rod-makers like Hawes, R. C. Leonard and Culhane. The error was in the rules, which were strictly adhered to, and as the men named had never cast before in public the result was unforeseen. The first contest to-day was—

SINGLE-HANDED FLY-CASTING.—CLASS A.

Judges, James Benkard, Barnet Phillips. W. Holberton, referee.

Scale of points as in light-rod contests. Open to those who have never cast in any tournament or who have no public record of casting sixty feet, with rods of seven ounces or over. The winner to have choice of the following prizes and the other contestants to choose from the remainder in their respective orders of merit:

1. FOREST AND STREAM offers a solid hammered coin silver gold-lined flower, fruit or punch bowl, value $125 00
2. Members of the South Side Sportsman's Club offer cash 50 00
3. James Ramsbottom, Baldwin's, L. I., a split-bamboo fly rod with reel, reel case, and water-proof silk line 35 00
4. Wakeman Holberton, 65 Fulton street, card of copy of Standard Trout Flies, colored by hand, in frame 10 00
5. One year's subscription to FOREST AND STREAM 4 00

	Length of Rod. Ft. In.	Weight of Rod. Ozs.	Distance. Ft.	Delicacy.	Accuracy.	Total Points
W. H. Hawes	11 6	5¼	81	25	25	131
M. Culhane	11 6	10½	74	24	20	118
R. C. Leonard	11 6	10	85	12	20	117
J. Ramsbottom	11 0	8	63	23	23	109
M. E. Elmendorf	11 6	7½	56	22	22	100
Ed. Eggart	10 4	8	60	20	18	98
H. P. Wells	10 2	8	50	15	18	83

STRIPED BASS CASTING.

(New York Bay Style.)

Judges: Charles H. Murray, Francis Endicott. Barnet Phillips, Referee.

Casts to be made with one-ounce sinkers, in a lane twenty feet wide, and each contestant to have five casts. His casts within the lane only to count. The distances to be added together and divided by five; the result to constitute his score.

1. "Remington" sewing-machine, with four drawers, hemmer, etc., complete, presented by Martin B. Brown, New York $55 00
2. One year's subscription to FOREST AND STREAM 4 00
3. "Paddle and Portage," by Thomas Sedgwick Steele, Hartford, Conn., from the author 1 50

	1st cast.	2d cast.	3d cast.	4th cast.	5th cast.	Average.
John E. Williamson	80	..	..	88	33 2-5	
Edward vom Hofe	15	35	..	..	..	16

The casting here was poor. Mr. Williamson has a record at the Coney Island tournament of 168 feet 6 inches.

STRIPED BASS CASTING.

(Sea-Coast Style.)

Judges: William A. Woodhull, S. M. Blatchford, James L. Valiotton, referee.

Open to all. To be cast with 2½ ounce sinkers. Winners to have choice of prizes, in the order of their awards. Lane and score as in light bass-casting.

1. Split bamboo "Newport" bass rod, with agate tip and rubber handle, donated by Fred Malleson, 134 First street, Brooklyn $10 00
2. "The American Anglers' Book," by Thad Norris, presented by Porter & Coates, Philadelphia 5 50
3. One year's subscription to FOREST AND STREAM 4 00

4. "Canoe and Camera," by Thomas Sedgwick Steele, Hartford, Conn., from the author 1 50
5. Meerschaum and amber cigar holder (carved brook trout), in case, donated by F. J. Kaldenberg, 125 Fulton street, New York 15 00

	Length of Rod.	Score of Casts, Feet.					To-	Aver-
	Ft. In.	1st	2d	3d	4th	5th	tal.	age.
J. A. Roosevelt...	7 0	135	161	—	189	188	636	127 1-5
J. E. Williamson..	7 6	—	—	169	165	161	495	99
W. Murray	8 6	103	—	—	—	132	235	47
G. Landuan.....	7 6	55	—	75	—	55	189	37 4-5
J. McGinnis.....	7 6	—	81	—	55	—	188	37 3-5
C. H. Murray ...	8 6	—	135	—	—	—	135	27
M. Culhane.....	7 6	—	40	—	—	—	40	8

Many good casts outside the lines were made but the rule of casting in a lane, to secure accuracy, was new and bothered the contestants. Mr. Roosevelt's casting was much admired for his coolness, as well as his record.

SINGLE-HANDED FLY-CASTING.—CLASS B.

Judges: Francis Endicott, Henry F. Crosby; Jas. Geddes, referee.

Scale of Points.—Distance, actual cast; accuracy and delicacy ten each.

Open to all who have never won a first prize at this or any other similar contest. The winners to have choice of the follo wing prizes in the order of their awards:

1. "Game Fishes of the United States," plates by S. A. Kilbourn, and text by G. Brown Goode, presented by Charles Scribner's Sons, New York $50 00
2. Split bamboo fly rod, presented by Mr. Fred Malleson, 186 First street, Brooklyn, N. Y..... 25 00
3. One portable "Stranahan" canvas boat, seat and oars complete, presented by Frank Holmes, Chagrin Falls, O.... .... 20 00
4. Copy of "Fysshe and Fishing," by Dame Juliana Berners (American edition)..... 1 50
5. One year's subscription to FOREST AND STREAM, ... 1 00

SALMON CASTING.

Judges: C. F. Fearing, James Benkard; L. W. Winchester, referee.

Scale of Points.—As in single-han ded fly-casting, Class B. Open to all. Winners may choose prizes.

1. A finely finished, German silver mounted, hexagonal split bamboo salmon rod, presented by Conroy & Bissott, 65 Fulton street, New York $50 00
2. One dozen patent fluted spoon baits (assorted sizes), with large photo. of 40lb. muskallonge, presented by G. M. Skinner, Clayton, N. Y..... 10 00
3. One year's subscription to FOREST AND STREAM..... 4 00

	Length of Rod. Ft.	Distance. Ft.	Delicacy.	Accuracy.	Total Points.
R. W. Hawes.....	20	116	7	9	132
Reuben Wood.....	18	105	10	9	124
H. Prichard.....	17	107	7	9	123
J. Ramsbottom.....	18	91	8	6	105

In this class the casting did not at all come up to the standard in either of the points of distance, delicacy or accuracy.

SATURDAY, OCTOBER 21.

The day was fine with varying winds from off shore to behind the casters, who faced the south. The only remaining contest was the

SINGLE-HANDED FLY-CASTING—CLASS C. (CHAMPION CLASS.)

Judges: Francis Endicott, W. C. Harris. Fred. Mather, referee.

Scale of Points—Distance alone to count. Open to all. Winners to have choice of prizes.

1. E. G. Blackford, Fulton Market, New York, cash..... $25 00
2. A Bethabara fly-rod, presented by Fred. D. Divine, 70 State street, Utica, N. Y 10 00
3. Revolver, .32-calibre, presented by Messrs. J. P. Lovell & Sons, Boston, Mass..... 10 00
4. One year's subscription to FOREST AND STREAM..... 4 00
5. "Book of the Black Bass," by Dr. J. A. Henshall, presented by Robert Clarke & Co., publishers, Cincinnati, O..... 3 00

	Length of Rod. Ft. In.	Weight of Rod. Ozs.	Longest Cast in feet.
H. Prichard	10 4½	8	91
R. C. Leonard.....	11 6	8¾	90
H. W. Hawes	11 6	8½	85
T. B. Mills.....	11 6	8¾	79
M. Culhane	11 6	10½	76

Mr. Prichard, of the Washington Gun Club of Brooklyn, here made his remarkable cast of ninety-one feet in his peculiar rolling throw. This has been variously called a "water cast," an "underhanded cast," and a "hoop-snake cast." The line lies on the water at perhaps sixty feet, and by reel'ng off more line it is sent out with a rolling motion until the flies leap out beyond. There are various opinions on the merits of this mode, which is new here, but is said to be used in England. Some contend that it is impossible to take a fish in this manner on account of the commotion in the water near the caster. The other contestants retrieved their lines and cast in the usual manner, and made many good casts. Only once did Mr. Prichard go beyond eighty-five feet, but as this contest was for distance alone he was awarded the first prize.

PROF. J. L. BARFOOT.—In our list of Fish Commissioners we noted the fact no appointment had been made in Utah in the place of Prof. L. Barfoot in April last. The London *Gardeners' Monthly and Horticulturist*, referring to the death of Prof. Barfoot of the Museum of Natural History, Salt Lake City, says: "He was born at Warwick Castle, England, in 1816, a lineal decendant of Robert Bruce, and at the time of his death heir to the earldom of Crawford. He embraced Mormonism in London in 1836, and in 1865 immigrated to Salt Lake City, where he resided until he died." Upward of half a dozen persons imagine themselves to be Earl of Crawford, but the House of Lords has decided whom it will recognize under that title. A Mormon peer would have had all the charm of novelty at Westminster, where as yet there is not even a Jew.

BIG BLACK BASS.—On the 18th a black bass was caught on the St. Clair flats, Michigan, by Mr. B. B. Barney, which weighed seven and three-quarter pounds. Judge E. D. Potter, of Ohio, the well-known fishculturist, saw it and pronounced it a small-mouth. The fish is now alive and is for sale. Here is a chance for some one who has a large aquarium to obtain a monster. Should this fish die it should be sent to the Smithsonian Institution that its figure may be preserved in plaster.

CAMPS ON THE WAY.

III.—STILL AT THE PICTURED ROCKS.

"Southward sailed the seagulls o'er him,
Southward sailed the ship that bore him,
Till at Dronthelm haven landed
Olaf and his crew again."
—*Longfellow.*

WE landed at Miner's Creek on the evening of the 3d of August, and intended leaving on the 7th, but a storm setting in from the north, we were unable to get away until the 11th. During that time ample opportunity was afforded to acquaint ourselves with our surroundings, and there was not an hour's time that hung heavily over us.

Almost daily we visited the lake and the falls, now that the way was known and a boat was at hand to enable us to do so. Had Miner's Creek Falls been favorably located, long ere this the place would have been celebrated by the historian, the poet, and the painter; but, outside of any line of travel, and hard to reach even by the trained woodsman, the icy waters of the creek pour in fleecy whiteness over the rim of the ancient lake shore in the heart of the "continuous woods," where no sound is heard save its "own dashings."

The sand-stone cliffs that wall in the bit of lowland which in some remote period of the past formed a little bay to the great lake, and which was described in some degree in the last one of these papers, meet in an acute angle at the place of the cataract, and although the creek has cut a deep channel forty or fifty feet below the hilltops in the rocks above, yet the walls at the side of the falls rise all of eighty feet above the debris, and the leap of the water is all of fifty feet. My companions thought it not less than sixty. One peculiarity of this fall is that the rim where the water pours over is crescent-shaped with the bow outward. This rim is a continuation of a huge columnated buttress that enlarges midway the descent down to its broad base. The falling water striking the rock below the point where its enlargement begins, breaks into a snow white foam, and, running down the swelling column in sudsy streams into the broad pool below, presents a picture of unparalleled beauty. A thin veil of mist ever rises, vanishing amid the leafy branches of the hemlocks and maples that crown the walls above, while against the left bank of the pool and quite a way up the hill of debris that rises back of it a strong current of air sets in from the descending stream which perpetually blows thitherward a cloud of frosty mist which nourishes the rankest growth of moss I ever saw. This air current and its cloud of mist have no dependence upon the currents of air that play in the tree tops above the cliffs, for every day that I was there I found it fiercely blowing as at my first visit, no matter from what quarter the winds above were coming. The pool at the foot of the fall was wide and deep, and it was there that I caught seventeen handsome trout on my first visit.

With the green trees all around, with the rocky walls and moss-covered hillsides, with the pouring, leaping, foaming water, with the mist cloud and the frost cloud, and above all, the everlasting solitude, which here seems to be personified, the Miner's Creek Falls are more to be admired than the Minnehaha. All that is needed to make the great traveling public think so is to start the fashion.

Another waterfall he who traverses Miner's Lake never fails to hear; but in its noise it proclaims that it is at best a feble straam, and the voyager will be apt to pass it by. One evening, while fishing in the lake, our boat had floated well over to the east side, when on looking up there stood a two-pronged buck gazing at us with a curiosity peculiar tol that animal. Ed. reached me the rifle, and I at once fired, when my too curiously inclined friend fell as "flat as a flounder." But before I had time to indulge in that little gratulatory boasting which is sometimes indulged in on such occasions, he sprang to his feet and sped off in the bushes. Of course we rowed a shore, beyond drops of blood here and there on the leaves, nothing more was ever seen of the little buck.

At the spot where he was standing, a small stream entered the lake, and it flowed over such a white, sandy bottom, and its waters were so cool, that I determined to follow it back to its fall over the old lake shore. It was too late that day, but the next Oscar and I made the trip, and although we found it a difficult one to make by reason of the brush, the swamps and the logs, we were, nevertheless, amply repaid for our trouble. The stream is a mere brook, but it has a fall of about sixty feet, and the surroundings are such as to give to the fall a distinction peculiar to itself. As one approaches the place, the perpendicular walls of rock rising on either hand to a height of not less than one hundred feet, with immense blocks of stone lying at their bases, claim attention. As the valley, through which the little stream below the fall narrows, it is finally well choked up by these broken blocks, and one does not see the cascade for rocks and trees, until he has fairly climbed the former and looked over. The scene then brought to view is wild and picturesque. Imagine a great dome one hundred feet in diameter, with a roof sixty feet from the floor in the center, descending on all sides to the walls, and the floor ascending on all sides to the walls; now, cut this dome in two halves from top to bottom, and one of them will represent the scene of this cascade. It was all of fifty feet from the little pool that received the falling stream, back to the walls which upheld the great roof of rock, capped with soil and trees; and an amphitheater was thus formed of grand proportions. Standing between the wall and the pool and looking upward, the stream, as it pours over the rocky edge, appears to come from a hole in the sky.

At the foot of the debris which makes the rising floor of the amphitheater a spring of cool water bubbles up, and along the outer line of the opening grew beds, thick with the greenest and most feathery ferns I ever saw. Standing back of the fall, under the vaulted roof, and looking out toward the evening sun, the stream of water sparkling and flashing in the sunlight as it broke into ten thousand drops in mid air, the waving ferns at my feet, the two lines of high rock wall running off in a widening angle, and the rampant trees growing among the huge rocks in the valley between, the scene presented was wild and romantic in the extreme. As I stood there on that August afternoon and looked out, and saw all these things and more too, and as my companions and I talked of the wildness and beauty, and solitude of the scene, we wondered whether the place had ever been visited before. In the dust and sand that has accumulated all over the floor of the amphitheater not a print of a foot, human or beast, was to be seen, and as the tracks we made were deep and plain, and beyond the reach of rain, it seemed to us that many a year would come and go ere our footprints would be obliterated, and so we reasoned that the men who row up the lake for the trout that are to be had at the large falls, never visit this little gem, and perhaps we are the first of white men to stand face to face with it. But after we had gathered a handful of ferns each and taken our last look and clambered over the rocks that lay near the entrance and gone down into the great thickets that spring up out of the moist valley, I found where someone, years before, had chopped off a log, and, though I could not guess the motive that led to the chopping, I nevertheless knew from the print of the ax that it had not been done by an Indian. One skilled in the use of an ax had done the work, and that man, whoever he was, had at least seen the little falls, or which, if I had my way, would become known as Fern Falls.

On the western side of the lake could be heard from out the thick woods and far up the hillside the gurgle and rush of water over a rocky bed; and one day, being curious to see where the fountain came from, I climbed the hill to its very top, and on a level with the highest of the pictured rocks, a large spring of icy cold, clear and sweet water burst forth and went leaping and bounding down the steep hillside, to find, after a short race rest, in the bosom of the great lake, which stood at a level two hundred feet at least below the rent which brought the spring to light and air. And as we slaked our thirst at the fountain, and rolled stones down the hillside, we questioned one another as to where that larger fountain could be, which sent this water up to this high level; but no answer was given.

Miner's Lake (and I call it that for want of a better name) is but little over a half mile long, and somewhat less in width. Around the outer edges the waters are shallow and lily pads and coarse grasses grow in luxuriance. In the central parts it appears to be deep. Countless pike swim in these waters. As one enters the lake where the water is somewhat shallow, it is quite common to see the pike lying amidst the thickets formed by the lilies and grasses, watching for such unwary yellow perch as may happen to be cruising by, or for such thoughtless frogs as trust themselves too far from home. The trout supply falling short by reason of adverse weather, we were driven to fish for pike for the pot, and Oscar and I, in half an hour, one evening, with a spoon made at Grand Rapids and which persistently refused to revolve, hooked nine within thirty minutes, six of which we landed. These, with great uniformity, ran 24 and 25 inches in length, and were in good condition.

Below the falls and down to the lake is trout fishing, and from the outlet down to the mouth of the creek trout are also to be found. The stream both above and below the lake is bordered with brush and trees, and logs and brush often formed a net work above the creek. Fishing in Miner's Creek was laborious work whether above or below the lake, but it was nevertheless delightful, for the trout were wary and gamy. They were much lighter colored than their Thunder River congeners, and it required more patience and skill to take them. My associates found them so difficult to catch that the trout fishing was left to me altogether while at that place, and I must say that I seldom took over fifteen or twenty at a fishing, but those fifteen or twenty, running from six ounces to fifteen (one a full pound) gave me so much to do, that I shall always remember among my most valued fishing experiences the trout of Miner's Creek. And there was a fair game supply accessible. Whortleberries fairly covered the ground, and pigeons and grouse came down from the hills to eat them, and the boys got many a bird for the pot. Foxes abounded in great numbers, but we paid no attention to them. Deer also were abundant, and while we did not hunt for them particularly, inasmuch as the "fifteenth" had not yet come, nevertheless we always carried guns with us and would have been "mighty glad" to have knocked over a good one. I got a shot in that way but without a fatal result, as heretofore stated.

Finally a storm set in from the north which lasted three days, and then trout fishing ceased. The little lake, hemmed in as it was by high hills covered by tall trees, was not affected by the wind which blew with so much violence outside, and so one night I determined to try my hand fireaunting. I had never had any success in that way, but as our larder was running somewhat low and we did not know how long we might be wind-bound, I determined to have a deer if fortune favored, and so, when night came, I set forth alone, and at about ten o'clock I entered the lake and began my weary round. For two hours I paddled slowly and silently around the shores, listening to the "voices of the night," and once hearing the unmistakable stamp of a deer, which was soon followed by a snort and the sound of running through brush.

At about midnight a black cloud like the segment of a great circular plane appeared in the northern sky, and lest there might be a coming storm I at once left the lonesome lake and headed for home. But I had not gone far when a glance at the ominous cloud told me it was not a cloud after all, for the stars shone through it with mid-summer luster. Just then a ray of light like a knife blade shot up from the eastern end of the circle and I knew it was the aurora borealis. Following this ray a fan-like cluster of long ones appeared at the western end, after which the entire rim of the great plane became luminous with yellow light. Gradually this faded away, when long lance-like opaline rays trembled far up toward the zenith, after which they turned to a rose hue, and then trembling faded away. The phenomenon was beautiful in the extreme, and it was a late hour before I withdrew and went to bed. While looking at the shifting, trembling lines of light shooting zenithward I could not help but think of that line of Bryant's, in the "Ages" I believe, when he speaks of one—

"Who unwinds the eternal dances of the sky."

Of the date of August 7, I find this entry in my journal: "Cloudy this morning when we got up. Pretty soon a breeze came on from the north, and it not only blew the smoke into our eyes, but into our victuals. And although the little spurt of rain is over, and the wind has lessened, and the sun is casting a sickly light through a rift in the clouds, old Superior is casting up mire and dirt with considerable vim. How I do wish a big blow would come on from the north, provided it did not last more than an hour or so—just long enough to send the great waves thumping and thundering on our beach and against the great rocks on either hand of us."

Well, I had my wish, but without the proviso. The storm came, but it was no one hour's affair—for three or four days the wind blew a gale from the north, and the great lake foamed like a sea, and I saw the waves beat against the rocks and heard the hollow boom as they flung themselves into the holes and caverns already carved out of the yielding sandstone. And the storm brought another set of campers to our little haven, a schoolmaster and four college boys,

who were driven in, and found a camping ground at the further end of the beach from us. As soon as we discovered their presence I made a visit to them, and the *entente cordiale* was established, visits were interchanged, and the habits of civilized life were at once established in this place by our borrowing their lantern and loaning them one of our frying-pans.

The storm having abated, Mr. Palmer and his party, on their way to Beaver Lake, stopped long enough to tell us that the Indian engaged to come for us, had at the last moment gone a hunting and so we had no boatmen. Our neighbors at the other end of the beach pulled up stakes and left, sailing farther down the shore, and for a time the outlook to us was rather discouraging. But at the last moment a party of young men from Marquette who were in Mr. P.'s company concluded, to stop over night at our place to try for a deer on the lake, and a noble young fellow proposed to take his boat and carry two of us back to Munising in search of a boatman, which he did, and Captain Jim Kish-ka-tog was in due time found and once more had us in charge.

It was with feelings of regret that we left our camp at Miner's Creek, but so soon as before a good breeze we began to sail along the base of the rocks eastward of our old camp, all thought of the past faded away. It is six miles from Miner's Creek to Mosquito Inlet, and between the two points the beauty and grandeur of the pictured rocks culminates. No written description can convey any adequate idea of the view they present. Nor will a view at any considerable distance give one a knowledge of what they are. As I saw the steamers passing at two or three miles distance, while at our camp on the creek, I could imagine the sight-seers after peering at the far away rocks turning aside in disgust and declaring that another idol was broken. Of these rocks it cannot be said.

"'Tis distance lends enchantment to the view,"

and hence I conclude them to be worthy of great praise. To be seen at their best, one must sail along close to their base. The Pictured Rocks are made up of a loose, fraile sandstone, which in some places is regularly stratified and lies in thick beds and at others it is laminated, the layers being from a half to an inch in thickness. Between the strata and often between the laminated plates, is a strip of a hard or chesty like rock, which enables them to withstand more weathering than they otherwise would. Sometimes the lines of lamination are parallel with the lake's surface and at others they lie at varying angles, thus showing, I suppose, that at some time past the rocks have been subjected to great pressure; or that there has been a gradual elevation. It is the color of the rock which gives the name of Pictured Rocks. In some places it is a reddish or burnt color, caused I suppose by an oxide of iron, in others it is a soft, creamy white, again it is a very dark brown, shading off into a black; then it wears a bluish tinge; next comes a yellow; and so on. It is the combinations of all the colors which these rocks show, that makes them worthy of being called the Pictud Rocks.

At the Grand Portal the boldest and most beautiful view is presented. Here the cliffs rise two hundred feet high, and into their sides the waters and floating ice have worn caverns into which small steamers could float and turn. One was a dome-like cavern two hundred feet in diameter, with a ceiling one hundred feet high. And then think of a perpendicular wall of rock an eighth of a mile long and two hundred feet high, as true as if made with plummet and rule, covered with trees! On the summit of this wall and of the other great cliffs and walls hereabout, and in the clefts and holes below the summits, innumerable gulls have their nests and are ever circling and screaming high in air. It is here where the wicked Pan-puk-keewis in "Hiawatha"

> "* * climbed the rocky headlands,
> Looking o'er the Gitchee Gumee
> Perched himself upon that summit.
> * * * * * *
> Stretched upon his back he lay there;
> Far below him plashed the waters,
> Plashed and washed the dreamy waters;
> Far above him swam the heavens,
> Swam the dizzy, dreamy heavens;
> Round him hovered, fluttered, rustled
> Hiawatha's mountain chickens."

And although the rascal killed them by "tens and twenties," he seems to have left them in plenty, for we saw them flying in and out and round and round by scores.

It was well on toward noon of Friday that we landed at the mouth of Beaver Creek, four miles east of Mosquito Inlet. On a high shore in the edge of a thick woods we pitched our tent and sought at once for Beaver Lake, less than half a mile back from our camp ground. The bottom of this lake is a white sand, and its waters, which were very clear, abound in pike and bass, the latter of which display remarkably gamy qualities. At this camp, at which Mr. Palmer and his party were also established, we hunted and fished, but beyond eight grouse which Ed. shot on Saturday, scarcely moving from his tracks, we met with no specially good luck. I did not try Beaver Creek for trout, but Charley Tomett, a wandering Switzer who has taken up his abode in the Upper Peninsula, and who had come down with Mr. P.'s party, assured me that there were many trout in the creek, but hard to get at on account of logs and brush.

Saturday the wind blew fiercely in shore, and the waves ran high all day and far into the night. Sunday morning, however, there was a calm, and we determined to sail back to Munising if possible. The night before a party had been made up to "shine a deer" on the lake, and of that party was a Louisville clergyman, a most intelligent man, with whom I spent an hour or two fishing quite pleasantly. He had never bagged a deer, and was quite anxious to get "just one," and so it was arranged that he should shoot. It was a late hour ere the party returned, so late that the next morning when the good doctor gave us a circumstantial account of how he shot and killed his first deer, and how the boat came straightway home afterwards, Ed. and Oscar both maintained (in the good doctor's absence, of course) that they had looked at their respective time pieces when the party came in, and that it was all of two o'clock in the morning, and that therefore, these two young scapegraces reasoned, the preacher shot a deer on Sunday. Of course I did not believe the boys, and if the doctor sees this, I want him to know that I have never ceased to maintain that his was a Saturday night's deer, for he gave us a quarter of it before we left, and, of course, I ought to know!

Sunday morning we bid good-bye to our Beaver Lake friends and set sail for Munising. We were about sixteen miles from the place, and for ten miles or more we had a delightful sail. Kish-ka-tog kept his boat close in to the foot of the rocks, and we enjoyed to the utmost the splendid views that were presented, not infrequently riding into the caverns and under the arched ways in the rocks, and once going ashore, where we climbed to the summit of the "chapel" and explored its dry grottoes and dark recesses.

When about six miles from our destination the wind shifted and we were driven to the oars, when, "tell it not in Gath," but Jim refused to touch a paddle because it was Sunday. The Switzer had taken passage with us, and at this turn in our affairs he took hold, and so we were able to man four oars in spite of the pious Indian, and by sundown, in an exceedingly bad humor, we landed in Munising in time to escape a drenching rain. D. D. BANTA.

FRANKLIN, Ind.

SUNDAY IN CAMP.

WE had spent our vacation in a pleasant and agreeable manner, trout and grayling fishing. We had tramped many miles to and fro, and spent days in the dense forest beside the creeks and streams after trout, returning every night to camp. We had strengthened every muscle and toned up a bundle of nerves that threatened at one time an attack of physical prostration, and had grown brown as berries under the August sun. Saturday night found us in camp, the fish cleaned and prepared for Sunday morning, and we half dozing as the candle lightened up the darkness surrounding our tent. Nine o'clock saw us in bed, but our sleepiness passed away, and we spent an hour perusing "The Adirondacks," sent to us just before leaving home by a gentleman whose name is well known in the angling world. At last we dropped into a dreamy sleep, from which we were aroused by the sharp elbow of our better half digging into our ribs and the half sleepy, "Come, H., put out that light." To hear was to obey, and we slept the peaceful sleep of innocence.

Pat-pit-pat, pat-pat-pat, then a shower of something, and the voice of our youngster piped up, "Say, pap, it rains," and we were wide awake. The little clock on our tent pole pointed to 7:45, and we had thus slept ten hours. Such a luxury we had not enjoyed for a year. Blessed sleep, what a power to rejuvenate and build up the overtaxed and wearied body. Nowhere in the big city could we thus remain in such perfect quiet and enjoy such rest.

It was but a moment's work to dress and plunge into a large bowl of cold water to remove the traces of sleep from our eyes and to prepare for breakfast. But what a morning! A fog thick enough to cut with a knife—such an one as we had never seen up in Michigan in all our fishing trips. The tall maples were fairly soaking with the dampness. The rustle of the leaves deluged you and wetted to the skin, but the sun was struggling to get through the fog, and puffs of light breeze came up once in a while. A silence and calmness betokening a Sabbath of rest brooded over everything. Though on almost the highest point of land in this section of the peninsula, yet this infant city was "a sleepy hollow," as truly so as ever Old Rip ever found in the mountains of his long sleep. Breakfast was a deliberate affair. Late numbers of the FOREST AND STREAM lay around the tent, and while partaking of the delicious fish, I read the experience of Old Knots in the Kingfisher's Camp and other interesting articles from this journal. No hurry to-day; no fishing, no hunting. The rods were in their slings, hanging in the rear of the tent, and we intended spending Sunday as the angler should who loves to contemplate the beauties of all things around him. He finds something to adore and reverence in the moss-covered wood path; the delicate fronds of different species of ferns; the soft-tinted hues of the few forest flowers attract him; while all around rear up the lofty maples and giant hemlocks, the rustling and rippling of whose leaves seem to strike new chords in nature's grand symphony, and all join in a grand hymn of praise.

Breakfast over, we take the hammock and stretch it to the trees in the forest. The sun is well up in the sky, and is shining in his strength, gathering to himself the heavy fogs of the early morning. Ah! glorious above all days, this last Sunday in August, seemingly the best Sunday in a damp summer. Taking with us a book we are soon stretched in blissful content, and gently swinging in the hammock, are absorbed in the interesting pages. Snatches of sacred music come from the tent as the good wife makes some changes in her apparel, and comes out with another hammock that is soon filled with her somewhat stately form. What a feeling of content comes over the senses as we thus let this lovely day pass away in a quiet rest.

Soon we are aroused with, "Say pa, if you will go to the spring for some water I will make some lemonade!" Taking the bucket, I am soon beside the cold, clear waters, quaffing them again and again. It is astonishing how much water one drinks when beside these Michigan streams. We sit on the log a moment and there comes stealing through the woods the sound of a well-known sacred song. In an instant we catch the words:

> "Had I a thousand hearts to give,
> Lord, they should all be Thine."

What a solace, what comfort woman finds in a devout, earnest religious trust.

Memory crowds back to another scene, when deep affliction fell on this same family, and this same voice, now ringing through these woodland cloisters, was dumb in her sorrow, and stood faltering and suppliant, seeing no ray of hope in the gloom. But a sublime faith triumphed, and to-day, while sitting beside this spring, the voice comes strong and clear in that much-loved hymn—

> "Oh! that beautiful home in my visions and dreams,
> Its bright jasper walls I can see,
> Till I fancy but dimly a veil intervenes
> Between that fair city and me."

The sorrow had passed away; joy came in the morning; but "where the treasure is there is the heart also." The anticipation of spending Sabbaths more glorious than these with the loved little one, voices these songs and turns them into hymns of praise.

No cloistered temples or hallowed fane—no Norman arches in grand old cathedrals, have rung out tones from a fine old organ, the Gregorian chants, with a whit more feeling of sublime worship than have these groves of springing maples rustled their leaves in accompanying music to these songs of loftiest cheer. And so our Sunday passes in quiet contemplation or in simple song.

Since we came here fishing a new cabinet organ came to the neighborhood, and while at supper on Sunday evening, a polite and cordial invitation came to our tent for us to spend the evening at the house and give them some music.

We found a copy of Gospel Hymns in the house, and sitting down we spent two very pleasant hours with the family, and soon had all of them singing these simple yet touching melodies. Turning to an old and well remembered tune, "Manoah," we sang the verses forming the doxology, and with the thanks of these friends for the evening spent so pleasantly, we went to our tent and to rest. Not a fear, not a regret, no headache to remind us of a Sunday's spree, but a peaceful, calm, quiet Sunday in camp.

The next day Camp Leonard was broken up. The twelve year old boy hauled down his stars and stripes and put them away for another year, he says, but whether they float another summer in New Mexico up in the mountain ranges, or East in Canadian provinces, or in the Rockies, or shall again spread to the breeze up near the grayling streams of Northern Michigan, we shall always remember our pleasant Sundays in camp at Summit City. NORMAN.

CHICAGO, Ill.

THE NATIONAL ROD AND REEL ASSOCIATION.

AT the close of the FOREST AND STREAM Anglers' Tournament, on Friday, the 20th inst., the members of the Committee of Arrangements and a few gentlemen who had signified a wish to be present met at dinner at the Windsor Hotel. After dinner the chairman of the committee formally stated, what all knew before, that there was a rapidly growing sentiment among the anglers who had visited the tournament, and many whose business prevented their being there, that an association should be formed to continue the good work so happily inaugurated by FOREST AND STREAM. The opinion of all was that an annual meeting should be held, and that much good outside work could be done toward educating the youthful anglers now coming on the stage, not only in properly casting the fly, but also in observing, and aiding in the formation of laws to increase and preserve our best fishes.

Mr. E. G. Blackford expressed himself as heartily in favor of an association to encourage fishing with the rod and reel, and it occurred to him that it might be well to consider whether "The National Rod and Reel Association" would not be a good name for it. Mr. Geddes thought it a good one—it left out protection of fish from the title, and it was much better to do things than to imply a promise in the name of the society that the protection of fish was the main object, and then do but little toward it. Mr. Mather approved the name and moved its acceptance, and the young society was christened.

The next move was naturally toward a permanent organization, and Mr. Francis Endicott, President of the Richmond County (N. Y.) Game and Fish Protective Association, was unanimously elected president. Mr. S. M. Blatchford, of the Squibnocket Club, was then asked to draft an announcement of the objects sought to be accomplished by the organization, and offered the following:

The objects of the Rod and Reel Association of the United States shall be—

First—The preservation of game fish by every possible means for those whose delight it is to take them by rod and reel.

Secondly—The holding of an annual Tournament to cultivate and compare excellence in the use of rod and reel.

Thirdly—The cultivation of that fraternal feeling which always exists among the lovers of our gentle sport.

Mr. L. W. Winchester, President of the Restigouche Salmon Club, was then chosen Treasurer and Mr. Fred Mather Secretary; the initiation fee and annual dues were fixed at $3.00. Messrs. Endicott, Blackford and Mather were appointed to draft a constitution and bye-laws to be submitted for approval at the next meeting, which will be at the call of the President, and with a vote of thanks to the proprietor of the Windsor for the use of the parlor, the meeting adjourned.

Since that meeting the enthusiasm among anglers is perfectly astonishing, and they are all asking why this association was never thought of before. Many of the first men in the land have written to the members of the committee to know how soon they can join. The low fee will bring in a thousand members before the new year, and the proposition of Mr. Geddes, that instead of asking for prizes the association should buy them, will be perfectly practicable. All agree that the status of amateur and professional fly-casters should be strictly defined, and classes made for each, so that it will be impossible for a man to enter in the first class and sweep all through unless he should be one who only handles the rod for sport and not in the way of business.

We predict the most glorious future for the new association which has been born of the first Anglers' Tournament ever held on this continent, which was conducted without objectionable surroundings, and which brought together a class of men who never before assembled at such a contest. The membership will include prominent men from most all States in the Union, and bids fair to be come a power for good in the land and one which it will be a pleasure for anglers to join.

RANGELEY TROUT AND SALMON.

I HAVE just returned from Rangeley Lakes, where I have been engaged since October 1, in taking eggs of the Rangeley trout for the purpose of hatching and restocking the waters. The fishing during September was very poor, and many anglers thought, with good reason, that the fishing was about played out. The cause was probably owing to the warm season. After October 1 the fish began to come into the streams and outlets, and were very plenty.

I give you items from my diary of my catch in Rangeley streams, not taking into account any of less than two pounds, of which we took quite a large number; also, the score of Kennebago stream, where, as the fish run smaller, I give you the whole number:

Oct. 1.—3 females, one of 7, one of 6, and one of 2½ pounds.

Oct. 1.—3 males, one of 7, one of 6, and one of 4 pounds.

Oct. 2.—6 females, one of 7, one of 6, two of 4, and two of 3 pounds.

Oct. 2.—4 males, one of 7, one of 6, one of 5, and one of 4 pounds.

Oct. 4.—Went up Kennebago stream to spawning ground. Caught with fly, in two hours, 60 fish, from one to 5½ pounds each; found but few ripe fish; they took the fly readily, the spawning females as well as the rest; four-fifths of them were males. So few of them were ripe that I did not try to catch more.

Oct. 4.—4 males, one of 9, one of 5, and two of 4 pounds.

Oct. 4.—9 females, one of 7½, one of 6, one of 5 and six of 4 pounds.

Oct. 5.—Went up Kennebago; stopped over night.

Oct. 6.—Caught, yesterday and to-day, 125 trout, average

2½ pounds each. Largest, three of 7, two of 6 and fifteen of 4 pounds each. They were mostly males. I found but few ripe fish.

Oct. 7.—14 females, one of 8½, one of 7½, two of 7, three of 4, five of 3, and two of 2½ pounds each.

Oct. 7.—3 males, one of 8½, one of 8 and one of 5 pounds.

Oct. 8.—12 females, one of 8½, one of 8, two of 6, four of 4 and four of 3 pounds each.

Oct. 9.—Went up Kennebago stream; stopped over night.

Oct. 10.—Caught 200 trout, average 2½ pounds each. Largest number males. Came back to Rangeley in afternoon. Caught 4 females first, average 4 pounds.

Oct. 11.—2 females, one of 3 and one of 4 pounds. One salmon, 6 pounds, turned back in stream unharmed.

Oct. 12.—7 females, one of 8, two of 7, two of 5 and two of 4. 1 male, 2½ pounds. Filled boxes with eggs to-day, with exception of those reserved for landlocked salmon.

I am very happy to say that the salmon put in an appearance in the Rangeley stream this fall in considerable numbers, and for the first time. Some of them were very large. I saw five of them in a pool which I estimated would run from four to ten pounds each. Over forty were taken last June in the Rangeley Lake alone, of from two and a half to four and half pounds each. They have also been taken in the lakes below. For the short time that has elapsed since they were introduced and the small number of eggs, the success has been remarkable.

The first young fry were planted there in 1874, 2,000; '75, 5,000; '76, 3,000; '77, 18,000; from these plants the fish that have been taken sprang. The fish of which I give you the weights are the true book trout (*Salmo fontinalis*). The size is not remarkable for those waters. Three-quarters of the fish which I took in the Rangeley streams were females. Why it was so I cannot tell, unless the males, coming in earlier than the females, as they always do, were caught by the angler at the bar and outlet. The last fish that came into the stream were females with hardly an exception.

The expense of the work is paid by contributing sportsmen, and is obtained by subscription books, which are kept open at the different hotels and club houses for that purpose. Ample funds were raised this year to take the eggs, pay a man for taking care of them through the winter, and also to erect another and larger hatching house for another season. Had the house been finished this year I could have filled it easily with eggs. I have no doubt that the fishing at Rangeley can be brought up to where it was in the palmiest days by following up the work now begun. The appearance of the salmon confirm it. I predict that in a few years the salmon fish ng at Rangeley will be the best ever known in Maine, and her big salmon will be as famous as her trout. And here I wish to thank every person who contributed to the Rangeley hatching fund, and may they all live lo land a ten-pounder from the fry that will be introduced there next spring. HENRY O. STANLEY, Com'r of Fisheries.

DIXFIELD, Me., Oct. 15.

BLACK BASS.—I saw in FOREST AND STREAM of Oct. 5 that a gentleman wanted to get black bass to take to Europe. I would refer him to Mr. Maurice Decker, of Lake Hopatcong, N. J., Mr. Decker's address is Wood Port, Morris Co., N. J. He is a veteran fisherman, and the bass are plenty and he can get him all he would want of every kind.—E. C.

The New Haven *Register* says: Burr Keeler, of Ridgefield, Conn., who claims to be the oldest "piscator" in the State, caught a 3½ pound bass in Umpawaug Lake the other day. Mr. Burr's taste for angling began when he was a boy—more than 70 years ago.

Will fish hook a fish hook?—*Earl Marble.* Will fish tackle fish tackle?—*Chicago World.*

Fishculture.

THE NEW YORK FISH COMMISSION.

A MEETING of the State Commissioners of Fisheries was held at the office of Commissioner R. B. Roosevelt, No. 70 Chambers street, Mr. Roosevelt occupying the chair. Commissioners Eugene G. Blackford and R. U. Sherman were present. A resolution was passed to the effect that hereafter no fish or spawn should be sold from the State hatchery without the consent of two of the commissioners. The State Superintendent of Fisheries was granted a leave of absence in order that he might visit Florida during the winter. Mr. Roosevelt said that little was known of the habits of striped bass and bluefish after they had left Northern waters, and thought something of practical value could be learned as regards their spawning places. He also said that the superintendent could be spared without loss to the State fish interests in the winter season. Commissioner Blackford said he did not think there was any basis for believing that fish found in Northern waters in summer were the same as those found off the Florida coast in winter, but he was in favor of the superintendent studying the habits of the Southern fish, and asked that a report of his investigations be presented to the commission.

A discussion took place as to the hatchery at Cold Spring, Long Island, which was begun last year, but not finished. Mr. Blackford said that for the past four years he had made an effort to have a hatchery established on Long Island, and he thought, as $3,000 had been appropriated for the work, it should be completed. He thought the State Superintendent had shown a want of inclination toward finishing it. He was in favor of there establishing salt-water fish preserves. Interest, he continued, had of late been taken in starting codfisheries on the Long Island coast. Already large numbers of cod were taken for the New York market in the fall and early winter months on the south coast from Coney Island to the point. Over twenty-five fishermen were engaged in taking them, besides many private boats. The Commissioners could get codfish with very little expense, and they would increase very rapidly. He also said that codfish were growing scarce rapidly along the New England coast. He thought the spawn of the Spanish mackerel could be obtained and the work of hatching carried on with success in the Long Island preserves. There had been expended in fixing up an old building for a hatchery at Cold Spring $178, and a few hatching troughs had been prepared. This is all that had been done.

Commissioner Sherman was in favor of continuing the work at Cold Spring, but thought that it should go on in a moderate manner. He considered it an experiment as yet. The time was soon coming, he said, when the spawn of striped bass would be obtained in quantity, and this fish would become one of the most important in the markets, as it will live in both salt and fresh water. He thought special attention should be given to it. The spawn could be taken from the Potomac and other Southern waters. In his opinion, the hatchery, in time, would be of the greatest importance in raising striped bass. The fresh water ponds could be utilized for brook trout and land-locked salmon. The Commissioners then decided to complete the work, and Mr. Sherman offered the following resolution, which was carried:

Resolved, That Mr. Blackford be appointed a sub-committee to complete the hatchery on Long Island, and to hatch such fish spawn as he may obtain from the State hatchery or United States Commission, and to build such salt water ponds as he may think advisable for the hatching of salt water fish. That the expenditures for such purposes be limited to $1,000 until the further order of the board, and the resolution on this subject heretofore adopted be modified to that extent.

It was also decided by the board that special appropriations should be asked of the Legislature, $1,000 to be expended in the rebuilding of the old hatchery house at Caledonia, and $3,000 to be devoted to the work at Cold Spring. Commissioner Sherman said that either Mr. Folger or Mr. Cleveland, if elected to the Governorship, would be favorable to fishery appropriations. He also called attention to the fact that no shad spawn had been placed in the Hudson River for two years, as whatever appropriation was made had come too late for the work. In the Caledonia hatchery, he said, the salmon trout were doing remarkably well. Over 800,000 spawn had been taken from them, and they were growing very large. This was a matter of special interest, because soon the supply of spawn from Canada would be withdrawn, and the superintendent would have to depend upon his own fish. Commissioner Blackford said he had received a hundred applications for carp and they would be distributed by the United States Commission next week. The interest in their culture, he said, was increasing rapidly. After authorizing the secretary to communicate with the United States Commission as to State exhibits of fish at the London exhibition to be held in 1883, the board adjourned.

A NEW HATCHER.

WE give below a cut and description of the McDonald hatcher as described in his specification, etc., in the United States Patent office.

Marshall McDonald, of Washington, District of Columbia, assignor to himself and Stephen C. Brown, of same place.

METHOD OF AND APPARATUS FOR HATCHING FISH.

Specification forming part of Letters Patent No. 263,933, dated Sept. 5, 1882. Application filed June 12, 1882. (No model.)

To all whom it may concern:

Be it known that I, Marshall McDonald, of Washington city, District of Columbia, have invented a new and improved Method of and Apparatus for Hatching Fish; and I do hereby declare that the following is a full, clear, and exact description of the same, reference being had to the accompaning drawings, forming part of this specification, in which—

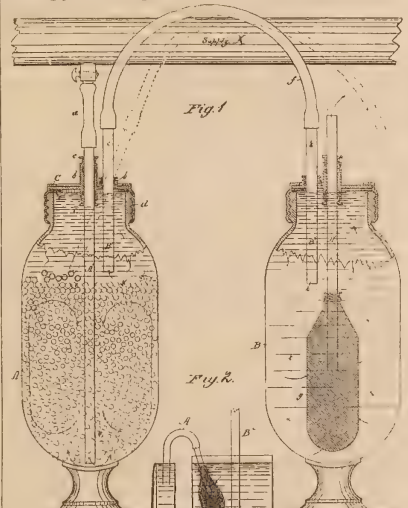

Figure 1 is a side elevation, partly in section, of my improved hatching jar and collector as connected for use. Fig. 2 is a side elevation of a modification of the collector.

The object of my invention is to provide a method of and apparatus for hatching fish, automatically agitating the eggs, eliminating the small fry as soon as hatched, and separating the bad eggs and old shells, and thereby avoiding the contamination of the sound ones.

To these ends my invention consists in the improved method of separating the bad eggs, and also the small fry when hatched, from the eggs remaining in the jar, which consists in agitating the eggs by a forced circulation of water in a closed chamber which is entirely filled with water, and taking off the discharge water from said jar, and with it the bad eggs, (or small fry, as the case may be,) at a point central with respect to the body of the chamber, in contradistinction to taking off the bad eggs at the surface by overflow from an open jar.

In the drawings, X represents a supply-pipe containing water under pressure and of a temperature between 50 deg. and 80 deg.

A is the hatching-jar and B the receiver or collector, which together constitute a complete automatic apparatus, but of which there may be a multiple series, according to the requirements of production. Both the hatching jar and the collector have two glass tubes, A' B' and A^2 B^2. Of these tubes, A' of the hatching jar connects by a rubber tube, *a*, with the water supply, and extends to nearly the bottom of the jar, being held firmly in a tubular sleeve, *b*, of the cover C of the jar, so as to maintain the central position of the tube in said jar. This tube A' may, however, be adjusted vertically in its sleeve to bring its lower end closer to or farther from the bottom of the jar. The reason for this is as follows: The central position of the tube causes the inflow of water to spread symmetrically over the bottom of the jar and cause uniform agitation and circulation of the eggs, as shown by the long arrows. By adjusting the tube down close to the bottom of the jar the stream of water is somewhat retarded or diverted in flow, but increased in vigor of circulation, causing it to be spread out in a thin active sheet, which produces an active circulation and agitation of the eggs in the direction shown by the long arrows. By raising the tube the flow is increased; but the water, instead of being spread by immediate contact with the bottom of the jar, is diffused through the capacity of the jar, making a less active circulation and agitation of eggs. By these very simple and practical adjustments, it will be seen, I am enabled to definitely regulate and control the agitation of eggs and flow of water according to the necessities of the case. This tube A' is rendered water-tight in the sleeve *b* by small stuffing-boxes *c c* at the top and bottom, which by frictional contact hold the tube A to its adjustments against the pressure of the water. The other tube, B', of the hatching jar is the outlet tube for the water, the small fry and the bad eggs, when it is required to remove the latter. This tube is arranged in a short sleeve, *b'*, in the cover of the jar, which is also provided with a stuffing box to render it tight, but which permits this tube to be deflected, as shown in dotted lines, for the purpose hereinafter described. In constructing the sleeve *b'* so as to permit this deflection of the tube, said sleeve and also the removable thimble of the stuffing-box are made of a larger diameter than the tube B', and the packing in the stuffing-box is in the nature of a round rubber ring confined between the said thimble and sleeve, and large enough to act as a fulcrum for the tube B' when it is to be deflected.

The cover to the jar A is held down upon the jar by means of a screw ring, *d*, upon a gum gasket, *e*, so as to form a perfectly tight closed jar. The receiving jar B is provided with a similar tight cover, and has similar tube connections for its tubes A^2 B^2, one of which tubes, B^2, is connected to the tube B' of jar A by a rubber pipe, *f*, and the other of which A^2 is the discharge-pipe, and opens into any suitable receiver for the waste water. Over the lower end of the discharge-tube A^2 is a large filtering-bag, g, distended over a cage, the object of which is to secure a discharge from this closed jar commensurate with the inflow without creating a violent suction through the filter, which would injure the young and delicate fish.

The jars are preferably of glass, so as to permit the operation to be inspected without opening the jar or affecting the flow of water. They are also preferably of a cylindrical shape, with rounded or oval internal ends. In practice I ey are filled about three-fourths full of eggs that have been impregnated or vitalized with the milt of the male, and the tubes are then adjusted to about the position shown. The constant flow of water under pressure into and out of the closed jar now gives the required movement to the eggs, and when the fish is freed from its shell it very soon is caught in the current of water passing up tube B, and is thereby transferred to the collector or receiver B, where it remains, while the water passes out through the strainer g. As the eggs are agitated by the current in A the bad eggs and the shells, by reason of their less specific gravity, accumulate from time to time on the top of the strata of sound eggs, which bad eggs, by reason of their opacity, I have represented by a few heavy circles at the top. Now, to get rid of them the tube *f* is disconnected from B^2 and tube B^2 is deflected till its end is in their vicinity, as shown in dotted lines, when the induction of water draws off these eggs, which are thrown away. After the jar has been purged of these eggs, pipe *f* is again connected to B^2 and the fish are allowed to pass over automatically again.

The fishculturist in practice has to deal with two classes of eggs; first, those which have a greater specific gravity than the medium in which they are deposited, and which therefore descend to and remain at the bottom, unless kept in suspension by the motion of the water. The second class of eggs are specifically lighter than the water in which they are deposited, and tend to the surface, and remain there unless disturbed by the agitation of the water by winds or waves, when they are diffused through and held in suspension in the surface stratum. These eggs all belong to salt-water species of fish—such as the cod or mackerel—are very delicate in structure, drift with the current, and up to the present time no methods or apparatus of hatching have been devised that could handle them on a large scale. Indeed, it is only in the last three years that the attention of the Fish Commission has been directed to the expediency and necessity of resorting to artificial methods in order to maintain the supply of these fish.

Fishculturists have heretofore been chiefly interested in the artificial propagation of species that spawn in fresh water, all of which have heavy eggs, and the methods and apparatus have been devised solely with reference to this class of eggs. My automatic fish-hatching jar proposes to handle both classes of eggs, with a precision and perfection of results not attainable by any existing apparatus. In the case of heavy eggs—such as the shad and the white fish—for which the jar, as illustrated in the drawings, is arranged, the central tube serves as a supply tube, introducing a current of water to the bottom of the vessel under pressure. This buoys up and filters through the mass of eggs that fills three-fourths of the entire interior capacity of the jar, communicating to the whole a slow boiling motion, and enveloping each egg in a film of fresh water constantly renewed. The dead eggs, being a little lighter than the live ones, by degrees work to the surface and under the outlet-tube, which by being set at a proper distance, determined by experience, will in the course of twenty-four hours remove every dead egg, leaving only a compact mass of clean, live eggs when the period of hatching approaches. The importance of this is appreciated when we consider that a single dead egg will develop fungus which may involve in its meshes and destroy many other healthy live eggs during the period of incubation. When the hatching begins a connection is established with the collector, to which the young fish as they break the shell and swim up in the water, are transferred by the current of water, and in which they are collected and retained without injury until ready for shipping.

The advantages of the apparatus are as follows:

First, the almost complete automatic performance; reducing attendance, and therefore the cost of production, to a minimum.

Second, the complete separation of the dead eggs from the living and the perfect circulation of water secure the hatching of every healthy impregnated egg, and necessarily yields a much larger percentage of production than any apparatus now in use.

Third, the collector enables us to collect in convenient condition for shipping and retain without injury all the fish that are hatched.

Fourth, the getting rid of the dead decomposing eggs and largely of the shells leaves the young fry clean and in the best condition for shipping—a cleanliness and therefore safety in transportation not possible to secure with existing apparatus without a degree of assiduous and careful attention which adds vastly to the work of the hatching room.

Fifth, the use of close vessels for hatchers and collectors worked full of water under a head enables me to use the apparatus aboard cars or on vessels—a result not attainable with existing apparatus, and which vastly increases the possibilities of fishculture.

In hatching buoyant eggs the direction of current is reversed, the water entering at the top and passing out at the bottom—in other words, the direction of the current is reversed, while in other respects the manipulation is the same.

As shown in the drawings, each hatching-jar is connected with a separate collecting-jar, which is also closed. I may, however, as a modification of my invention, have a common collector for a number of hatching-jars and for laboratory use where the jars are stationary or not in transit. This common collector may be an open jar or aquarium, as shown in Fig. 2, in which B^2 is one of the tubes from the hatching-jars, and A^2 a siphon discharge-pipe with filter for carrying off the waste water, which siphon has its outer end closed by a body of water in another vessel.

I am aware of the patents to Chase, August 16, 1881, and Wilmot, July 18, 1876, and I do not claim anything shown therein.

My invention is distinctive with respect to processes described in the foregoing, and especially the Wilmot process, in that he uses an open vessel and separates the bad eggs, which are of less specific gravity, by overflow from an open vessel. I take advantage of the same principle of separating

the bad from the good eggs through their different specific gravities. My process is, however, distinct in the following respects: The forced circulation in a closed vessel, and discharging the water from the vessel at a point more or less central to said chamber or below the surface of the water enable me to secure the following important results: First, I am enabled to effect the separation at any point in the jar without change in the water circulation, and thus can treat a very small quantity of eggs in the jar as well as if the jar were filled nearly to the top, as is necessary in Wilmot's invention; secondly, I avoid all slopping over of the water in the jar and I avoid waste of eggs, thus permitting my process to be conducted on cars during transportation; thirdly, by taking off the discharging water in the forced circulation at a point more or less central to the jar, I avoid the spattering of the water and consequent loss of small fry from fish eggs in the fall from an overflowing vessel; and fourthly, this mode of carrying off the water draws the eggs and small fry into its current with a gentle but positive suction whose influence is distributed throughout the jar, while a surface overflow has no effect in eliminating the bad eggs until they get upon the immediate surface.

Having thus described my invention, what I claim as new is—

1. The improved process of automatically separating the bad eggs and small fry from fish eggs during incubation, which consists in agitating them in a closed chamber filled full of water by means of a forced circulation of the same, and drawing off the discharge water along with the bad eggs or small fry at a point below the surface of the water, or more or less central with respect to the jar, as described.

2. A fish-hatching jar composed of closed glass vessel A, a detachable cover, and the inlet and outlet tubes A' B', one being adjustable in vertical direction and the other being detachable, as shown and described.

3. A collector for the small fry, consisting of a jar or vessel having an inlet-tube and an outlet-tube, with an enlarged or cage filter on its inner end immersed in said jar or vessel, as and for the purpose described.

4. The combination of the closed hatching-jar A, having tubes A' B' for a forced circulation, and the collector B, having connecting-tubes B' and f, and a discharge-tube, A', with a cage filter, as shown and described.

The above specification of my invention signed by me in the presence of two subscribing witnesses.

MARSHALL McDONALD.

Witnesses—EDW. W. BYRN. CHAS. A. PETTIT.

BLACK BASS FOR ENGLAND.—Mr. W. T. Silk, the English fisheulturist, who came to this country three weeks ago to procure black bass for the stocking of the preserves of the Marquis of Exeter, sailed on Saturday the 21st, on the steamer Baltic, after successfully accomplishing the object of his visit. Before leaving he said: "I have succeeded in securing 700 black bass from Greenwood Lake to carry back with me to stock White Water Lake, belonging to the Marquis of Exeter, and the various reservoirs around London. The fish all come from Greenwood Lake. As at this season of the year they resort to deep water it was impossible to net them, so I had to resort to hook and line, with which almost all of the fish were caught. In seize they range from two inches in length up to two pounds in weight, and I have secured a lot of minnows to feed the large fish with on their passage across. They will occupy the four tanks which I brought with me, and you will soon hear that the black bass is as plentiful in England as our sparrows are now with you."

Answers to Correspondents.

W. S. M., Gloucester C. H., Vt.—Write to the Essex County Hunt, box 187, Montclair, N. J.

D. W. C., Boston, Mass.—Pollux is by Dash III. out of Hardy's Diana. See FOREST AND STREAM of Aug. 24 for full description.

E. S. J., N. Y.—Can you name me a place within one or two hours of New York where there is good rabbit, quail, or partridge shooting, and which would not be overran by hunters? Ans. We know of no place that fulfils these conditions.

S. R. H., New York.—Can you inform me of a good shooting ground for rabbits within three or four hours' ride of New York city? Ans. We are informed that there is worth rabbit shooting near Lakeville, near Sayville, L. I. Take Long Island R. R. Your note was overlooked.

J. D. B., New York.—Can I shoot ducks at Barnegat and Forked River only on Mondays, Wednesdays, and Fridays, or does the three-day law cover Mosquito Cove only. Also if there is any quail shooting there? Ans. Covers Mosquito Cove only. No quail shooting to speak of.

J. L. Z., N. Y.—Will you please inform me what kind of shooting there is at the end of next month in the Hackensack meadows near Carlstadt or Secaucus. Ans. If the weather remains warm ducks may be found on the Hackensack River and adjoining meadows. Also snipe, if the weather keeps open. But no man but one who knows the ground thoroughly will find the shooting satisfactory, as there are more shooters than birds, as a rule. Near Carlstadt, quail and woodcock may also be found.

J. D. J., Long Prairie, Minn.—Please give me a name for the bird to which the enclosed head and bill belongs. I shot this about eight miles north of here yesterday. It weighed about eight or nine pounds, looked something like a goose, neck ash color, like head, back and wings dark brown or black, breast ash color, belly white with dark blotches or large spots on it, belly white, legs yellow. Was all alone when I shot it. Ans. The bird is the white-fronted goose (*Anser al bifrons*), sometimes, but incorrectly, called prairie brant.

BITTER ROOT BILL, Missoula, W. T.—1. I am about to order a 12-gauge, 9lb., 32in. barrel, with pistol grip, 3in. shell, double barrel B. L. gun for duck and goose shooting. What do you think of it? Would it be suitable? 2. How do ——— rank as gunmakers? 3. Is it not rather a strange thing for snipe to winter in this climate? I have seen them frequently in January when there was two feet of snow. 4. Would 5 drams powder, 1¼oz. shot, be a suitable load for above mentioned gun? Ans. 1. We would prefer 10lb., 30in. barrels. 2. High. 3. Snipe will often remain by warm, open springs all through the winter. 4. The charge would be too heavy. You must experiment with the gun. Begin with 3 drams of powder and an ounce of shot, and target the gun until you get satisfactory results. If you want to shoot heavy charges you had better get a heavy gun, perhaps a No. 10.

A. E. B., Washington, D. C.—Please publish field trials and bench show winnings of Warwick, Belle and Kirby. Also if Warwick and Belle were considered in any way fine in the field. What do you think a bitch (blue belton) is worth by Warwick and Belle? She has a fine head, body and legs in every respect. Anc. Warwick won he. at St. Louis in 1878, he. in impromptu class and second in native class at Baltimore 1878, vhc. at Philadelphia 1879, and vhc. at New York 1881. His field trial winnings are: Divided second with Grouse Dale in the Pennsylvania State Trials. All-Aged Stake, at Grand Junction 1881. Belle has won he. four times on the bench, viz., Baltimore 1877, St. Louis 1878, Baltimore 1878 in both the imported and native class. Kirby won c. in the champion class at Baltimore 1878. Neither she nor Belle has any record. Both are said to be capital fielders. It would be impossible to say what the bitch from Warwick and Belle is worth.

DAVY, Sardis, Miss.—I attended Mr. W. W. Cole's circus, menagerie, etc., at Memphis, Tenn., last week, and I saw a gentleman claiming to be A. H. Bogardus, the renowned shot of America, and I believe he claims the championship of the world. With him were his two sons, the older of whom performed very good shooting with rifle at a stationary target at a distance of fifteen or twenty feet, and the Captain's little son, aged about eight or ten years, also did some fine shooting with his little popgun rifle. The Captain himself did not do as well as I expected. Shooting at six single balls he broke all of them, but when it came to shooting at double balls, the renowned gentleman missed his second double, making his bow and retiring after the second double. Now, what I want to know is, was the gentleman the true and original Capt. A. H. Bogardus, or some one sailing under false colors? What has become of Dr. Carver? Ans. The individual whom you saw was probably the Simon pure Capt. Bogardus. He is traveling with a circus somewhere in the Southwest. Carver has just reached this country from Europe, and is soon, we believe to return.

The Kennel.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. Washington A. Coster, Flatbush, N. Y.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

RAB.

A LITTLE mound in the garden,
Aside from the box-bordered walk,
Tells in such language as flowers
And only flowers can talk—
(No need of other inscription,
No need of memorial slab,)
Tells that, all still and silent,
Underneath lies our little Rab.

And yet in fancy I see him,
Alert, overflowing with life,
Now racing across the grass-plot
With the children in playful strife;
Then, with head drooping saucily sideways,
On his haunches, with heaving breast,
Awaiting the further onset,
While the children stop to rest.

Rab, with his coat so silky,
Seal brown set off by white,
With his long, soft ears, and his questioning eyes,
Aglow with an inner light;
Shall we see him no more forever,
Will he come no more at our call,
He, the delight of the household,
The merriest, maddest of all?

Ah, Rab! we will miss you sadly,
As we look at the spot where your name,
Wrought of the ash's red berries,
Glows as if written in flame.
And the flowers will bloom and wither,
For many and many a day,
On the little grave where the children
Have tenderly laid you away. R. S. CHILTON.

[Rab was a favorite pet, a cocker spaniel. His owner, the writer of these touching lines, was for many years the private secretary of Daniel Webster.—Ed.]

FIELD TRIAL NOTES.

Editor Forest and Stream:

As the time for the annual field trials of N. A. K. Club draws nearer it may be of interest to some of your readers to know who are preparing for it and what dogs they have, therefore I send you a list of those near here.

E. J. Wallace, Bartlett, Tenn., has Gath for the Derby and Startle for the All-Aged Stakes, both Llewellin setters.

Chas. Tucker, Stanton, Tenn., has Clipper and Stanton, both Gladstone—Frost, which will probably be the youngest starters in the Derby.

Major J. W. Murnan, Keeling, Tenn., has Bragg and Gazelle, both by Prince, and said to be promising. He may also run Maud W., and if he does she will be a dangerous competitor.

W. A. Ellison, Atoka, Tenn., has Nellie E. for the Derby, and Lit, Nellie E., and probably Donno J. for the All-Aged Stakes.

Geo. W. Winford, Germantown, Tenn., thinks he has the Derby winner in Pride of Memphis (Wm. Bowle's), but Dr. A. F. McKinney, Forest Hill, Tenn., intends to fight him to the "last ditch" for first money with his Kate B. (Count Noble—Peep O'Day), and then try the old ones for the honors in the All-Aged Stakes.

H. M. Short, Middleton, Tenn., has quite a string, several already known to the public. He will have three or four in each stake, and if there is anything in numbers he ought to be about the last ordered out of the race. Pink B., Carrie J., Milwaukee, Richard III. and Dash will contend for the Derby honors, and the two first probably for the All-Aged Stakes, backed up by Frank H., Victor, Don, Peep O'Day and Sue.

J. M. Arent, Hickory Valley, Tenn., has one or two for each stake. J. E. Mask, of the same place, has one good one for the All-Aged Stakes. With the exception of Mr. Short all the above-named live near here. I know of quite a number of persons from the North, East and West who will be near Grand Junction soon with their dogs; of these I will write another time.

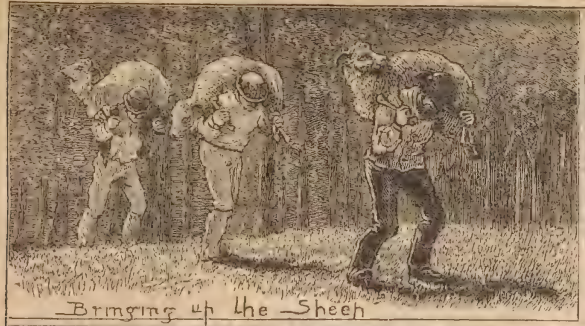
Birds at Grand Junction will be ample for a large entry, and if the trials are not a success it will not be for want of birds. No one will be allowed to shoot there, and those who desire to stop near there will be furnished with information regarding good places by writing to me.

D. BRYSON, Secretary N. A. K. C.

MEMPHIS, Tenn.

THE ESSEX COUNTY HUNT.

THE meet of the Essex County Hunt, last Saturday, was at Montclair, N. J., at 3:30 P. M. About twenty ladies and gentlemen participated, the affair being one of the most enjoyable in the annals of the hunt. The drag was laid in a northerly direction, over a rather stiff country, which was very cleverly traversed by all without mishap. The "bagman" was dumped about four miles from the start, and when the pack struck the scent they at once opened with a burst of melody that caused each rider to more firmly grasp the reins, as their impatient steeds plunged madly forward in the most exciting chase. After making the circuit of a house, Reynard broke away across the open into full view, and at his best speed made straight for Little Falls, with the pack in full cry, straining every nerve to make his closer acquaintance. Gaining the towpath of the canal, he followed it a short distance, but finding that this was altogether too slow for him, he artfully doubled and sought safety by plunging into the river and crossing to an island; but he little knew the temper of his foes, for the eager hounds, with flying leaps from the bank, were soon breasting the rapid current. Reaching the island, no delay was made to shake the water from their dripping coats, but, with a grand chorus of "heavenly music," they raced their victim round and round the island, finally running into him in the open, in full view of the admiring crowd who had gathered upon the bank. Mr. Howard, the huntsman, waded across and brought back the mutilated remains, which were distributed as follows: The brush to Mr George Hacker, the mask to Master Wilmerdeen, and the pads to Mr. McCready, Master Harry Page, and Mr. Bull. ESSEX.



NORTHWESTERN COUNTIES SHEEP DOG TRIALS.

President—Mr. H. C. Howard. Secretary—Mr. C. D. Mare. Judges—For the best worker, Mr. J. Howell, and Mr. John Rigg; for the best looking, Mr. W. A. G. James and Mr. W. D. Inman.

ON Thursday, Sept. 28, the annual collie trials in connection with this association were held in a portion of Greystoke Park, near Penrith. The weather proved, on the whole, unusually favorable, there, in early morning rain threatened and a piercing wind blew. As noon approached the sun shown out brightly, and all minor surroundings became favorable. There was a large and fashionable attendance upon the ground, doubtless the most numerous since the inauguration of these trials. The prizes offered are valuable—£12 first and £5 second in the champion class; £7, £4, and a third prize of £2 in the open All-Aged stake; £5, £3 and £1 in the local one; with an extra stake of £5 and £2, and a special cup value £5 for the handsomest dog on the field, which had worked to the satisfaction of the judges. With such good money prizes as these, it is no wonder the entries numbered forty; almost more than can be satisfactorily gotten through in one day, especially where, as in the present instance, the course was a difficult one. Unfortunately, the competition is confined to a district—an extensive one, certainly—including Cumberland, Westmorland, Lancashire, and a portion of Yorkshire. But with such manifest advantages as this association possesses, we should like to see at least one valuable stake open to general competition. Possibly another year arrangements for this may be made. Capt. Best, of Llangollen, hon. secretary to the Welsh Trials Association, was upon the ground, and, we believe, was well pleased with his visit north, which was solely undertaken to have some conversation with the committee as to future improvements in and extension of such trials generally. The result of the interview may induce the Welsh shepherds to visit the north of England another year.

The arrangements for the trials appeared to be very complete, though there is one little thing against them—the difficulty of access to the places where they are usually held. On the present occasion we were at Greystoke Park, some three miles from Blencowe Station. Part of the distance was taken in a wagonette or other conveyance, the remainder, of about a mile, through the park on foot. In returning, on the conclusion of the trials, there was quite a scarcity of conveyances; and many of the visitors, after standing about the field the whole day, did not quite relish the three-mile walk to the railway. Had the weather been wet, this would have proved a great inconvenience; as it was fine, and the moon about full, those of the less active stamp were compelled to be satisfied with their grumble, while the remainder, perhaps, enjoyed the walk. In other respects Greystoke Park is admirably adapted for competitions of this kind. The different stakes were capitally formulated, though some of the interested ones complained of the abolition of the puppy stake, which in previous years proved one of the most interesting events; but there was always some dissatisfaction expressed as to the stated ages of the dogs, and perhaps the executive acted wisely in striking out a stake which there were grounds for believing might lead to disagreement. And it would be sure to do this unless some rule for the registration of puppies at their birth could be made. Although we are all so honest, still there are some human beings who are unrightfully suspicious and no one can correctly tell from observation to a month or two the age of any dog which has lived, say, ten months on this earth. The sheep used on this occasion were pure Herdwicks and capital specimens of the breed. They answered their purpose well, and were quite wild enough for anything; moreover, they were the most uniform and even lot of sheep we ever saw at any meeting—*i. e.*, they afforded fewer, what may be called, lucky trials than usual. One of the drawbacks to such contests as we are writing about is a certain amount of good fortune which may be obtained by one dog an easier trio of sheep to drive than another. However, with these Herdwicks the element luck was reduced to a minimum. The spectators were arranged upon the side of a hill, at the foot of which was a gully studded with trees. On the other side of the latter lay the course, semi-circular in shape, the boundaries defined by eight flags, outside which the sheep were to be driven. Toward the end of the course in front of the last flag a lot of hurdles were erected, extending from the wall to some distance up the field. In these hurdles or railings was a gap about two yards wide, and through it the sheep had to go, while some eighty or a hundred yards further on stood the pen in which the flock had to be "housed." The opening to this pen was but two feet wide, and with great difficulty only could the sheep be driven therein. At the commencement, the shepherd worked his dog from the foot of the hill where stood the spectators, the ravine and the trees being between the man and his collie. However, the wind was blowing in a contrary direction, and the dog could not hear orders, so after a couple of trials from that point had proven unsatisfactory, the shepherd was located about the center of the course, over the ravine, some four hundred yards from where the sheep were liberated. The course was undulating, as much so, that at times the collie would be quite out of sight of his worker. This made a difficulty. And again at the fifth flag there was a considerable decline or hollow, which had an attraction for the sheep, as leading directly to a corner in the field where some time or other might have stood a sheep fold. That point proved most fatal to the ultimate success of some of the competitors, especially as the remainder of the flags round which the little packs were driven lay to the left hand side of this tempting and easy declivity. After the trials which went for nought, as we have stated, the proceedings commenced with the Local Stakes, open to any places within ten miles of Greystoke. Ben was directed to his sheep, which he viewed soon after leaving their pen; he went round them on the high ground, bringing them the wrong side of the first flag, and also of the second one. Here he could not manage to work at all, and, after trying for considerable time, was called up. Toss, a white and black smoothish-coated dog, was a little time before he found his sheep; when he did so, he went up to them a bit roughly, and brought them inside the flags. About the center of the course one of the sheep bolted right down the field, and the dog, not being able to get the three together again, was called up. Meg, a pretty little black and white bitch, was worked by a shepherd of considerable character. The sheep were duly found and nicely driven for some distance, when the dog managed to get to the rear of them; they took back to where they had been released from, and were never afterwards recovered, so Meg was called up. Fan, directly she was let go, began to bark and was with difficulty sent round her sheep, which took up the hill, away from the course. Here they were soon lost, and poor Fan came back without success. The Southwaite dog, the last in the stake, had little to do to go in and win, but he actually worked worse than any which had preceded him. He took a fair course to his sheep, but all the persuasion of the shepherd could not make him go round them, so, as he showed no pretensions to excellence, he was called up. The judges very properly refused to award any prizes in this class, as no merit had been shown by any of the competitors. There was not a murmur at this decision, though there was grumbling at the time occupied in giving each animal in this stake a full trial.

All-Aged Stake (open to the district of the association). Mite went quickly to her sheep, but unfortunately got on the wrong side, which caused them to go right over the hill, when the bitch came back to her owner. She was, however, sent for them a long way back, and succeeded in getting well behind her sheep, and now showed some knowledge of driving, but, finally, going once more on the wrong side, the sheep went back to the pen and Mite was recalled. This was a long and tedious trial. Nell, a little black bitch, with white frill,

SCENES AT SHEEP DOG TRIALS.

went quickly along to her sheep, and got very well to the right side of them. She then, keeping at a nice distance, drove them quietly outside the first flag, then on the right side of some others till past the judges. Here, coming down the hill, the sheep were kept well together, but brought inside the next lot of flags. The hurdles were passed on the high side, but very cleverly the bitch took them back, through the gap, and so on to the pen. Here the sheep were very stupid, but, although Nell would not "lie down," the trio were penned safely in fifteen minutes. Young Mat was next released, and went quickly to the far side of his sheep on the low ground, driving them very quickly well outside all the flags to past the judges. Here, as usual, the sheep would come inside the boundary, and then ran down the hill to the wall side, and there huddled up in the corner formed of the junction of the railings with the wall. Mat was now sent over the latter and so succeeded in getting behind the sheep. One of them turned stupid and faced the dog, but Mat, sailing good naturedly, just backed. The sheep would not stir until, with a deal of persuasion, they began backing up hill, facing the dog, but gradually approaching the opening, through which they had to be driven. Now Mat showed some of the best form we ever saw at a trial, barking and bounding toward his flock, which steadily continued their course of backing. They actually went so to the opening, but even here they stuck for a time, and when persuaded through went pretty cheerfully to the pen, where, after some little work, they were safely ensconced. Time, nineteen and a half minutes.

Puck, another black and white bitch, got the sheep well enough round the first flag, then inside the next ones; but she took them back the right course for a time; then they made over the hill, and when next Puck appeared she had lost two of her sheep. The early work of this bitch was good. Mat is a little hard-haired dog, to look at almost as much a terrier as a sheep dog, but he is a variety we have seen do unusually well. He worked carefully a wild lot of sheep, driving at a nice distance behind them, rather slowly though. The early flags were taken on the outside, but at the fatal place past the judges, the sheep became almost unmanageable, and half way down the hill the dog appeared quite at a loss. Here much time was occupied. Ultimately most of the flags were rounded, but the sheep were not taken through the opening in the hurdles, neither were they penned. John, a grey colored dog, rather of the stamp of the last, found his sheep, but instead of taking them round the flags brought them to the judges, or nearly to them. When steadied and sent away again, they were taken inside the flags, and, being driven somewhat roughly the dog was called up. Next came the yellow and white dog Rob, not a bad looking collie by any means, and perhaps entered for the beauty prize. Certainly he was no worker, for although he undoubtedly saw his sheep he would not go past them, and appeared to us to put his nose to the ground as though in quest of a hare or rabbit; of course he was no use. Lady, a brown and white bitch, went well to her sheep, and when behind them waited patiently for orders. On the word being given she, keeping a respectful distance, drove her flock along and outside four or five flags. When down the hill the sheep turned and went back a bit but were ultimately made to return on the outside of the flags; at the lowmost flags Lady could do nothing, and failed to make further progress, although half the course was worked in very good form. Topsy, a little brown bitch showed considerable sense; too much, perhaps, for instead of driving the sheep as directed, just brought them straight to her worker. Belle made a capital commencement, losing no time in getting round her sheep, which she drove quickly some distance outside four flags, then inside the fifth, but outside the remainder, taking a capital course to the hurdles, the sheep not being allowed to get too low, and so into the corner. Then the gap was safely passed and to the pen. Here the sheep were unusually troublesome; at first one entered, then came out again, then a couple were within the hurdles, but only for a second or two. Finally, after showing capital work here as in driving, the sheep were penned in sixteen and a half minutes. Mr. Bracken's nameless animal (the committee should not allow entries so to be made), a black and tan in color, went quickly to his sheep and drove them round a couple of the flags. Then the flock would have its own way, bolted up the hill, but was after some little delay brought back, and so on outside three other flags; again the sheep broke away and were to be brought back, a feat safely accomplished. The remaining flags were rounded, and so to the hurdles. Missing the gap the first time of trying, at the second attempt they were driven through, then to the pen. Here the sheep were "housed" quickly. Whole time, twenty-two and a half minutes. Beauty, a good-looking, smooth-coated black and tan bitch, showed great pace, and at the outset considerable docility in going round her sheep on the low side and driving them outside four flags. At the fifth, the sheep broke away as usual, but in due course were brought back, then missing the lower flags, were taken through the openings in the hurdles to the pen. Here some capital work was done, and the feat accomplished in fifteen minutes. Although this bitch worked well and secured quickly, she did not show any particular work. Meg, next in turn, had worked previously in the local class and done badly. She now showed considerably improved form. Finding her sheep she, in answer to the voice of her shepherd, drove them quietly and patiently outside the early flags, crossed the difficult descent without scattering her sheep, and properly around all the flags but the lower one. The gap was safely passed, and so on to the pen. Now the shepherd caused considerable amusement by doffing his coat, which he held in his left hand, and, spreading out, used it to prevent the sheep bolting in that direction. Meg worked very patiently and sagaciously, crouching and creeping as the word was given. A troublesome lot of sheep were in the end driven into the inclosure in seventeen minutes, over five of which were occupied in penning. The awards of the judges were: Mr. J. S. Pattinson's Nell, first; Mr. Moscrop's Belle, second; Mr. J. Aikrigg's Young Mat, third; J. Bracken's nameless, reserve.

Champion Stakes, for previous winners of a first prize of £4, or upwards.—In this class the judges did not allow so much time in the commencement of the work, and any dog that began badly was at once ordered up. Fan, a red bitch, saw and went around her sheep very quickly, (using the first flag on the outside. At the second the sheep went away from their would-be guardians, and, becoming squandered, the first champion bitch was called up. Jack likewise commenced well, though his sheep came on the low side of the second flag, but he cleverly took them back again. Jack now did a little barking, and then got his trio under good command, driving them very nicely round all the flags, but he had occupied too much time in doing this as he approached the hurdles, so the flag went up against him. Bess, an active black and tan bitch, knew where the sheep were, and galloped well round them, and at a great pace hurried them along the outside of the earlier flags, taking a course rather too near the top of the hill. At the third flag the sheep had a notion of trying the lower ground, and came inside the boundary. Then they were driven the right course until the lower flags were reached, and this part of the course was omitted. Next the flock was taken through the opening in the hurdles and to the pen. Here the bitch proved herself an adept at this sort of work, and after considerable trouble, the task was *un fait accompli* in sixteen minutes. She missed going outside three of the eight flags. Mat took a very circuitous course to reach his sheep, but when they hove in sight were "surrounded" in correct fashion. So they were driven past the first flag then inside the next ones; and, perhaps thinking they had done wrong, the sheep went off boldly, and Mat, not being able to get on friendly terms with them again, was put out of court. Rob, a big, strong, brown-brindled dog, came with a great reputation, which he sustained quite as well as he was able to do under the circumstances. Reaching, then getting on the right side of the sheep, he drove them faultlessly round to the fourth flag, which they took on the inside, next properly outside the others all but the lower one, which most other competitors had omitted. In running down the hill, Harding, who was working his dog, fell; but the animal took no notice of the accident to his master, but, all on duty, drove his sheep through the gap in the hurdles and to the pen. All this work had been done quickly, occupying but eight minutes. Now came the most troublesome portion of the business, for the sheep were not safely penned until twelve minutes more had elapsed—twenty minutes in all. It was the stupidity of the sheep, and not any lack of skill in either dog or shepherd which caused so much time to be lost here. Rap, a brown and white dog, seven years old, met his sheep as they emerged from the pen with their heads in the right direction. Going around them they were driven outside the first two flags, but inside the next one; then down the hill over the proper course, rounding the boundary correctly and in good form. The hurdles, too, were quickly negotiated, and even at the pen the sheep gave little trouble, for they were got inside in eight minutes from the commencement. Very quick time, which the judges must have considered in a measure due to the easiest lot of sheep which had been let loose that day. Rake was a little slow in getting to the sheep, but when there went carefully by them and drove with patience and skill round the earlier flags; then the sheep showed an inclination to go over the hill, and on being turned reached right down to where the judges stood. Here they (the sheep) became separated, and the dog was called up. Fly, a repeated winner, although she was unsuccessful at the Alexandra Palace trials, had now a turn. She is a tan and black bitch, inclined to be smooth-coated, nice-looking, and a "good one to boot." She was very care-

ful and a little slow in going to the sheep; when behind them she waited patiently for orders, and subsequently drove steadily and soberly, going neither too fast nor too slow. Passing the middle of the course the sheep went rather on the high ground, but were still kept well in hand. After bringing them back the sheep came just on the inner circle of two flags, but the others were rounded all right. Reaching the hurdles the sheep ran by their side and round the upper end of them, but were driven back and down through the gap therein, and then safely to the pen. Here but two minutes were occupied in housing a fairly wild and uneasy lot of sheep. Time, thirteen minutes in all. Mr. R. Huck's Fly worked very sagaciously, and her sheep were sufficiently wild to enable her to show many good qualities. She was awarded first prize, second going to Mr. Udale's Rap, while Mr. Harding's Rob had the reserve number.

The last stake on the card drew fourteen entries, and, as it was purely a local one, being confined to the district included in the Kendal, Kirby, Lonsdale, and eastwards of Westmorland. The course was somewhat shortened and made much easier. The lower flags were removed, and the competitors were not required to bring the sheep through the opening in the hurdles. Moreover, they were each restricted to seven minutes in which to perform their allotted task. The prizes, five guineas and two guineas respectively, were given by Mr. B. H. Wakefield. The first animal called out was Meg, belonging to Mr. Irving, Forest Hall, and which had been worked in two previous stakes. Now she went away well to her sheep, driving them round the flags all right, and the now easy course was soon gone over and the pen reached. Here more than the allotted time was spent before they were housed, and Mr. Martindale's Watch was let go before that feat was accomplished. This dog drove well, though slowly, and, not penning at all, was out of the hunt. Mat, belonging to Mr. A. Krigg, only contrived to send the sheep round the first flag in the time allowed, so he was called up. Mr. Huck's Rap worked his sheep well until approaching the spot where the judges were stationed. Here the trio rushed down the hill, and before they could be got well together again the stipulated time had gone. Mr. T. J. Wilson's Jan, a nice looking black and tan bitch, went a long way round her sheep, and slowly drove them outside the flags toward the centre of the course. Then the sheep bolted, but Mr. Wilson, who worked his own dog, though the flag was against him, got his flock to the pen. Here considerable amusement was caused by his vain and long-continued efforts to pen, which resulted in the loss of one of the sheep. In the meantime Nell (Mr. Pattinson's—the same that won the open stakes—was at work, and sent her sheep along capitally, the usual flags being rounded on the proper side. Then in coming down the hill the sheep were unruly, and disturbing a rabbit, which Nell speadily killed, reached wildly away. Before they could be gathered again the time had flown, so Mr. T. Udall's Lady was tried. She quickly found her sheep, and, taking the right course, prevented them breaking away, so the pen was reached in good time. Here, for a wonder, the little flock was not unruly, and almost immediately entered the inclosure. Mr. Martindale's Mite showed capital form, and until she lost her sheep at the pen, looked like winning or coming second. Peace, Mr. Garlick's, Kirby Lonsdale, a very handsome black and tan dog, has a capital idea of driving; but, although he took the sheep outside the whole of the flags, failed to pen them within the time. The prizes were thus awarded: First, Mr. Udall's Lady; second, Mr. Irving's Meg; reserve number, Mr. Garlick's Peace.

When the last trial was run the sun had set, and a chilly air prevailed, so no time was lost in mustering the competitors, in order that Lady Bective's cup for the handsomest collie on the ground should be awarded. Only three dogs competed which had worked satisfactorily. There was, as the saying is, "but one in it;" and Peace, the dog which had run last, was awarded the coveted honor. Then Lord Bective and Mr. Longrigg read out the list of awards, at the same time distributing the prize cards. Hearty cheers followed for Mr. H. C. Howard, who had so generously set a portion of his park at the disposal of the committee, and to the local and general management of the trials.

As a genuine test of the working merrits of collies, these trials proved the most satisfactory we ever attended. This was undoubtedly because the judges in making their awards did not abide altogether by the time test. It was not the dog which actually penned in the quickest time, irrespective of the form he showed, which attained the premier position. Actual work was the test, so long as it was performed within fairly reasonably limits. We have at times advocated this course, and are pleased that now, when adopted, it proved so satisfactory. The awards of the judges throughout were made without a mistake, and even the unsuccessful competitors, did not grumble. That a considerable amount of luck is required to win one of the stakes, there is proof enough in the varied performances of some of the animals which competed more than once. Very much depends upon the nature of the sheep; but when the judges are not hampered by having to award the prize to that dog which performs his work in the quickest time, the amount of luck required is considerbly reduced, and therefore actual merit more likely to obtain its due recognition.—*London Field.*

FOX HUNTING IN GEORGIA.—Macon, Ga., Oct. 16, 1882.—*Editor Forest and Stream:* I have just read "J. D. H's" article on fox hunting in Tennessee, and enjoyed his "bout" very much. I sent you an extract some months ago from our daily paper here, giving you some idea of Manuel Hunt's pack of hounds. Capt. Ham Ridley, who lives in an adjoining county, has by far the finest and most celebrated hounds in Middle Georgia. He has bred a cross between an Irish dog and Maryland hounds, and for speed and staying qualities they are hard to beat. During the last season he caught between forty and fifty foxes, mostly red, and rarely ever runs a gray over ten minutes, and a red thirty to sixty minutes, according to the starts. This pack caught five successive gray foxes, and did not run either of them over five minutes after jumping. Capt. Ridley has invited me to visit him soon and as I hope to do so, will report success.—I. H. J.

EASTERN FIELD TRIALS.—The Associated Railways of Virginia and the Carolinas have issued instructions to their agents to transport free over their lines all dogs for the trials when accompanied by an attendant. Those who wish to avail themselves of this privilege should address Mr. W. A. Coster, Flatbush, N. Y., who will furnish necessary papers. The Bellevue Hotel, High Point, Mr. J. L. Waldrop, proprietor, will be headquarters during the trials. We have received several letters from the vicinity of High Point, and all agree that birds are plenty. The entries for the Members' and All-Aged Stakes are coming in freely, and the indications are that they will be nearly, if not quite, double those of any previous year. All who intend running their dogs should bear in mind that the entries close next Wednesday, November 1.

HARRY MALCOLM.—It gives us great pleasure to notice that Harry Malcolm, who is well known to our readers, has been appointed agent, at Baltimore, of the Star Union line. We congratulate Mr. Malcolm upon his promotion, and trust that his new duties will not prevent our readers from occasionally perusing articles from his able pen.

COURSING.—The match between the celebrated greyhounds Snowflight and Waterford, which was to have taken place at Newmarket, Eng., on Oct. 14, did not come off, Waterford having paid forfeit.

ST. BERNARD CLUB BENCH SHOW.—We have received the prize list of the St. Bernard Club's (English) Bench Show, to be held on November 1, 2 and 3. There are twenty-two classes, with over $900 in cash prizes. There will also undoubtedly be a large and valuable list of specials offered by the gentlemen who are interested in this noble breed of dogs. The Rev. J Cumming Macdona will act as judge. We wish the club all success in its laudable efforts to maintain the purity and improve the quality of this magnificent animal.

A PACK OF BEAGLES.—Port Henry, N. Y., Oct. 17.—Game birds here in the north are very scarce, but foxes and rabbits plenty. So after the advice given in FOREST AND STREAM, that considerable sport could be had after the beagles, I consulted your advertising columns and made a strike for some, succeeding finally in getting a little pack of ten together, and with them I have had (in the words of the small boy) "more fun than a circus," and want to thank you for the suggestion.—W. C. W.

SCENES AT SHEEP DOG TRIALS.—We give our readers this week a capital illustration of some of the scenes witnessed at collie trials. The cut is reproduced for us from the London *Graphic* by the Rockwood Photo Engraving Co., 15 City Hall Square, and is an excellent piece of work.

LARRY AND GUSSIE.—Mr. Wm. H. Pierce, of Peekskill, N. Y., has sold his brace of red Irish setters, Larry and Gussie, to Dr. J. W. S. Arnold, of New York. Both are capital fielders, and we congratulate the Doctor upon the possession of so good a pair of animals.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

Sir Launcelot. By Mr. Wm. Wade, Pittsburgh, Pa., for mastiff dog, whelped Sept. 5, 1882, by Taurus II. (E. K. C. S. B. 9,339) out of his recently imported Dhuad II.

Rory B. By Mr. Albert Wylly, Savannah, Ga., for red Irish setter dog, whelped March, 1881, by champion Rory O'More out of Norah O'More.

Leda. By Dr. E. C. Frankin, Ann Arbor, Mich., for black cocker spaniel dog, whelped July 6, 1882, by imported Montague (Baron—Queen) out of his imported Leda.

BRED.

☞ *See instructions at head of this column.*

Jester—Onward. Mr. W. C. Witherbee's (Port Henry, N. Y.) black, white and tan beagle bitch Jester (Frank—Venus) to his Onward (Frank—Blue Belle), Oct. 12.

Fire Fly—Onward. Mr. W. C. Witherbee's (Port Henry, N. Y.) black, white and tan beagle bitch Fire Fly (Frank—Venus) to his Onward (Frank—Blue Belle), Oct. 15.

Mary Druid—Dashing Berwyn. Mr. J. A. Rockwood's (West Medford, Mass.) black, white and tan English setter bitch May Druid (Druid—Nillson) to Dashing Berwyn (Dash II.—Countess Bear), Sept. 21.

WHELPS.

☞ *See instructions at head of this column.*

Judy. Mr. Wm. R. Hill's (Albany, N. Y.) imported Dandie Dinmont bitch Judy, Oct. 14, four (two dogs), by imported Waltz.

Nellie. Mr. Wm. R. Hill's (Albany, N. Y.) imported collie bitch Nellie, Oct. 16, six (all bitches) by Mr. Thos. H. Terry's champion Tweed II.

Wasp. Mr. Wm. R. Hill's (Albany, N. Y.) fox terrier bitch Wasp, Oct. 18, eight (five dogs) by imported Peirgrine Pickle.

SALES.

☞ *See instructions at head of this column.*

Bang—Jean whelps. Pointers, whelped July 10, 1882, by Mr. Geo. E. Poyneer, Dayton, Ia., a liver and white dog to Mr. E. B. Downing, Wilmington, Del.; a liver and white dog and bitch to Mr. A. A. Roos, Lyons, Ia.; two lemon and white dogs to Mr. W. B. Stafford, Elmore, Minn.; a lemon and white dog to Mr. W. P. McCreary, Cedar Rapids, Ia.; a lemon and white dog to Dr. H. Brewbridge, Natrona, Pa.; a lemon and white dog to Mr. Ed. Aiken, Atalissa, Ia.

Dorothée. Black greyhound bitch, whelped Sept 15, 1879 (Roi du Combat—Sefatica), by Mr. L. C. F. Lotz, Chicago, Ill., to Mr. H. W. Huntington, Brooklyn, N. Y.

Druid—Gessie whelps. Blue belton English setter bitch, whelped Feb. 14, 1881, by Druid out of Gessie (Dash III.—Modjeska), by Mr. J. A. Rockwood, West Medford, Mass., to Mr. A. A. Whittemore of same place.

Jean. Lemon and white pointer bitch (Glenmark—Girl), by Mr. Geo. E. Poyneer, Dayton, Ia., to Mr. John J. Ohrt, Burlington, Ia.

Lady Bang. Lemon and white pointer bitch (Bang—Jean), by Mr. Geo. E. Poyneer, Dayton, Ia., to Mr. W. P. Stone, Atalissa, Ia.

Rip. Chesapeake Bay bitch (Gowrie—Fan), by Mr. Geo. E. Poyneer, Dayton, Ia., to Mr. E. S. Payson, Boston, Mass.

Bruce. Tawny red Scotch collie, whelped September, 1881, by champion Tweed II. out of Elsie, by Mr. Robert Mackey, Youngstown, O., to Mr. Thos. H. Terry, New York.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Bang—Jean whelps. Pointer bitches, whelped July 10, 1882, by Mr. Geo. E. Poyneer, Dayton, Ia., one (liver and white) to Mr. W. B. Stafford, Elmore, Ia., one (lemon and white) to Dr. H. Daly, Pittsburgh, Pa.

Bertie Jardin. Orange and white setter bitch, whelped July 12, 1881 (Leicester—Crook), by Major G. R. Watkins, U. S. N., Brooklyn, N. Y., to Mr. Geo. T. Leach, New York.

KENNEL MANAGEMENT.

SUBSCRIBER, Bay City, Mich.—See answer to B. D. this week.

W. J. H., Hartford, Conn.—We should judge from your description that your dog has mange. Wash the sores with dilute sulphurous acid.

E. A. D., Melrose, Mass.—You do not give a description of symptoms sufficient for us to form an opinion of the case. Write again giving full particulars and we will prescribe.

G. M., Savannah.—1. Dinks, Mayhew and Hutchinson on the dog, treats of their diseases and management. Price $3. We can send it. Consult instruction at head of Kennel Notes.

B. D., Annapolis, Md.—For canker in the ear use of bromo chloralhm and laudanum equal parts, diluted with six times their bulk of water. Fill the ear and gently knead the base for a short time and repeat in 24 hours. Two or three applications should effect a cure, unless of long standing.

J. H. F., Gloversville, N. Y.—Your dog undoubtedly had an epileptic fit. The dose of salt was wrong. Do not give him exercise after eating, until his food is digested. You do not state his age, but if young he may outgrow it. We would advise two grains of bromide of potassium in a pill twice a day for two or three weeks.

L. VAN D., Littleton.—To kill the lice on your dog, tie up in a piece of muslin two ounces of quassia wood chips and suspend them for two hours in a pail of water, occasionally stirring it. Use this to wash the dog, with plenty of soap, rinsing off with clear water. For the lump on his throat, with a small brush paint it with tincture of iodine; repeat in a day or two.

C. T. R., Ausable Forks, N. Y.—My cocker spaniel puppy, 10 months old, has decayed teeth, the ends of nearly all of them slightly decayed and of a yellowish color. In teaching him tricks I have fed him a great many baker's cookies as a reward. These contain some sweetening, but I did not think enough to damage his teeth. Can you give me the reason for this decay and suggest a remedy? Ans. It is very probable that the cookies are the cause of the trouble. Take one grain of chloride of zinc to one ounce of water. Apply with a stiff tooth brush twice a day.

F., Foxburg, Pa.—1. Will you advise me what remedy to apply to a setter dog whose eyes appear to be rising, or more properly the skin covering is falling over the eyeball, leaving in lower part of eye a fleshy part exposed. It has been growing worse and worse for a long time, until now very little of the eye proper appears. 2. I have a setter bitch in season that I have had to keep shut up between two and three weeks. Is it not longer than usual, and is there any remedy? Ans. 1. Bathe frequently with warm water to which a little vinegar and laudanum have been added. We fear that this case is of so long standing that an operation will have to be performed, and would advise you to consult your family physician. 2. This is not an unusual length of time. We know of nothing to shorten the length of the season, except perhaps a low diet with an occasional small dose of salts or other cooling medicine.

Persons wanting beautiful large watch dogs are referred to advertisement of Charles F. Kelly.—*Ade.*

Rifle and Trap Shooting.

ONE VIEW ON THE MATCH REPORT.

Editor Forest and Stream:

After a careful reading of Col. Bodine's report in your last issue I find it so different from what would naturally be expected from the result of the whole match, that I am constrained to say a few words about it, and having been on the grounds prior to, and at the time of the match, also having had some experience in rifle shooting, I can speak from actual knowledge.

It appears that the Colonel's ideas in regard to the selection of a team have undergone a radical change. As heretofore our teams have been selected by actual competitions at Creedmoor, and invariable success has attended such selections. His statement that "the made of selections of teams by competition has only one advantage in matches of an international character" is open to question, but whatever that advantage is it has been with us. If the Colonel wishes to import the British idea of appointing places on the team, I predict a miserable failure, from the fact that there are not perhaps one-tenth of the number of prominent shots in this country that there are in Great Britain that would be eligible for a place on the team from which to make the appointment. The idea is not American at all; for a body of men who compose a team, if they wish to foster the *esprit de corps* and have harmony among its members, twill be found necessary that they should have the appointing power as to their own officers. The Colonel's idea of a team would imply that he wanted a machine made to his order and fitted up with automatons, with certain motions and methods decided upon beforehand by himself.

But it must be remembered in this connection that a team of riflemen are composed of flesh and blood and are unreliable in a certain measure, and need more careful management and nursing than any machine with patent keeping, knowing and genius manufactured, and it would seem to require a captain with a genial and happy manner, one that can stoop to the position and take an interest in each individual member of the team, and not one to stand on a dignified pedestal with starched collar and shirt bosom.

Is the Colonel sure also he made no mistake in attempting to enforce his own make of ammunition on the team? How could he expect them to accept his advice in this regard when he had never shot the guns over the ranges, and never experimented with each identical gun to know whether it would give a better result with his ammunition than with that of the man who was shooting the rifle each day.

When we find that the men were compelled to use Colonel Bodine's ammunition, perhaps it will explain some of the misses and outers and the marks made by members of the team on the boards, rags, etc.

Colonel Bodine, in speaking of the experiments made at the factory with the ammunition as furnished with the rifles, uses some very strong language. It would be interesting if we could have access to the records wherein the members of the American team had practiced with his own lubricants and bullets and ammunition; to have proof that his methods are much better than those employed at the factory.

"Guns grossly unworized in basie," etc., etc., we find with the Remington gun there were extensive experiments at the factory, and the ammunition adapted to it to such a degree that very fine shooting was the invariable result when used according to directions.

Colonel Bodine, finding himself whipped at the 200yds. range by the English team, it would seem from his report, desires to enfore the adoption of what is known or called the "picture position" for off-hand shooting at range. It is only necessary for any rifleman to take his rifle and hold "with the left arm fully extended" to reject the Colonel's short practice of splitting and trembling the extended and strained muscles, which precludes the possibility of holding with that positive firmness and solidity which can be done with the elbow drawn close in against the side or body, and still command the 200yds. range. The position of the National team at 200yds. is nearly the whole length of the barrel.

Colonel Bodine says: "In the prone position the hand should grasp the barrel in front of the action."

Now, as the forward part of the stock does not extend in the rear of the action, it would seem that his advice in this direction is superfluous.

He says: "Nor do I think that coaching the military team with the present sight can be done with any marked success;" he only went through the motions "to satisfy the public and prevent strictures from the press."

The remarks of Colonel Bodine as to the effectiveness of the English guns, and his comparison of our guns with theirs, are quite to the point. How can our makers get out a gun that will be perfect in all the necessary requirements without the advice and experience of men that may be sent to go out and make use of the whole subject in the open air and at the extreme long ranges?

The results of experiments conducted with rifles and ammunition at 200yds. range are not a criterion or sure test for accuracy at 1,000yds.

As to the allowance on guns. If the match, as the Colonel says had been up to 600yds., and the N. R. A. could have arranged the conditions as favorably for the N. Y. State National Guard rifle as they arranged it for the regulation musket at Creedmoor at the fall meeting, they could have allowed points enough in favor of that weapon, undoubtedly, to have won the match.

Had the National Rifle Association encouraged the style of shooting to which this team was confined as much as they have fostered the shooting of the .45-cal. Remington at Creedmoor, the result would certainly have been as predicted by Colonel Bodine.

It is true that the English riflemen came here with fixed ammunition; they were not bothered in any way in reloading, as our men were; still the fact remains that no factory in this country has ever produced ammunition that will shoot with accuracy, even in the long-range match rifle, which is cleaned out after each shot. Each rifle has peculiarities of its own; it must be arranged for in its ammunition. We surely hit the point well taken on the ammunition as being defective, seeing it was all Bodine's. The British service has adopted a certain style of ammunition, and the manufacturers have adopted the rifle to shoot that ammunition; hence the reason for their fine shooting of this prepared ammunition is quite apparent.

Any rifleman who should get a series of bad shots from ammunition that was made by any one but himself, would at once blame the ammunition as the reason of his bad shooting, thus losing confidence

in the whole stock of ammunition, and losing interest also in the match.

The Colonel lays great stress on his desire to be able to thoroughly discipline the members. Let me ask, does this kind of work make bullseyes? Far from it; each member has a friend in his brother-shooters, and in some cases the chords of friendship are too strong to be severed in the peremptory manner indicated by the late captain. Let the captain and adjutant of the team treat each member as their equal, and approach each member in a reasonable and sensible way. Neither should he have power to disqualify a member for the mere expression of an opinion that there was "too much wind to-day to make a full score," or words to that effect. NAT G.

RANGE AND GALLERY.

THE MATCH OF 1882.—The Special Committee of the Board of Directors of the National Rifle Association charged with the management for American riflemen of the match of 1883, met on Tuesday last and decided on asking some important concessions from the British board. Colonel Bodine said that the conditions of the match of 1882 had been dictated entirely by the visiting team, and that in place of holding to them an effort should be made for better terms for the Americans. The points asked were the use of the wind guage, the use of a barley-corn sight, thin at the bore, in place of the present form, and finally a rule which should permit of men on the team who joined the National Guard after last Sept. than January next. A letter making these requests was ordered to be sent by the secretary. It was also proposed to purchase a dozen English rifles to be placed in the hands of the coming American team.

LUTZOW RIFLE CLUB.—New York, Oct. 15, 1882.—The first annual prize shoot of the Lutzow Rifle Club was contested for at Steinbrenner's, Guttenberry, N. J. Conditions: 10 shots per man, ring targets; possible 250; distance, 200yds. B. Zettler 215, V. Steinbach 232, Chas. Weegmann 196, Capt. L. Zucker 185, A. Ringler 176, H. Berger 175, H. Backmann 170, F. Meier 161, G. Berigus 154, L. Zitzmann 148, H. Ulmer 145, F. Wiedeler 139, H. Hauser 124, J. Hartmann 116, C. Gunther 112.

NEW YORK, Oct. 17.—The match between the Lutzow Club of New York, and the Celluloid Club of Newark, N. J., has been decided in favor of the Lutzow team. This is the third match. It was won once by the Celluloid team and twice by the Lutzow team. The conditions were as follows: Creedmoor target, 10 shots per man; possible 50; ten men on a side. Lutzow team, Capt. Zucker, 441; Celluloid team, Capt. McVoy, 437.

BOSTON, Oct. 21.—The riflemen have been busy at Walnut Hill range during the past two days with the matches of the fall meeting of the Massachusetts Rifle Association. The weather conditions on both days were favorable, and a good attendance was shown. The shooting was entirely at 200yds., but at various targets. The scores stood:

Decimal Match.

Conditions—Rounds, 7; 3 scores to win; entries unlimited; to run through both days. Prizes—Trophies, 12 in number of the total value of 70 per cent. of the entire entry fees.

G F Ellsworth	62	63	61—186	A Duffer	58 57 58—173

WORCESTER, Mass., Oct. 20.—The fall series of matches, under the auspices of the Worcester Rifle Association, were continued today. The attendance was good. The wind was light from 12 o'clock by the dial. The front of the targets were somewhat obscured by the settling of the rifle smoke. The following are the scores, made off-hand, distance 200 yards:

Massachusetts Target.

M Gregory	9	11	11	11	10	10	12	10	11	9	—104
C A Allen	12	10	10	9	9	11	10	10	10	12	—104

G H Cutting	4	5	3	4	4	4	4	4	5	4—41

NEW ORLEANS, Oct. 14.—The sixth contest for the Hill trophy took place this afternoon, and was won by the Continental Guards for the third time, and the cup becomes their property. There was a very annoying wind at about 1 o'clock, which bothered the marksmen considerably. The Washington Artillery team improved very much, but they failed to reach the Continentals. Dudley Selman was to the front yesterday, leading the score by one point. It is gratifying to see this fine rifleman once more interesting himself in these contests, and it is certain that in a short time he will regain his magnificent shooting qualities and take his position in the front rank of riflemen. Owing to the irregular attendance of the Louisiana Field team, their shooting is a little off, but this will not be for long. The Continental team deserves credit for their achievements with the rifle, and they will be congratulated on their splendid victory. The score was as follows:

Continental Guards—Team No. 1.

	300yds.				500yds.				
J K Knight	4	4	3	4	4	4	4	5	4—32—57
Geo Howe	4	4	3	4	4	4	4	5	5—33—58

It is said that a friend of rifle shooting intends to offer a very handsome prize for competition among the different teams. The shoot for the Hepburn rifle will probably be an individual shoot instead of a team contest.

SPRINGFIELD, Mass.—The Rod and Gun Club will hold its annual fall meeting at its range, October 30 and 31, for which they offer the following programme:

Continuous match—Open to all comers. Any rifle within the rules. Conditions—1. Number of shots to score 7; 2. The aggregate of three best scores made during the tournament to count for a prize; 3. Entrance fee, $1; entries unlimited. The list of prizes is as follows: $50, $35, $12, $8, $7, $6, $5, $5, $5, $5, $4, $4, $3, $3, $2, $1.

Bullseye target (Massachusetts)—Ten tickets for $1; bullseyes, 12's only to count, to be paid 25 cents; $5 will be paid for the most bullseyes made during the tournament, and $2 for the second best.

Team match (Massachusetts target)—At 2:30 P. M. on the first day of the tournament; open to teams of five men from any rifle association; score, 7 shots; entrance fee, $5. Prizes: First, 50 per cent. of entrance money; second, 35 per cent. of entrance money.

TROY, N. Y., Oct. 17.—At the regular monthly practice of Trojan Rifle Club to-day, the following scores were made: R. Bovee 168, Geo. Pollock 178, Geo. W. Gemmill 180, Frank Ritchie 168, A. P. Wight 130, I. S. Nickerson 188, W. D. Taylor 161, Chas. Babcock 165.

THE TRAP.

ALGONQUINS vs. WASHINGTON HEIGHTS.—A friendly match at glass balls between the above clubs was shot on Thursday, October 19, at the spacious grounds of the latter club at Inwood-on-the-Hudson. The match was eight men each club, twenty-five balls each, thrown from a rotary trap, and resulted in a victory for the Algonquins. The match was gamely contested throughout in the midst of a heavy rain, and some fine scores were made. It was a matter of regret with all present that, owing to the drenching rain, the match ended with the sixteenth ball, as otherwise the afternoon's sport promised to be one of rare pleasure to all. A brief cessation of the rain at the close of the day gave opportunity for a lively "sweepstake," in which all hands joined. Adjournment to the Washington Heights headquarters—Sand's Hotel—was next ordered, and here a surprise awaited the Algonquins in the form of a bounteous collation all in readiness. To have heard the yelp of delight sent up by a certain chief of the Algonquin tribe, as he cast his hungry eye on the tempting viands was simply soul stirring, and roused the dormant enthusiasm of his "braves" for vigorous onslaught. Delighted appreciation gleamed from every face as the feast began, and the smacking of hungry palates and general jubilee an aged "Sachem" was heard to murmur "Long live the fountain head." "So say we all of us," whooped every "brave," thus

"The feast went on, and the flow of soul
Did all hearts warm; and gladness beamed
From every eye."

That other as pleasant reunions are somewhere in the near future, and that long life and prosperity may always attend the Washington Heights Gun Club is the wish of every true-hearted Algonquin.

PROVIDENCE, R. I., Oct. 19.—Narragansett Gun Club, seventh contest for club medal, 20 balls per man, 21yds. rise:

W G Crandall	1	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	—18

C F Baldwin	0	1	0	1	0	0	0	0	0	0	0	0	1	0	0	1	0	0	1	1	0	— 4
G J Crandall	1	0	1	0	1	0	0	0	0	withdrew												— 4

Ties on 18, 3 balls: W. H. Sheldon 1, G. Crandall 0.

The following is the second contest for the solid silver cup, clay pigeons:

J B Valentine	1	1	1	1	1	1	1	1	1	1	—15	W H Sheldon	1	1	0	1	1	1	1	1	1	1	0	—12
G J Crandall	1	1	1	1	1	1	1	1	1	1	—14	W Cary	1	0	0	1	1	1	1	1	0	1	1	—11
C H Perkins, Jr	1	1	1	1	0	1	1	1	1	1	—14	D F Baldwin	1	1	0	1	0	1	0	1	0	1	1	—11
S D Green, Jr	0	1	1	0	1	1	1	1	1	1	—13	O H Baker	1	0	1	1	1	0	1	0	1	1	0	—10
W G Crandall	1	0	1	1	1	1	1	1	1	1	—13	E Pratt	1	0	1	1	0	1	0	1	0	0	—	9
E W Tinker	1	1	1	0	1	0	1	1	1	1	—13	L Bennett	0	1	0	1	0	0	1	0	0	0	—	5

J. B. Valentine wins the cup for the second time. Cup to be won three successive times to become personal property. For a time gold locket donated by one of the members for second prize in this shoot, G. J. Crandall and C. H. Perkins, Jr., having tied on 14, shot off at three clay pigeons each, scoring: G. J. Crandall 2, C. H. Perkins, Jr., 1.

FALL RIVER, Mass., Oct. 12.—The Fifteenth and final competition for the silver cup given by the Fall River Gun Club took place this afternoon, and was won by W. H. Sheldon, by the following scores:

	Balls.	Clay pigeons.
Sheldon	11110 01111	1 111 11111—17
"Jackson"	11101 10111	11101 11011—16
Valentine	11111 11111	11011 11111—17
Hall	11111 00101	10011 10111—15
Negus	01011 00011	00011 11100—14

The number of times won by the various members, and the winning scores are as follows:

Sheldon, 5 times, 18, 18, 17, 17, 17; Valentine, 3 times, 17,19, 17; Ruffinton, 3 times, 19, 18, 17; Hall, twice, 17, 18; "Jackson" once, 18; Crandall, once, 20.

The match for club badge resulted as follows; 20 glass balls, 18yds. rise, Hudson trap:

"Jackson"	11111	01111	11111	10111—18
Hall	11111	11011	11111	01011—17
Valentine	11011	11111	11010	11100—16
Negus	11111	11100	11111	01001—15
Sheldon	11111	11111	withdrawn.	

FIRST GERMAN GUN CLUB OF NEW YORK.—New Dorp, S. I. Sept. 20, 1882.—The regular quarterly shooting of the above-named club took place on Sept. 20, 1882, at New Dorp, S. I. The score was as follows, 21yds. rise:

H Otten	1011111111—9	J Glaecum	1111111111—10
H Otten	1110101110—7	J Klein	0111101000— 5
F Jenner	1111101001—7	C Brown	1111111110— 9
L Maisch	1111110111—9	F Bockelmann	0010111110— 6
H Zahn	1101111110—8	F Oppermann	1110111111— 9
Dr Hudson	1111010010—5		

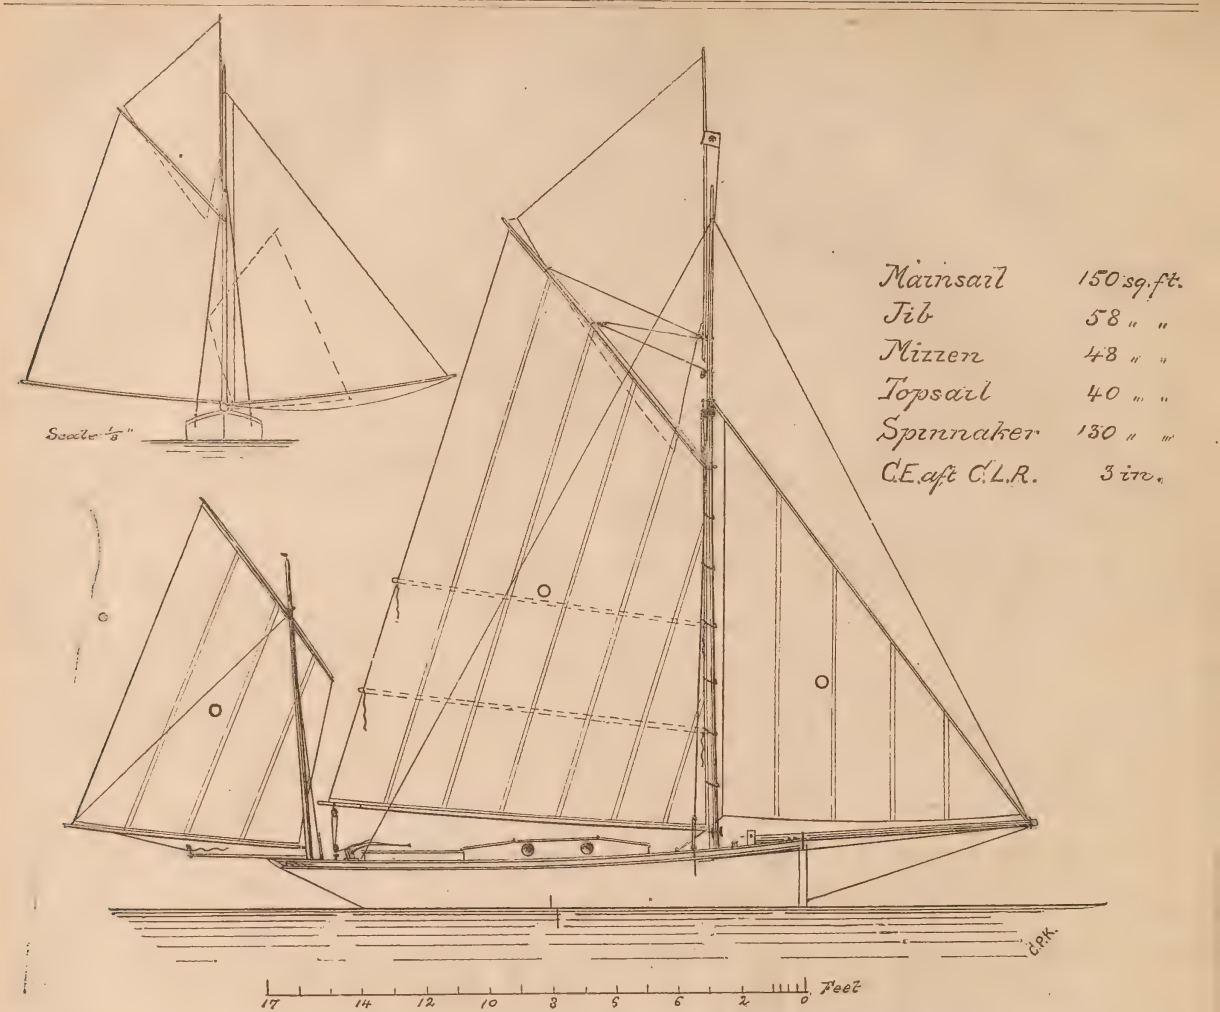
The first prize, a gold medal, was won by Glaecum with 10 out of 10, and the following score was made for the second prize, consisting of $15:

Klein	101—2	Brown	111—3
Maisch	010—1	Oppermann	111—3

Oppermann and Brown being tied they shot off with 3 birds each with the following result:

Brown	011—2	Oppermann	011—2

The ownership of the second prize not being determined yet, it was at last determined by the score below:



C Brown	11—2	F Oppermann	10—0

Mr. L. Maisch shot at 25yds.—F. P.

NASHVILLE, Tenn., Oct. 16—Andy Meaders shot a match at glass balls to-day for $100 a side, he wagering to break 185 out of 200, 100 single balls thrown at angles and 100 double balls. The following is the score:

Double Balls.

11 10 11 11 10 10 11 00 11 10 11 11 11 11 11 11 11 10 10 11 11 10 11 11 11 10 10 11 11 11 11 11 11 11

SAIL PLAN FOR SINGLE HAND CRUISER. (See Last Issue).

agitation will ever be opened again in favor of L × B × D. So far as present opinion goes on the subject, there is a growing feeling that a rating ought to be based on either sail power or sail spread, and the objection to such a rating at present consists of the bare statement that these things ought not to be rated; but it is just as easy to say that length or breadth ought not to be rated. There is not the smallest doubt that the one aim of the designer to put the largest quantity of lead outside a yacht has grown to be an evil; and it is useless to attempt to modify the evil by urging that it may be possible to build a satisfactory vessel which has only a moderate quantity of lead outside, in the face of the absolute certainty that one with the whole of her lead outside, other things being equal, will be the most satisfactory vessel for racing, and beat the other as often as they meet."

The above, taken from the London *Field*, is of interest as indicating the growing preference abroad for narrow cruisers as well as racers. We have, however, quoted the article quite as much as proof of the best sort, because unintentional, of the soundness of measurement by bulk, which we have insisted upon as the only logical basis of competition. In trying to draw a rational comparison between the performance, speed, accommodation, etc., of two yachts, the writer in the *Field*, for the moment left free from artificial restraint imposed by existing racing rules, falls back by intuition upon *bulk* as the basis for his conclusions. We have italicised the passage referred to in the quotation from the *Field*. We find the writer aiming to give an impartial verdict upon the qualities of the two yachts of different form. While conceding in the first part of his essay the broad fact that a large boat has an advantage over a small one in her behavior which may not be due to form, but to size, the writer finds himself obliged to narrow down his comparison to two boats of different type, but of like bulks, *regardless of differences in dimensions*. This he does in the following words:

"It will be necessary to show the advantages of length and depth, taking a bulk standard." That is to say, for conclusions having real meaning—for conclusions the correctness of which extraneous, irrelevant or conceded advantages of mere size of itself, shall not mar so as to mislead, the *Field* deems it right that no notice should be taken of any differences in shape, though the two shapes should equal each other in bulk. In fact, in the comparison the difference in shape is really on trial, not any difference in size. Both subjects in the contest are permitted to assume what shape they wish, and therefore such dimensions as may be necessary, but one must not out-top the other in bulk or size, as that would at once render the comparison unfair to the smaller one, the form of the larger boat getting credit for what is really only due to excess in bigness.

No person will question the soundness of the *Field's* logic in this case. The whole question in point is too plain and simple to admit of dispute. It is this: "Which *form* will give the best results?" It is not "which size, large or small, is best." Everyone knows the answer to the latter query. The *Field* is seeking a solution of the first. Manifestly a truthful end can only be obtained by barring what is due to size, or what amounts to the same thing, by starting the comparison on equal bulks, but of varying form. That is just what the *Field* concedes in the words "it is necessary to take a bulk standard."

On our part we now take up this admission of our contemporary as the text of a further argument. We will carry out the thing to the end as applied to sailing races. The *Field* wants to reach truthful answers between two different forms as to their speed, seaworthiness, efficiency, etc., and starts on a basis of bulk.

Now, sailing matches are instituted for *exactly the same purpose*. We do not race yachts to learn what we already know, that in winds strong enough to develop qualities, size has an innate advantage. The object is to test the *forms* of the boats, devoid of the interference or the prejudicial favors due to difference in size or bulk. The object being the same, we are justified in utilizing all the logic and influence of the *Field's* article, as so much solid proof of the most natural kind, coming from one of the best and most generally recognized authorities on subjects of this sort.

For an unbiased, honest expression upon the value of form, the *Field* acknowledges "bulk" to offer the only logical beginning when free from the artificial conventionalities of existing measurement rules.

As we seek precisely the same answer in racing two vessels, it follows that the same kind of conclusions are only to be drawn from the same kind of a basis, and Mr. Dixon Kemp, to whom we believe the article quoted is to be attributed, concedes unreservedly the equity of bulk measurement.

As to the advisability of applying that system in practice it is another chapter of the subject which need not here be opened. The first thing to be done in any reform is to clear the principles involved from misapprehension that they may be comprehended by the public. Then it will be time enough to enter upon the practical aspects of the question and the best methods of securing simplicity without vitiating equity.

For the present we congratulate ourselves upon having such excellent authority as Mr. Kemp falling back upon bulk in his search for an equitable basis of comparison.

SINGLE HAND YACHTS.

[CONTINUED.]

IN yachts adapted to a special purpose certain predominating considerations govern the design, and to them all others must be considered subordinate. In judging of a design or in fixing upon a selection, these chief objectives must be kept in view. In the plans published last week certain peculiarities were aimed at in connection with the general requirements expected of all varieties of boats. The single hand yacht is to be in main a floating home. She is to be a small edition in most respects of a large yacht, so that the same sort of sport and concomitant benefits may be enjoyed, though on a smaller scale and at a tithe of the expense. Such boats must be cheap, small, in fact as small as it is possible to make them answer the intended purpose. They must be safe, absolutely so, not only probably so. They must be under easy control, possess permanent accommodations, be fit to face bad weather and as able as their limited size permits. In these æsthetic days they must be handsome and smart looking, too, with a finish attractive to the eye.

The size is regulated to a great extent, perhaps altogether, by the tapeline dimensions of the proposed occupant and the mark at which he brings down the scale;—for a heavy weight a large boat, for a light weight a smaller one; but in each individual case the smallest suitable to the person. The underlying idea with the lonely voyager is to get the most out of the least boat. It is always possible that he may be able to sail a much larger yacht; but that is just what he does not want, for that means more expense to start with—more for keep, more work, and more draft, to say nothing of the ever-present insidious temptation "to take a friend along." Now, nothing can be more heretical and schismatic to the true orthodox and respectable faith of the single-hander than the division of the pleasures of his cruise with some barbarian of another school, not in full sympathy and a devout follower of the same creed. The greatest independence, the gratification of self, and accountability to no one, constitute the main attractions of a cruise all alone. To divide with an intruder is to become a passenger and a slave to the inclinations of others—adfictions impregnated with bitter gall if, in addition, the "friend" chews up your smooth, white decks with hobnail boots, innocently shipped for the occasion, spills grease about the boat, litters up the cockpit, and rams the yawl's head against your beauty's glistening side till she has the appearance of suffering from small-pox, keeping your teeth on edge in expectation of the next piece of savagery to which the boat is to become a victim.

When the single-hander wants a friend and companion, the only satisfactory method is to take him along in a boat of his own, and thus obtain gregarious conviviality in squadron and not in one confined cabin. Moreover he has a right to expect as much, for if the friend be really a lover of yachting and not an "excursionist" imbued with a passing impulse, the bane of true yachtsmen, the friend can so easily acquire his own little boat that, it is nothing less than imposing upon good nature to break in upon the single-hander's charmed circle where only berthing for one has been contemplated. At all events this is the interpretation the devotee of sailing alone puts upon the sport as he follows it. For all that no one, not even the most inveterate admirer of small boat sailing, will deny the pleasures of cruising in larger craft with company aboard, but they say men differ in their tastes, and yachtsmen are human. "Give unto Cæsar what is Cæsar's," and give to the single-hander his solitary seclusion aboard his own ship or he is not quite happy. His boat must be for him and he for his boat. Nothing less than that will do. Those unwilling to subscribe to his doctrine have no business building a single-hander, but should go in for tonnage enough to lug along Tom, Dick, and Harry, and build of cast iron to meet the inroads from a promiscuous horde, with nob nails, store clothes, fastidious appetites and particular trains to catch. Perhaps sailing alone is a little selfish, but that makes it all the more enticing this side of the millenium

The plans published last week are for the smallest practicable size we should commend. They will serve for larger boats just as well by altering the scale. The three best sizes on those lines we judge to be 14, 16 and 18ft. load line. Beyond 18ft. we would not venture if long and distant voyaging is be followed. The smallest boat for lads and young men say not over 125lbs. weight, the medium size for skippers running up to 140 or 150lbs., and the 18ft. length for heavy weights or for those willing to stand the first cost, do the work entailed, and put up with the greater draft. The cost of building, hull, spars, lower sails, joiner work, gear, pump, anchor, chain, tanks, etc., as shown in the cuts will run, say $350, $400 and $450, the prices varying, of course, with material and finish.

Fitting out will cost something more, as much or as little as you choose. Spare anchor and ¼in whale line, collapsable dinger or light 6ft. punt, marlin spike, a few ordinary tools, rope yarn, watch-tackle, life belt, anchor light, side lights, a cabin lamp, fog horn, cooking stove and belongings, as well as what you wish in crockery and linen, a blanket, canvas bucket, clock, barometer, binoculars, compass, lead and line, charts and parallel ruler, a funnel to fill the tank, canvas shoes, old clothes, oilskins, scrubbing gear, ensign and burgee, these, with a few minor articles experience will suggest, make up a very complete inventory. They may be procured one by one after going into commission, and though all contribute to the interests of a cruise in detail, many may be dispensed with as not absolutely necessary. In sails a spinaker will be found a great aid in long runs, and if made of light drilling ought to stow very compact. A topsail is of less importance.

The spare anchor should weigh about 25 lbs., have plenty of spread to the flukes and long shank, and may be stowed below, to be broken out only when riding to a sea or likely to drive ashore, the whale line being bent to the ring by passing two turns around the ring, then taking two half-hitches around the standing part and seizing off the end. The dingey or punt is a very necessary adjunct to a voyage. Perhaps the best plan is to build something after the Berthon pattern, but lighter and smaller than anything in the market. These boats may be described as follows: The keel, stem and post form a central back-bone. At the head of post and stem is a hinge similar to that of a buggy top, adapted to taking the ends of rail or gunwale battens, and a pair spaced between the rail and keel. This fore and aft frame corresponding to the shape of the rind of half a watermelon at the cuts when sliced up, falls together upon the keel for stowage, assuming the form of an elongated U, having the length of the boat, 6ft., with the ends turned up the height of stem and post, about 2ft. In this condition the frame is a bundle only 5in. thick and 1in. wide. It can be stowed on deck close alongside the hatch, the ends of the boat reaching around the ends of the hatch, out of the way and no obstruction at all. The canvas covering should of course be stripped and stowed apart in one of the cockpit lockers. To launch, break out the frame, partially spread it, pull the canvas over, then finish spreading, looping the canvas to small buttons inside the gunwale strip. The whole is kept in shape by a thwartship rib, which is stepped into a metal socket in the keel by means of a small pin, then slewed square across, the fore and aft strips fitting into jogs or steps cut in the rib on purpose.

The thwart is next shipped in wake of the rib, and with oars and rowlocks at hand the boat is dumped overboard well clear of the ship's side and made fast astern. The canvas should be 10oz. duck, though even 8oz. will do, properly prepared by some reliable water-proofing process. A dingey of this kind is extremely buoyant, sightly and very serviceable, though care must be taken in beaching to avoid sharp-edged stones. We much prefer such a tender to anything in the punt line. Another contrivance is a light oak frame, flat bottom, with scow ends and square sides, which collapse upon the bottom, making a package two or three inches thick and as long and broad as the scow, which may be lashed on top of the yacht's cabin or hatch. Ordinary yawls or punts cannot be taken over the rail and must be towed in all weather, a great drag and hard jerk on a small yacht in a seaway, besides the danger of their coming on board of their own account and raising smash with the quarters. We suggest the "bolsa" as worth experimenting with, being capable of serving as a tender and the best life boat for an emergency. It consists of two long rubber cylinders inflated by a small hand bellows and kept apart, catamaran fashion, by light braces and hoops supporting a number of slats between the hulls for footing. They can be stowed in very small space and will stand rough usage; cannot capsize or fill, and are right side up either way, being much like the life rafts found on ocean steamers in principle. Some additional arrangement to keep the feet and a load dry can easily be devised.

For tools, the amateur must follow his own bent, and what he cannot himself accomplish, must be left to the regular boat carpenter. A few attempts will master the more common tools, and every good sailor should become familiar with all kinds of odd jobbing about his boat. Glass, jack-knife, coarse and fine sand-paper are required for scraping and smoothing up spars; cotton and putty for caulking and stopping as deck seams open; a small hatchet is always a useful article; broad chisel, wood rasp, ironfile, small hammer, small and large gimlet, screw driver, assorted lot of nails and screws, brass eyes, some annealed copper wire, bit of leather and canvas and spare sisterhooks, thimbles, kleet or two and an extra block with swabs, spare line, sail twine and wax for seizing rope ends, a tarpaulin to work on, large and small marlin spikes with good points, a small pot of slush and a ball of marlin, and you have quite a complete assortment ready for any work you are likely to be called upon to execute. A cigar box or two and a few brackets will accommodate them. Black paint and varnish in a pound tin should be taken along so that when very thinly applied with an oiled rag the luster of the yacht's sides may be preserved in that high state of gloss which is one of the many characteristics of the well kept vessel. Pummice stone for the decks is an excellent article in conjunction with elbow grease for gaining them in man-of-war whiteness.

Of life belts one or two should always be on board. Circular rubber belts kept inflated are handy as cushions in the cockpit, in the yawl boat, or as pillows below. For style they should receive a light coat of blue paint and varnish with the yacht's name, tonnage and port in gold leaf letters, her burgee being depicted in the center. This is very much *en regle* in yachting high life. A very good idea has recently been put in practice by a Brooklyn maker, consisting of a neat fitting vest with a thin lining of buoyant material, so padded as not to interfere with the free working of the arms or body, and not in the least clumsy. The amateur tar who cannot swim ought not to exist, but as long as he does, such a garment will give him and his friends a feeling of confidence at all times agreeable, but the same garment is to be highly recommended to all, in view of the liability to being knocked or jumped overboard in very small craft, which are necessarily quick in their motions. The greatest danger, however, is when clad in heavy oil skins, and a lining to the coat or jacket about the chest would remove all danger in the quite possible event of falling overboard. Life preservers are proverbially out of reach when most wanted, but a precautionary appliance as described would prevent even the most careless from coming to grief.

Concerning lights, the single-hander should adopt special devices to secure his peaceful slumbers at anchor and comfort down below. For riding light eschew all cheap tin solder substitutes and invest at once in a first-class pattern of brass, with the casing riveted or stamped from single pieces to obviate melting and falling apart. The wire preventers should be rove through holes at top and bottom, and the horizontal binder should be twisted about the others or fastened in some way without recourse to soddering. The lens, or globe, should be of extra stout glass, and ample means supplied for the escape of heat and smoke without any fear of extinguishing the light by up and down drafts. Whale oil is out of question in these days, kerosene has a bad odor and is not over reliable. The best fluid to burn is genuine "mineral sperm," obtained from the Downer Oil Company, corner of Burling slip and Pearl street, New York. This oil is the cleanest to use, is practically non-explosive, and has displaced all others on first-class steamship lines, with the approval of the government and insurance companies. It cannot be bought at country stores, which is rather a recommendation than otherwise. In cost it is only a trifle higher than the astral oil of domestic economy. See to it that there is a thumb screw to the burner for raising the wick, or the bottom has to be removed and the wick pricked up with a knife, during which operation the light is invariably blown out at the expense of time, matches and strong English.

Special burners are required for this wick, but they can be had at any navigation store. All burners in the yacht should take the same wick and like oil for simplicity's sake. Keep the oil in a regular astral can and stow in a cockpit locker. Keep all lights in the same place and do all the filling and trimming outside the cabin. Much objection is raised against the use of mineral oils, on account of their strong odor, but, in our experience, without good reason. We have known the contents of a gallon can spilled over the cabin cushions and collected in the bilge, whence it was pumped, for several days; but the odor was trifling, and no discomfort ensued in close quarters —7ft. long and 6ft. wide, with less than 5ft. depth. In the same cabin three meals a day were cooked over a kerosene "hot-blast" stove, without objectionable accompaniments. With "mineral sperm," we believe, the accommodations of the smallest yacht can be kept perfectly sweet without trouble. For cabin lamp, Porter's Sons, in Pearl street, near Fulton, furnish a neat little article, known in the trade as "stateroom" lamp, which costs but a trifle and is neat and emits a clear, strong light. A bell should be hung over the glass chimney, or the heat will dry up the wood above.

Side lights are not very effective when hung with the small spread a little yacht affords, but it is rather comforting to know they are in place with the chance of their being seen by an approaching stranger you may have failed to observe yourself. A brass pair can be procured for $5, and tin side lights for half that sum. It is economy to invest in brass and lenses if the lights are to be useful in fact, and as the single-hand voyager cannot have a forecastle lookout, and may himself be tired or blinded with the flying dust, he should not cut things too fine on vital points in the outfit. Save a few dollars in some other direction, but see to it that your working appliances are really fit for work, and not only for play or to lull you into a false sense of security. Powerful lights, reliable lights, may be the means of obviating an unwelcome crisis sensible seamen do not care to take. The same applies to the fog horn. Penny whistles are below standard; procure the U. S. regulation article, price $6, and make yourself heard on the high seas.

[TO BE CONTINUED.]

ACTEA.—This Boston schooner, Mr. David Sears and friends, reached the French coast the latter part of September, after having visited the Channel ports. She was at Bordeaux and left about Oct. 1 for the Portugese coast preparatory to an extensive cruise in the Mediterranean.

CRUISE IN A SHARPIE.—A Frenchman has been bold enough to sail a 36ft. sharpie across the Channel from Boulogne to Dover, and, by dodging bad weather along the English coast, into Southampton waters. He reports the boat satisfactory, but not close winded in a sea. No rough weather was encountered, so the experience, though nominally "at sea," is without any special lesson. The same course has been done by canoes and half-decked yachts of less tonnage.

Best Quality Braided Fishing Lines.

The Cotton Lines are all 84 feet long, two connected, if so wanted.
The Linen Lines are all 150 feet long, two connected, if so wanted.
The Silk lines are all 75 feet long, four connected, if so wanted.
Braided Long Staple Cotton, five sizes (all same price) 25 cents each.
Braided Irish Linen (reel line), six sizes, (all same price), 60 cents each.
Braided Irish Linen (hand line), six sizes (all same price), 75 cents each.
Braided Tsatless Silk, either raw, boiled or oiled, per 75 feet, No. 1, $1.25; No. 2, $1; No. 3, 68 cents; No. 4, 58 cents; No. 5, 50 cents.

	Length of Lines	60ft.	75ft.	90ft.	105ft.	120ft.	150ft.	300ft.
Enamel Waterproof Braided Silk Fly Lines, No. 3,		$1.00	1.25	1.50	1.75	2.00	2.50	5.00

Manuf'r of Photo. Instruments.

N. M. MUZZY,
45 South Canal Street, Chicago, Ill.
Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

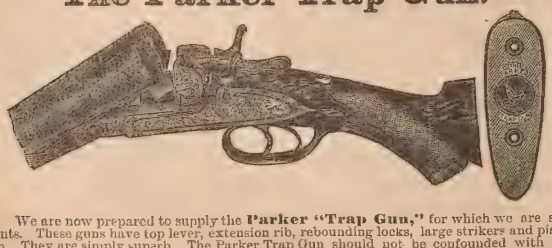
The Parker Gun.



Again Victorious at the late Exposition at
MELBOURNE, AUSTRALIA.
THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."
They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

BRANCH FACTORY:
BROCKVILLE, Ont. THERESA, N. Y.

The Parker Trap Gun.

We are now prepared to supply the **Parker "Trap Gun,"** for which we are sole agents. These guns have top lever, extension rib, rebounding locks, large strikers and pistol grip. They are simply superb. The Parker Trap Gun should not be confounded with the regular Parker top lever guns, which, although excellent guns, do not approach the Trap for close, hard shooting. Every genuine Parker Trap Gun has the rubber butt plate with a flying pigeon beautifully embossed upon it, as shown in the above cut.
We have a small remnant of Webley's heavy ducking guns, mostly 10-bore, of various qualities, at about half price. Address
P. O. Box 1114. H. & D. FOLSOM, 15 Murray St., New York.

The Maynard Rifles and Shot Guns.
NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.
PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.
For **Hunting** and **Target Practice** at all ranges, the **"MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world,** as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the **new attachment for using rim and centre-fire ammunition.**
MASS. ARMS COMPANY, Chicopee Falls, Mass.

B. F. NICHOLS & CO.,
BOSTON, MASS.,
Manufacturers of
HEXAGONAL SPLIT BAMBOO FISHING RODS,

AGENTS FOR

W. & C. Scott & Son's

BLOCK SAFETY HAMMERLESS, With Crystal Apertures.

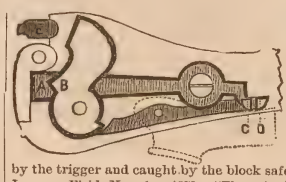
The *only* Hammerless showing position of hammers at a glance. The only Hammerless having fixed firing pins, thus preventing smoke and dirt entering the lock. In others the aperture through breech to lock is open, the hammer and striker being one piece.

1876—PHILADELPHIA, MEDAL AND DIPLOMA. 1878—PARIS, SILVER MEDAL. 1879—SYDNEY, FIRST, AND HIGHLY COMMENDED FOR MANUFACTURE. 1881—MELBOURNE, SPECIAL GOLD MEDAL AND FIRST ORDER OF MERIT.

COGSWELL AND HARRISON, 142 New Bond Street and Strand, London.—"After careful consideration of the merits or otherwise of the various systems of Hammerless Guns now before the sporting public, our opinion, formed sixteen months since, remains unchanged, that the principle of your top lever gun with the safety tumbler-block has many advantages over any other gun we know of at present; we consider with the extreme safety secured, together with the sound principle on which the gun is formed, will make it a general favorite in the future. As far as we are personally concerned we like the principle so much that we have adopted the system."

CAPTAIN BOGARDUS.—"As evidence of the durability of your guns, I have shot one gun over 50,000 times. I used your triplex action in my two recent matches with Mr. Pennel, winning both times; also in my match with Captain Shelley, at which time I scored 84, the highest score on record; and in the international match with Aubrey Coventry, Esq., for £1,000, which I won, killing 70 out of 100—all 30 yards rise."

THE *Field* says:—"The match will be handed down as one of the most exciting contests ever witnessed."



"GREAT PIGEON MATCH.—Captain Bogardus, in his recent match with Mr. Rimmel, of England, used his new W. & C. Scott & Son's **"Block Safety" Hammerless,** and killed 99 out of 100—30 yards rise,"—*Forest and Stream, New York.*

C. M. STARK.—"The Scott Hammerless is the very best shooting gun I ever owned or have seen shot both for closeness and penetration."

LATEST VICTORY FOR THE SCOTT HAMMERLESS.—Match between Mr. Chas. Mucalaster, of Philadelphia, and Mr. E. C. Murphy, N. Y., for $1,000 a side.

Constantly receiving fresh invoices of these guns of all sizes.

SEND STAMP FOR OUR CIRCULARS OF DIFFERENT MAKES.

Absolute Safety!

Patent Block Safety Lock.

This gun is always safe from any accidental discharge. In opening the gun for loading, the block safety A, interposes between hammer B and striker E, which is only removed when the trigger is pulled. The drawing is intended to show the hammer as accidentally discharged, other than by the trigger and caught by the block safety.

LONDON *Field*, Nov. 1st, 1879.—"The principle accords with our ideas of what is wanted to make the hammerless gun safe."

Land and Water, Nov. 10th, 1879.—"The great improvement lies in the New Tumbler Safety Block; this being worked by the triggers only, supposing the hammer from any cause should fall, **without the trigger being pulled,** the projection on the hammer falls into the **Safety Block,** and so prevents an explosion. The gun is on the favorite top lever action, and the cocking arrangement is exceedingly simple and smooth-working."

REV. W. J. RAINSFORD, Toronto, Canada, Oct. 2d, 1879.—"I have used many guns, by many makers, and certainly your New Premier Hammerless is the hardest hitter I have put to my shoulder."

CAPT. BOGARDUS says:—"No gun can excel mine in shooting. The Block Safety is perfect."

GREAT INTERNATIONAL PIGEON SHOOTING, MONACO, Feb. 18, 1882.—Grand Prix du Casino, 80 competitors, comprising the best shots in the world. Sig. Guidicini (the most noted shot in Italy), won the 8,000 frs. prize with a pigeon gun by W. & C. Scott & Son.

We call attention to a few of their leading hammer guns, viz: their New Trap Gun; their Star quality gun with Prize Compensating Lump; their New Triplex Lever Grip Pigeon Club Gun. Superior quality in hammers and hammerless. Their highest quality is marked "The Premier Quality" between name and address. No guns are genuine unless marked in full W. & C. Scott & Son.

THE TWO BEST GUNS IN THE WORLD.

Harrington & Richardson Hammerless

Is the highest achievement of American gun enterprise. The workmanship is equal to the finest London Premier guns, and the fitting is closer, every part being made by machinery to a gauge. For close hard shooting nothing in the world can excel them. In every respect equal to imported hammerless guns costing twice the money. They are made on the Anson & Deeley patent, and the work is inspected Mr. Deeley. The rubber butt plate is of the most exquisite design, and all the lines are in the finest taste. Size—12-gauge, 7¾ to 8¼lbs.

No. 1, Laminated steel barrels, outline engraving.....$100 00
2, Damascus barrels, good scroll engraving, selected stocks.....150 00
No. 3, Same as No. 2, but finer in all points.....$200 00
4, Premier quality, every part made with the most scrupulous care, and most exquisite finish, 300 00

The Daly Gun

Has been in the market for ten years, and has the largest sale of any strictly first-class gun in the country. Hundreds have been in the hands of professional hunters for years, and are as sound to-day as when they were bought. C. R. Shelton, manufacturer of auxiliary rifle barrels, New Haven, Ct., has shot one over 20,000 times in showing his invention, and it is sound as a dollar and hasn't had one cent of repairs. Here is a sample testimonial:—Jefferson, Texas, Aug. 19, 1882. "The Charles Daly Gun I bought in 1880 is the most perfect gun I ever saw. A microscope cannot detect the slightest flaw in the fitting. I have shot it 2,000 times and the action is as strong and tight as when received. The gun is a beauty and the admiration of all my friends.—WM. T. WARE.

No. 42, **Scott Action,** Damascus barrels, bar rebounding locks, pistol grip, patent fore and extension rib.....10 and 12 g. $80 00
53, Same as No. 42, with Purdy double bolt and horn butt plate.....10 and 12 g. 90 00
55, Same as No. 53, with 3 pin locks and engraved mountings and ornamental rubber butt.....10, 12, 16 and 20 g. 100 00
60, Same style as No. 55, fine laminated steel or Damascus barrels, fine engraving and chequering, first-class workmanship.....10 and 12 g. 130 00
100 **"Diamond Quality."**—The most superbly finished gun in the market, every part of the finest quality and most elegant workmanship, and equal in every respect to the finest London Guns, 10 and 12 g. 200 00

Live Geese Decoys For Sale.

Seven live geese, raised on Long Island from wild geese. Have been used as decoys and shot over. Sold only on account of owner not being able to use them. Address D., 118 John st., New York City. oct5,4t

TO SPORTSMEN.

For Sale.—Four or five islands containing upwards of four hundred and fifty acres, situated in what is called the Back Bay of Currituck Sound, all within three hundred yards of the main island, having over five miles water front, with boats and decoys, also one portable house suitable for six or eight persons, with mattresses, cooking utensils and stove, cutlery and crockery, where there is plenty of swan, geese, canvas backs, red heads, sprig tails, ball pates and widgeons, black and all other kinds of fresh water ducks. It is the best snipe ground in the vicinity. I have started over two hundred in two hours within a half mile of my house on the main island the first of December; they are there all winter, and ducks from October to April. The best sporting ground in the United States; a grand place for a club or a hotel. Price $2,000 cash. I will be at the Mansion House, Norfolk, Va., on Monday, the 20th day of November next, and show parties the grounds at Currituck Sound. If not disposed of at that time it will be sold to the highest bidder. For further particulars address A. ARKERSON, No. 12 Park st., Cambridgeport, Mass.

P. S.—Convenient to stores and steamboats. oct12,4t

Duck Shooting. Duck Shooting.

"SUSQUEHANNA FLATS."

Woodcock and Quail shooting in season contiguous to the celebrated perch-fishing grounds at Betterton.

For sale with immediate possession, one of the best locations for canvas-back and redhead shooting in the State of Maryland. The property comprises an extensive and well-built brick mansion, replete with every comfort and convenience. Heaters and gas in every room, and well furnished throughout. On the shore is a new house for steward's residence and club room with boat houses underneath. Yacht, skiffs, batteaux, two sink boxes (one double, one single), about 350 decoys, and everything necessary for sportsmen's outfit. Connected is a farm of 150 acres, in the highest state of cultivation, farmer's house, large barn, ice house, and all necessary out-buildings. Discontinuation

—OF—

"THE BLUE STAR KENNEL,"

—OR—

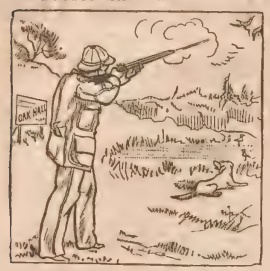
THE COCKER SPANIEL KENNEL,

FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,tf

WILL EXCHANGE FINE, SMALL-SIZE, UNbroken black setter bitch, about one year old, fine blood, for single breech-loader, Stevens' or Forehand & Wadsworth make. Bitch all right every way. Address N. ELMORE, Granby, Ct. oct26tf



Sportsmen's Goods.

THE BEST

DOGSKIN LEATHER JACKETS

AND

"BOSTON SHOOTING SUIT."

Dogskin Leather Jackets, windproof, flannel-lined, pliable, durable, indespensible! We are importers and manufacturers, and can supply the very best leather jacket or vest that is made.

Last season we sold nearly one thousand jackets at retail alone. This season we have manufactured very largely *to supply the trade.* Send for samples of material and special circular, with rule for self-measure. These leather jackets and vests are supplied in either *black* or *tan colors.* To all who are exposed to the inclemency of the weather, to sportsmen, drivers, brakemen and professional men, they are highly to be recommended!

The "BOSTON SHOOTING SUIT," which is shown in our illustration, is the standard suit for sportsmen in America. It is made from waterproofed duck, and is practically indestructible.

Special circulars descriptive of this suit, with samples, can be had by any one who sends address.

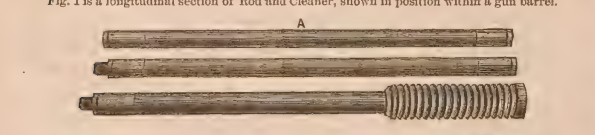
Climax Gun Cleaner.



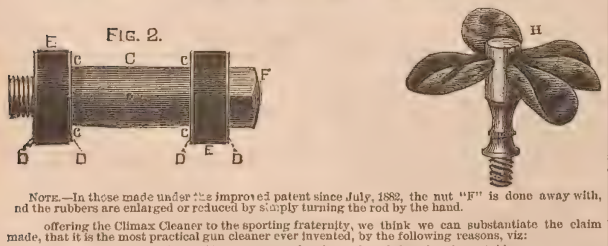


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR,

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device hails the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

In ordering, give Gauge of gun. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

NOVEMBER SHOOTING.

NOVEMBER'S conventional and proverbial "frosty mornings" are golden days in the sportsman's calendar, but there is little of this distinctive character about the opening of the month in the year of grace eighteen hundred and eighty-two. The weather of the past few weeks has been exceptional in its mildness, and the newly ushered in November is not frosty but muggy. The advent of November marks few changes in the sportsman's calendar. The open game seasons in the great majority of instances remain unaltered; most of them began in September or October, and few will close before mid-winter or early spring. Among the few important changes to be noted are the openings, on the first day of the month, of the quail seasons in the District of Columbia, Maryland, Virginia, New Jersey, New York and Michigan. A large number of very young broods have been observed in various parts of the country during the past few weeks. This was naturally to have been expected, when the effect of the unusual warm weather which has prevailed is taken into consideration. Many of those sportsmen who contend against the theory that quail ever rear a second brood, will doubtless, this season, have an opportunity to add to their fund of ornithological lore.

The weather has also materially affected the woodcock shooting. The migration has been delayed, and the birds have remained scattered on their feeding grounds in the inaccessible swamps, in the mountain tops, and in other accustomed fall haunts. There has been no "cold snap" to start them on their southern journey. When the frost does come a large flight may be expected, and those gunners who may be so fortunate as to be in the line of this flight will be sure to have some rare sport. The migration will be a rapid one. The birds will not linger on the way, as is their custom when they start earlier in the season.

It is a favorite belief with many woodcock shooters that the autumnal migration is dependent upon the moon's phases. The birds, they claim, fly south "on the full of the moon." It would be difficult to reconcile the correctness of this theory with the facts of the last month, for we then had the full moon, but not the usual flight. Possibly the truth of the matter is this: that the birds, flying by night, move when the nights are cold and clear, and such conditions are most apt to occur, it has been claimed, when the moon is full.

Ruffed grouse shooting opened in New Jersey on the first of the month, and the season in Delaware will begin on the 15th. The deer season in Massachusetts and Minnesota opened on the first, and on the same date it closed in California; it will close in Wyoming on the 15th and in Ohio on the 20th. The wildfowl season opened on the first in Maryland and West Virginia. Grouse shooting in Colorado closed on the first, and in Wyoming the same season will close on the 15th.

A MATTER OF OPINION.

THE discussion as to the excellence of the flesh of the mud-hen, or coot, which seems to be agitating some of our correspondents, appears to us quite profitless. On a matter of this kind only opinions are to be had, and what may suit the palate of one individual, perhaps appears to another very unpleasant. There is no standard, as to what is or is not good to eat, and while grasshopper bread appears to the Pah Ute a choice delicacy, it does not appear probable that it will ever win its way to public favor along the Atlantic seaboard. Like one or two of our correspondents, we have seen mud-hens served as teal in the West, and accepted by the eaters as genuine, and it may perhaps be questioned whether most people could tell the difference between the two. It has been our fortune to eat coots in most of the States and Territories between the Atlantic and Pacific, and we confess that we have always relished them, and regarded them as quite equal in excellence to most species of our ducks. They are very near relatives of the rail, certainly among the most delicious of our feathered game, and their food consists chiefly of the tender shoots of grasses and water plants, together with the seeds of the latter. In autumn, along the Atlantic coast, they feed to a great extent, and in company with rail and many species of ducks, on the seeds of the wild rice (*Zizania aquatica*). There does not, therefore, appear to be any inherent reason why the flesh of this bird should have a disagreeable taste, or should be, as has been suggested by one correspondent, dangerous for human food; nor do we believe that under ordinary circumstances it is so.

As our correspondent, "Byrne," remarked in a recent issue, there is another bird—in fact there are two or three of them—the small grebes, sometimes called divers, which, especially when at rest on the water, closely resemble, to a superficial observer, the coot, having the same partially webbed toes, and being similar in general shape. These grebes are extremely fishy in taste, and are by universal consent condemned as utterly worthless for human food. They are so tough that along the New England shore it is said that if you are going to cook one, you should place in the body an iron wedge, then cook until you can run a fork into the wedge. When this can be done your bird is ready for the table. It is not unlikely that in some of the cases reported by our correspondents, these grebes may have been eaten under the impression that they were coots. This is perhaps overmuch on a subject of no very great importance, but it seems only fair that the much-abused mud-hen should have a word said in its favor. The explanation of the term coot, which, in New England, is improperly applied to the black sea ducks of the genus *Œdemia*, has been given in these columns many times, both editorially and by a number of our contributors. This mixing up of two utterly different birds under a common name is only another example of the lamentable confusion which is constantly arising from the use of local names among men who shoot and fish. It has taken a long time to drive out of use the terms partridge and pheasant, and to substitute for them in different sections of the country the name ruffed grouse, and even now the work is only half done. Still the partial success which has attended these efforts should stimulate us to others in the same direction.

DEATH OF DR. HOWELL.—Doctor Benjamin C. Howell, one of the Fish Commissioners of New Jersey, at his residence, at Gloucester, N. J., October 10. Dr. Howell was in the seventy-fourth year of his age and has been active in the cause of fishculture for many years. He was a cultured gentleman, esteemed by all who knew him, and his loss will be felt by a large circle as well as by his co-laborers in fishculture. Dr. Howell was the owner of the great shad fishery at Howell's Cove, which has been in the possession of his family since the establishment of the fishery in the early settlement of the country. Notices of the enormous seine in use there have several times appeared in our columns.

EXPRESS RIFLES AND EXPRESS BALLS.

A COMMUNICATION from a Montana hunter which we give below shows very clearly that the writer misconceives the object of the express bullet, and as this is only one of a number of cases in which we have heard the same or similar objections made to this form of projectile, it may be worth while to allude more fully to the subject. The object looked for from the use of the express ball we conceive to be shock and not penetration. It is believed that the deadly effect of a ball which is, to all intents and purposes, explosive when it strikes a bone, is much greater than that of a solid ball which merely pierces or breaks. And it is self-evident that a ball which is so made that it will fly to pieces or flatten out on meeting with a resisting substance cannot give penetration. For this very reason we have heard old hunters condemn the use of the express ball on dangerous game, asserting that they want something that will penetrate as deeply as possible. Our own experience with express balls has been somewhat limited. We have witnessed their effects on the Creedmoor range, of course, but have never used them to any great extent in our hunting. During the past summer, however, while in the Rocky Mountains, we tried them on antelope, and found them deadly, but not more so than a solid ball equally well aimed. A buck antelope struck in the shoulder or just behind it with an express ball rarely ran more than fifty yards, but we could not see that death or disabling ensued more quickly with one than the other. More definite results might have been attained had we purposely wounded the game in places where a shot is not so speedily fatal, but that would have been so cruel that it was not to be thought of.

On the other hand it must be remembered that the express balls are, after years of trial, regarded by hunters in India and Africa as a most fatal style of projectile. Their use in this country is comparatively of recent date, and although quite a good deal has been written on the subject, the practical experimenting has been confined to the hands of a very few individuals. "An Old Hunter" may rest assured, however, that the fact that he does not obtain penetration with express balls is not at all remarkable, but is just exactly what was to be expected.

The letter referred to is as follows:

BOZEMAN, Montana Ter., Oct. 7, 1882.

When express rifles came in vogue, it was claimed by the manufacturers that they far excelled the common breech-loaders in regard to killing power. Some manufacturers, like the Winchester Repeating Arms Company, are manufacturing now express rifles, .50 cal. I ordered one of these from the factory, and gave it a good trial on large game. The rifle itself is very good, and a very accurate shooter, but as far as the killing power of the express bullet is concerned, I don't see in what respects it is any better or as good as a solid ball. The cartridge as manufactured by the Winchester Repeating Arms Company contains ninty-five grains of powder and three hundred grains of lead. At common hunting distances (from fifty to one hundred and fifty yards) the bullet flies to pieces, at longer distances the ball only flattens out. For instance, I recently shot at a black-tailed deer at twenty-five yards, the bullet struck about the center of the shoulder blade and went into fragments, which were distributed through the whole shoulder (this shot killed the deer.) Shot at four elk from 150 to 250 yards, the bullets didn't fly to pieces, but merely flattened out, and gave very poor penetration; as soon as a bullet struck a bone, it stopped after breaking the bone or part of it, where a solid bullet would have passed clear through. One elk had five express bullets in him, and lived over a day, when I finished him and examined his wounds and found that all the bullets were flattened out, and didn't penetrate far enough. I shot at an elk at forty yards distance, the bullet broke the shoulder blade, and the fragments did not pass any further and failed to kill the elk; another shot killed him. On my last hunt I used a Winchester Repeating rifle .44 calibre, model '66, forty grains powder and two hundred grains lead, and a Winchester Express, .50 calibre, ninety-five grains powder and three hundred grains lead. The Winchester .44 calibre gives the best penetration, as I killed two antelopes at one shot with it, the bullet passing clear through them, while with an Express I never shot clear through a deer or an antelope or an elk yet, although I killed a good many with it. I, for my part, prefer a solid ball for large game. Penetration is everything, especially where a hunter has to take all kinds of shots to secure game. The Winchester express bullet gives very poor penetration, and for that reason the gun don't find many admirers among hunters in this part of the country. I am trying to shoot solid bullets out of my express rifle now, and hope to secure large game with less shooting.

Some hunters use Sharps rifles. .40, .44 and .45 calibre, with express charges and express bullets, but they generally use more powder (115 to 120 grains) and a longer bullet than the Winchester express, and report good results. Most hunters, however, use solid balls in preference to the express balls.

The large game is decreasing fast in Montana and Wyoming. Where about four or five years ago I saw from two hundred to three hundred elk in a single band, I found now not more than from twelve to fifteen elk in a band, and other game in proportion. Eastern Nimrods should be aware of this, and those desiring to kill large game should not wait too long to take a trip to America's best hunting grounds.

AN OLD HUNTER.

THE SPORTSMAN.

BY A. WOOD COCKE, F. S.

THE overgrown featherless bird called by our scientists by as many names as there are of them—"the sporting man" —*Oiseau sans plume. Homo bombarda, H. sclopeto, H. mortifer*, etc., etc., but commonly known as the sportsman, is, though a constant resident in most parts of the civilized world, partly migratory. He is oftenest seen in the latter part of summer and throughout the autumn and early winter, and also when snipe and wild ducks abound—during the first half of spring. Whenever is found anything which he calls "game," whether biped or quadruped, there he is sure to be in the seasons named. To all such he is exceedingly destructive, especially when accompanied by his four-footed companion—the dog—who plays the part to him of the pilot-fish to the shark, and leads him to his prey. Our family is the special object of his pursuit in the last half of summer and in the fall, though strange as it may seem, in spring and early summer, he would no more think of harming one of us than one of his own offspring. He practices the same strange forbearance toward almost all those birds and beasts which he entitles game, except our cousins, the snipe, and all the waterfowl. If it were not for this, it would seem that he spares us and the others which he so favors during the breeding season, not from any real love for us, but for his own selfish ends, as his congener, the farming man, does his flocks, herds, and poultry. But if this be the reason, why is it that he does not likewise with the snipe, ducks and geese, whose breeding season is also the spring? Truly he is a strange fowl, exhibiting in some ways the utmost foresight and ingenuity, in others the traits directly opposite. Against the hawks, owls, and foxes he bears the greatest animosity, begrudging them the least portion of game, though they destroy not a tithe of the number that he takes.

If deprived of all weapons but those with which nature has supplied him, he would be almost harmless, for he cannot fly, and his legs, though ridiculously long, cannot impart to his awkward body a degree of speed which is anything but contemptible to the meanest of us feathered ones. Nor has he the talons of the hawk nor the fangs of the fox, nor the fox's cunning and stealth.

But a certain engine which he carries makes him extremely dangerous when he has become expert in the use of it. It is a tube, or oftener nowadays, a double tube, of iron, which at his will ejects a volume of fire and smoke and pellets of lead, which pierce feathers and flesh more easily than our bills do the softest mold. Those individuals, and they are many, who have become proficient in the use of this, are terribly destructive, and by all means to be avoided by our kind.

The sportsman measures from four and one-half feet to upward of six feet in length, and the extent of his pinionless wings, which terminate in five fleshy claws, is usually the same as his length. The head, when exposed by the removal of its false covering, is so various as not to be easily described, is clothed with hair on the crown, the color varying in individuals—in some it is flaxen, in others a fiery red, brown of various shades, and black, and in old specimens grizzly and white. The eyes differ in color almost as much as the hair. The hinder and lower part of the cheeks and the chin are covered with a coarser hair, which appears to be shed at will, in color nearly like that of the crown. The forehead and upper part of the cheeks are naked and, with the beak, vary from exposure to the weather and quantity and quality of internal irrigation, from light flesh-color to brown and scarlet. In very bibulous specimens the beak is extremely brilliant, seeming to glow as with fire held within it. The whole body, wings, and upper part of the legs are covered with a fibrous texture, removable at pleasure, usually of a russet or dead-leaf color. The lower part of the legs and the feet are encased in dull black skin, which he frequently coats with grease, probably the more easily to make his way through the sedges and brush.

His female differs from him so entirely in appearance and habits that she would hardly be thought by the ordinary observer to belong to the same species. She is seldom seen by any of us, and but little would be known of her had not some facts been obtained by a distinguished member of our family who passed some months of captivity in the home of a pair of these enormous birds.

Her head, at times decorated with the gaudiest plumage, is always covered on its upper part with a luxuriant growth of hair, as various in color as the male's, but longer, finer and softer. Her whole face is naked and that and the beak are of a soft flesh color. She has invisible legs, and her delicate feet are encased in a finer covering than those of her make. The colors of the body and its wide elongation toward the feet are so various that it is impossible to describe them. She rarely exhibits towards the lesser birds and beasts anything of the predatory nature and cruelty of the male, but him she attacks at times with her terrible tongue in the most merciless manner, especially on the occasions of his going out to prey upon our kind. It is a comfort to know that he lives in more abject fear of her than any of us do of him, and that she makes his life and that of his dog more miserable than he does our own. Such is the even-handed justice of Nature, yet she is as inconsistent as he, for notwithstanding her opposition to his "sport" as he calls it, she exults as much in his success as he does himself, and feeds with quite as much zest on the little birds which he brings home.

Altogether the genus, whose numbers seem to be rapidly and alarmingly increasing, is one well worth the study of the speculative Cocke, but always, be it remembered, at a safe distance, say one hundred yards.

H. kidyloveii was once thought to be identical with the above, but is now generally regarded as a distinct species When he has passed through the moult which brings him to his nearest resemblance to *H. sclopeto*, he bears an exaggerated likeness to his congener.

His dress is more elegant and brighter in color, and bulges with a multitude of pouches filled more with food and flasks than game, and he has a boastful bearing, but is far less dangerous to other birds than to himself and companions, for his leaden pellets seem to go in any direction but the one he wishes them to, and he sometimes blows his own head or hand off. His dog is not at all under his control, but ranges far and wide in advance of him, giving the objects of his master's pursuit what would be most ample and timely warning if it was at all needed.

With a specimen of *H. kidyloveii* a cock, or grouse, or quail may have rare sport, leading him by short flights through the worst bogs and thickets. Let him but get a glimpse of you flying on before him and directly comes the thunder of the gun, as the deadly engine is named, and the whistling of the lead to the right, or left, or overhead, shortly followed by a volley of curses directed by turns against yourself, the dog, the gun, and the bushes almost as loud and quite as dangerous as the discharge of the iron tube.

If you have the presence of mind to fly not too far, it is very amusing to watch this sportsman searching the ground for a feather, the further to assure himself that he has, as he says, "certainly hit this time," and then to fly up almost from under his feet, and, casting a backward glance, behold his surprise and chagrin. But for the sport he affords us he would be interesting only in his being supremely ridiculous.

The Sportsman Tourist.

A LEAF FROM A VAGABOND'S DIARY.

"BEAUTIFUL! beautiful! and beyond that, beautiful!" the immortal Humboldt is said to have exclaimed, when for the first time he gazed upon the tropical beauty of Central America, and I, a humble admirer of that great hero, echoed his sentiments again and again, and, reclining on a bed of wild oats, I drank in the glories of my queen of mountain streams. Rising twenty miles to the northward, on the storm-swept sides of McWilson, pouring over innumerable ledges, foaming, tearing thro' rocky cañons, creeping dreamily thro' sunlit valleys,

> "With here and there a lusty trout,
> And here and there a grayling,"

until it joins fifteen miles below, its sister, the Rio Dolores. This, my Minnehaha, runs a hundred feet below me, sparkling in the rays of the setting run. Before me, across the valley, rises an amphitheatre of foliage, green willow, golden aspen, brown spruce, relieved here and there by bold masses of gray rock. Above, an almost cloudless blue sky; a hawk so motionless that it might be a fixture. The little park, or open glade, in which I am resting, is waist deep in grass and wild oats, surrounded on three sides by oak scrub. Before me, the ground slopes, spruce clad, to the valley.

Can one wonder the Indian was loath to leave this hunter's paradise? Put yourself in his place, and what would you do? I ask myself. The answer comes in an involuntary grip on the stock of my rifle. Yes, my red brother, I am not ashamed to own I can feel for you for are we not both vagabonds? I know the delights of those deep, frothy pools, from which we have both enticed the shining trout. To me also is known the mysteries of those green swamps, where the beaver swarm at night. My knife, with yours, has drank the blood of many a noble buck. Have we not both lain in wait for the lordly elk? Those towering rocks have echoed our shouts of pride, as the grim she bear gave her death shiver. And when nobler game was scarce, have we not both brought the brown grouse whirling to the earth? Alas! brother mine, the days of these glories are numbered. The axe is already at the root of the tree. The hum of threshing machine and saw will arise from the valley below. The pale-faced tenderfoot is already killing deer in July and using giant powder in our favorite pools. Verily, brother mine, 'tis time you and I, and the other vagabonds, were seeking happier hunting grounds in the land of the Great Father.

Ah! a shot away to my right! My reverie is broken; I spring to my feet and start down toward camp. Half a dozen steps and I am crouching in the grass, for I hear that unmistakable thud—thud—thud—a deer coming at full jump and straight toward me. One moment and then—there she is—a barren doe by her size and condition. As I rise to my feet she swerves, hesitates one second—one fatal second—and then, as my shot rings out, with a magnificent bound, she disappears in the brush. Alas for her! that bound, grand as it was, has a tell-tale tremor in it; the tail is clutched convulsively, my shot has told. Carefully picking up the trail, I follow it down hill, through oak scrub and groves of aspen; tree, brush and ground, red with life blood. Across an open glade, where the tracks are closer together; down into the rocky gulch, up the opposite bank with staggering gait; see, she stumbled there! I shall find her soon. Ah, here she is, prostrate between two rocks. Knife in hand, I stoop for the *coup de grace*. Slowly the comely head turns toward me, the large black eyes, swimming in moisture, look me full in the face with a glance of dying wonder. Gently I turn away the reproachful eyes, while I drive the steel to the hilt. "What a spooney," I think I hear some desperado, with his hair parted in the middle, exclaim. My bad friend, I can't help it, you see; I am a vagabond, and, consequently, romantic. For nearly a decade my life has been passed on the frontier. I have hunted, and been hunted by, many kinds of game, biped and quadruped, but—"can the Ethiopian change his skin or the leopard his spots?" Romantic I shall remain, and a pair of dark eyes swimming in tears, whether they are in a woman's head or a deer's, will always excite my sympathy.

Ah! that reminds me of one pair of eyes I shall never forget. It was years ago, back on the plains, we raided a nest of horse thieves one night. There were three men and two women in the dug-out, when we burst in the door. There was a short, sharp struggle, a woman's scream, and suddenly I found a pair of arms around my neck, a face, fur too beautiful to be in such a nest, devouring me like one fascinated; her large black eyes wild with terror, her bosom palpitating with short, quick breaths, pressed so close to me that the child she was nursing was held up between us. The trembling lips could hardly frame the prayer I was powerless to grant: "Oh spare them, spare them." And then, when the men, closely guarded, were led from the room, and that beautiful form sank to the ground, I would have given several years of my life not to have been there.

But there, I can't stop talking any longer, my doe is hung up and dressed. The valley is already in gloom. The sky has faded from blue to gray, here and there twinkles a silvery star, a few fleecy clouds in the west are still tinged with the glories of the dying day, the sound of the ax comes faintly from the direction of the camp, the small birds are chirping their last good night, a belated woodpecker speeds by on swift wing. *Tap! tap!* comes from a dead spruce; yes, my friend, it is too late to be lingering along this way, sweet as the woods are at dusk, fragrant with resinous spruce and balsam and aromatic weeds.

Ten minutes' tramp through waist-deep grass brings me within view of camp, and shows me once more that scene, dear to the heart of every true brother of the rod and gun, to every member of the great fraternity of vagabonds. The bright fire, the white tent under the giant pines, the carcases of fat deer, the figures of men and dogs, and the piles of "impedimenta" scattered around the fire in picturesque confusion, the background of green willow gently waving in the night winds.

> "How dear to my heart are the scenes of my childhood,"

says a good old song; but dearer to me is the flickering camp fire, the frying pan, and the coffee pot. As I walk into the firelight, the dogs open on me full-mouthed, until they quickly recognize a friend; and I am just in time, for that prince of good fellows, Joseph Meredith, has just lifted the lid of the bake-oven and permitted a whiff of the most delicious fragrance to escape from the chowder of trout and onions—worthy dish to set before a king. A king, did I say? "Take away that bauble"—a hungry hunter, I meant—and six hungry hunters were soon seated before a bill of fare New York itself need not be ashamed of—loin of venison and baked potatoes; trout chowder; fried venison, with chili colorado; hot biscuit; tea and coffee. Add to the above "hungry sauce," and the bill is complete. Hunger is a good sauce, taken in small doses. I have taken it in somewhat large doses, so much so that a rattlesnake stew was declared excellent, a prairie owl not to be despised; but I was finally choked off with a crow, although offered under the name of "blackbird."

But the best of appetites won't last forever. Supper is over, plates and cups, knives and forks washed and laid aside, beds made down, boots pulled off, pipes lit—and now comes that one hour between supper and sleep—hour sacred to yarns, to fish stories, and other truths. What scenes and incidents—"moving accidents by field and flood"—that hour recalls; back through ten years of stormy life—parched with thirst on a waterless divide, snowbound above timber line, treed by a wounded bear, all night waist-deep in a swamp, with twenty red devils waiting for daylight and your scalp; a wild night "off the banks," with a broken propeller; a moonlight ride through the lime groves of Santa Barbara; north, south, east, and west—yes, and back to the brooks of dear old Kent, where we caught our first trout; and the rolling downs of Surrey, where we grassed our first bird. Heigho!—happy days, when "gold, and Greek, and love were all unknown to us." But the yarns are over, pipes are out—one by one heads disappear under the blankets. Overhead the full moon sails glorious, in the midst of myriad stars. From behind the willows comes the silvery tinkle of the streams, singing a song of peace and quietness, and bearing away on its pure bosom the restless brain of the vagabond to the care of "nature's sweet restorer, balmy sleep."

A. B. B.

DOLORES COUNTY, Colorado.

RAMBLES THROUGH NEWFOUNDLAND.

PART V

BEFORE returning to the capital from the regions described in my last paper, I induced a local sportsman acquainted with the coast to accompany me down to the bottom of Placentia Bay, where I intended spending the remainder of March. In Newfoundland it is not unusual to find March the most boisterous month in the year, and of all the twelve it is the most dangerous for coast shipping; for at this time there appear around the coast vast bodies of ice, formed during the winter in the Arctic regions, and carried down into the bays by the prevailing southern currents. Down at the bottom of Placentia Bay is a small isthmus about three miles wide, separating the waters of the latter bay from those of Trinity Bay upon the opposite side, and along this isthmus is the great thoroughfare of the deer passing from the peninsula of Avalon to the northern regions of the island and back again. The extremities of both the bays touching upon the isthmus is almost a silent wilderness, but those who visit there never fail to see large herds of deer passing up and down by steady marches. Sometimes parties from other settlements in the island, I had learned, had fitted out during the winter, come to the isthmus, and as the herds were passing up and down, slaughtered them in great number, burying the carcases in the snow till navigation opened to take them to the island of St. Pierre or to St. John's.

Crossing, therefore, over from the shore of St. Mary's to that of Placentia Bay, our course lay down along the edge of the bay, past the settlements where the fishermen live. Here was civilization in its primitive state. Now we met a large settlement nestling in some large sea nook between the hills, again a small cluster of cottages, and often passed some solitary house built down by the front of the open sea.

One afternoon in the midst of a storm, when blinding snow-drifts blew outward from the bleak country, my guide asked me to turn from the rough mountain path by which we were journeying along, down to Angel's Cove, a romantic chasm down between the cliffs, at the edge of the bay. He told me many curious stories of this lonely place, for like nearly all the inhabitants I met there he could neither read nor write, believed in ghosts and unseen interfering powers. Twenty years before he told me that Angel's Cove was known by a different name; that then it was called Devil's Cove, and that the fisherman sailing past its black rocks in the gloaming shuddered and crossed himself, for lights moved across the strand and flickered among the rocks, while wild rushing sounds were heard up among the green woods that skirted the turbulent torrent that poured its waters down from the mountain.

And to prove the malignancy of the spirits of this lonely place he told me that less than twenty years before the owner of the only cottage in the cove left, with his wife and two children, for the nearest settlement, where the priest had come, as was his custom once in the year, to say mass, hear the people's confessions, and give them the sacraments, for the purpose of "doing their Easter duty" and having the children christened. The husband, turning from the mountain path on the way to shoot some mountain partridge which here are found in swarms, was delayed an hour or two, but on returning to the wooded path where he had agreed to join his wife, found her black in the face, and dead, and the two

babes, by some unknown hand, strangled by her side. These deaths were attributed to the evil spirits of Devil's Cove, and however much they may have been guilty, the main fact of the death of the mother and the babes while the father was absent upon the hills, I subsequently learned was correct; but I incline to the belief that the babes were frozen to death after the mother had fallen a prey to the fatigue of the journey, for she carried the two children slung upon her back in the fashion of the Indian women of this continent. It was also a fact that the Irish priest who visited these regions once a year, with bell, book and candle, came down to the cove after the occurrence, exorcised the evil spirits, and changed the name from Devil's to Angel's Cove. But though he read as the candle burnt, the belief was as strong as ever at the time of my visit that the evil spirits inhabited the wood, and I know that to this time few of the inhabitants would venture to cross the bridge alone in the noon-day.

In this dismal yet romantic region there is not a road to be seen, and the traveler goes by the narrow path which leads across the plains, down the hills and across the valleys. Through each cove runs a brook, and in the spring and autumn these are so swollen by the rains as to bed angerous to ford. Yet some of them are to this day without bridges, and many a poor traveler trying to cross them has been borne away by the angry flood down to the sea and drowned. Neither will you find for a score of miles along such a coast as this a schoolmaster or a schoolmistress, but the people are plunged in ignorance and superstition.

In crossing the bridge of which I have spoken, my guide, as he looked nervously over his shoulder into the dark woods, for it was drawing late, told me the story. I wondered little, for the river in rushing through the rocky walls gave forth a noise like the sound of many demons, and the hurricane, sweeping in gusts over the hills, sang dismally and weirdly through the trees. Then he led me down by a steep path through the firs and spruces out to where I saw the water, and partly sheltered by the trees a house appeared, the only one in the cove, or for miles on either hand. The people received us with the most genuine hospitality, and surrendered to us the very best the house afforded. It is so all around the coast. I care not who the stranger may be, on his entry into a house the kettle is at once put on, and if it be in the winter season he is made to go behind the stove and shift his shoes and stockings. As long as he chooses to stay he is made welcome, and I have never known of a case where money has been accepted as a recompense. The place is so dismal and so lonely that the poor creatures are delighted at the sight of a strange face, and if the traveler can tell harrowing stories during the evening by the hearth, and has news of wars being fought or threatened revolutions, he is surrounded, eager eyes and mouths drinking in all he has to tell.

They pressed us to remain a week, but we consented only to stay two or three days at the furthest, and this not till we had been promised some good shooting down around the rocks.

During the evening a violent storm, accompanied with a blinding snow-drift, blew off the land, moving the huge body of ice, which had come into the bay, before it. The house shuddered to the storm, and the breakers roared dismally up and down the coast. As I sat by the flushed stove talking to the head of the family, an old man beaten with the hard storms of nearly seventy winters, I was overcome with melancholy as he told me how hard he felt it to be shut up in this desolate place all his life. He was too infirm then to visit his neighbors living in the other coves, but still he thought of the time when he was a boy driving a lime cart, at dawning, into Dublin. He made verses, too, after his own rude fashion, and after the rest had retired—for he would not say them before them, as they "laughed" at him, he said—he repeated them to me. They were singularly apt, recited as the storm howled.

And after I had commended these rude verses, I shook the dear old man's hand and retired, sinking below my shoulders in the feathers which are taken from the sea birds.

At the dawn I was awakened by one of the sons, for there were three, who asked me if I would like to go and get a shot at some ducks. I was delighted, sprang out of bed, and dressed. The dawn had now just begun to break, and the morning was bitter cold. Piloted by my guide, I fumbled my way down among the black rocks that skirted the water. It was "low tide" he told me, and we could take shelter for fully an hour before the tide came in again, behind any of them. Sometimes in clambering over these rocks I would slide upon the slippery ooze, and before I had gone far I am sure I must have had a score of bruises upon my body. Then my guide, who before had skipped along the rocks nimbly as a goat, slackened his pace, and asked me to excuse him, that he had forgotten that "in the cities there is not this kind of traveling." But we eventually reached the "stages" or the buildings where in summer himself and his brothers landed, split and salted their cod; and here we waited till it became bright enough to see around us. He kept his eyes fixed upon a land-locked basin in from the stages, and after he had gazed there for some time said, "Swiles."

Now, by the word swiles I knew he meant seals, and that there must be some in the basin; but before I had long to reason, he whispered "Load for swiles," which I did, not using cartridge, but ramming home nearly six fingers, part of which was a heavy dose of seal shot. Then we crept around by the shelter of the rocks, till we got within gunshot; when looking through the crevices we saw five or six round black heads bobbing up and down without making any splash or commotion. They were swimming leisurely over to the very rock where we were, and I was trembling with impatience to fire. But my companion grasped my arm and whispered, "Let 'em come, and bunch up." So under this restraint I lay watching the black heads drawing nearer and nearer. Now they would sink from sight, and I would feel vexed, and say, "Are they not gone?" but not a word could I get out of Davy. He simply kept a firm clutch upon my arm.

"Now," he said in my ear, "get ready and wait till I take aim." Then I saw the whole bunch of heads together and also saw Davy's gun go up. Quick as lightning mine went up too, and I fired right into the bunch. Davy's gun had gone off simultaneously with mine. Three heads with some body attached lay floating motionless as the result of our shots; the rest had disappeared and we did not get a sight of them again. The dogs jumped out and half pushed, half towed the game ashore, which proved to be three fine animals. My companion informed me that these came off the ice floe "very likely," and were different from the seals found in the bay. I was of a different opinion, and am still, regarding them as the *Phocalitorea* or shore seal, and not the *Ph. greenlandica* or harp seal, which the hunters find upon the ice floe during the spring. Leaving our seals to be attended to afterwards we crossed the point to look for a flock of "gambirds." A good deal of tramping among the slippery rocks showed us a pair extremely shy of the land, but eventually coming near enough. We took one a-piece, which our dogs fetched, though their going out was now risky, as a strong in-breeze had sprung up and the sea was heavy. On the way back to the house from the rocks for breakfast I saw the other brothers engaged with the horse and a sort of cart upon the strand. During the winter, whenever the wind blows off the land, immense quantities of kelp orsea weed are cast upon the beach by the undertow. Among this kelp is found the dulce which you see for sale in the little grocery stores, glistening with the sea salt. But the Newfoundlanders save none of the dulce. I saw these two brothers now with manure forks loading the kelp into a crate, or "kish" as they call it, and then drawing this up beyond the reach of the tide, where it was thrown into a huge pile. They told me they needed three or four hundred loads of this, that after being piled it rotted, and that they invariably used it to manure their potato and vegetable fields and their meadows. The manure it makes is very strong, and I subsequently ascertained that it impoverishes grass fields where it is used a few years in succession, leaving nothing behind it but a growth of moss.

Then the breeze grew into half a gale, raising a heavy sea upon the land, and sweeping the banks of kelp away. As the storm increased Davy told me they were going out upon the cliff to watch a vessel which had been caught in the ice for many days, and had been drifted with the currents in the bay and out again, working nearer the shore each day. If the wind continued to blow in as it now did they said she would be driven against the rocks and wrecked. I went with them, we taking our guns and the dogs up through the woods. Sheltered by the hills, it was not very cold, and we found several coveys of both willow grouse and ptarmigan sunning themselves in sheltered spots. The dogs showed us each covey, but they were "wild"—in the local language—and would not allow us near enough for ground shooting. I did not mind this so much, but strange, none of my companions would dream of firing on the wing, and regarded me as a marvel when I, every now and again, knocked down a bird or two out of the flock. I think I could not have shot less than a dozen, though for all the others they had but one, which one of them shot sitting upon a bank of snow.

When we got out of the woods we were confronted by a fierce gale, whose cold pierced one to the very heart. I find this is the case generally in Newfoundland. In a strong breeze upon the coast, when the mercury is not down to zero, I have found the cold more piercing than I have ever felt it in Canada, with the mercury ten degrees below zero and a strong breeze blowing. This is owing, I should suppose, to the larger quantity of moisture in the air adjacent to the sea. But, in the face of the breeze, we made our way out over the bleak marshes and headlands three or four miles, and from the "Naked Man," a bold, bald peak, overlooking the bay, we saw the vessel, a brigantine, not more than half a mile off the land, and being driven toward the rocks through the loose ice rapidly.

Meanwhile the tide was setting strongly northward, that is running into the bay, and though the vessel was three or four miles further from the coast than the point at which we stood, the cavemen concluded she would strike near about the point on the top of which we were standing. I shuddered, as I saw the vessel borne along toward the grinding rocks, for the fate of the luckless crew, but my companions were of the opinion that the crew was not in the ship; that if they were they would hoist sail and try to keep out from the shore. And then they told me that shipwreck and drowning was not a rare sight to them; that the winter before two vessels had been wrecked upon the point stretching out before us; that of one of these crews every man was drowned, the crew of the other, excepting one man, escaping. Were there a crew in the ship now drifting onwards, they told me there was little chance of their safety; and now their anxiety was that she would strike in such a position that some of the cargo might be saved. But the vessel dragged along, and, to disappoint the expectations of all, cleared the point and swung inward where the wind could not press her so closely toward the land, and where the capes did not run out so far. Tired of our watching and benumbed with cold we returned to the cove, and in the evening started around the wild cliffs for the next settlement, Patrick's Cove. We found the inhabitants of this settlement eager with expectation of the striking of the prize; but still she skimmed along by the cliffs and jutting rocks past this settlement too, and onward in the bay.

As I was bound in the shore to the bottom of the bay I followed the party in. About midnight, between Patrick's and Ship's coves, we lay behind the rocks, I shivering and my dogs whining; for the wind had increased in violence, and was now pressing the vessel sheer in upon the land. In the clear moonlight when the storm clouds passed we could see the ship plainly, and to our astonishment she now showed some of her smaller canvas. When last we had seen her she floated along evidently without anybody on board, for her poles were bare. We crept out on the rocks, the tide being out, as she was pushed in, and though there was much heavy ice in patches along the shore, the waves roared against the rocks, and threw their foam high up the cliffs.

The vessel was now distinctly in our view, and was being rapidly swept toward the ledge. But only for a minute, for a towering wave arose, caught the luckless vessel and swept her as it would a bubble of its own making, against a sharp edge of one of the reefs. How it came about, and with such suddenness, I fail to understand; but simultaneously with the crash against the rocks her spars snapped off like stems of glass, and she parted amidships. Then a number of white objects ran out of the broken part into the boiling sea; like unto a flock of sheep running out of a pen; and in another minute only the debris of the proud vessel could I see. The fishermen had, meanwhile, run out upon the rocks as far as possible, in the hope of being able to assist those on board, while I was obliged to feel my way along, for the rocks were oozy, and deep pools of land-locked sea lay on every hand. How my heart was wrung as I heard a wild cry come over the noise of the storm when the ship struck, and how anxiously did I look among the white waves, amid the pieces of the ship, for a boat bearing the hapless crew. But the fishermen told me no boat could live in that sea; that were she made of iron she would be pounded into jelly. The fishermen had coils of rope with them, as is their wont when out "wrecking," and it would terrify the heart of one unaccustomed to see the seas into which they will plunge, one end of the line fastened around their waist, the other in the hands of those on shore.

And now their preparation and their bravery came into needful use, for among the floating pieces two forms were seen struggling, though the waves beat over their heads, but they were being carried around the point instead of driving into the nooks. And though it was most piercing cold, and in the face of death itself, one of the fishermen fastened the line about him and plunged down into the roaring waves. I saw a heavy sea come toward him, but putting his hands together he dived through it, and it passed harmlessly on. In the space of a minute he had reached the piece of plank upon which the two seamen were, and when he had got his arms upon it, those on shore drew it with its freight of life safely through the boiling waters to the land. The two sailors whom he rescued were benumbed and apparently lifeless, and it was with difficulty that the arms of one of them could be got from round the plank. The other soon recovered, and a good drink of brandy from my flask brought his activities fully back. The other must have swallowed much water, we thought, for he appeared stupified; but after he had been rolled and disgorged fully a quart of sea water he showed returning consciousness. The brandy, too, helped him, after whith we hastened back over the rocks with the two rescued men to the nearest cottage, about two miles distant. He who plunged into the surf, my guide and myself, with the two sailors, returned only, leaving behind us the rest, who with boat hooks and other contrivances were saving a number of valuable articles from the wreck as they were driven against the rocks. From the sailors we learnt that the vessel had been laden with flour, leather, butter, tallow, etc., and from this intelligence I knew that what seemed like sheep running through the broken part of the ship was the flour. About four days previous the whole crew had deserted the ship and struck out upon the ice for the land, but the party had become separated, seven in one division and three in another. The latter on nearing the land found no hope of getting ashore, and after wandering up and down for two days returned to the ship. Two of these, as I have shown, were saved, the other was beaten to death among the wreckage. The other party, I subsequently learnt, arrived at Placentia, after two of the number had succumbed to hunger and cold, lying down and dying upon the ice.

That night, or rather morning, when we reached the Ship's Cove, a blinding snowstorm was piping out the valley, and I was so weary that I fell asleep before I was well settled in a rude but comfortable arm chair before a roaring fire in the open hearth. A hot meal of fried venison and rich home-cake was served us soon, and then we retired, I sleeping till midday. When I arose I found that several feet of snow had fallen, and was told I could travel no further without "rackets," the racket being a very clumsy snowshoe which the fishermen make themselves. I set out, having purchased an old pair of these shoes, and with my guide made my way around by the slate cliffs, now through clumps of evergreen forest, now down deep gorges, again over bleak heights, or across an angry torrent, at the risk of being carried away by its turbulent flood. I will not recount the incidents of that weary way through bitter winds, and often blinding snowdrifts, the desolate places where we found fishermen dwelling, and the privations and often the sufferings to which the inhabitants are doomed.

The previous season's codfishery had been a failure, and the inhabitants at many points were reduced to sore distress. We had heard of many families who for numbers of weeks had not had anything to eat but herring, being beyond the reach of the assistance the government sometimes renders in the way of meal and molasses. In nearly all the settlements we traveled through we saw here and there a piece of "Indian meal road," a name given to roads made for meal and molasses furnished by the government to the hungry. In one little cove, where we stayed over for a day to shoot ducks, we found every family except one reduced to the utmost want. A few barrels of Indian meal and molasses had been hauled from the next settlement on dogs, and the magistrate from the latter place was busy with a gallon measure doling out the "relief" in small quantities to the hungry claimants.

During the morning I had shot a dozen or fifteen large sea divers, and these with a well-filled bag of rock ptarmigan which I had shot along the way, I offered to the magistrate to distribute to the suffering creatures. So poor were they that they had not even powder and shot to kill the ducks so numerous around their homes. The magistrate then informed me that he believed the worst was past. The ice which had come into the bay was "northern" or "heavy ice," as distinguished from the bay ice, and it, from reports heard, was laden with a large body of seals. That evening before I left those miserable people I saw them with exultation push out their punts, armed with gaffs, bound for the floe in search of the seals. The relief from this quarter would be two-fold. The flippers would serve as food, and as soon as the traders near by heard that the people had seal pelts to sell they would be industrious in bringing provisions thither. I should have remained here for a few days, as the shooting was excellent, and to join in the seal catching expeditions, but that the poverty of the place forbade it, and I was also assured by the magistrate that I would have all the sport I needed in this way further down the bay.

A trader in a small covered boat, in which were two others and himself, who had been out the coast for provisions for the people further down, invited me to take passage with him as far as Piper's Hole. This saved some days' weary tramping, though the bay was rough, and the spray flew incessantly over our craft, encasing her completely in ice. A day's run brought us down to the bay's bottom, near Piper's Hole, a picturesque little settlement nestling among stern hills green in their dress of fir the season round. At several points sea arms run inland, and as dwellers are rare along their shores, sea birds flock to the quiet retreat they afford in thousands during the entire season. They build their nests and bring out their broods along the shingly beaches during the summer, and when the winter storms prevail they fish in quiet in the still waters for herring, and the many kinds of shellfish clinging to the rocks.

We put up at a homely inn, yet a large establishment for such a place, and one of the proprietors agreed to spend a week with me fishing and shooting through the sea arms described, and then to accompany myself and my guide to the choicest camping ground to await the deer herds as they crossed the isthmus separating Avalon from the rest of the island. This it will be remembered was my objective point on starting.

The next morning on rising I wondered at the prepara-

tions being made about me. Groups of men were here and there carrying sails, masts, oars, etc., to a number of small boats lying on the beach, and some were busy preparing gaffs, that is an instrument with a s out wooden handle and an iron spike, etc., at the end. Others carried guns down to their boats. The women and children had turned out too, and were assisting the male inhabitants, all their faces beaming with extreme joyfulness.

As I wondered at this commotion, my landlord informed me that our proposed expeditions were "up" for the present, that the ice had pushed in the bay and was covered with "swiles," and that all hands were turning out to kill some. He kindly offered me a place in the boat with himself and his brother. It must not be thought that what I am now to describe is the regular seal fishery for which Newfoundland is famous. The regular fishery is carried on by steamers and large vessels out in the ocean, to the north of the island, in wide-extending floes, but frequently a portion of this large seal-bearing floe becomes detached and drifts into the bays, bearing its seal freight along. Such a detached body had now come into the Placentia Bay.

Though a strong breeze now blew landward we launched without danger out through the surf, for the ice body on the outside afforded a shelter. I carried my gun, which was capable of throwing heavy shot, and my companions provided me with a gaff. We also took some provisions, blankets, hauling ropes, flag poles and other things needful. And then with loud cheering some of the little boats hoisted sail, and we soon followed suit, beating out to the edge of the ice floe.

On reaching the ice it was the aim of each boat to get as far into the body of the floe as possible; and we entered through a wide seam that led on to three or four lakes, extending nearly a mile out into the thick jam. When we came to a heavy "pan" barring us from another lake, we used our joint strength in pulling the boat upon the same and running it across. In the outside of these "ice-ponds" we found a swarm of elder duck, and among these I plied my shot. They left the lake in the most pelpless fashion, some of them flying shoreward, others simply becoming stupefied, and perching a short distance out upon the ice. After they had left the pond I pursued them upon the ice, thinking they would rise and fly, but they actually allowed me to go up and strike them with my gun. This of course was not sport, so I had no heart for it; but everywhere around me I saw a seal hunter with his gaff, dealing a blow to one of the helpless birds. "We never waste shot on these fellers," they had told me when I began firing at them in the lake; "We'll get 'em wid the gaff bumby." I protested that the gaff was a barbarous way; but my companion truthfully observed that I killed them for the sport, they killed them to eat.

Some of the crew had now pushed out a mile beyond upon the ice, and looking with my glass I could see a number of dark objects moving slowly about the field. Some of these were in groups on a large pan, others were scattered about singly; and I saw two or three others far larger than any of the rest, each of these alone. I informed my hosts of what I saw, and after a good deal of fixing, leveling, studying and sweeping, I succeeded in getting one of them also to see these things through the glass. We had no doubt that they were seals, and taking our flag-pole, two gaffs and my gun, we set out to where we saw them. We now could see some of the other crews busy at work striking, then "skulping" upon the spot.

The ice was heavy, so that you might bring an elephant, bearing a garrisoned tower, all over the bay. Yet, sometimes a heavy swell would heave under, pass along with a sound as if some giant, powerful beyond limit, were breathing. Then the great mass would crack, crack, and sometimes a wide seam, ten feet across, would open, closing again as the swell went past. Sometimes the unwary seal-hunter traveling heedlessly upon the ocean ice, when the "undertow" is heavy, may step from one edge of the opening rent towards the other, just as the breach is opening, miss his step and fall in. Then before he can get out of the water the rent will sometimes close and crush him—crush him as it sometimes crushes the strongest ships getting into a like rent.

We found our way out slow enough, as huge mounds of ice, resembling hills, had been formed by the floe grinding outside against the cliffs, and sometimes you came upon a deep green hole, where, getting down, the chance of getting up again was slight indeed. I had the ordinary heavy winter boots on, but the rest had "skin boots," that is, the seal skin untanned made into a sort of moccasin with a leg coming up to the knee. With these the fisherman would pass over the most "glassy" places without slipping, while I made my way slongonly with the greatest difficulty. For the first time my dogs found themselves upon an ocean ice-pack, and whined and seemed timorous, and instead of questing over the field as they would upon the land, followed at my heels timorously. An hour's tramp through the piercing wind, which, however, by the exercise of rapid walking upon the rough ice, brought us in the midst of the seals, where we found two other crews busily at work.

VACATION.

THERE is a great diversity of opinion in regard to the subject of vacation as to when is the best and most enjoyable season for those who have two weeks at their disposal and who are obliged by force of circumstances to take it all at once. With those who follow the crowd to the fashionable hotels and "flit, as it were," from Saratoga to the seaside, wear their best clothes, and come back at the expiration of their two weeks, having had an "immense and chawming time," being obliged nevertheless thereafter to economize on cigars and lunch to strike an average, we have nothing to do. But to those who have a genuine affection for FOREST AND STREAM, with a fortnight's relaxation of business cares each year, we would say, wait until the latter part of September or the first of October. If your general health is good you can work through the hot weather in July, August and middle of September without much discomfort, and when weary and exhausted after a scorching day, you may board any one of the numerous boats, and after a trip down the bay, return to the city refreshed. There are so many pleasant afternoon and evening excursions at the command of the New Yorker during the summer months, that life in the city during hot weather is not the burden it used to be. Leaving in July or August, the chances are that on reaching your destination, you will find the weather there nearly as warm as that you have left, and be compelled to keep shady during the middle of the day, for exposure to the sun is just as uncomfortable and dangerous in the country as it is anywhere else So you fret and fume and perspire your time away until you return to find the thermometer still among the nineties. I find that I can work through the hot weather better than idle through it; you do not feel it so much if your mind is employed. September is drawing towards its close, the days vary, now hot, now cool, awakening the migrating instinct. A clear, cool, bright day arrives, a promise what autumn has in store, it is a positive pleasure to breathe the air, and you long for the woods, another scorcher and they are forgotten—so it continues until, the equinoctial past, you find a light blanket a necessity if you wish to sleep comfortably. Now you begin to realize that there is a something in the bracing air that tells you the time has arrived.

The hotels (if you must go to a hotel) are not crowded, as the thin-blooded guests have left ere this, and you find forest and stream and lake in perfection. You may leave at sunrise, tramp until sunset, and enjoy every breath you draw. You may float on the clear water, catch pickerel or perch, or lazily loll and enjoy the enchanting and ever changing views. A sharp October frost sets the woods in a blaze of glory. Faint at first, it gradually brightens until the culmination surpasses your powers of description. Your hounds will find deer on the mountains, and the clear, thin air will throb with their resounding bay. The partridge is waiting for you, and the squirrels are at work cutting off the chestnut burrs, and making the woods alive with their chatter. This is the time for a vacation. After two weeks of such life (and how quickly they pass) you return, improved in body and mind, with no more hot weather to steal your required appetite away, or plague you with sleepless nights. DICK.

NEW YORK, Oct. 24, 1882.

Natural History.

THE PINE GROSBEAK.

Pinicola enucleator, Vieill.

BY DR. ELLIOTT COUES.

THE earliest account of the pine bullfinch to which I can refer the reader who may be anxious to start even with the history of the bird is that given by the great naturalist Edwards, who figured it on two plates, in his famous "Natural History of Birds," 1751. The species is said, however, to be included in the Fauna Suecica of the illustrious Swede, published at Stockholm in 1746, and again in 1761. These

two quotations are the basis of "*Loxia enucleator* L.," 1758, and in the twelfth edition of the Systema Naturæ, 1766, reference is made to a paper in the Transactions of the Swedish Academy, 1757, p. 139.

Very shortly afterward, in 1760, Brisson published an original and independent description of the same bird, under the name of the "Gros-bec de Canada"—"*habitant in Canada*," he says, "*unde missæ sunt ad D. Aubry, qui D. de Reaumur dono dedit.*" Thus the American bird came in for notice almost as soon as the European. Brisson gave a recognizable figure of the male, as well as one of his usual elaborate descriptions of both sexes. He called it in Latin *Coccothraustes canadensis*—a name revived in later times for use by those who attempted or made believe distinguish the American from the European bird.

Another early synonym is found in the *Dar-bec* of the Count de Buffon—a term which became the usual French book-name of the bird, as pine grosbeak or pine bullfinch did the English one. Among the more prominent later synonyms may be noted *Loxia flamingo* of Sparrmann, *Pinicola rubra* of Vieillot, and *Loxia psittacea* of Pallas. As will be seen from a glance at any full list of synonyms, various other names have been imposed; but they arise either from the assignment of the species to different genera, or from unsuccessful attempts to subdivide it into two or more, Brehm having no fewer than *five* of these nominations, none of which are worth serious attention. No points in the synonymatic history of the species appear to require discussion, as the list of names is perfectly plain, although quite extensive.

Though it is not my intention to treat the pine bullfinch at any length in its character of an Old World bird, a few words respecting its general distribution in Europe and Asia will not be entirely out of place. What I have to say is mainly derived from Dresser's elaborate article upon this subject. "This," as he says, "one of the most strikingly beautiful of the Arctic birds, inhabits the high northern portions of both the Old and New World, only migrating southward when driven down by the rigors of the Arctic winter. It has occurred in Great Britain, but must be looked on as one of the rarest of the stragglers that occasionally visit our shores." The British authors are nearly unanimous in attesting its extreme rarity in the United Kingdom; but various authentic instances of its occurrence there, among some open to grave doubt, are recorded by Harting and Dresser. It is common in Scandinavia, breeding in the high north and wandering southward in winter. According to Degland and Gerbe, it is a rare and casual visitor in France, several authentic instances of its occurrence in that country being recorded, though Dresser finds none from Spain or Portugal, and only doubtful ones from Italy. It is said never to straggle so far south as the Black Sea. To the eastward it extends across the continent of Asia, and has been found as far south as the Amoor country. In the Himalayas it is said to be replaced by the *Pinicola subhemachalana*.

So little has been learned of the nidification of the bird in America, that for this portion of my narrative I turn also to the work just mentioned, glad to transcribe so reliable and interesting an account:

"The mode of nidification of this bird was unknown until discovered in 1855 by the late Mr. Wolley; and the particulars were first published by Mr. Hewitson in the following year (Eggs of Brit. Birds, 2d ed. i., p. 210,* pl. liii.*). Quoting Mr. Wolley, Mr. Hewitson says: 'As the days grew longer I eagerly listened to the beautiful clear music of the bird in more than one locality; and one snowy morning I saw a hen watching me so very unconcernedly from a tree, that I climbed up to try to catch her in my hand. It was not till I nearly touched her that she flew off, as though she thought I was carrying the joke too far, but in a way that convinced me she had no nest. I had made arrangements for working another part of the country; but I left a trusty Lap in strict charge to visit a spot in Finland where I had ascertained that in previous years the bird had bred. On my return to that neighborhood at the end of summer, I watched day after day for the arrival of my faithful Lap. The nights were already becoming dark, when one evening I saw the well-known figure in a boat approaching our strand. I had scarcely shouted welcome before his wallet was in my hand and my English friends and myself were in triumphal procession to the house. First made its appearance a grim wolf's head; then came forth some reindeer gaddties; next there was extracted the unknown nest, then a skinned pine grosbeak; and at last were carefully unwrapped from a little case the wished-for eggs, and there they lay in all their fresh-discovered beauty before us. At midsummer a nest was found with four fully fledged young about a hundred yards from the spot where the former nest had been. It is now in the British Museum. Externally it is made of remarkably open work of twigs and roots, generally in very long pieces. In the center of the platform there is an inner bedding of barkless fibrous roots, with a little of the hair-like lichen which grows so abundantly on the trees in the Lapland forests.'

"I am indebted to Prof. Newton for the loan of a copy of the late Mr. Wolley's notes on the breeding of this species, from which I extract the following description of the first nest obtained by him: 'The nest was found by Piety, the trustworthy Lap, in company with Mikel Sadlio. It was on the evening of the Second Helutnai (*i. e.*, 27th of May) that they went to Kotta Mello, a little above Yli-Kyrö, on the same side of the river. The place was a little kind of deil where there were groups of small spruces. Piety first saw the bird fly up from the ground with some sticks or nest-lining in its mouth. It remained quite quiet and still, and they were some time before they found the nest, apparently completed, but still without eggs, and placed about two fathoms from the ground in a young spruce three fathoms high. The branches near the nest, which was not quite touching the bole, were thin, short and open. Several days afterwards the nest contained one egg, at the next visit there were two, and several days later there were four. The nest and eggs were now taken, and it was found that the eggs were slightly sat upon. But first the old bird was snared, horse-hair nooses being fixed into the bole of the tree so as to stand out over the nest. . . . The Sadio lad says that he saw at least ten old nests thereabouts, and Piety says that he has also seen nests in similar situations, but never anywhere else; *i. e.*, there is always some favorite corner where they are placed year after year. At midsummer the lad found another nest, about a hundred yards off, containing four young birds scarcely ready to fly. He took it, and it is now in my possession. The nest which contained the eggs was pulled to pieces by the children in his house at Sadio. The one before me is made externally of an extremely light network of thin trailing twigs laced into each other. One of these twigs completely encircles the nest and goes half way round it again, appearing to be about twenty-eight inches in length. This network of twigs is suddenly changed into a compact bedding of fine bare roots mixed with a few spigs of hair-lichens, which form together almost a separate nest inside the outer network."

According to Mr. Wolley's notes, further cited by Mr. Dresser, the nests are nearly always made in spruce trees about twelve feet from the ground. Others than that just described differed in being lined with fine grasses and tree-hair; one was made entirely of fine trailing branches or runners, chiefly of *Linnæa borealis*. The usual number of eggs appears to be four. Several clutches described by Dresser, all from Muonioniska "are pale blue, with the faintest greenish tinge, rather darker in shade than those of the common bullfinch, and are spotted and blotched with faint purplish underlying shell-markings and dark brown surface-spots. In size they average about $1\frac{1}{16}$ by $\frac{3}{4}$ inch."

The nest and eggs of the pine bullfinch in America seem to have been first noted by the same author, to whom my readers are so much indebted already. The nest was in a tree and contained six eggs. It was discovered at Musquash, New Brunswick, July 6, 1863, by Mr. Dresser's brother Arthur, who saw both the parents, and described them so particularly that no doubt remains respecting their identification. They resembled those from Lapland, but were a little smaller, measuring only $\frac{29}{32}$ by $\frac{11}{16}$ inch; the markings less and the spots duller. According to Dr. Brewer, no positively identified eggs of this bird from America were known to exist in collections in 1874; but a nest found at Calais, Maine, by Mr. Boardman, was identified with little doubt, though the parent was not seen. This was placed in an alder bush in a wet meadow, about four feet from the ground, and contained two eggs "not distinguishable from those of the European *enucleator*." It is somewhat a matter of surprise that the investigations conducted by several naturalists of late years in Alaska have not produced the desired specimens, as the bird is very common in that country, where it undoubtedly breeds.

It has fallen within my own experience to find pine grosbeaks at home for the summer, and catch a glimpse of their bearing during the most interesting period of their lives. This happened to me many years ago, when I paid a flying visit to Labrador. I saw birds of this kind on several occasions; once I happened upon a pair which I was sure had a nest near by, because they acted so demurely. They were in a little thicket that grew in a sheltered place where the wind did not blow strong enough to disconcert the insects in the least, and so, though I plunged in several times, each time I beat a quicker retreat, vanquished and disheartened; it was simply impossible to search for a nest in that maelstrom of mosquitoes. So, after watching the pair at my leisure from a vantage ground where the wind blew fresh, I secured them both with my gun, and was glad to leave the spot. The birds displayed no fear at all, nor did they even seem disconcerted by my staring; very likely, neither of them had

ever seen a creature of the kind before; certainly they had not learned how "mighty unsartin" a white man is, or they would have left before I did. As I watched them the mother bird often spoke a single word to her mate in a low, soft, reassuring tone, which reminded me of the note of the fox sparrow; and again the pair chirrupped comfortably to each other, as if they had had their doubts of me, but were entirely reassured. It was a pity to kill them, after all this; but indeed I needed all the specimens I could get during that unlucky cruise, to make any sort of a show for my time and money. Nor were these two the only birds of the kind that I destroyed the same summer. I found them at various points along the coast; so that the country must be a regular summer resort for large numbers, which find in the thick patches of fir, pine and juniper a congenial home.

It was rather late in the season when my slight acquaintance with these grosbeaks began and ended, so that I never heard their song. At least I judged they had passed the tuneful season for that year, though they are said to sing during nearly the whole summer. Thus Audubon pictures the scene of their musical triumphs, and pays a heartfelt tribute to the power to please their strains possess. "The pine grosbeak is a charming songster," he says: "Well do I remember how delighted I felt, while lying on the moss-clad rocks of Newfoundland, near St. George's Bay, I listened to its continuous lay, so late as the middle of August, particularly about sunset. I was reminded of the pleasure I had formerly enjoyed on the banks of the clear Mohawk, under nearly similar circumstances, when lending the attentive ear to the mellow notes of another grosbeak. But, reader, at Newfoundland I was still farther removed from my beloved family; the scenery was thrice wilder and more magnificent. The stupendous dark granite rocks, fronting to the north, as if bidding defiance to the wintry tempests, brought a chilliness to my heart, as I thought of the hardships endured by those intrepid travellers who, for the advancement of science, had braved the horrors of a polar winter. The glowing tints of the western sky, and the brightening stars twinkling over the waters of the great Gulf, rivetted me to the spot, and the longer I gazed, the more I wished to remain; but darkness was suddenly produced by the advance of a mass of damp fog, the bird ceased its song, and all around seemed transformed into chaos. Silently I groped my way to the beach, and soon reached the Ripley."

As a piece of pure "buncombe," this passage from the great author will compare favorably with anything in his work; I should not be ashamed of it myself, if I had to "write up" the song of a bird I had forgotten all about, or perhaps never heard. His experience with dry fogs being doubtless extensive, it was well to state that the mist in which he groped, after he had unfastened the rivets of color, was damp. The same article, however, continues with a contribution from his friend Thomas McCulloch, of Pictou, Nova Scotia, which I transcribe as giving the best picture I have found drawn of the pine grosbeak as a captive.

"Last winter the snow was exceedingly deep, and the storms so frequent and violent that many birds must have perished in consequence of the scarcity of food. The pine grosbeaks being driven from the woods, collected about the barns in great numbers, and even in the streets of Pictou they frequently alighted in search of food. A pair of these birds, which had been recently taken, were brought me by a friend, but they were in such a poor emaciated condition, that I almost despaired of being able to preserve them alive. Being anxious, however, to note for you the changes of their plumage, I determined to make the attempt, but notwithstanding all my care, they died a few days after they came into my possession. Shortly after, I received a male in splendid plumage, but so emaciated that he seemed little else than a mass of feathers. By more cautious feeding, however, he soon regained his flesh, and became so tame as to eat from my hand without the least appearance of fear. To reconcile him gradually to confinement, he was permitted to fly about my bedroom, and upon rising in the morning the first thing I did was to give him a small quantity of seed; but three mornings in succession I happened to lie rather later than usual, and each morning I was aroused by the bird fluttering upon my shoulder and calling for his usual allowance. The third morning I allowed him to flutter about me for some time before showing any symptom of being awake, but he no sooner observed that his object was effected than he returned to the window and waited patiently till I arose. As the spring approached he used to whistle occasionally in the morning, and his notes, like those of his relative, the rose-breasted grosbeak, were exceedingly rich and full. About the time, however, when the species began to remove to the north, his former familiarity entirely disappeared. During the day he never rested a moment, but continued to run from one side of the window to the other seeking a way of escape, and frequently during the night, when the moonlight would fall upon the window, I was awakened by him dashing against the glass. The desire of liberty seemed at last to absorb every other feeling, and during four days I could not detect the least diminution in the quantity of his food, while at the same time he filled the house with a pitious, wailing cry which no person could hear without feeling for the poor captive. Unable to resist his appeals I gave him his release, but when this was attained he seemed very careless of availing himself of it. Having perched upon the top of a tree in front of the house he arranged his feathers and looked about him for a short time. He then alighted by the door, and I was at last obliged to drive him away, lest some accident should befall him."

Various writers speak of a curious disease to which pine grosbeaks are subject, supposed by some to be occasioned by continual perching on the resinous boughs of coniferous trees. It consists in hard irregular excrescences which form upon the tarsi and toes. Mr. McCulloch adds to the account already quoted, the following observations on this score: "Irregularly shaped whitish masses are formed upon the legs and feet; to the eye these lumps appear not unlike pieces of lime; but when broken, the interior presents a congeries of minute cells, as regularly and beautifully formed as those of a honeycomb. Sometimes, though rarely, I have seen the whole of the legs and feet covered with this substance, and when the crust was broken, the bone was bare, and the sinews seemed almost altogether to have lost the power of moving the feet. An acquaintance of mine kept one of these birds during the summer months. It became quite tame, but at last it lost the power of its legs and died." A lady who seems to have had some experience with caged pine grosbeaks also informed Audubon that they were liable to cramps, and died of sores about the eyes and base of the upper mandible. Several males she had in confinement were fond of bathing, used to sing during the night, fed on all sorts of berries and other fruits in summer, and on seeds of various kind in winter. In a state of nature, this food seems to be much more varied than some have supposed, consisting of buds, fruits and seeds of almost any kind. They also take gravel into the gizzard to facilitate the triturations of the harder substances they eat, and often descend to the ground to pick it up. They move either on the ground or in trees, by hopping with both feet together, in the usual passerine fashion. Under all ordinary circumstances, even when not breeding, their tameness is a remarkable trait; they scarcely seem to think of danger from any source, and sometimes even fly in its face. They are less decidedly gregarious than many others of the Loxians; still, many pairs may resort to the same tract to breed, and during their winter wanderings they are usually observed in each other's company, often also associating with crossbills, redpoll linnets and other boreal Fringillines.

These beautiful grosbeaks, as may be surmised from what has preceded, are distributed in summer throughout the wooded districts of British, and what used to be Russian, America, where they lead quiet and secluded lives in the recesses of unbounded coniferous forests. From such favored *penetralia*, where they are scarcely molested during the period of the season of reproduction, many of the birds are inclined to move southward in the fall, while others are content to endure the rigors of a boreal winter as far north at least as Hudson Bay. The extent of their wanderings in the United States becomes a matter of the same interest that attaches to the nomadic lives of the Bohemian waxwings, crossbills, redpolls, snow-buntings and the like, all of which scour our country in restless flocks during the off season of the year, searching for their precarious means of subsistence. We have no accounts of the summer residence of pine grosbeaks in the United States east of the Mississippi; excepting in Northern New England and New York, and the region of the great lakes, all along which stretches of the pine woods which the birds love invite them to a congenial summer home. But, doubtless, when we know more than we do now of the whole bird life of our great mountain ranges in the West, we shall find the pine grosbeaks all along them at certain elevations, as alpine but no longer boreal denizens of the higher reaches of pine-clad mountains. We already know of their breeding as far south as the Rocky Mountains of Colorado, as they doubtless also do in the Sierras Nevadas of California.

We have a number of records of the irregular appearance of the bird on the eastern side of the continent, as far south as Philadelphia and Washington, which seems to be about the limit of migration. Drs. Coues and Prentiss speak of it as "an exceedingly rare and probably only accidental visitant in severe winters," in the District of Columbia. The parallel of 39 deg. north, may be given as roughly indicating an extreme of its range, unless in the most exceptional instances. In Pennsylvania, according to Mr. Gentry, the pine grosbeak only occasionally occurs during the winter, reaching such latitude about the beginning of December, and inhabiting dense pine woods, which it forsakes in the spring to leave traces of its presence in the damage done to the buds of fruit trees before it takes its leave. The same author, noted for the attention he has paid to the food of our birds, presents a winter bill of fare which includes a variety of insects, besides the seeds of pines, firs, birches and junipers, to which is added in the spring the buds of maples, the tender young cones of pines, and a new set of bugs. In Southern New England, writes Mr. Merriam, the pine grosbeak is an irregular winter visitant in Connecticut, though Messrs. Coe and Sage, of Portland, Conn., informed the writer that the bird was to be found there every winter, from the latter part of November to the middle of March. Further north than this, it is scarcely necessary to trace the bird's history in winter; for it directly becomes a regular winter visitant, if not resident, though its movements still depend more or less upon the vicissitudes of the weather. One of the records, however, may be here transcribed, as showing in what multitudes these rovers sometimes make their appearance.

"In the winter of 1835, and for several following seasons," writes Dr. Brewer, "these birds were exceeding abundant in the vicinity of Boston, [Mass.]. They appeared early in December, and remained until quite late in March, feeding chiefly on the berries of the red cedar, [*Juniperus virginianus*]. They were so unsuspecting and familiar that it was often possible to capture them alive in butterfly nets, and to knock them down with poles. Large numbers were destroyed and brought to market, and many were taken alive and caged. They were tame, but unhappy in confinement, uttering mournful cries as the warm weather approached. In the winter of 1869-70 they again made their appearance in extraordinary numbers, in a few localities on the sea coast of Massachusetts, where they did considerable damage to the fruit buds of the apples and pear."

The Ohioan and Illinoisan authorities concur in accrediting the pine grosbeaks to their respective States, but only in the usual character of winter visitants, and in the northerly parts alone. It may be remembered that Dr. Cabanis records from Illinois a specimen upon which the name *Pinicola canadensis* was originally based. It is quoted in Professor Snow's list as a rare winter visitant in Kansas, as far south as Leavenworth. Turning westward now, we directly find that the greater part of the country is ill adapted to the requirements of this bird, and that consequently it is confined to mountainous regions, where its much-loved conifers flourish.

I can present no record as a voucher for its appearance even casually in New Mexico or Arizona, but it is common, and it breeds, in more elevated regions environing the basin of the Colorado River. The bird finds its most southerly extension, and likewise the most southerly breeding range, in the Rocky Mountains. I lately had the pleasure of first publishing some notes, furnished by Mr. T. M. Trippe, which substantiate these statements, although the latest formal biography of the American bird makes no allusion to the important information furnished through my valued correspondent. Mr. Trippe's observations, made at Idaho Springs, in Colorado, are to the following effect: The pine grosbeak is irregularly distributed in that part of the mountains, where it was observed throughout the summer and fall months in the woods near timber line. It does not descend much below such elevation, not having been seen under 9,500 feet, even in the depth of winter, though stragglers probably reach even the foothills. Its food is chiefly the seeds of the pine, birch and alder, but the birds occasionally descend to the ground to pick up other kinds, and probably insects as well. It has a very pleasing song, clear, sweet and flowing, like that of the purple finch. "I cannot say at what season it breeds, but am inclined to think that it must be very early, as young birds are fully feathered and have left their parents in June, before the snow has disappeared from the woods."

Mr. Nelson has given us the record of the occurrence of pine grosbeaks in abundance in June and July at Fort Bridger, Utah. For California, our principal authority, as would be supposed, is Dr. J. G. Cooper. According to this writer, "this beautiful bird is not uncommon near the summits of the Sierra Nevada, lat. 39 deg., in September, and doubtless breed there, as I obtained two fine specimens in the young plumage. . . . They were feeding on spruce seeds when I first saw them, and still lingered about, after two had been shot, as if waiting for their comrades. Soon descending to some shrubby alders to eat their seeds, then to the ground, where they hopped about for some time, uttering a low chirping note, and allowing us to go within a few feet of them." In a later communication, made to the California Academy of Sciences, Dr. Cooper thus alludes again to the same birds: "A specimen which I shot in August, 1870, near the summit of the Pacific Railroad pass, over the Sierra Nevada, was of a fine *orange-red* color, but beginning to moult. This plumage, which is not described by Baird, is stated by Nuttall to be the most adult condition of the species, the *carmine-red* characterizing younger birds. It may, however, be a fading change, like the yellow seen in caged birds of some other red species." I may add that Dr. Cooper's surmise is undoubtedly correct. In any event the carmine-red is certainly the normal perfect plumage, other shades of red indicating decay, decline, fading of the plumage, or other ill condition.

THE BREEDING OF QUAIL.

In reading the issue of October 12 of your valuable journal, I was impressed with the controversy about the quail breeding twice a year. This fact is so universally acknowledged by sportsmen as well as ornithologists, that "J. E. S.," could have left the truthfulness of this statement for their endorsement. The surprise is that a doubting Thomas should hail from the Old North State, the natural home of the quail, and a place eminently fitted for observation of the habits of this wonderful little game bird. Years ago, while at Chappel Hill, I often enjoyed a day's sport among them, and my memory now carries me back to the many shots I made into coveys composed of two different broods. But to disabuse any one who may entertain a different opinion, I will mention two notable incidents which came under my observation this season. On the prairie part of my farm, I was having some millet mowed, when the driver called to me, "Here is a covey of birds and I believe I have killed the hen." In making an examination the cock bird only could be found. This brood, in charge of the old cock, was seen for several days during the hauling of the hay. Several weeks elapsed before I went to this field again, and I then saw two old birds, a cock and a hen, with two different sized broods in the same covey. In the timber part of the tract, where I had a new ground containing ten acres of land, one of my hands found a hen bird sitting on twenty-two eggs just under the end of a log in the same row he was plowing. The quail flew off the nest and the mule struck the bird with her fore foot. The boy told me of this circumstance, and after waiting a day or so and fearing that the bird might be injured, I went with the boy to the nest, but the bird had hatched. In looking after this brood I found them in charge of the old cock, and I concluded that the hen bird was killed. Two or three weeks later I came across the old cock with his brood, and with them an old hen with a younger set all in the same covey. LOWNDES.

CLAY CITY, Miss., Oct. 19, 1882.

There is no doubt but that the quail hatch and raise a second brood in favorable seasons, as stated by "J. E. S.," of Iowa. During the past few weeks quite a number of broods have been seen in this locality that were hardly able to fly, and others but half grown, while all the broods that were hatched in the early part of the season are now full grown and strong of wing. A few days ago two gentlemen were walking through a woods pasture, and when passing a clump of small bushes and woods a female quail flew out and acted as though she had a brood of young in the cover; the men parted the brush and looked in, when they saw a nest full of eggs, upon which the quail had been sitting. Many of these second broods contain from twenty to thirty young birds. R. E. STEPHENS.

NEWPORT, Ind., Oct. 23, 1882.

THE WHITE BUFFALO.—Upper Marias River, Montana, Oct. 12, '82.—*Editor Forest and Stream:* I fear your correspondent, "H. S.," who has an article in your issue of Aug. 31, on "White Buffalo," has been misinformed as to the manner in which the Indians regard the albino buffalo. Among the several tribes of the Blackfoot nation, the Gros Ventres, Crows and Sioux, the tanned robes of white buffalo have always been regarded as the most valuable present that could be given to the sun during the ceremony of the medicine lodge. The Blackfoot nation at least has always killed the white buffalo whenever the opportunity occurred, and many legends are extant of the wonderful speed of these albinos. If "H. S." will take the trouble to question some of the old men of the Crow tribe he will find that his statement is decidedly erroneous. Many legends of the Blackfeet, which I believe to be at least several centuries old, speak of the white buffalo. So long ago as that there were few, or any, cattle on this side of the Mississippi, so I can hardly believe that the white buffalo is not an albino. Please let "Pistol Grip," of Butte, understand that I did not write of killing a poor doe antelope and a few ducks in a day as a boast. I intended it to be understood that I think it better to kill game for home use out of season than to slaughter and waste hundreds of ducks and other game just because they are in season and a person has a right to shoot them. I do not need to cross way over to Butte, Mr. Pistol Grip, to find game. At present the buffalo (plenty of them) are not thirty miles away, and on the headwaters of this creek, some fifty or sixty miles distant, we have as much mountain game as you do. Come over and I will take you buffalo hunting. AP-PE-KUN-NY.

NOTICE.—James Purdey & Sons, of 287 and 289 (late 314½) Oxford street, London, gun manufacturers by special appointment to Her Majesty the Queen, H. R. H. the Prince of Wales, and the most noted shots of Europe, give notice that on January 1st, 1883, they will move to the new and large manufactory they are now building, and that after that date their address will be Audley House, South Audley street, London. They take this opportunity to inform American sportsmen that they have patented a new rebounding hammerless gun, which, after the most careful practical trials and severe tests, they confidently recommend as by far the best and only perfect hammerless gun made. Its advantages are strength, simplicity, safety and freedom from misfires. James Purdey & Sons will only make one quality of guns for the United States, viz.: the best. Guns take about five months to make, and can be ordered direct from the makers, or through the agencies of Schuyler & Duane, 159 Broadway, New York, and Joseph C. Grubb & Co., 712 Market street, Philadelphia, Pa. Messrs. Purdey & Sons are prepared to sell the right or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States.—*Adv.*

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

THE MOOSE CALLERS.

WITH springy gait and hopeful breast,
Two men and a boy start for the west;
With gun in hand and pack on back,
And flour and pork stowed in a sack:
To call up moose at break of day
From silent barrens far away.
With coaxing notes and lovesick tones,
Thrills the bull to his marrow bones.

In leaky tent and dripping dress,
Two men sit with a boy, and bless
The rain that falls, the wind that blows,
And try to dry their soaking clothes.
The fire fizzles and will not burn,
In vain they squirm and twist and turn,
Trying to dodge the smoke that flies
With blinding fury in their eyes.

With bated breath at break of morn,
Two men and a boy, with a horn,
Call for a moose, gallant and gay,
"Come to me, darling, come, I pray."
For maiden moose, though shy and coy,
Always woo first, *too-roy-too-roy*.
"Come and see what a loving cow
Is making this infernal row."

With haggard mien and downcast eye,
Two men and a boy sadly fry
The salted pork and batter raised
By "Royal" powder, so much praised.
Slim fare have they for knife and fork,
Their cake is dough, their venison, pork—
The bull a courting never came,
Suspecting no doubt "their little game."

With footsore tread and fallen crest,
Two men and a boy came from the west,
Their flour is spent, their pork all fried,
To call a moose their best they tried;
With birchen horn they called *too roy*,
"O, come, my dear, do come, my boy."
"Not for Joseph," he said, and fled,
"Not with that sort of cow I wed."

GUNNING FOR GROUSE.

BY PAUL PASTNOR.

THE days have come when the modern Nimrod cannot be kept in town. His eyes fall upon his gun in its chamois case, stretched royally between the antlers of its first and noblest victim, and the conviction bursts upon him that he ought to go afield. Upon careful reflection and balancing of *pros* and *cons*, he makes up his mind that, as he has but a few days to spare, he will go grouse shooting. He is not in condition to undergo the hardships and fatigues of another deer hunt, and it is getting too cold to camp in the mountains. What he needs, and what he therefore desires, is a judicious admixture of civilized comfort and invigorating field sport. Grouse shooting is just the thing. It may be enjoyed within easy reach of the amenities of life. It does not demand undue exposure or over exertion. And, above all, it is sport that tries the quality of a man's physical energy. There is something fine about it, it is a gentleman's sport. Almost any coarse-grained sort of a fellow can paddle out to a deer struggling in the water, with the dog clinging to its haunches, and pour a couple of barrels of murderous buckshot into the poor animal's head; but to stand alert, alive, behind a staunch setter, and arrest the swift mottled cock, as he springs like an arrow from his covert—this is something which requires a finer organization. It is very seldom that your deliberate deer-slayer is a good shot upon the wing. He can snip off the head of a "pa'tridge" with his rifle at twenty rods, perhaps, but he is willing to acknowledge that the mysteries of aerial shooting pass his ken.

Grouse shooting is essentially an aristocratic sport. It exists, in its ideal perfection, in England, but we have it in its practical perfection here in America. There has grown to be too much artificiality about the sport in England. The grouse themselves are fairly bred to the gun there. They are too tame. They have lost the magnificent gaminess of the natural bird. But here we combine the fair, manly, almost chivalric method of the English sportsman with the best natural condition of the game. Consequently there can be no finer sport in the world than gunning for grouse, in the fall of the year, on our highlands and mountains. The autumn season itself is delightful. To merely be afield with one's dog and gun in so bracing an atmosphere, under so superb a sky, in the midst of such glorious scenery as our autumn hills and valleys afford, is enough to fill the heart of the true Nimrod—who, by necessity, must be also a lover of nature—with the purest enjoyment. Add to this the romance of the sport which he is pursuing, its almost intoxicating exhilaration, the satisfaction which grows with a growing bag, and ceases with a full one; the pleasure of feeling the "insidious approaches" of a mighty appetite; the sense of gaining muscular vigor and activity with each step—and who can wonder at the sportsman's true love for gun and dog, and his delight when the keen autumn air tells him that the leaves are falling and that the covers are in prime condition for his purpose?

Let us, then, take the season at its height, and away to some quite mountain hamlet in New England—wherever you choose—provided it be not too plentcously infested with the mighty local "hunter" and his dog of anonymous origin. Let us suppose that we are safely domiciled, with Nimrod and his setter, at a neat village inn among the New Hampshire hills. What an immense relief it is to sally out on the porch—"verandy" in the *patois* of mine host—without a care or a single demand upon one's time, and tilt back against the wall, and smoke an after supper cigar with the best of friends. What an invigoration, to drink in the mountain air, and sniff, on the damp o.or-gathering wings of the breeze that comes after the stars, the bewitching savor of pine coverts and banks of decaying fern, favorite hiding places of the wary grouse! Dreams too pleasant to be fixed in memory visit the couch of the expectant sportsman, as he retires for the night, and yet, when the trusty landlord comes at 5 o'clock to wake us up, Nimrod is loading shells, and that gentle personality which includes the reader, and shall be designated irrespectively as "we" and "I" are engaged with equal diligence in oiling and putting into shape his beloved breech-loader.

"Breakfast is ready, when you are!" cries mine host, a jovial and familiar and withal a good fellow, with a heart too big to run in the little flagreed moulds of conventional formality. All men are "boys" to him, and he does not resent being thought the most youthful of them all. We follow him down to the pleasant little dining room; with its well polished windows just brightened by the morning sun, and enjoy a foretaste of the delights to come in the shape of some delicious bits of broiled grouse. While we are eating, our host gives us an account of the slaughter of the innocents.

"Yesterday" (quoth he) "Ham Ma'sh come up from the lower road with that dark curly span'l of his'n (you'll probably want to borrer it before you git done) and his old army musket, all in a stew to git me to hitch up and go along with him to Bryan's Holler, where he had heern there was a big flock of young pa'tridge. I wan't p'ticlarly driven yesterday, so I hitched up and took my old double-barreled muzzle loader, and we drove down to the Holler. It wan't five minutes before that little span'l of his'n had the hull flock—I should think there was as many as twenty of 'em— up in a clump of pines on the side of the ravine. Me and Ham crep' up with our guns all ready to shoot, and pretty quick we seen the pa'tridges in the trees, lookin' down at the dog, and turnin' their heads this way and that, you know, like a turkey lookin' for a grasshopper. Ham's old musket belched out, and down tumbled one of 'em, an old cock, drummin' with his wings in the leaves so't you could ha' heard it half a mile off. 'Take the lower ones first,' says Ham, with the stopper of his powder horn in his mouth, 'and we'll get 'em all.' I brought down two with my two barrels, and by that time Ham was ready to fire again, and he fetched another. The dog kept a barkin' all the time, and the pa'tridges on the upper limbs never stirred a peg, but just kept bobbin' their heads and peckin' around to see where the others had gone to. In less than fifteen minutes we had twelve of 'em scattered over the ground, and might have got more if we'd be'n a mind to. But twelve was enough for once, so we left the rest for another time, and come away. But if that ain't pretty tall shootin' now I'd like to know what is!"

We exchanged horrified glances with Nimrod, but said nothing. The broiled grouse, however, did not taste quite so delicious after we knew how it was obtained. We fed the dogs sparingly, smoked our cigars on the porch, and then went up stairs for our guns and trappings. How glad Don and Rob were to see us accoutred for the field. How they raced together up and down the road, neck and neck, their eyes glistening and every muscle a-thrill with life. But a stern "To heel" brought them submissively in, for they knew, as well as we, that they must not waste their strength in fool'sh play when a day's work was before them. Through the keen, bracing air of the early morning we tramped along the hillside with our dogs, greeting the habitant with a cheery "Good morning," and his wife and daughter with a gallant doff of our double-visored caps. I doubt not we—or our habiliments—made quite a sensation in that section. The people came out by families to see us go by, and the awful admiration and deference with which our occasional calls for a drink of water were received would have satisfied the advance couriers of a circus.

We had gone about three miles when we came to a crossing of the roads. The old guide post, after half a century's hesitation, had finally decided with such emphasis to lean toward the west that it had fallen down the bank upon its face, and there it lay in peaceful slumber like a drunken rambler with his two arms spread abroad.

A native urchin was sitting under the shade of a big oak tree by the wayside, engaged in the enviable and profitable employment of picking bramble prickles from his bare feet. Him, in default of a guide-board, we consulted as to the going of the ways.

"Where does this road lead to, bub?"

"I dunno." (Mouth and eyes wide open—a clear case of fascination.)

"Well, can you tell us where this one goes?"

"I dunno."

"Where do you live anyway?"

"I dun—"

His stupidity was past comprehension. We chose the westward road, superstitiously following the crazy preference of the fallen guide-board, and presently were led to thank our stars for so doing. The road led us into the depth of a grand old wood. On either hand branched out the logging roads, which led far back up the mountains on either side of the valley. These roads were fringed on either side with tangles of bush, and brake, and fern, glorious coverts for the game of which we were in search. Nor was it long before our busy setters, Rob and Don, began to show signs of birds.

We were creeping stealthily along one of these tangled woodways, side by side, with our guns cocked and fingers on the trigger. Suddenly Don's tail, which had been vibrating eagerly from side to side, stiffened, and he came to a dead halt by the side of the road, his body curved into the shape of a half moon, with head and forequarters turned toward the coverts. "Birds!" said Nimrod in a tremulous whisper. Bob, who had been ranging wide, just then came in sight, quartering for the covert, but he too stopped before he reached it, and fell into the same statuesque attitude on the opposite side. It was a pretty picture indeed, to see the two noble dogs frozen into attitudes of the most intense excitement and warning, their fore paws slightly raised, their tails stiffened out in a line with their backs, their eyes glistening and fixed, their jaws slightly wrinkled and dripping with saliva. And we, in our russet trappings, each with our left foot advanced and gun hanging balanced and slightly raised, crouching forward, ready to let loose the batteries of flame and death at the first signal, must have made no unfitting accompaniment to the picture. Every moment we expected to hear the wild whir of wings announcing the flight of the hidden birds; but, having been so long unmolested, they were inclined to keep their covert, even under the very noses of the dogs, till a sharp, "Hie on!" from Nimrod sent Don creeping into the brakes, and then, with a bewildering rush and thunder of wings the covey rose, not simultaneously, but rapidly one after another, so that there was a continuous beating and drumming of wings, startling our nerves and bewildering our aim. As the first birds rose, our guns came quickly to our shoulders, and we fired almost simultaneously. Nimrod's bird turned over and over in the air, and came down with a dull thud on the edge of the heath; mine swerved quickly, and let fall a little puff of feathers, that told it was hit, but not severely. Just then the third grouse rose, and with a quick snap shot, almost before it had reached the level of my aim, I mowed it down, and it fell among the ferns, beating a wild reveille in its death struggles. Startled and confused, the birds now rose from every part of the covert. Nimrod's second barrel was as destructive as his first, but, in the nervous haste of reloading, I lost self-possession for the moment, and my two next shots were wild. All this while the dogs were lying on "charge," just where they had stood when the birds rose. Their staunchness was a silent reproof to my own excitement, and a glance at my faithful setter restored my command of nerve, so that the next bird, and the last that rose, fell to my gun.

It was not a bad beginning of the day's sport, and as Don and Rob retrieved our birds we loaded them and ourselves with congratulations and compliments. As we proceeded the road kept getting narrower and narrower, and the bushes encroached upon it more and more, until we found it inconvenient to walk abreast. Nimrod accordingly proposed that we should separate, each taking a dog, and meet again at the expiration of two hours in the main road. I accordingly took Don, and making my way back to the road, chose another of the wood-ways to be my own line of operations, while Nimrod and Rob continued to follow the one we had first entered. I had not gone far before I heard the sharp crack of Nimrod's gun out to the left, followed by a faint halloo to "look out," which I obeyed none too soon, throwing myself into the position of ready just as a swift gray form came whizzing down one of the glades on my left, and rose up sharply as it saw me to pass over the tops of the trees and avoid my aim. But the maneuver was executed a little too late. I was on the *qui vive*, and the instant the bird mounted I covered it with the muzzle of my gun and fired. It is well known to sportsmen that an "oncoming" shot is the most difficult of all; judge, then, of my surprise and gratification when the swift-moving grouse "towered" for an instant with a spasmodic quiver of its wings, and then fall like a lump of lead almost into the jaws of bewildered Don, who had never "had any experience in that line of shooting before;" as the whimsical surprise in his brown eye informed me as distinctly as though he had been able to speak. "I've got it," I yelled with stentorian excitement to Nimrod. He might have heard me though he were a mile away. "All right," came the distant reply, and then the silence of the woods closed in about us again like the waters of a lake displaced for a moment by the thrust of a child's finger. What a solemn and impressive thing is the silence of the woods! There is the silence of the broad fields, of the lonely mountain peak, of the pathless waters, of the deserted house, but there is a spell in the silence of the forest that is grander and deeper and more heart-searching than them all. Where the vision is hemmed in and the sense of isolation and self-presence predominates, a man's personality stands out before his inward eye with a largeness and vividness that is startling. The little human relationships which, like atoms of ether, go to make an atmosphere between the soul and God, are all dissipated, and the being, the selfhood, stands exposed to the direct influences which come to it from the higher life, from the very presence of God in, and around, and above the soul.

But while I am pointing a moral, Don is pointing a bird. Quick as a flash the spiritual side of nature goes under, and the animal side comes up. There is but one intent and purpose in my mind at the present moment, and that is to bag the cowering game. "Hie on, Don!" The bird flushes, flies straight for a few paces, but, just at the same instant that my finger presses the trigger, swerves sharply aside, and escapes the leaden hail. I watch the swift gray form, as it skims with outstretched wings down the glade, and suddenly, to my delight, see it sink gracefully down into a bit of thick covert, just on the limit of vision. "Aha!" said I to Don, "we shall have a chance to try prince grouse again at his little game." Hastily sliping in a fresh shell, and warning Don to work "steady," I made my way as swiftly and silently as possible in the direction of the covert. As I drew near the edge of it, and grasped my gun more firmly, and strung up my nerves to the highest tension of readiness, I heard a tantalizing "cluck! cluck!" and the pattering of quick little steps in the dead leaves. Don, who had come duly to a point at the first intimation of game, now crawled uneasily forward, with his belly trailing the ground, as if anxious to keep within scent of the bird. I knew that such a maneuver would unsteady him, and so hastened forward myself, determined if the bird would not flush, to shoot it as it ran. I got a glimpse of it through the twigs and foliage as it scurried away, and, depending rather upon sense than sight, fired at the place where I conjectured it was, and was well pleased to hear it beating the ground with its wings, sure sign that it had received a mortal wound. Don plunged into the covert and brought it forth in triumph. It was a heavy cock, and added materially to the weight of my game bag, as I consigned it to the already plethoric net. Suddenly I noticed that the gloom of the forest had deepened; that there was a strange hush and intense brooding stillness in the air; and as I stood still to listen and marvel at the change, I heard, of a sudden, a distant muttering sound, which satisfied my curiosity in an instant, and set me to retracing my steps toward the main road at a lively pace. I had scarcely reached it when Nimrod came striding into sight further down. When he saw me he came swinging up the road, bowed forward with the weight of his game bag like a man carrying a pack.

"We have got to leg it!" he remarked, laconically, as he swept into line with me, caught my stride, and led the homeward way by half a length in advance. I shall never forget that sturdy race with the storm. There was not a house in sight anywhere, or shelter of any kind, and we had the usual antipathy of the well-equipped sportsman to getting ourselves and our guns wet. We were determined to reach the first house if it was a possible thing. Back of us, as we craned around our necks occasionally to look, we saw the great lazily moving banks of inky clouds, with their fleecy edges and vans, mounting up the sky. Away to the southwest was a veil of parallel strands, like a great spider's web, stretched from Heaven to earth; and we knew that it was the swaying curtain of the rain. Out of it came a fresh, damp breeze, that freshened every moment, and warned us that the couriers of the shower were close at hand. We could hear them tramping away off over the valley, and the sound urged us to even greater speed. Presently the dusky landscape began to flash into vivid pictures here and there, as the forked index of the lightning pointed hither and thither. A few large drops were falling. "Well, we might as well get under a tree, I suppose," said Nimrod, in a tone of dolorous resignation. But just then we rounded a bend in the road, and saw, on our left, a rude log barn in a clearing. It was well nigh overgrown with a tangle of bushes and wild grass, and had easily escaped our notice when

going in the opposite direction. But now we made for it right gladly, and had just time to pry open the little door and squeeze in against a solid mass of hay, when with a rush and a roar the unreasonable thunderstorm broke upon us. In our cosy nest we were safe and dry, and we exulted at the roaring of the wind in the trees, and the crashing of thunder, and the mighty undertone of the rain. For full twenty minutes the storm raged, with intervals of comparative quiet, when it gathered strength for a fresh onslaught; but by and by the thunderclaps rolled farther and farther away, the wind subsided, and the rain fell more and more gently, till at length it stopped as suddenly as a child stops crying, and the sun burst through the dripping tree tops like a smile through tear-wet lashes. We gathered up our guns and game, pushed ourselves out of our nests in the hay, and picked our way carefully along the narrow path to the road again. Then, with the invigoration of the clarified air and a keen appetite, we set out on a swinging lope for the tavern, and presently were toasting our damp shins at a good hickory fire, and relating our adventures to a wide-mouthed audience. "Wal, them dogs of yourn be good for something," said Ham Marsh, carressing his "span'l"—"but I'd ruther hev mine."

A DAY'S SHOOTING IN FLORIDA.

"THE Invalid" was in St. Augustine, Fla., enjoying with his wife and friend, the *dolce far niente* of that quaint and pretty old town. His first and only shooting excursion there took place shortly after his arrival, and on his return he described it in these words:

Our guide was the Jack of all trades of the entire county. His name was Fredericks, and the populace called him "Rex" for short. While strolling any day through the narrow streets you would see him perched in mid-air, hanging on by his upper lasses, painting a sign for an aerial fancied shopkeeper. Again he would be tearing on a young colt beyond the city walls, breaking the restive three year old. Then you would meet him rushing into one of the old coquina walled houses to choke a dose of physic down the throat of some poor sufferer. His favorite prescription was a delightful and bracing mixture which he compounded from his stock of paints and oils. Many a tough old "manhawkin" and Florida "cracker" had he pulled through with that same "tonic."

Well, one bright lovely morning, just at the dawn of day, Rex appeared at the hotel door in a "jumper," as he called it. It proved to be a two-wheeled abomination, and it was well named, for it would jump everlastingly. The only way you saved your tongue and teeth from entire destruction and loss while riding in it, was to ram the one half way down your throat and close the others so tightly together that your entire mouth felt like a vise, and you quite experienced all the horrors of lockjaw. A fair looking setter belonging to "the old veteran"—as the newspapers delight to call him—Carroll Livingston, was coiled up in the cart.

My friend Page and I, accoutred as we were with long boots and guns and traps, plunged into the vile vehicle and dashed off. Of course, as in all such cases with me, my good wife had filled the cart with all sorts of bundles and bags She crammed in the medicine chest and a big lunch basket and some enticing looking bottles, and wraps, waterproofs, rugs, an umbrella, and great Scott! a camp chair, which I suppose she thought I would recline on and gayly shoot the birds as they confidingly soared to their fate in a constant street about thirty yards off. Ah, the faithful tender *spouse mia!* What good and careful watch she keeps over my racked lungs, and how anxious will she be till I greet her again at dusk.

Packed full as we were, and with only one seat holding two in the cart, big Page had to find a bed of thorns among the traps behind. Every jolt of the wheels would send his heels up in the air, he would make a dash with his hands for the back of our seat, when down would come his heels again with a "devil's tattoo," enough to smash the floor boards in twain. Thus we rode through the streets of old Augustine, and out of the city gates into the magnolia groves beyond at the gray dawn of day. The mocking-birds were warbling their clear, pure notes as we bumped along, and the air was thick and drowsy with the scent of orange blossoms. We went on through the magnolias, a grand old grove, with the trees arching overhead so that the blue sky above was almost shut out. The heavy dew drops sparkled and glistened on the leaves, and a cool breeze was swaying the limbs to and fro, shedding the drops to the ground, so that we seemed to be passing through a shower of silvery light. Beyond again, in the open, we came to the savannah, an immense low swamp, where we expected to find that glorious bird for sport, the English snipe, and have our blood stirred at the sound of his "scape, scape," as he winged his quick flight.

Just at the border of the "mash" I saw a big wing glisten in the grass, about sixty yards off, and, hoping for big game, I cunningly and selfishly said to Rex, in an off-hand way, "Pull up here and I'll just put my gun together, as we may put up something." I jumped out, stuck in a couple of cartridges, and crept along the edge of the sedge. The dog hung back and did not seem to care to do her work. I stole forward, and judging I was about the right distance from where I had seen the wing flutter, I threw a lump of clay ahead, and rose up all ready to catch the bird on the wing. My blood was up and I was eager for the fray. At once there rose an immense black object that appeared to fill up the whole sky as I sighted. Slowly and awkwardly the creature took flight, and I had all I could do to prevent myself from blazing into it.

Great shrieks of disgusting laughter assailed my ears, and slowly and sadly, "halting with reluctant feet," I turned back to meet the jibes and ridicule of those two vulgar and heartless ruffians. "Why didn't you pot him?" shrieked Page; and "You're a prize buzzard stalker!" yelled Rex. Alas, too true. I had advanced with deadly intent and with a beating, hopeful heart, using all my sporting skill to bag "the scavenger of the South." Great Scott! will I ever hear the last of that buzzard?

We went on and hunted the savannah and got about two dozen birds. The sun had climbed high in the clear sky by this time, and as our throats were parched and we were as hungry as only hunters can be, we made for the cart. As we went we skirted a rising ground covered with scrub palmettoes at the edge of some woods. Fan suddenly drew up stiff and among the low scrubs, and Page said to me, "Invalid, you go on and take that point. You've been missing all morning, see now if you can't kill this time." (Page is really a good fellow, take him all round, but he is one of the many who preface in a sort of hang-dog manner some of their speeches by saying, "I'm a plain, outspoken person, you know—"and then immediately blurt out something which hurts your feelings in the cruelest way.) I advanced quietly, admiring the good bitch the while as she stood like a rock, with her body rigid and her head drawn a little to one side. Just as I reached her she suddenly made a big spring, gave two quick frightened yelps and "lit out" on a bee line for the woods as hard as she could tear, and was soon lost to sight. A peculiar pungent and aromatic odor floated in the air, and I looked at Rex dumbfounded with surprise. Not a bird got up. Rex turned off one side with very quick steps and quickly remarked, "We had better make tracks; it's a moccasin!" Cheerful intelligence truly, for the moccasin is a deadly poisonous snake, so Page and I left, looking like a pair of full checked "high-steppers" as we lifted our feet full high over the palmettoes, with a pleasant feeling crawling in cold shivers up our legs, and playing along our back bones that every moment we would be struck with the venom of the reptile. Ugh!

Rex told us later that the dogs often point these snakes, their odor being very like a quail's. The brute had evidently struck at Fan who must have been out of range, but the very life was frightened out of her.

We reached the cart, which was drawn up in a cool shady spot near some water, and I immediately went to the stream and pulled one of the bottles out, which had been put there to cool, and took several long and deep draughts from it.

"Look here, Invalid," called Page, "how many of those 'swallows' make a summer?"

"When the 'swallows' homeward fly," Rex added.

"I'm taking an antidote for a snake bite," sai l I.

"But you weren't struck."

"Well, I might have been, and it will cure the fright anyway."

"You'll see snakes—plenty of them; heap snakes, too—if you don't take your long throat away from that bottle."

"He will drown himself inside with it, anyway," said Rex.

We sat down in the cool nook, and spread our feast over the grass. Rex dealt out the fluids, and Page handed us a big pile of sandwiches. They were mighty tough chewing I thought, and Rex, who could bolt anything, seemed in difficulty, too. We managed to grind up two each, and slow, laborious work it was. I looked at Page, who had kept so quiet I fancied he might have noiselessly suffocated over one of them. He seemed all right, however, and was munching away with composure and satisfaction.

"You fellows are always grumbling—never satisfied. Why can't you be contented and take things, even tough sandwiches, as they come?" he said. I noticed a sly twinkle in his off eye, and I knew something was up. Just then a bit of white meat dropped from the sandwich in his hand. It fell to the ground, and, by the great horn spoon, it was—chicken! Yes, young, tender, and juicy chicken! My wife, with her own hands, had made a few big sandwiches of "spring broilers" for me. I had forgotten all about them, and had been breaking my teeth and dislocating my jaws on the black, tough, leathery abominations of the hotel's making, while Page was regaling himself on what should have been my dainty, toothsome ones. The brute had finished all but one, and I crammed that whole, into his mouth, while he was shaking with laughter at my rage; but I had the slight satisfaction of seeing him almost choke as he spluttered and shook. He grew red in the face, but he could not stop laughing, and finally, when he got the whole thing anchored down into his rapacious and capacious stomach, he took such a long pull out of one of the bottles that it made us lonely watching him, as the spirit gurgled with an enticing wash down his throat.

The setter wandered back to us just then looking thoroughly ashamed of herself, with her "flag" drawn down at more than half-mast. We gave her a few biscuits, washed her feet in the stream, and, recruited and refreshed, we put the flea-bitten, home-bred mare to the cart and started off for "pastures new" with high hopes to pursue the sport.

Fan ranged at her "own sweet will," and as we reached the center of a large, dry, open space, while quartering the ground swiftly, drew up to a fine point. We flushed a bevy of about twenty quail, and by each of us taking the birds in our line at the first flight and "marking down," we got seventeen of them. The bitch worked finely here, though she would "break shot." She was very fast, with a keen, true scent, and staunch and firm on a point, so it was half the sport to me to watch her work.

We soon started homeward, as it was getting late, and I had promised the good wife to house my "iron constitution" before dark. As we neared the town after a long drive, with "a heavy sea on" in the "jumper," Rex, pointing to a bit of water ahead, told Page to alight, as there was always a duck or more to be found there. Page went on, and as he neared the pond threw up his hand as a signal that he sighted game. Stooping well down, cautiously and slowly he stole on, almost on all fours. The grass, about three feet high along the margin of the water, hid him from the doomed birds. On he crept, and we held our breaths now, for he was within range, and well we knew his deadly aim. Suddenly he arose, brought his gun as quick as lightning to his shoulder, gave one quick glance along the rib, and took a snap shot at—what? By George! at a little clump of native oyster shells! He let drive into the mud and shells, and for one instant the heavens were full of dirt, bits of hardened lime and smoke, while the din of the report rang on the air!

He turned with a sad face and retraced his steps to the cart—and we exploded. I yelled and shouted myself hoarse at him, for the buzzard and chicken sandwiches incidents were now avenged. Rex gave out mighty war whoops, Fan barked unceasingly, even the mare took sides with us and neighed responsively. Page said never a word, but he will regret all the rest of his life mistaking a dark dirty mess of Florida oyster shells for black ducks.

We feasted that night on the spoils of the hunt, and we poured libations deep and strong to the day, but there was one at the banquet who bore a sad air and a meek mien. A deep gloom was in his eyes, and melancholy marked him for her own, and it was neither Rex nor I. J. S. H.

NEW YORK.—Medina, Orleans Co., Oct. 25.—Wild geese have appeared in quite large numbers on the shores of Lake Ontario, feeding on stubble and wheat fields, but I have not heard of any being killed. Ducks are not reported plenty. Plover have been scarce this fall, but a friend reports killing twenty-five one day when he was drilling in wheat. Black and gray squirrel hunting has been good. I have good authority for reporting strings of ten to twenty, and one especially large bag of thirty, but the writer must say he has not had so good luck. Woodcock and partridge shooting has not been, on the whole, first class—at least, that is the experience of—SAL NITER.

THE NEW JERSEY NON-RESIDENT LAWS

Editor Forest and Stream:

I have paid some attention to the New Jersey game laws affecting non-residents of that State, and have arrived at conclusions respecting them which I beg leave to submit. I have no personal interest in the questions involved, but being a lawyer, I have found them interesting in their legal and constitutional aspects My conclusions are as follows:

1. The acts in question do not authorize any society to exact a license fee exceeding the annual dues of resident members for the privilege of shooting in New Jersey. The provision in the charter of the West Jersey Society is, in effect, that non-residents of the State shooting in certain counties must comply with the by-laws of this society Now, what sort of by-laws are meant? I think, obviously, by-laws intended to protect game, and restraining the members equally with non-residents. The idea of the Legislature seems to have been that such regulations as the members saw fit to impose upon themselves for the good of game, should apply equally to all non-residents shooting in the counties affected. Such regulations might, for example, be made, forbidding the shooting of prairie chickens or exotic game, such as migratory quail or English pheasants during a term of years; or forbidding spring snipe shooting; or limiting the number of game birds or animals to be killed by a man in a day. To by-laws of this general nature non-residents were required to conform. But there was not to be one law for the member and another for the non-resident although the State would enforce the law against the latter and not against the former. No discrimination between members and non-residents is permitted to the society, either by express terms or by implication. If the society can make the privilege of shooting more burdensome to the non-resident than to the member, it can practically exclude the former entirely. No such power is given to it.

2. What has been said of the West Jersey Society applies equally to all societies organized under the general law, which has, nevertheless, some curious features of its own. No society organized under it has any special or peculiar field of operations assigned to it. The New Jersey Society claims "protection" over the whole State, and there is nothing in the statute which forbids or conflicts with such a claim. Nor is there any limit to the number of societies that may be organized. From this it would follow that any non-resident desiring to shoot in New Jersey must comply with the by-laws of all the game protective societies "organized or to be organized." A few men in Cape May county may, it is supposed, get up a society and fine a non-resident $50 for shooting a partridge in Sussex without joining their society. Moreover, no provision is made in the statute for giving the non-resident notice as to how many or what by-laws he must obey. He may be required to conform to any number of them, no matter how onerous, inconsistent or absurd they may be, and no matter if he ever heard, or might have heard, of them. Can the Legislature have intended any such thing? Can such an act have any force or validity?

3. The root of the matter is that this sort of legislation is all unconstitutional. The courts have repeatedly held, and it is well settled, that the legislative power of the State, vested by the Constitution in the Legislature, cannot be delegated by it to any other body. Thus in Barto vs. Himrod, 8 N. Y. Reports p. 483, it was decided that an act, which, by its terms, was to become a law only after its approval by a majority vote of the people of the State, was unconstitutional and void, whether approved or not by popular vote. Decisions to a like effect have been made, and are the recognized law, in New Jersey. To my mind it is too plain for argument that the legislation now under consideration is a mere bald attempt to delegate legislative power, but with certain gross and extraordinary features of unconstitutionality. For the power is attempted to be given, not to the people of the State, nor of any part thereof, nor to any local authorities, but to certain undefined and irresponsible societies, not representing the people in any sense, and not subject to any direct supervision or control. The courts of New Jersey cannot hold such legislation constitutional without swallowing alive several of their previous decisions.

4. But an adequate discussion of these points is hardly to be expected in the Welsh case. It is stated that the New Jersey Society has assumed the defense of that case and has intrusted it to their own counsel. That he will defend the case in a way which, if successful, will knock the bottom out of the whole system of levying tribute on non-residents, is not very probable. The court may possibly go beyond the argument of counsel, and, on its own motion, decide the constitutional and other questions involved. But this, also, is unlikely, because the judges generally have enough to do in deciding the questions argued by counsel, without digging any other questions out of the cases that come before them. There is some danger that the court, by assuming and passing without question the constitutionality of the legislation under consideration, may unconsciously create a quasi precedent in its favor. The ultimate settlement of the matter is, however, in my judgment, as certain as the decision of a legal question, involving the application of old principles to new circumstances, can ever be. Perhaps an action for assault and battery or false imprisonment, brought by some one who has been arrested and fined, or imprisoned, would raise the question in as neat a way as any. Such an action might probably be brought in an United States Court, though I do not think there would be any advantage in choosing that forum. PICKET.

NEW YORK, Oct. 13, 1882.

Editor Forest and Stream:

In looking over the file of back numbers alluded to in my last, I see that you have been favored with pros and cons of the game protective society question, with especial reference to the West Jersey Society and their recent activities. Perhaps you are tired of the subject, and perhaps you have room for a little more light on it from another standpoint. To-day I have with me a friend, a gentleman who loves to shoot, and who has for fifteen years lived at Glassboro, in the very center of the West Jersey jurisdiction. Let me give you his opinion on the "local society." He says:

"The W. J. G. P. S. may be a good institution, but if so it has been sadly misrepresented and entirely misunderstood. With us it is looked upon as organized and managed solely for the gentlemen sportsmen (?) of Philadelphia whom we denominate pot-hunters. Among our farmers we have many who shoot for the love of shooting, who protect, or would protect, the game, and who are in no sense illiberal in their views. And yet I do not know of one such farmer with whom the society is not an object of dislike

and disgust. If the society has spent thousands of dollars in supplying game birds, we have not heard of them in our section. If they have made any effort toward enforcing the law against trapping birds or shooting out of season it has not been in our section. On the contrary, it hinders the enforcement of the law by pretending to do what it does not do, and what others would do were it not for the pretensions of the society.

"To-day the woods of Gloucester county are full of bird traps and 'snoods,' and around Glassboro a regular fusilade of guns and the continued yelping of hounds tells how the rabbits are suffering. The farmers say that the law is directly against them, and in favor of those who make a business of shooting. To the Philadelphian who shoots every month of the year the fee of five dollars is nothing. To the market hunter who makes this his calling and sells his game the fee is a mere bagatelle. But the farmer, who feeds and protects the game, feels it an imposition that he cannot invite his relative or friend from across the river for a day's shooting on his own land, without the payment of this unjust tax, or running the risk of having his friends arrested. In another way, indirectly, the society works against instead of for game protection. Many land holders would forbid and prevent promiscuous shooting by enforcing the trespass act and claiming their rights. But with a society 'license' in his pocket the pot-hunter waxes bold and impudent. He defiantly waves his paper under the nose of the farmer, and insists upon his right to shoot anywhere in the five counties. Of course it is mere brag, or else he has been imposed upon by those who sold him the privilege, but he gains his point if, as in many cases, the farmer gets tired of being cursed and threatened and gives up his game to destruction.

"Again, we consider the charter of this society, if not unconstitutional, at least opposed to the best and most thoroughly established principles of legislation. It is local option in its most dangerous form. The law makes certain acts upon the part of certain persons criminal and punishable, provided the said persons have not complied with the by-laws of the society. Now, the society is composed of just whoever pays the membership fee, most of them, of course, non-residents of the State, and so far as the State is concerned, perfectly irresponsible. This body of irresponsible persons then has the power of enacting a criminal code, subjecting persons to imprisonment and fine. No, sir, down in West Jersey we do not consider the W. J. G. P. A. a West Jersey, or even a New Jersey, institution; we do not think it a benefit of the State, the citizens, the game, nor anything else but the 'sports' and market hunters across the river."

Now, my friend may be right or wrong in his own opinions, but I know he speaks for the section he comes from, and it may be of interest to your readers to know that the odious "non-resident" clause is not in favor with a large class of Jerseymen. Game protection we need, but we do not get it by any law or charter now on our statute books. A.

MIDDLESEX COUNTY, N. J., Oct. 27, 1882.

Editor Forest and Stream:

As there have appeared in your paper not long since some articles in reference to the manner in which the West Jersey Game Protective Society has been conducted and the manner in which the funds of the society have been spent, we, the majority of the committee appointed to investigate the books of the secretary, assistant secretary, and treasurer, do make the following report:

That we have vouched said accounts and find them to be correct in every particular.

The following is an itemized account of the financial transactions of the society:

Balance on hand September 21, 1881		$ 251 26
Total amount received from September 21, 1881, to September 21, 1882		1,618 00
Total		$1,869 26
Amount expended, salary of Secretary and Assistant	$280 00	
" salary of detective officer	630 00	
" printing	112 65	
" stationery	9 24	
" distributing birds	106 05	
" Committee on Laws	47 25	
" extra policing	148 00	
		$1,333 38
Balance on hand September 21, 1882		$535 88

We regret that Mr. Charles Dougherty, our fellow-committeeman, through absence from the city, was not able to respond to the notifications of meetings held.

Very respectfully,

GEO. EMLEN,
CHAS. A. BRAGG.

OCTOBER 25, 1882.

OUR PHILADELPHIA LETTER.

BUT few Philadelphia sportsmen have gone out for quail in our State as yet, preferring to wait until November 1, when the opening season begins in the neighboring States of New Jersey and Delaware. The State law of Delaware, requiring non-residents to pay a license for shooting, seems to work well. There is no complaint on the part of outsiders, who willingly pay the yearly fee, recognizing it as a State law, while the farmers of Delaware, whose lands had been so long overrun by the chicken shooting and fence-breaking hordes from the city of Philadelphia, now feel a diminution of visiting "gunners," and are more apt to allow the privilege of shooting over their grounds to those that come, especially if they ask permission. Woodcock are being killed in goodly numbers throughout Pennsylvania, the flight having come on since the cool change of weather took place. During a late trip to Connecticut your correspondent learned that quail were comparatively abundant this season all through the State. Everywhere from our own Pennsylvania the same story reaches us, and we all hope for an open winter, that the birds may gain.

While at Middletown, Conn., Dr. Morgan, of that place, showed me his new pointer Zip, a dog weighing perhaps sixty-five pounds, and a perfect Spanish one to look at. It is seldom we now see a pointer which holds so firmly in appearance to the Spanish blood from which it sprung on one side or the other, as Dr. Morgan's. Here we can notice the cleft nostrils, short muzzle and round head of the Castilian animal, while the body is a perfect representation of the old cuts of this breed, so little met with nowadays.

While at New London, Conn., I had a few hours' amusement fishing for small mackerel in the Thames River, near its mouth. The fish were small, weighing a quarter of a pound, but the river is full of them, and the autumn run is now on. With a light rod and tackle and any white bait that will attract the attention of the fish (a piece of rag kept in motion will do), hundreds may be taken. Such schools make their appearance every year about this time in the Thames River, and disappear about Nov. 1 or a little later.

The present fresh weather has moved more wild fowl to our New Jersey bays. A few brant have arrived. There is quite a flock now using the flats in Tuckerton Bay, opposite Packertown and West Creek, but they are out of harm's way, unless a battery or sink box could be put there, and this is not in order in these waters

Snipe are so little sought for in our immediate neighborhood at this time of the year, owing to the fact that the season for upland game is open, I have heard of none being killed, but could almost warrant a good day if some of the grounds bordering the New Jersey creeks were visited, especially now that many of the banks have been down and excellent feeding places have been created by the overflow of water.

Battery or sink box shooting begins next week at the Susquehanna, Bush and Gunpowder rivers. Redheads and blackheads are already feeding on the flats in numbers, but few canvas-backs have come on. Scores will be large at first, but it does not take long to educate the fowl, and they soon know the difference between a flock of stools and a bunch of their own kin, and then it takes more powder.

HOMO.

OUR NEW JERSEY LETTER.

YOUR printer's mistake in making my last say "breeding" instead of "feeding" ground may have impressed the whole subject of woodcock shooting on my mind and sent me out to investigate. If so I thank the printer for a half holiday, a long tramp, some good sport and an excellent dinner.

In this section (about ten miles south of New Brunswick, in Middlesex county) we get our fall woodcock shooting in the "timber swamp," the low-lying parts of what was once heavy timber. Twenty or thirty years ago the valuable trees were sent to market, but here and there the "snags" or gum trees stand, "like sentinels" of course, while underneath the sprouts and saplings, the alders and rosebushes, the catbriars and swamp grasses, struggle for an existence and against the progress of the invader. We ride out through the wood-carter's roads to the most distant point and hunt toward home. Our dog is Milo. He is so old that he cannot hear the loudest command nor the shrillest whistle. He would pay no attention if he could. He has followed this business in the swamps longer than you have, sir, and he wants none of your instruction. Remember that to-day you are not taking the dog with you, but you are going with the dog.

Now we are in the swamp; yonder is a group of two or three old "snags," beneath them you see the green leaves of a pin-oak or two, and the tops of some alders. Below all this there winds a little run, a little path of water filled with green moss, and that, says our guide, is a likely spot. Milo knows it, and the tinkle of his bell bids you adieu as he disappears under the briars. You may see him again in five minutes or you may not. You take the old roads and rabbit paths and try to keep within sound of that bell. When it stops you will stop. You can force your way toward the point where you last heard it and there, as staunch as steel, you will find the old dog, and there you will find a bird. But if you cannot get through the thicket, or if you consider your position favorable for a shot, stand still a minute or two, and a tinkle of the bell and a whir of wings brings your gun to the shoulder and the pin-oak leaves and feathers on the air tell the result. Stand still, Milo will bring your bird. Now in he goes again and on you go—*whir*—there comes another down the open. You could have hit him with your hat, but you wheel, shoot and miss him with your gun. That is not strange, for the leaves still hang on the trees, and at this time of year their color is trying to the eyes. Do you say that Milo "flushes" his birds? That is exactly it, and that is his business about half the time. He is as true as truth in the open field or when without his bell, but when that is on his neck he knows his duty is to put up the bird if you do not come when he stops. Yesterday he went into a cat swamp, impenetrable to us, found a bird, and flushed it four successive times, bringing it at last within our range. Now please do not say that this is contrary to all rules of shooting and training. Remember if it is wrong we cannot tell the dog so, for he is deaf; and if it is wrong it is successful, for Milo has brought more woodcock to his master's hand than any dog now living in New Jersey, to the best of our knowledge and belief. That is enough about woodcock for this time; I want to say something else.

Speaking about rabbits. One day this summer the sexton of a church down in Monmouth county, asked me to take a walk in the old graveyard. He showed me right in the slope of one of the sodded mounds which cover the graves, a round hole, about the size of a quart bowl. In this cavity were five young rabbits, the smallest I ever saw. The kittens were blind, not larger than the common mouse, and do you know that when I saw them cuddled so cozily in their strangely selected bed, I wished that another Burns might see these "wee, sleekit, cow'rin', tim'rous" beasts, and draw the proper lesson from this new union of the "cradle and the grave." Postponing the poetical and taking up the practical, I am glad to say the little beasts were not hurt by the uncovering of their nursery nor frightened away by the handling of curious visitors; but before this letter is printed will no doubt know what "open season" means.

And in that same connection one of my neighbors has been training a young hound this fall. He caught a half grown rabbit and kept it in a barrel. Every leisure day he would tie the rabbit's hind legs together and let it go, then put the pup on the track. Of course he had no trouble in securing his drag when school was out. That was all right, but I have another neighbor whose old hound does not need training. Skip got wind of this rabbit in the barrel business and upset the concern. Since then the pup has had a vacation.

While we are on this black bass subject, I notice that some of the folks in New England are down on this game fish, because they say, when put in a pond it cleans out all other fish and then clears out down stream. A few years ago Commissioner Anderson sent some young bass, which were used for stocking the pond at Milford, in Mercer county. I have never heard of any of these fish being taken at Milford, but this summer several two-pounders have been caught in the pond at Hightstown, which is on the same stream and two miles below. A.

MIDDLESEX COUNTY, N. J., October 27, 1882.

WADS BOILED IN TALLOW.—Mercersburg, Pa., Oct. 23.—If "F. B.," New York, will boil his wads in tallow he can shoot all day and his gun will not lead, nor powder crust, and a single wipe after shooting will show a bright barrel. —S. D.

HOUNDING vs. STILL HUNTING.

JACKSON, Mich., Oct. 22.

Editor Forest and Stream:

The northern part of our State, as you well know, is stocked with an abundant supply of deer, enough to satisfy an unlimited number of "true sportsmen" with a month's good hunting for years to come. But we find that the market hunter is rapidly accomplishing his work, and we, the members of the game protective societies and the business men of the State, who enjoy a little sport with the gun occasionally, have racked our brains for the best means for remedying the evil. We studied the matter carefully and finally, after some trouble, had a law passed prohibiting the shipping of them out of the State.

This last act was not passed from any selfish motive. We are glad to welcome sportsmen from other States to our hunting ground. It was simply an act of self-preservation, and the doing of it was arrived at only after incontrovertible facts and figures proved it a necessity. In the first place, where a great hue and cry was raised against the hounds, by the market hunters, we looked into the matter. Figures came pouring in that made things look as though an edict must be passed against the poor brutes. Some one, generally a market hunter, would say, "Such a party of hunters left the woods last week with thirty-five deer;" another, and you could make up your mind that he was hunting for the filthy lucre there was in it, would speak of "another party of those infernal hound hunters that went down on the train last night with twenty deer," etc. Now the truth about the matter would be this: the party that went down with thirty-five deer was probably composed of seven or eight or more persons, and they had been in the woods about three weeks, which meant about two deer a week for each man in an outfit of very successful hound hunters, and, furthermore, these same hound hunters were business men and farmers from the southern part of the State, industrious citizens who pay heavy taxes for the support of the State. Who wants to deprive them of a little sport every fall when they haven't the time or opportunity to learn to still hunt the deer successfully, and who has a better right to hunt as he pleases, so long as he does it in season and in a manner that will not exterminate the game?

On the other hand, how does the market hunter work it? Does he hunt with hounds? Oh, no, he wouldn't do such a thing, he wouldn't do anything so unsportsmanlike, he would rather sneak around where the deer congregate in the morning, and see if he couldn't get two in range of each other so as to save ammunition. But really, without joking, a market hunter considers it very poor work indeed, if he does not average one deer a day, not for a week or two, but right through the whole season, and I can give names, if necessary, where one man, in several different cases, has killed over 160 deer in the open season of ninety days.

Now let no one think I am opposed to still hunting, I prefer it myself, for I am still young and strong and can follow a pair of antlers as far as anybody, but for pity's sake don't try to bar out those who are not so fortunate, from this most exciting sport. There are several old gentlemen in this city, my father among the rest, who wouldn't sleep well all winter if they couldn't kill a deer or two every fall, and even "Antler" may see the time when his limbs are stiff and his eyes dim, when he will welcome the faithful hound and will find the buckshot and ten-bore good enough for him. A. W. M.

THE NUTMEGGERS' DEER SHOOTING.—Montreal, Quebec, Oct. 22.—*Editor Forest and Stream:* I am surprised that you, who take such high ground in favor of the preservation of game and the strict observance of all laws having that end in view, should publish an account of the doings of a party of law-breakers, even though the adventures of these heroes may be, and doubtless are, purely imaginary; the fact of your doing so, even though no offense against the game laws has actually been committed (except in the author's mind), cannot but have a demoralizing effect. The case I now refer to is that of "B. G. A." in his papers in yours of 12th and 19th inst., styled "Nutmeggers on the Ottawa." This writer professes to have been engaged, with his party, hunting deer in Ontario during the close season in that province (Dec. 15 to Oct. 1.) I contend that it is a grave offense to describe the unsportsmanlike act of hunting game during the close season. The practice of writing accounts of feats performed in direct and open violation of the law is becoming quite too common, and should be frowned down by all good citizens and sportsmen. Quite recently a prominent member of the Sherbrooke Game Protective Club published in a local paper a graphic description of his exploits killing moose in the Lake Megantic District during the close season, greatly to the disgust of all true sportsmen who saw the article. Last year a book was published here, entitled "Three Months Among the Moose, by a Military Chaplain," describing the author's exploits slaughtering moose, the most noble game in our forests, during the close season. All these writers, if they are guilty of the breaches of the law they profess to have committed, should at least have the decency to abstain from publicly proclaiming their crimes. I trust you will call attention to this matter in the columns of your widely circulated and highly influential journal.—H.

"SWIVELLER" VISITS OLD SCENES.—Phila., Oct. 27.—I have just had a call from a valued correspondent of FOREST AND STREAM, whose articles I had often read with pleasure, but on whose face I had not before looked—"Dick Swiveller" (W. L. C.), formerly of New York and Philadelphia, but lately of South Carolina. For many years—ever since his connection with the U. S. Ordnance Department in 1861–5—Mr. C. has applied himself to the study of guns with an enthusiasm not often seen, and it now creates little surprise to learn, as I have just done, that he is about to form a connection with one of the most influential gun establishments in the North. This will be good news to his friends and will increase many-fold his already very large circle of acquaintances, as he has that keen sense and magnificent grip on business affairs that will enable him to command success in any establishment. May he prosper greatly and return to our next bi-centennial.—W. M. H.

MUSKOKA.—Toronto, Ont., Oct. 26.—Messrs. McKee and Beatty, of Pittsburgh, the latter the art correspondent of the N. Y. *Graphic;* Dr. Elliott, of New York and Mr. J. Mathews, of Toronto, are camped on Trading Lake, Muskoka. During the past week they have "bagged" ten deer, one bear, and numbers of duck and partridge. They report the sport and weather all that could be desired. Two of the party have made annual trips to this section for some time.

LOWELL (MASS.) SPORTSMEN.—The country surrounding Lowell was in the early history of the town, considered good hunting ground, and in spite of the work-a-day life peculiar to a manufacturing city there were not wanting men fully appreciating the opportunity presented. Some of the older sportsmen of to-day recall the name of Governor Buttrick, Nathaniel and William Jones, Jefferson Nickless, Jake Lakin, James Calef, Isaiah Leighton, Abijah Cutter, William N. Owen, David Ockington and a host of others, whose adventures were wont to be discussed around the winter fire, and are still the subject of entertaining anecdote. Many of them have passed on to the "happy hunting ground," but others still remain and even now take an active interest in the exploits of others. There are probably in the neighborhood of 300 men in Lowell who might dislike to have the word "Sportsman" follow their names in the directory, but who nevertheless enjoy an outing for a day or more, taking rod or gun, with a gusto which would entitle them to the term. As a rule they are men actively engaged in business, to whom occasional outdoor recreation is a necessity, and which sends them back to their exacting duties better prepared for the wear and tear of business life. They are men engaged in trade, in manufacturing and various professional callings. Some of them prefer the contemplative pastime of angling, some the more active and exhilarating sport of securing feathered or furred trophies with the rifle or shotgun, while others are equally at home in either occupation. However brusque these men may at times appear when harassed with business, they all have a genial side which becomes apparent the moment they start on a vacation excursion. The writer has in mind a man of whom it has been said in homely phrase—"You can't touch him with a ten-foot pole," who is the veriest boy when he gets away with his rod or gun, and he is sure to bear home with his game a modicum of his boyishness. There is an organization bearing the euphonious title of the "Wild Goose Club," composed partly, at least, of Lowell gentlemen, who own a tract of land in the vicinity of the Rangeley lakes, who annually visit those waters in quest of fish and game. Faint murmurings of the good times had at that encampment come from that distant locality, but as they go for the express purpose of unbending no one ever dared accuse them of going on a "bender." The majority of Lowell sportsmen, however, do not find it necessary or convenient to go so far for sport and the smaller game, though the exact locality of their hunting ground is something not necessary to make public. Years ago—twenty or more—the Nimrods of the day would go over into Dracut and return with a bag well filled with woodcock. Now one can have the same opportunity to hunt provided the owner of the land does not interfer, but the chances for securing game are greatly diminished; and the same is true of most kinds of game, though for some reason foxes are more plentiful than they were ten or fifteen years ago. Still good marksmen and those acquainted with the habits of game are rewarded with a fair allowance of game on their incursions. The more successful of the hunters are specialists, who not only study the habits and learn the haunts of certain species of birds or animals, but have dogs trained for hunting that game exclusively. One member of the gun club rarely shoots anything but rabbits, and has two beagle dogs with a sharp scent for the game. Another has a preference for woodcock or partridge, and he has a pointer which thoroughly understands his master's preference. Others still have hounds and ignore everything but foxes, though neither would probably refuse an occasional shot at anything which might challenge it. It is believed that the magnanimity of the true sportsman pervades every Lowell gunner. If a fox gains his hole in a fair run not one of them but would scorn to dig him out. They would not take a fish unless with a hook, nor resort to deceptive tricks to entrap game. With most of the Lowell sportsmen an annual trip to the seashore in the autumn is something rarely omitted. Here they find plover and other marsh birds, waterfowl, etc.—*Lowell Daily Courier.*

INDIANA.—Fairland, Oct. 24, '82.—Our quail season opened on the 15th inst., and many sportsmen, I am told, have availed themselves of the open season to have a bout with the birds. But most of them have been disappointed, I imagine, the birds being, for the most part, entirely too small to shoot. Out of three full broods I myself put up in the last few days, three were entirely too small, two of them only chirpers, no larger than a full-grown *Passer domesticus*, while the third covey may be full-grown by the first week in November. Not a solitary quail have I seen since the open season—except in charge of young chicks—large enough to afford sport to a real sportsman. What a commentary is this on the wisdom of our last Legislature; or rather the influence that caused them to change the open season from Nov. 1 to Oct. 15. A much wiser course, in my opinion, would have been to prohibit the shooting of quail for at least two seasons, to give our favorite little game bird a chance to recover from the late hard winters. The last winter was very mild, and a great gain was made, I think; but it will require several mild winters and a general observance of the game laws to make the shooting as good as it was in the autumn of '77. Hares and squirrels are reported abundant, the former, in fact, a nuisance on many farms.—C. W. W.

GALVESTON NOTES.—Galveston, Tex., Oct. 25.—With our first norther wildfowl have arrived in great numbers. The honk of the wild goose is now a familiar sound. Already the sportsmen revel in their anticipated sport. The market hunters are at work. One of our largest dealers has received one consignment of four hundred pairs, while the lesser lights are quite busy disposing of large numbers. With the exception of the canvas-back and redhead I have seen all of the duck family that make our bay their home during the winter. These will abound in another month.—NEMO.

NEW YORK.—Wayne County, Oct. 28.—The quail season has opened with more birds than I ever saw. It is no unusual thing, with a brace of good dogs, to find as many as two hundred birds a day. The summer having been wet we have a very rank growth of weeds and grass, which makes the walking very fatiguing. The shooting will not be good before the first of December. We have had but one light frost.—SNAP SHOT.

SULLIVAN COUNTY.—Monticello, N. Y., Oct. 26.—Rabbits and squirrels very plenty, with a fair number of ruffed grouse and woodcock. Good rabbit hounds and bird dogs with guides can be had at reasonable rates. To sportsmen enclosing stamp I will give any desired information.—CHAS. F. KENT.

TENNESSEE.—Savannah, Oct. 25.—The prospect for sport is fair, although June rains have somewhat diminished the number of quail. Was out, for first time this season, one afternoon last week, and bagged nine, shooting over a puppy. No frost as yet to kill the weeds, and the weather being hot and dry, renders it difficult for the dogs to find the birds. Beech, oak, and hickory mast unusually plentiful, and the prospect for ducks and geese seems good, although, owing to the warm weather, few wildfowl have come in yet. Deer and turkeys are reported in larger numbers than usual within easy distance of the town. Wild pigeons have begun to come in small flocks.—WILL.

NEW YORK.—Bay Shore, L. I., Oct. 25.—Broadbill and coots still continue to come in the bay in large numbers, and the prospects for shooting were never better. There are a good many widgeon in the bay toward Layville and Patchogue, but I have seen none here yet.—B.

VIRGINIA QUAIL.—Amelia C. H., Va., Oct. 19, 1882.—Our season for quail opened on the 15th. The majority of birds not even half grown as yet. Sport will be first-class later, say by Nov. 10.—F.

"THE STILL HUNTER," by T. S. Van Dyke, is in course of publication with Fords, Howard & Hulbert, of New York, and will be out on or before Dec. 1.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

Grayling, *Thymallus tricolor and T. montanus.*	Striped bass (Rockfish), *Roccus lineatus.*
Black bass, *Micropterus*, two species.	White bass, *Roccus chrysops.*
Maskinonge, *Esox nobilior.*	Rock bass, *Amblopliles*, 2 species.
Pike (N. Y. pickerel), *Esox lucius.*	War-mouth, *Chænobrytlus gulosus.*
Pickerel, *Esox reticulatus.*	Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*	Bachelor, *Pomoxys annularis.*
Yellow perch, *Perca fluviatilis.*	Chub, *Semotilus bullaris.*

SALT WATER.

Striped bass, *Roccus lineatus.*	Smelt, *Osmerus mordax.*
White perch, *Morone americana.*	"Sea trout," *Cynoscyon carolinensis.*
Tautog or blackfish, *Tautoga onitis*	Drum, *Pogonias chromis.*
Bluefish or taylor, *Pomatomus saltatrix.*	Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

* * * Not that a true angler ever passes the line which takes him into the land of ailment and decrepitude. It is the glory of the art that its disciples never grow old. The muscles may relax and the beloved rod become a burden, but the fire of enthusiasm kindled in youth is never extinguished.—*George Dawson, "Pleasures of Angling."*

WITH HACKLES AND GENTLES.

FIFTH PAPER.

"Gentle stranger," have you seen
An angler pass this way—
A blue-eyed lad, of graceful mien,
Attired in drab array?
A creel upon his back he bore,
His boots gemm'd o'er with dew;
And on his head a cap he wore,—
He had a rod quite new."

OF how many readers of the FOREST AND STREAM might the above be the description when they first essayed to ply the "gentle art"

Buoyant with health and hope, untrammeled with the cares of life, and rejoicing, like bird and bee, in the fragrant air of a spring morning—forty and more years ago we had a spring; then it was not a warm, a mirky transitional period only, but a very enjoyable and evident fact! We, you and I, "gentle stranger," were wont to go afield like the "blue-eyed lad" of the quaint old song. It is sweet to recall those days, to look back upon them from the stormy, thorny pathway of maturer years and to marvel at the zest and innocent pleasure which walked, hand in hand, with us through leafy lane and daisy-dappled meadow. The frosts of years cannot nip and sear these memories, and the dreams that came to us, as we quietly angled, are dear to us still, although alas! very few of them have been realized.

Once upon a time—it seems like yesterday, although it was very many moons agone—I planned a "fishing day," and till it had dawned and ended, my anticipation run riot and every hour was counted.

In one of my rambles I had found a brook in which I had surely seen a few trout of respectable size and, with due respect to the game laws, had waited only for the "close season" to end ere I tried to bring them to creel. In those days I had not learned the awful dullness of waiting, nor the full meaning of Milton's line, "They also serve who only stood and wait," which the passing years have taught me. If ever a fisherman's outfit was overlooked and in perfect order, my own was then and, like the arms of a vidette, everything was in readiness for the very moment when I should start for the untried water. In these prosy days it seems strange that so much enthusiasm can be beaten and squeezed out of one as the time flies and the "crow's-feet," trace one's visage! I would not have believed it then—I have to, now, however! Nathless, almost within reach, I keep my rods, my creel, my lines and fly book, as of yore, and if they are used less frequently they are suggestive, and often lead me a long way into the past, through green fields and by "still waters." There is nothing lost and much gained in keeping one's favorite rod, gun, dog collar, or riding whip, here and there, pendant from the book shelves, over the fire place, or in a cosy corner! Don't agree with me "gentle stranger?"

The day at length came, and proved auspicious as to weather, and off I started for the "beck." I had to cross a river, full of ignoble fish, and having done this, to walk a long way through field and wood to the "deeps," where I had seen the trout dart at my erst-while incautious approach. Ah, how my heart bounded and my spirit leaped within me as I caught the gleam of water running through the secluded meadow. I halted and nervously arranged my tackle, and by the time my "leader" was fully ready for a "cast," I was on the very tip-toe of excitement. Cautiously, quietly, I made my virgin cast, and soon my fly—an old-fashioned palmer-hackle of the smallest size—falls like a leaf on the water, and floats like a leaf down its mimic tide. I waited and grew anxious lest the beating of my heart should alarm the fish, it seemed to throb so hard and so loud. Not a rise as yet. I walked slowly down stream for a little, seeing nothing but my tempting fly, oblivious to all save my quest. Ah, how many flies have I watched since then on the less quiet stream of Time—*cui bono?*

At length the Fates were kind to my youthful zeal and hopes, and a "rise" convinced me that the stream was not desolate as to fish—a rise and to my fly. I struck, not, I trow, as would have the competitors at the late tournament in Central Park, but, *mirabile dictu!* I hooked the fish, which seemed to me a heavy, as it proved to be a lusty, one. I tried to practice the theory of fly-fishing that I had been so long reading and thinking about. In some degree I did, I doubt not, but I smile at this far-off day, as I think of my anxiety and efforts to land the fish. Eventually I did successfully do so, instantly broke his neck—"always kill your fish as soon as caught"—and in my delight kissed the pretty lifeless little trout lying so like a jewel in my trembling hand. My scales gave its weight as half a pound, and I reverently wrapped the trophy in leaves and laid him in my creel, which began to feel heavy. Again I cast, hoping to get, at any rate, a mate to make up a brace, although I longed to show my fish to the loving sceptics at home, and was chafing to taunt them with "I knew there were trout there."

Another rise, but I was too nervous and lost the fish. Again I deftly (at least I thought so) throw the fly and resolve to be calmer. I think of Holton's words to his beloved scholar and try to imagine him by my side, when I was startled by a mad rush at my fly which disappeared! I struck and felt life at the end of my leader—it seemed a "heavy weight" and evidently bound for a "steeple chase" right across country. The plunges of that fish were, to me, past all conception, and I gave up hope of landing him more than once! My "good luck"—which has since oftimes deserted me—more than my skill "came to the fore" and saved the playful fellow for me, and I had the coveted brace of well conditioned trout. The last was a trifle less heavy than the other, but in better flesh and stronger. I tied another fly and cast in a larger pool, but my effort was not rewarded. Retracing my way to the first casting place I met with better success, and two brace and a half soon reposed beside the first notable brace in my creel.

"At length he grew hungry"—and so did I. I was quite satisfied, too, with my catch, and so wended my way homeward in a mood which all anglers will recall, whose memories of youth are not wholly drugged and forgotten. To such I will not try to tell how proudly I bore my trophies home. Imagination and retrospection may do it far better than my poor pen. In conclusion, however, I must add that after this first taste of fly-fishing—

* * * * "to cast a fly-line well
Became my chiefest wish;
I strove each sportsman to excel
And cheat the nimble fish.
Now trout and grayling I might kill,
It gloomy was the day,
And salmon also at my will
Became an easier prey.

"Now flies and palmers I would dress,
Aquatic insects, too,
And all their various seasons guess—
Their uses well I knew.
So now, the perfect angler,
With rod, and line, and hook,
I sheen each noisy wrangler
To fish the murmuring brook."

Without the assurance expressed in this last verse I must confess I still love to "fish the murmuring brook," though that first brook of blessed memory is far away and never more may be fished by me. O. W. R.

CAMPS ON THE WAY.

IV—TROUTING ON THE TRIBUTARIES OF THE MANISTIQUE.

"On pass the hours: the camp fire bright
Steeps the near leaves in bronzing light,
And shifting, plays o'er the figures laid
In the generous glow, on the grassy shade.
—*Frontenac.*

THE morning after our return from the Pictured Rocks, we made the earliest start possible for Munising Station, but the earliest there would have been wretchedly late at any other place. In the first place that pious friend, Captain Jim, was a cause of detention. The night before, after dumping our camp stuff on the beach, he had unceremoniously seized the oars, Sunday as it was, and rowed away without his wages, rather than assist us with our stuff up a steep bank. When the morning came, it came without the Captain, and we had half a mind to "save the money for him" ourselves. Oscar and I, however, swallowing our indignation, made the tour of the wigwams and at last found the particular one that housed the Captain, who was at the moment lounging around his mother's cooking stove. We did not pay the navigator just then, but told him that if he wanted his money he had better come to our camp for it, and then we threaded the trails that led through the thick brush and out of this village of Chippewas back to our own lodge.

In the next place, the fact of our being short of supplies, was a source of delay. Munising boasts but one store, and the proprietor thereof has a way of not opening his store of a morning until he is "completely and altogether" ready—no matter what may be the hurry of a customer; and that particular morning the store was not opened as soon as we would have had it.

However, we felt no ill will toward the tardy merchant, for the longer we hung around the store door waiting for the clicking of his rusty lock, the longer we had Captain Jim hanging around, waiting for his "two dollars per day, Sundays included."

At last our supplies were bought and Jim was paid off, and Frenchy had our chests and boxes piled upon his little wagon, and our toes were turned toward the railroad. Oscar drove the cob a roundabout way, while Frenchy and I took a short cut over the hill, with Ed. following in the distance, and we met the little team on the high ground above the little old town. Our cartman was a good Indian later, and I must confess that it did me good to hear his maledictions on the whole tribe; for Jim, who was esteemed as one of the best of all the Munising Indians, had so persistently shirked all labor during the days we had him in

our employ, and at the last moment, under a pious pretense, had refused outright to spell with us in rowing against a stiff head wind, that all our sympathy for the red race had melted into thin air. But the talk was not altogether of the Indians. Frenchy rambled on at a great rate, and, among other things, told me how he had found in his wagon a pocketbook which a passenger had dropped, and that it contained $100 in money and a $50 check. "I had a telegram sent as soon as I found it," said he, "and the answer was for me to take out five dollars and send the book on by the next train." And for want of something better to say, for I was not much interested in the pocketbook story, I said:

"And you sent it to him, did you?"

"O yes, yes; a hundred dollar do no good. I always send little sum. But if it be five thousand dollar, or three thousand—yes, if it be two thousand, I put it in my pocket and say nothing. And when the man come and ask me, I say 'No, no; I just haul people, I don' look!'" And he laughed a loud laugh at what he evidently considered his own amazing cuteness, while I felt for my pocketbook, which had railroad tickets in it sufficient to carry me home and about ten dollars in money, and I knew that it was safe.

In due time we boarded the train, and a run of six miles brought us to "Perry's Camp No. 1," where we stopped off and set up our tent in the edge of a potato field. Mr. Brisset, the accommodating agent at Munising Station, wrote me a letter of introduction to "the gentleman who had the camp in charge," and as he handed it to me, he said that he had "written it in French and given the translation in English, for he did not know which the gentleman could read." No sooner did I see "the gentleman" than I knew Mr. Brisset had mistaken his man, for old Mike McCorrow was Irish from the crown of his head to the sole of his foot. He got the letter, however, and as he treated us right royally all the time we were with him, I give the agent all the credit.

Perry's Camp No. 1 is built on level land bearing a heavy growth of timber, much of which is, or has been, white pine of immense size. I measured a great many stumps that were five feet two inches in diameter.

After we had cleared away the brush and pitched our tent, I asked Mike (who was so busy entertaining a trio of women who had stopped off the train that morning to inspect the condition of the camps prior to their occupancy by a gang of lumbermen in a few days, that he could not visit us) whether there were any trout in the neighborhood.

"Plenty of them, if you can get them to b-o-i-t-e," said he; and then he gave minute directions how to find a creek three-quarters of a mile distant, and left me to find my way as I best could.

I went the same afternoon to the stream, which I found to be small and sluggish and running through a natural meadow; and rigging up a cast, I essayed in vain for a rise. Disappointed, I returned to camp, where I met Mike, who expressed great surprise at my failure. He said he "knew they were hard to get to b-o-i-t-e by one who didn't understand them, but he had never known one to fail altogether before." And then he examined my rod, which he condemned, and next he gave a contemptuous look at my flies, which he said were "useless," and then he overhauled my assortment of Limerick and Sproat hooks and found fault with them. "This," said he, "is all the tackle I have," and he exhibited the broken-off end of a mountain-ash pole, around which he had wound a short, heavy cotton line, to which was tied a side bent Carlisle hook, No. 3-0, and above that, a large flattened bullet had been rolled around the line.

The next two days were cloudy, drizzly and cold, and as the Indians had said the deer were "starving south," I watched the crossing places along the railroad for a chance shot. None of the white hunters agreed with the red that the deer were then traveling, but all said that when such was the case the railroad was a first-class hunting ground, inasmuch as the deer never failed to play and feed up and down the track for some time before crossing. I failed to get a shot, but I learned from their tracks that one never failed to walk up or down the side of the road from one hundred yards to a quarter of a mile before crossing, and from the further fact that by far the greater number of tracks came in from the north and crossed to the south, I was induced to believe that the Indians were right and the white men wrong as to the time when the deer began their southern march.

Between the D. M. and M. road and Lake Superior is a vast and densely timbered region, which I was told supported countless numbers of deer, and which will for a long time to come afford a good range for the deer hunter.

Old Mike had made a "salt lick" not far from where we were encamped, and had constructed a very ingenious comfortable blind within thirty yards of it, and the second morning, by his permission, I went to it at an early hour with my shotgun to watch for deer. By an oversight I was without suitable buckshot on the trip, but the charges of B shot which I had with me I thought heavy enough to kill at a distance of thirty yards. Daylight came that morning without the sound of a deer having been heard, but no sooner was it broad light than I saw a "big buck" approaching furtively in the distance. He came within sixty yards, or perhaps less, and lifting his horns high in the air looked steadily toward the salted spot for some time, when he took a few steps and again elevating his nose stood broadside to me, while I sat as still as a post, wishing he would come closer and anathematizing myself for not having brought my Ballard along. Had some one come along just then and kicked me out of the blind I would have gone to my tent without a word of complaint. As it was I sneaked in and did not mention what I had seen for hours.

I think that buck had something to do with my return to the rod, for that afternoon I went with old Mike to the creek. I have seen some odd fishermen in my time, and I think Crazy Jake, who fished for bullheads at the outlet of St. Helen's Lake in the Southern Michigan Peninsula, was the oddest of them all. He could jerk a pibbling cut with more desperation and swear rawer oaths the meanwhile, than any one I ever did see. Next to Crazy Jake comes old Mike. Mike fished with a short stout line tied to a stiff newly cut pole, and when he got a "b-o-i-t-e" he jerked as if he expected to snake out a panther. Occasionally his unlucky trout would let go of the hook after leaving the water, and in such cases it flew through the air like a stone from a boy's sling. Once or twice he whacked his fish with such violence against a sapling as to disembowel it. But he was more judicious in his swearing than Crazy Jake. It was the trout that were too smart to get hooked that he leveled his maledictions at, and not the ones he caught. The stream we were fishing in and which was a tributary of the Manistique, was a small one, and at our fishing ground it ran through an old beaver meadow, and was fringed at intervals with "black alders." In no place was the water over four feet in depth, and seldom was it over two. In the holes at these depths, trout could be seen literally by the hundreds (and I write this advisedly) ranging from fingerlings to ten inches in length; and at such places as there were mud bottoms, the mud was riddled with the prints made by the young trout in hiding themselves therein.

The first thing old Mike did after he had rigged up his barbarous pole was to prance around in the water above the holes and muddy the stream. Then he cast in and the trout bit greedily. After catching a few he cut off the ventral fin of a six-inch trout and fished with that, not forgetting to keep the waters muddy the meanwhile. My cast was a single fly, but I soon saw that a fly was worse than useless, sure enough, in that kind of fishing, and so I put on a split shot and a fin bait and "waded in." I think we fished an hour, possibly an hour and a half, when we ceased muddying the waters and went home, old Mike with thirty-six trout and I with thirty-three. And that was the last time old Mike and I fished together.

Very soon after we had set up our tent at Perry's Camp, the Switzer who had sailed with us the day we left the Pictured Rocks and had camped and broken bread with us at Munising, passed down the road and stopped at Jeromeville, the first station, which was a mile below. Charley was a kind soul, and no doubt gave us a good name, for the evening of the same day he went down, Ed. Stevens, with whom he put up in Jeromeville for a day or two, came to our camp and advised us to go down to his place and stop, which we did, and much to the bettering of our condition. There we found a good camp ground and good water, and we were within a stone's throw of the stream in which old Mike and I had fished.

The mouth of the Manistique River, which discharges into Lake Michigan, lies south of our camp about thirty miles, and the general course of the main branch of that river upward is to the northeast. Its numerous tributaries rise in the belt of high land that bounds the southern shore of Lake Superior from Grand Island to the great sand hills, forty miles to the eastward, and these tributaries, after gathering the waters that well up from the springs in that high land, flow southeasterly and at right angles to the main stream, down a gentle slope mainly parallel to, and at varying distances from each other. At Munising Station the railroad track going east enters the region drained by the Manistique, and making a long curve to the southeast, which carries it six miles further east and to Perry's Camp No. 1, it then runs on a section line apparently as straight as it could be run by engineers and be built by skilled workmen, a distance of thirty-six miles, which carries it beyond the Manistique and its tributaries and into a region drained by the Taquamenou. Within the limits of that thirty-six miles the railroad crosses twelve streams, little and big, belonging to the Manistique system, and of these I know that three contain brook trout, and I have the authority of old Mike, who was a laborer on the road, and says he speaks from personal knowledge, that three others also of the number likewise contain these beautiful fish.

Jeromeville contained one house—the station-house, which was set on the north side of the track and within six feet of it, and was occupied by Edward Stevens and family, consisting of his wife and two little girls, with whom boarded Joe and Jim, his comrades of the section gang. Out of the green woods on the south side of the road we hacked a place in which we set up our tent, and materially added to the population of the place as long as we remained.

One trout stream, as already stated, was at our tent door. This was a small stream which after a run of about twelve miles was swallowed up by a larger one. This larger one was crossed by the railroad a little over two miles east of our camp, and less than a half mile east of that another was crossed, and these two, after a run of about twenty miles to the southeast at varying distances from a half to two miles from each other, united and formed what is termed, on the elaborate Map of the Northern Peninsula, published by the Detroit, Mackinaw and Marquette Railroad Company, the "N. Branch." I fished in these streams near the railroad crossing and found plenty of trout, and of good size. Both streams are too deep to wade, and both are badly obstructed by brush and down trees, and the trout are consequently hard to get at; but when I did get one I nearly always got a good one. I took no fingerlings, but found them running from a quarter of a pound up to fourteen ounces by actual weight. Every day that I visited these streams I found it necessary to coax a good deal, but after I left for home Oscar and Ed. caught fifteen "big ones," out of one hole inside of thirty minutes one afternoon, which was certainly good enough. Now, these two streams run for twenty miles southward before they unite, and I know of no reason why they should not abound in trout all the way down to their junction, and for that matter, down to the main stream, which is twelve or fifteen miles further.

On Saturday afternoon of the 19th of August, I thought to take my last fish, and to that end set out to that part of the stream on which we were camped, where old Mike and I had caught sixty-nine in less than two hours a few days before. I began fishing below the point to which he said the fishing grounds extended, and by the time I reached that point I had fifteen handsome fish. Looking up stream, I saw at a distance of about forty rods, a deer feeding in the meadow, and dropping my fishing tackle, I took up my rifle, which I had brought along, and availing myself of a clump of brush and a favorable wind, advanced to within eighty yards, when I got a fair but quick shot, and my deer, after a run of fifty yards, fell dead in the edge of the brush, shot through the heart.

The circumstance brought great joy and much self-gratulation to the shooter, and put an end to further fishing on that day, and also delayed his start for home until the following Tuesday, for the venison had to be jerked, which took some time. Sunday, Mr. Gunton, who was connected with the lumbering interest at Perry's Camp (for the camp hands had come), called at our tent, and in a conversation with him, he said that a tramp two and a half miles southward would take us to the northwest branch of the Manistique, the best stream of all for trout.

Monday morning, notwithstanding the drizzling condition of the weather, Oscar and I set out for that best stream, and a smoothly cut logging road carried us a mile on the way. A quarter of a mile through a heavy growth of timber brought us to a tamarac swamp. It was three-quarters through this, but, fortunately, the water was nowhere over shoe top deep, and there was no bad bottom. Then we entered a cedar swamp a quarter of a mile in width, through which we floundered, after which we struck a narrow ridge, bearing pine timber of first-rate quality, and passing over that, we entered a beaver meadow, through which ran the northwest branch.

We saw a great many thick patches of what is termed in that northern region "black alders," but certainly nowhere did the black alders grow so thickly or tall as along the northwest branch. No one can imagine how difficult it is to crawl through these alders with rod and line who has never tried it. They grow to the very margin of the stream, and frequently overhang it so as to effectually prevent the casting of a fly. But, notwithstanding the black alders, we found the fishing superb. We took thirty-one, twenty-one to my hook and ten to Oscar's, inside of eighty rods of stream, and I do not think there was one that would have weighed less than six ounces, and at least ten of the entire number would have weighed thirteen and fourteen. (In the stomach of one of the largest we found, when dressing it, a full grown mole undigested.) One place, by way of experiment, I managed to work a fly through the bushes and into the water, and I counted eight rises to that fly in succession, but by reason of the brush I was unable to hook the rascals, and they took care not to hook themselves. Mr. Gunton told me that I would find a better disposition on the part of the fish on that stream to take the fly than in any of the others, and so I did. The day was cloudy and drizzly, conditions favorable to the trout biting, and it may have been that had we gone to the streams on the railroad that day we would have met with the same degree of luck. Ed. and Oscar, as stated above, did take fifteen in half an hour in one of those creeks, but it was with bait. Be this as it may, trout can be had in the tributaries of the Manistique by any one who has the patience to crawl through the brush for them, and in numbers that ought to satisfy any reasonable fisherman.

But while I say this, I beg leave to add that the half-pound fellow that struck my hook the day Grandpap Farrington and I went fishing away up in the White Mountains, had more vim and spirit than any trout I caught in Thunder River, Miner's Creek, or any of the Manistique tributaries. And I wish to further say that I did not find any fishing that afforded anything like the sport that fishing for grayling did in the Au Sable or Big Creek, in the years when grayling fishing was in its prime. But these streams were clear of brush, and the fly fisherman had an open field, which makes all the difference in the world.

And yet I never regretted the fulfilment of my time more than I did on this trip. My explorations in the Manistique region had been confined to the near vicinity of the railroad, and as I glanced at the map, I was impressed with the belief that to the southeast, at an accessible distance, was a region abounding in princely fish. It would be difficult to get into that region, no doubt, but then a determined couple could get into it, and all the more enjoyable would be the sport when once in there. Either of the two streams in which I fished lying east of our camp and the northwest branch lying to the south, were large enough to carry a boat, but the drifts and other obstructions would make boating a labor altogether too great. Other means of conveyance would have to be resorted to, but such means could be had and these promising waters reached.

Then again down the railroad toward the straits, a distance of about forty miles, the Tequamenon takes its rise and, flowing eastward and then northeastward, finally discharges into the Tequamenon Bay. Hallock, in his "Gazetteer," gives that as a trout stream, but says it is difficult to ascend. And in a comparatively late number of FOREST AND STREAM I think I saw the statement repeated of the Tequamenon being a trout stream. But Mr. McKeown, the general manager of the new railroad, told me that he had sailed the upper half of that river and there were no trout to be found in its waters; but muscalonge of large size abounded—muscalonge weighing twenty-five pounds. His report was afterwards confirmed by a surveyor, whom I met on the train as I was on my way here, as to both trout and muscalonge, and he showed me an awkward hand that had at some former time got into the mouth of one of these last-named and savage fish and had been scratched and grooved to such an extent as to leave marks that would last a lifetime.

The time had now come when, the dog days being over, it was to be expected that clients would be getting restless, if ever, and so I had to go home. Our camp life, taken as a whole, had been very pleasant. Excepting two or three nights on Thunder River, insects had given us no trouble whatever. In the long run the weather had been favorable. The gale on Lake Superior had brought us no discomfort, except that of delay, and a terrific thunderstorm one night, while we were camped at Perry's, kept us awake the matter of a couple of hours and no more.

For the last time we noted the long twilight that characterizes that high latitude, and which never ceased to be a wonder to us; and for the last time we sat around the camp fire, and watched the flames as they waved and curled above the burning wood. And as we talked over the events of the five weeks since we had left home, a feeling of regret came over us, that the time for our separation had come. The boys had made the journey for the sake of health, and so beneficial had the rough life been to them that they had resolved upon a longer stay in the woods. Somehow, I was loth to leave them, but after I had given them a great deal of good advice, and bidden them good-bye the next morning, I reflected that after all their education in the mysteries of camp life was by this time fairly good; that they had been taught to set a tent, to bake a slap-jack, to broil a fish, to tie a hook, to mend a rod and to catch a trout. And so I set my face steadfastly homeward, and was glad when I got there. And now, having written in brief over the scenes of that journey, I go in memory back to the tributaries of the Manistique, and in imagination I look down the long and winding "branches" about which so little seems to be known, and I resolve that another year, life being spared, will find me not only invading the solitude of the mighty woods, through which they run, and fairly rioting in the capture of some of the trout with which I believe their waters to be filled, but, also, sailing down the tranquil Tequamenon in pursuit of the savage muscalonge that swim beneath its floods.

D. D. BANTA.

FRANKLIN, Ind., Oct. 24, 1882.

BLACK BASS FISHING IN VIRGINIA.—Leesburg, Va., Oct. 23.—Last Saturday Judge Murray, Major Murray and myself caught, on Goose Creek, twenty-five bass weighing 23¼ pounds; two largest 3¼ and 2½ pounds. One with artificial minnow; rest with live minnow. Could have caught more but bait gave out. Several catches of twenty or more have been made on the same creek.—W.

BLACK BASS IN LAKE GEORGE.

THE New York State laws retain the distinction between the two species of black bass, now, we are glad to say, almost obsolete. They call the small-mouth the "black bass," and the big-mouth the "Oswego" bass. A short time ago a man was arrested for taking black bass from Lake George and set up the defence that they were "Oswego" bass. That expert angler, Mr. A. N. Cheny, of Glen's Falls, being appealed to to settle the subject, wrote as follows:

There is perhaps no fish inhabiting the waters of the United States that has been inflicted with such a multitude of names, both common and scientific, as the black bass. Where scientist were at variance, it is not strange that the layman should also become mixed upon this same subject, so that to-day, singular as it may appear, the black bass is spoken of in various portions of the country as perch, chub, trout, black perch, marsh bass, river bass, Oswego bass, black bass, green bass, white bass, spotted bass, slough bass, etc., etc. A few years ago the Smithsonian Institute, speaking through Prof. Gill, straightened this vexed question in a measure, by saying of the black bass: "There are but two varieties, the small-mouthed black bass, and the large-mouthed black bass." The former perhaps, most generally called the "true black bass," and latter the "Oswego bas."

Prof. Gill's letter was written for and to the scientific world, so that it remained for Dr. James A. Henshall of Kentucky to treat the black bass not only scientifically, but from the standpoint of an experienced angler, he having fished nearly all sections of the United States for this favorite fish, in a volume entitled "The Book of the Black Bass." This work is the result of years of patient research and thorough investigation in the North, South and West, the particular habitat of our dusky friend. Dr. Henshall is now the recognized authority upon the fish of which he treats, as he has sifted and pruned the writings of dead and gone naturalists, and has had the assistance of the best known living ones, and such aid as could be rendered by the Smithsonian Institute, the fountain head of the U. S. Fish Commission and the highest court in matters ichthyological.

For years I struggled to get the bass question clear in my own mind; anglers differed, writers differed and the fish differed, so that I was one of the many who were groping in the dark, when I thought I was comparatively in the light. You ask what kind of bass are found in Lake George, and I answer, backed by the authority I have quoted, small-mouthed black bass, and these alone. The large-mouth, sometimes called Oswego bass, is not to be found in Lake George, Schroon Lake, Effner Lake, Long Pond, the Hudson or Sacandaga Rivers, if I can judge from the examination of hundreds of specimens, and the examination was made with this object in view. The bass in the Hudson and Sacandaga rivers came originally from Effner Lake, in Saratoga county. The Schroon Lake bass came from the same source. Lake George always contained bass, or, at least, the memory of man runneth not to the contrary. Glen Lake was stocked with bass from Lake George.

The great difference found in the bass in the waters named is in the coloration; there is no structural difference. It is so well known that food, bottom and water affect the color of fish, that a moment's thought will account for this marked difference in external colorations. Sould anyone, however, doubt, let him take two bass alive and put them in a fish car, and in a short time they will become of the same hue. Although our authorities upon fish nomenclature do not now recognize such a fish as the Oswego bass, this title was used to designate the large-mouthed bass, so that it was a misnomer to have applied it, at any time, to the bass in Lake George. They have been too long known by a name that did not belong to them, and it is time they assumed their ancient name—black bass, small-mouthed variety—and let "Oswego," as applied to bass, be relegated into the "nowhere."

CANOEING ON THE MATAPEDIA.

"ALL aboard," and the voice of Conductor Kane came in muffled sounds through the dense fog that enveloped the station and surroundings of River du Loup at 6 P. M. of September 9 with a drizzling rain, not at all a pleasant prospect for the Doctor and I, who were bound for the Matapedia River to have a few days' fishing.

"Fine weather by morning," says the Doctor in reply to my question, "how long was this kind of washing going to last," and the Doctor's words proved pretty near the truth.

Doctor Armstrong and self had with us all the necessary river so well known to the readers of FOREST AND STREAM, camp and other fixings for a week's fishing on that delightful Casopascal 3:15 A. M., and we soon had our baggage on the platform of that station. Here we were to take canoe, and as we had a few hours to wait the arrival of our birchen bark, we retired into the station and were soon wrapped in our blankets and slumber. 5:30 A. M. saw our canoe putting in its appearance round the bend of the river in charge of Blais, and soon our traps were snugly stowed away. The Doctor takes the paddle and I the pole, and with a wave of his hand and *bon voyage* from Blais we were in the current, moving down stream rapidly.

This was my first attempt at canoeing, and I began to have some misgivings as to the safety of this mode of transport when I saw the rapids that we were rapidly approaching. The river was very high with the recent rains, and blind rocks were now and then introducing themselves to our craft, some of which I thought would rip the bottom off her.

"Steady," roars the Doc., "and mind your pole," and with the speed of an express train we shot in among the white-capped waves, whizzing past boulders, drenched with water, and we were through the first rapids.

Came to anchor and commenced fishing, but with poor success; hoisted our anchor and proceeded. We are now coming to the Devil's Elbow, but the name of this was worse than its appearance. We shot through nicely. Tried fishing again; same success. Proceeded to Metallic Brook; here we had good luck. After a spell, up anchor and away.

The current now loses its usual strength, and we can handle the paddle. Leisurely we move along, taking in the beauties of the banks that have now donned their autumnal colors. What a panorama! Nature is lavish here with her coloring, tint upon tint of the brightest hues so thoroughly shown to advantage by the dark green pines, and—I heard the Doctor shout, "Mind the pole!" Now tossed to one side of the rapid, now the other, just going to climb over a huge rock, but miraculously missing it, we whizz along, every wave seeming to swamp us; but our little craft shoots into a calm little nook, whose surface is only disturbed by the ripple of our canoe. We have run the Hellsgate of the Matapedia, or as it is better known, the Assametqughan Falls, the most dangerous of the many on that river, and more especially as it was then swollen high with heavy rains. We, however, lost our double-barreled gun running this last rapid; when the canoe struck a blind rock and gave a cant around, the gun, which was lying with its muzzle projecting over the thwarts, dropped out. The Doctor says it's not lost, as we know where it is.

Previous to this we shot a number of sheldrake, which are very destructive to salmon fry, and we brought home some specimens with us, but now we get no more.

Commenced fishing, which was very indifferent. Evening drawing to close we started for McKinnon's Brook. We soon came in view of the quiet little brook and had our canoe ashore, put up our tent, and supper in a very short time, accompanied by black flies. They just came into the tent by the cubic foot and stayed there, they came to spend the evening. What a blistering we got; we smoked them out after a while, and ourselves, too.

Tried fishing by torch light, but no use.

Our camp fire attracted the attention of two fishermen who were lingering over their last pool for the evening, and they came up to see us. We were delighted to meet them—R. Bowes and J. A. Talbot—two well known characters on this river; they spent quite a while chatting and deploring the heighth of the river. After smiling all round they left us with their guide, F. Lepage, who was somewhat surprised at us running the river in its present state.

We were aroused from our slumbers at 5 A. M. by the whistling of a passing train. Soon had our rods ready, but the morning was cold and foggy, and we did not have much success. We returned to camp and had our breakfast.

The fog now begins to lift and the mountains come into view; old Sol puts in his appearance and soon the surroundings are changed, every leaf glistening in the morning sun, the cry of the kingfisher heralding the advance of morning.

On the way again, fishing every pool until we came to Mill Stream Bridge, anchored under it and caught a first-class lot of fish; nothing over two pounds, and an occasional grilse; proceeded to Mill Stream Station and camped; weather cold, but half a dozen blankets kept us pretty snug.

Next morning forwarded our fish to various points where they were expected, in all forty-seven pounds, and started on our last day's canoeing, and with better fishing as we proceeded; soon came to Matapedia without any mishap, and as this was the last of our water route we transferred our canoe and camp fixings to the west-bound train, and with them thirty-two pounds of speckled beauties to M. W. Crean. River du Loup, for distribution among our friends in that vicinity, our first lot having been sent to St. Johns, N. B. The Doctor and I part here; good bye, Doc, and the train takes me west satisfied. C. H.

QUEBEC, October 24, 1882.

THE ANGLERS' TOURNAMENT.

Editor Forest and Stream:

In the last issue of your pleasing and instructive journal I was much interested in an article on the anglers' tournament; it was graphic and honest. I think that to such notices, just as much as to good casting, will depend the future success of our annual tournaments. Fair play is very essential to excite honorable emulation in every kind of contest, but it is especially required in developing the nicest skill of the "gentle art." Thus feeling, I think it my duty to correct a slight inaccuracy which occurs in your account of the contest. You say I only once threw my flies over eighty-five feet. The fact is I cast ninety feet just before I made the ninety-one.

The accounts published in some of the papers intimate that I could not throw overhand. That is a mistake. I think I can cast overhand just as well as any other way, but I prefer my method, firstly, because I can cast with less than half the labor, and do more fishing in a half a mile than I could do in three miles by the overhand throw; secondly, because I can make a greater reach with more accuracy than by the overhand method; thirdly, because I would not consider my flies and leaders either ornamental or useful to the trees along a wooded stream. Some of these gentlemen also think that by my method I would frighten all the fish. Ah, that would be very bad indeed. And to think that in forty-five years' experience I should not have suspected that my method was frightening the poor little fishes. Perhaps that was the reason why I have received so many invitations to join fishing parties. They knew I would frighten the fish, and then they would the more easily catch them. As you know if one should get frightened (say while crossing Broadway) by one horse he will be almost sure to run under the feet of another, so my friends wanted me along to frighten the fishes from my own line so that they would rush upon their's, filling their baskets rapidly. Now, after the publication of this exposé, I shall expect invitations to all the private ponds, that I may serve to make the success of my friends complete.

NEW YORK, Oct. 30, 1882. H. PRICHARD.

LARGE BASS IN THE DELAWARE.—Belvedere, N. J., Oct. 20.—On the 31st day of August, fishing at the foot of Foul Rift, on the Delaware River, I took with a small jointed rod and line a black bass weighing six pounds eleven ounces; length, twenty-three inches; circumference, fifteen and a half inches; width, six and a half inches. The fish was out of water nine hours before being weighed. This is said to be the largest bass ever taken with rod and line in the Delaware. Bass, I believe, weighing seven and seven and a quarter pounds have been taken in some of the ponds and lakes of this State, but not in the Delaware. During the first week in August I took four bass, weighing seventeen pounds, from the same river. Bass fishing in the Delaware has not been good in this section, although some good strings have been made. The writer has taken about 160 since the 1st of July, many of them weighing from one pound to five and a half pounds.—I. H.

DEATH OF COLONEL HOYT.—Col. Thomas J. Hoyt, of this city, died at the Victoria Hotel, Oct. 24 last. He was a gentleman of large liberality, fine physique, of the highest integrity, superior business attainments, and exceedingly genial in his social relations. His death is greatly deplored by a host of his friends, and by none more so than by his brethren of the rod and reel, who have met him for very many years in the Adirondacks, at Bartlett's. "There only remains to us the recollection of his pleasant ways and joyous companionship." His family and immediate associates have our deepest sympathy.—R. N.

LEESBURG, Va., Oct. 28, 1882.—Dr. Elzey, Rev. Dr. Davis, Mr. Hickman, and the Murrays caught thirty bass one day this week on Goose Creek.—T. W.

Fishculture.

ESCAPED CARP.—Some weeks ago, while driving along the banks of White's Creek, my attention was attracted to a large shoal of fish in one of the many deep pools into which the stream resolves itself during the fall months. I was satisfied they were neither bass nor perch, and naturally asked what they were. No one seemed to know, though the query gave rise to an investigation, which resulted in determining them genuine German carp. Once this fact was assured, I had but to think a few moments to find a reason for their being there, which was, during the heavy floods with which the Cumberland River was visited last winter, a number of carp ponds were inundated, and the little fellows, and no few large ones, made their escape, and being, no doubt, bewildered by the vastness of their new quarters, and chased by game fish, sought refuge in their present home, a tributary of the main stream. Thousands of these doubtless perished and were destroyed, though the ones which succeeded in reaching the upper waters of the creek were saved, and from them sprang the immense quantities now seen there. For years White's Creek has been depopulated of its finny denizens, save the unaccounted for myriads of minnows, hence there was no enemy to molest them during procuration and hatching. As carp do not take the hook readily, and seining, trapping, and like modes of fishing have been stopped, the question arises in my mind whether the increase of these fish will not be sufficient to stock the entire waters of the State contiguous to the Cumberland River. Everything seems to favor such a result, as there are hundreds of small streams emptying into it which, like White's Creek, become a series of pools or holes during the summer and fall, and where the spawning, hatching and first growth can be finished before the young fry are exposed to any serious danger. If such be the case, the apparent calamity of the carp's escape may prove of endless value to the community at large. When the newly appointed fish commissioner for Middle Tennessee reads the above in the FOREST AND STREAM, if he will call upon me, or send me a permit to seine the creek, I will take the trouble of verifying what I have heard and believe, by going out to the place and catching some of the suspected fish. The question is of too much interest to pass unestablished, and I hope in a short while to be empowered to get at the facts, or what would be still more in accordance with the subject's importance, the commissioner should seine the creek himself and make a formal report of his findings.—J. D. H. (Nashville, Oct. 22).

THE GOURAMI IN INDIA.—It is announced in the Bombay *Gazette* that a fish association in the Madras Presidency has just accomplished the task of transporting some gouramis from Madras. One hundred of the fry were despatched in earthenware and tin vessels, and completed the journey without any apparent damage, having been kept cool and fed upon the larvæ of mosquitoes and other insects. Very shortly after their arrival at Bombay they were taken to the banks of the Vehar reservoir, where they are intended to become the progenitors of a numerous race. This large piece of water has now been in existence as a lake for a round eighteen years, and it is regarded by the learned in pisciculture as an admirable home for the gourami, as there is no reason to believe that it contains pike or other creatures endowed with predatory habits. On the other hand, the new fish are expected to prove of benefit to the reservoir by clarifying the water in which they are to live and multiply. The experiment, if successful, may lead to a great extension of pisciculture throughout the Presidency and the whole peninsula.

FISHCULTURE IN ENGLAND.—We learn that a movement is on foot to form an association in England similar, perhaps, to our own Fishcultural Association, or to the Fischerei Verein in Germany. The men who have taken hold of it are Mr. W. O. Chambers, a gentleman long known for his interest in the subject, and Mr. R. B. Marston, editor of the *Fishing Gazette*. A public meeting will soon be called, and if the fishculturists take hold of it with a will, there is no reason why the government should not be induced to do something in a practical way to supply the people with fish food. We hope and believe that the formation of this association in England is the beginning of a great work which will end in making fishculture a national institution in England, as it should have been years ago.

QUINNAT SALMON IN GERMANY.—We learn through the *Fischerei Zeitung* that Mr. Schuster, proprietor of the celebrated fish farm at Freiburg, in Baden, has received the large silver medal of the Société d'Acclimatation of Paris, for his success in keeping and growing the *Oncorhynchus quinnat* in confinement until the fourth year, and until the development of their spawn. Mr. Schuster is one of the most enthusiastic and successful of German fishculturists.

CARPCULTURE IN MISSOURI.—Mr. George Eckardt has been employed by the Missouri Fish Commission to construct carp ponds near St. Louis. They will be after the model of his father's famous ponds in Germany, where young Mr. Eckardt has spent many years in carpculture on a large scale.

Answers to Correspondents.

NEW ROCHELLE.—Your fish is the "ling," and is not uncommon on the coast.

F. Z., Boston.—Go to Chiltonville, just below Plymouth, for quail, grouse and ducks.

J. P., West Tisbury.—To what cross do the black spaniels owe their color? Ans. Black is a legitimate color, as much so as liver.

T., Frederick City, Md.—The average pattern for both guns, under conditions mentioned, is 200 pellets; some of them go as high as 240.

A. A. M.—Will a thoroughbred setter bitch, eleven months old, not even yard broken, pay for handling if properly trained? Ans. It depends upon the natural ability of the dog. Many prefer to leave their training until they are mature.

PEBBLY DOG, N. H.—1. Can you tell me of any books on the insects and bugs of New England or New Hampshire? 2. If you can, where to be purchased, and at what price. Ans. 1. "Packard's Guide to the Study of Insects" will be of use to you. 2. We can furnish it; price $3.00.

ALBANY, N. Y.—1. Which is the most used in the manufacture of split bamboo rods, the white or colored cane? 2. What cement is used in cementing the strips together? 3. How is fish glue prepared for use? 4. Give dimensions of ferules for three-piece, 18ft. long, salmon rod? 5. What number of the FOREST AND STREAM was the description of the Oconowoc bass rod published? Ans. 1. Malacca cane is used and it always has the marks of ornamental burning on it. 2. Common white bone glue, the varnish keeps it perfect, although each manufacturer has his own preparation which he keeps secret. 3. Fish glue is prepared by boiling fish skins; it is done near the large sea fisheries, especially at Gloucester, Mass. 4. They vary in decimals, find a rod that suits you and get ferules of that size. 5. In issue of February 11, 1875, and a further notice in April 11, 1878.

We call attention to the notice of the new "Atlantic House," at Oak Hill, Florida, published in this issue of the FOREST AND STREAM. This house supplies a great deficiency heretofore existing in Florida, viz.: a place where tourists can enjoy all the advantages of a really first-class hotel, in a section of country where game and fish remain comparatively intact. The proprietor has spared no pains, particularly in the matter of good beds and excellent *cuisine*, to afford his guests a comfortable home.—*Adv.*

The Kennel.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. Washington A. Coster, Flatbush, N. Y.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

THE MUSIC OF THE HOUNDS.

Heavens! what melodious strains!
How beat our hearts
Big with tumultuous joy! the loaded gales
Breathe harmony."
—*Somerville's "Chase."*

THE maple leaves are blushing,
And the oak a marvel is;
The withered leaves are crushing
'Neath the hare's fleet foot, I wis.
The yellow of the birchen tree
Reflects the westering sun,
And the squirrel, in the hickory,
Seems full of food and fun.

The sumac flaunts its pennon,
Where the golden-rod hath died,
And the aster's eye is bent on
The gentian's purple pride;
The scream of the jay, like clarion,
Rings boldly on the air,
Like a fierce, freebooting baron,
Raiding the monks at prayer.

Now is the time, if ever,
For the wood-land-ways to sound
With the music of the clever
And keen-scented beagle hound.
The jay hath shrieked defiance,
The hare hath left his "form"—
E'en the young may learn reliance
When the scent of "puss" lies "warm."

O, what tumult 'mid the bracken,
O, what music in the air,
See them quarter and then slacken,
And, in full cry, follow fair.
Like a knot of jewels rampant,
See the pack, through copse and plain,
Over gem-like leaves triumphant,
Bearing to the coup-de-main.

O, what music meets the ear,
When the beagle giveth tongue;
Silver trumpet not more clear,
Sweeter never beauty sung.
Hark! all nature seems to listen,
And the leaflets hush their fall,
As their lithe forms, chasing, glisten,
As their voices, echoing, call.

Oct. 17, 1882. O. W. R.

EASTERN FIELD TRIALS.

Editor Forest and Stream:

As the time for the annual field trials of the E. F. T. C. draws near it may be of interest to some of your readers to know something of the prospects for birds down in this country.

I am situated in Halifax county, Va., some seventy-five miles from High Point, close to the Richmond & Danville Railroad, just one hundred miles below the former place. In regard to the birds, I find a great many broods entirely too small to shoot or to work young dogs on, some that cannot fly at all, a great many more than in any former year since my shooting in Virginia. The weather is, and has been, very warm, about like August, since my coming South, and I have had but little it weather to work dogs, and I suppose my brother sportsmen have found it the same. I have with me some promising youngsters if I ever have weather so they can work to advantage.

As I came through Richmond I had some talk with Mr. Stokes and Mr. Taylor, one of our judges of the R. I. Trials of 1881. They are at present having some of their young ones put into good shape to compete in the field trials at High Point this fall. They expect to show what Virginia has in the dog line, and I expect some of our boys had better bring some good ones or they will be apt to go home without having the winners of the Derby, as they know how to make good field dogs down here. I have had some talk with parties that are acquainted with the grounds at High Point, on which the field trials are to be held, and they say there always has been a great quantity of birds there, and they think there will be no doubt but what there is a great many there this year. There is quite a heavy undergrowth this year, and it makes it a hard task for dogs to find the birds. But I think it a much better idea than having the trials held on Robin's Island, for it shows the finding qualities of the dogs to have open grounds to work over.

I hope we may have a large turnout from the sportsmen of the West, and have some of those fine dogs we read so much about take part, as they have never come to the front with many of them yet in the Eastern Field Trials.

I think the club makes a mistake in having their entry close on November 1 in the All-Aged Stakes.

We have been having some very heavy rains, which will be an advantage, if it would come cold, but this morning is like a beautiful spring morning with a very hot sun. I shall be on hand at High Point to see what I have in my lot that can hold their own among the cracks of the country.

E. I. MARTIN.

JUDGES FOR THE N. A. K. C. FIELD TRIALS.—Memphis, Tenn., Oct. 27, 1882.—The following gentlemen have kindly consented to act as judges of N. A. K. Club Field Trials at Grand Junction, Tenn., commencing with the Free For All Stake, Monday, Dec. 4, 1882: Dr. Rawlings Young, Corinth, Miss.; Mr. B. F. Wilson, Pittsburgh, Pa.; Mr. W. H. Key, Florence, Ala.—D. BRYSON.

"Boss" is the name adopted by Upthegrove & McLellan, of Valparaiso, Ind., for one style of their celebrated Shooting Suits. By persistent advertising and good work their suits have become national in reputation and have many friends in all parts of this continent.—*Adv.*

EASTERN FIELD TRIALS ENTRIES.

THE following entries for the Eastern Field Trials have been received. The list includes only those received up to Monday night. We shall undoubtedly be able to publish the remainder next week.

MEMBERS' STAKE.

1. BESSIE. J. Otto Donner, New York.—Orange and white English setter bitch, 3½ years (Ranger II.-Mallard's Belle).
2. BUCKALLEW. W. A. Coster, Flatbush, N. Y.—Orange and white English setter dog, 3 years (Druid-Heller's Ruby).
3. DIANA II. Charles Heath, Newark, N. J.—Black and white English setter bitch, 3 years (Dash III.-Diana).
4. COUNTESS. George T. Leach, New York.—Red Irish setter bitch, 3½ years (Count Bosco-My Duchess).
5. BROCK. George T. Leach, New York.—Red Irish setter dog, 3½ years (Count Bosco-My Duchess).
6. PEG. Dr. N. Rowe, Chicago, Ill.—Blue belton English setter bitch, 8 years (Leicester-Dart).
7. MARCHIONESS PEG. Dr. N. Rowe, Chicago, Ill.—Black, white and tan English setter bitch (Druid-Peg).
8. BIGLY FLINT. J. Herrin Crossman.—Liver and white English setter dog, 4 years (Rob Roy-Jessie).

ALL-AGED STAKE.

1. POLLUX. Edward E. Hardy, Boston, Mass.—Black and white English setter dog, 2½ years (Dash III.-Hardy's Diana).
2. BESSIE. J. Otto Donner, New York.—Orange and white English setter bitch, 3½ years (Ranger II.-Mallard's Belle).
3. LALLA ROOKH. Luke W. White, Bridgeport, Conn.—Lemon and white pointer bitch, 11 months (Sensation's Son-White's Grace).
4. MAIDA. Dr. S. Fleet Spier, Brooklyn, N. Y.—Black and white English setter bitch, 5 years (Dick-Clio).
5. PRINCE HAL. Dr. S. Fleet Spier, Brooklyn, N. Y.—Orange and white English setter dog, 3 years (St. Elmo-Maida).
6. DIANA II. Charles Heath, Newark, N. J.—Black and white English setter bitch, 3 years (Dash III.-Diana).
7. BROCK. Geo. T. Leach, New York.—Red Irish setter bitch, 3½ years (Count Bosco-My Duchess).
8. COUNTESS. Geo. T. Leach, New York.—Red Irish setter bitch, 3½ years (Count Bosco-My Duchess).
9. DOC B. Robert Betty, New York.—Lemon and white English setter dog Jersey Duke-Topsy).
10. BUCKALLEW. W. A. Coster, Flatbush, N. Y.—Orange and white English setter dog, 3 years (Druid-Heller's Ruby).
11. BRAVO. Geo. N. Appold, Baltimore, Md.—Lemon and white pointer dog, 2½ years (Bragg-Kate).
12. BESSIE. Luther Adams, Boston, Mass.—Black and white English setter bitch, 2½ years (Dash III.-Countess II.)
13. SHADOW. Luther Adams, Boston, Mass.—Black, white and tan English setter bitch, 2½ years (Lincoln-Daisy Dean).
14. DON PEDRO. Henry F. Aten, Brooklyn, N. Y.—Orange and white English setter dog, 2½ years (Ranger II.-White's Daisy).
15. ELCHO III. Adolph Nelson, Brooklyn, N. Y.—Red Irish setter dog, 4 years (Elcho-Rose).
16. GLADSOME. J. W. Foster, Leesburg, Va.—Blue belton English setter dog, 19 months (Gladstone-Leila).
17. MONARCH. H. E. Hamilton, New York.—Liver and white ticked pointer dog, 4 years (Ranger-Queen).
18. SENSATION, JR. J. Otto Donner, New York.—Lemon and white pointer dog, 22 months (Sensation-Daisy).
19. LORNA. Dr. Wm. Jarvis, Claremont, N. H.—Red Irish setter bitch, 4½ years (Elcho-Rose).

GUN-SHY DOGS.

ADVICE upon a delicate subject like this comes with better grace from those who have seen some experience, and have also made a study of the varying dispositions of dogs. In any pack of hounds this variety may be observed in all its numerous shades. Every huntsman worth his salt knows the temper of every hound in a pack of sixty couples, just as every good shepherd knows the habits of every ewe in his now very valuable breeding flock. The habits and dispositions of all our domestic animals are as surely hereditary as are their constitutions and symmetrical proportions.

Some hounds will resent the whip, or the threat of it, and will fight it out with the whipper-in, even to the last extremity; others will fly for their lives, construing the punishment into an undeserved and cruel outrage, and taking the matter to heart so seriously as to carry their drooping stern throughout all the day, and possibly longer. Do we not constantly see these counterparts in mankind? One feels mortally offended and injured at a hint, an allusion, a *double entendre;* while another, with a skin like a rhinoceros, will then and there forgive everything if the ill-bred conversationalist will but pass the bottle.

Pointers are just as variable in temperament, and in their degree of boldness (or the want of it), as foxhounds or other highly-bred animals. Nature is constitutionally nervous. He was born so. Probably the whole litter were more or less so, but they will vary much. Knowing one of the parents to be rather nervous, the breeder should coax or call all the puppies out of the kennel, and then cause alarm by stamping the foot, shouting, or firing a gun. Those puppies that scamper back to kennel with the greatest stampede of alarm will make the most nervous dogs in the field; while those that run last or least, or stop soonest, gazing cross-eyed with an inquisitive, penetrating stare, will make the boldest and best dogs of that particular litter.

Nervousness in a pointer is not an unmixed evil. It leads to caution and carefulness, and many other good things. He always drops shot. He scorns to run a hare. He never puts birds up, except, perhaps, when quite unavoidable by reason of a down-wind approach. Even then, though he is not in fault, his sense of shame is as plainly shown and keenly felt as that of a gentleman who spills a glass of claret on the best dress of a duchess. The bold and daring dog is inclined to rush into all the above excesses of exuberance from which the timid dog is free, and the principal part of the education of the resolute dog is the adoption toward him of a stern, determined, restraining manner, which must be black enough to check the rashness of running in and such other deeds of too much dash.

Such are the bold dogs whom a certain class of sportsmen contemptuously dishonor by excuse by saying, "Yes, he used to drop shot, but I have not taken the trouble to keep him to it;" or he will say, "Well, I have been out lately without a retriever, so it is as well that he can help me to catch a wounded hare, ay, old fellow?" The dog is quite beyond the control of such a man, of whom there are many. He is too fast for partridge shooting, but could be managed with the help of the hard work of the moors.

Having shown the difference in the manners of pointers, I am now in a position to treat with the management of the gun-shy dog. Everything must be endearment and love, and at present never let him see nor hear a gun. Sins of commission, as committed by the daring dog, are met by severity; while sins of omission, as committed by the nervous, are met by encouragement and coaxing.

He is not the dog to do wrong, but you must not chide him if he does. I should love to see him rush into the house with dirty feet, and dash out with a leg of mutton in his mouth. That is the form of the bold dog. When the timid dog does it, pull out your 6½lb. twelve-bore. He won't wink his eye when you fire. The bold dog, if underfed, would become a daylight thief. I have known one to charge through a first-floor window with his booty, and come to grief with a crash on landing in a cucumber frame. The nervous dog would die of starvation rather than take a mutton chop from the hand of the severe-mannered blusterer or the ungracious rowdy. He'll never sniff round the house for swag. He behaves more like the over-polite bore who, standing like a soldier to salute, persistently repeats uncalled-for apologies for his presence.

Make the gun-shy dog your every-day companion. Let him accompany you in walking, riding and driving. He will soon get into the dog-cart himself when you are going for a drive. Let the children play with him, he could not be provoked to harm them. Have him indoors, that is the place to teach a dog obedience and manners, and give him nerve. Of course he must learn the sport in the field, but when he has nerve, and understands your conversation, he is educated. His field prowess is an instinct—an inherited habit—aided by a highly sensitive organization. He requires no breaking. If at first introduction to the house he appears shy, do not notice him. Even let him remain timidly crouching under the sideboard of the next room awhile, if he is very full of fear. Your kindness will bring him courage, and the day will come when you will exult to see him put his feet on your shoulders. When the shooting season comes round, the bold dog must run after the dog-cart, but the nervous dog should ride part of the way. Use no collar and chain as you shoulder your gun to take the field. Do you think he will run away from the man who is all the world to him? Never, never!

He has a strong objection to your gun, but his objection to leaving you is not ready stronger. To him your endearing companionship is an overpowering habit of life that could not so lightly be given up. He is attached to you as firmly as by an iron girder. He may be frightened when you shoot, and may run back five yards; but if he ever leaves you I shall not think much of your diplomacy. He does not now think himself a Cain, with "every man's hand against him." When he ran away from an ignorant stranger, there was no motive in staying. Now the motive is all powerful, and though he will not yet join in the sport, he will crouch at your heel. Go alone, mind, or half his thoughts will be on the stranger. You would thus lose half your influence. Do not ask him to range; do not notice him at all. Even endearment intensifies his fear, as it would that of a child who had cut his finger and was frightened at the blood. Do not throw a dead bird toward him, he may think you are "'eaving 'arf a brick at 'im," but leave a bird on the ground and walk in such direction as will bring him across it. Instinct now asserts her all-powerful sway. He knows that is his natural game, and his rejoicing is unbounded. Before the day is out he will back the other dog and take an interest in the fall of the birds. Never ask him to range, he will slide off stealthily himself. Your work is done; your victory complete. You now have one of the best pointers in England.—*Farmer Extensive in Stock Keeper.*

MEMORY IN DOGS.

IN an article upon this subject in the *Kennel Gazette*, "Perplexity" writes as follows:

"Many years ago I had two bull-terriers relegated to my care by a friend, and, as I had them for six months constantly with me, and used them to hunt for all sorts of vermin, I had every opportunity to judge of their qualities. They were both bred from fighting stock, one the son of a battle winner of note, but they were very good-tempered, the best of the two, as it turned out in a subsequent fight between them, being stupidly so, as he would let other and smaller dogs take liberties with him. The most marked deficiency that I perceived in them both, however, was want of memory, and the case with which they could lose themselves. One walked to the post with me one afternoon on a road he had been twenty times before, and I returned after the evening had closed in, when it was getting somewhat dark. An hour or two after I had been home I missed the dog, and the thought struck me that he had never come back, although I recollected that I had seen him half a mile from my house, and that he crossed the road, in company with a terrier, to a corn stack, through a gateway. Accordingly I walked to this point, and there I found him shivering in the cold. He had not had the sense to find his way home. I had several opportunities of the same sort to convince me that both this dog and his companion had such short memories as to be totally incapable of finding their way over the shortest distances. I have remarked something similar to this in greyhounds, and I have certainly seen more stray greyhounds about, temporarily lost by their owners, than almost any dog I can call to mind. Retrievers, though notable for their sagacity, are not unfrequently lost, and setters and spaniels, although so full of intelligence, are not, according to my experience, the best judges of distances and places, so as to make them remarkable for an eye to country.

"I am inclined to believe that the breeds more capable than others to find their way from point to point are those that are the most remarkable in hunting a foot scent, and I place two breeds infinitely before all others for that particular quality, namely, foxhounds and fox-terriers. Collies have very retentive memories and extraordinary sense, but they would not take a line of country with so much certainty or quickness as a foxhound. It may be called a quality to exceed memory, and to be something akin to the power possessed by the carrier pigeon, but it is a remarkable development in a foxhound to find his way to his kennel from immense distances. The well-known fact of hounds purchased at Tattersall's and sent by water to Scotland finding their way to the south again in an extraordinary short space of time can hardly be accounted for, as it was something beyond memory, but those who have been accustomed to hounds will always assert that it is next to impossible to lose them in any country over which they have ever traveled before. I can bear in mind a pack of foxhounds being sold, and they came by road a three days' journey, at twenty-five miles a day. About a fortnight after they had arrived at their new home a bitch slipped away while at exercise in the afternoon, and a letter received from the late owner showed that she had reached her old kennel during the same night, as she was at the gate at six the next morning. This showed memory, as, considering the time in which she covered the seventy-five miles, she would not have hesitated at all in finding her way over the road she had traveled a fortnight before.

"Fox-terriers—and I have noticed it more among wire-haired ones—are extraordinary in their capacity to find their way over long distances, and I believe it would be impossible to lose one over any road it had traveled before. There are signs, however, that there is as much method about them as memory, and to these I will allude in the journeys I am about to place place are extraordinary. I know of one case where a fox-terrier was tied up so that she should not follow her master and mistress, as they were leaving home for a few days. They left in a carriage with a pair of horses and first of all drove 10 miles to a farm of theirs, where the horses were fed, and after a stay of an hour the next proceeding was to call on a friend living about three miles from the farm, and when they drove 18 miles to the house they were visiting. Four hours later they had left the bitch yet loose, and was nowhere to be found, and during the afternoon she turned up at the farm, hunted about the passages of the house and through the rooms, ran into the stable, and then went straight away to the house of the friend, where she went through the same process of hunting before getting on the road for the eighteen miles, which she covered in such good time as to complete her journey almost as soon as the carriage conveying her friends. Now, the commencement of this performance was possibly prompted by memory, as she had more than once followed the carriage to the farm, but her course to the friend's house, and then over the 18 miles must be accounted to her nose and hunting properties, as she had never been on the road before.

"Another case of a fox-terrier bitch was one that had been brought from a long distance to a country house, and shortly after she arrived she had puppies. She was with these whelps for about six weeks, and then she was given away to a person

living at a distance, as the crow flies about ten miles, but it was near the mouth of an estuary, and the most get-at-able way was by a steamboat down the estuary. In this way the bitch was sent with a collar and chain on, and her new owner came off in a rowing boat to meet her. Somehow or other she got out during the night, as the next morning she was back to her puppies. The way this little bitch got back no one knows, as, unless she swam across the estuary, which was about a mile, she would have had to have gone eight or ten miles to the head of the estuary, and then a detour of three miles to get back to her destination. I have remarked that pointers will find their way back to their homes better than setters, and I have known some of the former very clever in their memories of a road once traversed; moreover, I have noticed that when a pointer has been ranging wide, and lost sight of his owner for a minute, he has seemed to throw his head out something like a pigeon before taking line for home, and but for a timely whistle he would have gone straight off in the right direction. Some people will say all this is not memory, but what is it, I ask? Will some lover of the dog explain?"

This is a very interesting subject, and one that nearly all writers upon canine matters have given much attention, but we have never seen in any article upon the subject a satisfactory explanation of this wonderful power. No one who has witnessed the display of this remarkable gift, but will agree that its workings far outrank the scope of memory. Nor can we for an instant believe that the sense of sight plays an important part in accomplishing the result attained. We once received a setter dog, less than one year old, from a place thirty miles distant. He came by rail, arriving at the depot about nine o'clock on a very dark and rainy evening. He was then taken in a carriage and completely covered with the blankets and driven seven miles to our home. He was fed and chained in the kitchen and left for the night. At a few minutes past midnight he made so much noise that we got up and coaxed and petted him awhile until he became quiet and again left him. Nothing more was heard from him during the night, but this was easily accounted for in the morning, as he was missing, having slipped his collar and left through a window. After searching for him an hour or two without success, we went to the nearest office and telegraphed his owner, and were greatly surprised to receive from him a reply stating that the dog was there. We afterward learned that he arrived at his home between five and six o'clock in the morning, fresh as a daisy. He must have traveled at least thirty miles in the darkness in, at the most, about five hours time. This dog had never been a mile away from his home before, and it has ever since been the deepest mystery to us how he found the way. We may never fathom the secret of the wonderful and mysterious power that guided his footsteps, nor understand the nature of the subtle sense that shaped his course, but with "Perplexity" would very much like to have some one explain.

MURDER MOST FOUL.

MURDERED because he would not sell for more than $250! Such, we read, was the fate of poor Prince Royal, a Laverack setter, owned and offered at a public sale by R. F. Llewellin. "What an inhuman wretch!" was the indignant remark of a friend, a lover of dogs, to whom I mentioned the circumstance, in which opinion I most heartily joined. I never heard of any atrocity committed upon our dumb pets among people calling themselves civilized which has so stirred my blood; and the more we look into the matter, the more abominable does it appear. This person, moving in good society, professing to be a gentleman, and having ample means, interests himself to such an extent in dogs as to aspire to have his name attached to a breed of setters.

He finds himself at last with a surplus, and decides to offer some of them at public sale, on which he places large reserve prices. Two hundred and fifty dollars is bid by several different gentlemen for a single animal, but the amount not satisfying Mr. Llewellin, he orders the poor, unoffending dog and his mate to be killed. That the dog was a prime good one, and in full health and strength, is amply proved by the high price offered at the sale. Then, why should the poor fellow—"man's most faithful friend"—be consigned to such an early and ignominious death? Simply to show Mr. Llewellin's lofty scorn of such a trifle as $250. He seems to have had no friends to whom he might have made a present of poor Prince. Well, the fewer friends such a man has the better it shows for humanity.

We have all of us often heard of many vulgar and disgusting displays of wealth, particularly by the *nouveaux riches*, but who ever heard of such a heartless as well as most sickening display as this? When I think of old canine pets, many of which we all of us keep many years after their usefulness is past, simply for the affection we have for them, it seems almost impossible that there should be any human being so miserably destitute of a heart as this R. F. Llewellin has shown himself to be. What a pity that the strong arm of the law could not reach such a case as this! I notice in some of the papers a great deal of discussion about the breed of setters bearing his name. What this I have nothing to; but, as a faithful friend of a good dog, I feel I am but voicing the sentiments of many when I say I wish to record my protest against such wanton cruelty, and to stamp as infamous the person who committed it. G.

DANVILLE, P. Q., Canada, Oct. 25, 1882.

TENNESSEE FOX HUNTING.—I met Col. Johnson this morning, and from him learned that last night he had the most beautiful fox chase he ever took part in in his life. His dogs were in splendid trim, and as soon as they reached Mrs. Ellis's farm, a fox was started, and for two hours the hounds run him as never dogs run a fox before. The wily fellow had not an instant to lose, but occasionally a briar patch or a thicket would check the pace for a few minutes, then he would have to take the open, through woods and grass, and once he took to a cornfield, and as the pack came toward him, driving the fox at lightning speed, their music was like the singing of millions of birds. Once he tried to evade his pursuers by taking to the top of a stone wall, though Nick and Sandy were equal to the strategic move, and never left the trail a second. So hotly did they chase the fox, that he passed close to where the Colonel was seated on his horse. After all their magnificent work, the dogs were doomed to lose the game, as he made one desperate spurt, jumped a five-barred gate, and instantly took a hole. I do wish for the sake of the lovers of fox hunting that I could convey to them the earnest sportsmanlike manner in which the enthusiastic Colonel narrated the above, and they would enjoy it all the more.—J. D. H.

A CARD TO HANDLERS, FROM E. F. T. CLUB.—The resolution passed by the Eastern F. T. Club, debarring any owner, or handler, from competing and forfeiting all entrance moneys, stakes, etc., who work or shoot with dogs within a radius of eight miles of High Point, on the grounds selected and posted by the club, on which the Trials will be run, is aimed at none, but intended as a common good for all, free from any animus, being solely passed to act as a warning, and to prevent owners or handlers, going down, from shooting off the birds or taking any undue advantage before coming in actual competition in the Trials, whether intentional or premeditated.—W. A. COSTER, Treas. and Sec.

MARCUS.—Mr. Thos. H. Terry, of New York, has purchased of Mr. A. S. Apgar the champion collie dog Marcus. Mr. Terry has now the best collection of collies in this country, and is making arrangements to establish an extensive kennel on Long Island for the breeding of these useful animals.

BIRMINGHAM DOG SHOW BOYCOTTED.—SIR: Some months ago there was a discussion in your columns on the action of the Kennel Club in boycotting independent dog shows, and it was then stated that the Kennel Club had no intention of boycotting the Birmingham show. I wish now to call the attention of your readers to the fact that the Birmingham show is to be henceforth excluded from the Kennel Club Stud Book, and it has been determined not to admit into volume ten of the Kennel Club Stud Book, to be published at the end of this year, a record of the prizes won by dogs at Birmingham. This may be a startling announcement, but, incredible as it may appear, it is true, and it is information that should be communicated at once to all intending exhibitors at the forthcoming Birmingham show, for no record will be published, except in the newspapers, of the prizes gained by the dogs so exhibited. The Kennel Club Stud Book purports to be a complete record of dog shows, but it appears from the circular sent out with the form of entry for dogs to be entered in the Kennel Club Stud Book, volume ten, that Birmingham, the oldest, and, as many think, the premier dog show in the United Kingdom, is intentionally left out of the list of shows whose prize winners are to be entered free of charge. No doubt many exhibitors will comfort themselves with the assurance that they will be able to have the information inserted in the forthcoming book on payment, but an application to the secretary will dispel this illusion. Everybody concluded, from the correspondence in your columns in the summer, that the Kennel Club were afraid to attack such a powerful and well-established institution as the National Dog Show at Birmingham; but what they dared not openly do then, they are now doing secretly, by refusing to insert a record of the Birmingham prize winners in the forthcomming vol. 10 of their Stud Book. They have not had the candor to advertise this fact openly in your columns and the advertisement of vol. 9, published in your last week's issue, may lead people to believe that, as Birmingham was included in the 1881 Stud Book, it is to be included in that of 1882. The contrary is, however, the case, and the fact cannot be too widely known. Before the establishment of the Kennel Club Stud Book, the sporting newspapers were accepted as the records of important shows; but since the Stud Book has come to be regarded by dog breeders as the authoritative record of important shows, the omission from it of Birmingham will seriously damage the reputation and prestige of the National Dog Show, diminish its commercial value of its prizes, and curtail the number of entries. I do not, however, suppose that the Birmingham committee will sit down quietly under "threatened annihilation," but it will be necessary for them to take steps to meet this action of the Kennel Club, a recently established private body, who, while professedly acting for the interests of the public, are really advancing their own ends to the serious loss of the public, and attempting to ruin the best dog show in the country.—*Beta in London Field.*

GARRYOWEN AND VISCOUNT PALMERSTON.—At a meeting of the English Kennel Club Committee, held on Tuesday, Oct. 3, as reported in the *Kennel Gazette*, Mr. Giltrap brought before the committee the action of Mr. Hilliard in entering his dog, Viscount Palmerston, in open classes in Belfast and Portadown shows contrary to the rules of those shows, and also the conduct of Mr. Hilliard in reiterating in the press statements respecting the color of the nose of Mr. Giltrap's setter Garryowen, after the decision of two veterinary surgeons, and requested that the Kennel Club would deal with the matter under Rule 9, Part 1, Code. The committee requested Mr. Hilliard to furnish them with an explanation of the charge. A committee meeting was held on Saturday, October 7. Present—The Rev. W. J. Mellor, the Rev. G. Lovell, Mr. P. C. Reid, and Captain Lindoe. A letter was read from Mr. Hilliard in answer to a request from the committee for an explanation of the charges brought against him by Mr. Giltrap. The committee considered that Mr. Hilliard was guilty of culpable negligence in breaking both the regulations of Belfast and Portadown shows and Rule 14 of the Kennel Club Code, and they recommended him to be more cautious in making entries for future shows. With respect to the matter of the color of the nose of Garryowen, the committee considered that the nose had not been tampered with, and that the conduct of Mr. Hilliard in writing to the press in the absence of any positive evidence, and in the face of the decision of two veterinary surgeons, not only deserved the greatest censure, but brought him very near to the penalties of Rule 9. They further suggest that Mr. Hilliard should, as an honorable man, return to the Belfast Committee, for the benefit of the second prize winner, the money wrongfully awarded to Mr. Hilliard's Viscount Palmerston.

WHISTLING DOGS vs. DOVES.—Uncle James was a veteran fancier and kept a large lot of tykes, in fact, anything in the fancy line of pets, if they were very rare, Uncle James would buy, even at long prices. A mutual friend met a party who had recently returned from Japan with various kinds of curios; among the lot were a pair of whistling doves. The owner was sent to Uncle James to make a sale. The party was one of the sort that talk thick, and Uncle James was a wee bit hard o' hearing. "I was sent to ask you if you wanted to buy a pair of whistling doves?" "Whistling *dogs!*" replied the veteran; "I've owned and seen all kinds, but that beats my time. Where did they come from?" "Japan, sir." "No, I don't want them; the ones I have make noise enough by barking and yelping, and if I had a pair of *whistlers* they would drive me into the lunatic asylum."—LORETTO.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Sex.
3. Age, or
4. Date of birth, of breeding or of death.
5. Name and residence of owner, 6. Name and residence of owner, breeder or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Fur, Fin and Feather. By Dr. H. G. Pillard, New York, for liver and white cocker spaniel dog and two bitches, whelped Oct. 4, 1882, by Sinnard (Snip—Juliette) out of Mr. Wm. Lloyd's Flora.

Beauty. By Mr. A. Butt, Ogdensburg, N. Y., for liver and white cocker spaniel bitch, whelped July 12, 1882, by Col. Stubbs (Captain —Flirt) out of Pet (Grip—Flirt).

Psyche. By Dr. L. C. Franklin, Ann Arbor, Mich., for black cocker spaniel bitch, whelped July 6, 1882, by imported Montague (Baron—Queen) out of his imported Leda.

Daphne. By Mr. Wm. H. Moller, New York, for black, white and tan beagle bitch puppy by Mr. H. W. Hunt's Capcon out of Midget.

Max. By Mr. W. H. R. Du Bois, Westfield, N. J., for white fox-terrier dog, whelped Oct. 17, 1882 (Prince—Venus).

Royal Charlie. By Mr. J. F. Kirk, Toronto, Can., for black, white and tan cocker spaniel dog, whelped Sept. 11, 1882, by Bonnie Charlie out of Bonnie Kate.

Royal Flora. By Mr. J. F. Kirk, Toronto, Can., for black, white and tan cocker spaniel bitch, whelped Sept. 11, 1882, by Bonnie Caarlie out of Bonnie Kate.

King Rufus. By Mr. J. F. Kirk, Toronto, Can., for black spaniel dog, whelped Sept. 2, 1882, by Toronto Beau out of Negress II.

Maggie Lauder. By Mr. J. F. Kirk, Toronto, Can., for sable collie bitch by Rex out of Jeannie Nettles.

BRED.

☞ *See instructions at head of this column.*

Becky—Dash III. Mr. John Hunter's (New York) black and white setter bitch Becky to Mr. A. M. Tucker's champion Dash III., Oct. 14.

——*—Napoleon.* Mr. C. Ormsby's pug bitch —— to Mr. A. W. Lucy's (New York) Napoleon (Tou Sharpless—Pippin), Oct. 26.

Julia—Boxe. Dr. J. S. Jones's (Jackson, La.) orange and white pointer bitch Julia to champion Bow, Oct. 23.

Bunny—Bow. Mr. N. W. Ware's (West Point, Miss.) liver and white pointer bitch Waddell's Fanny to champion Bow, Oct. 26.

Keswick—Boxe. Mr. J. B. C. Lucas's (St. Louis, Mo.) imported liver and white pointer bitch Keswick (Faust—Faith) to champion Bow, Sept. 29.

WHELPS.

☞ *See instructions at head of this column.*

Beauty. Mr. W. J. Rushforth's (Yonker's, N. Y.) liver and white ticked cocker spaniel bitch Beauty (imported Racer—Walker's Daisy), Oct. 20, six (two dogs), by Prime's Joe (imported Ned—Bates's Jenny); one dog and two bitches since dead.

Queen. Mr. J. C. Waller's (Tangipahoa, La.) orange and white pointer bitch Queen, Oct. 12, four, by Mr. Edward Otell's champion Bow.

Florence. Mr. Winchester Johnson's (Boston, Mass.) liver cocker spaniel bitch Florence (Snip—Cute), Oct. 5, seven (four dogs), by Mr. J. P. Barnard's imported black cocker spaniel Phil (Beau—Kittie); all black, with white on chest and feet.

Venus. Mr. W. H. R. Du Bois's (Westfield, N. J.) imported fox-terrier bitch Venus, Oct. 17, three (two dogs), by Mr. J. W. Fleck's Prince.

SALES.

☞ *See instructions at head of this column.*

Blush. Liver and white ticked cocker spaniel dog, whelped Aug. 6, 1881 (Col. Stubbs—Fanny Fern), by Mr. E. L. Hitt, Delhi, N. Y., to Mr. George Thompson, Idlewild, N. Y.

Lofty. Liver cocker spaniel bitch, whelped May 7, 1879 (Snipe—Flora), by C. B. Cumings & Son, South Acworth, N. H., to Mr. J. P. Willey, Salmon Falls, N. H.

Marcus. Black and white imported collie dog, whelped Nov., 1876 (E. K. C. S. B. 7,526), by Mr. A. S. Apgar, New York, to Mr. Thos. H. Terry of same city.

Boone—Reno whelps. Liver and white pointers, whelped May 3, 1882, by Mr. Geo. E. Poyncer, Dayton, Ia., a dog to Mr. H. F. Young, Boston, Mass., Mr. C. B. Squire, Troy, N. Y., and Mr. W. S. Butler, Weston, Mo.; a bitch to Mr. W. P. Stone, Atalissa, Ia., Mr. W. B. Sketch, Jackson, Miss., and Mr. Lowell S. Miner, St. Louis, Mich.

Montague—Leda whelps.—Black cocker spaniel bitches, whelped July 8, 1882, by Dr. E. C. Franklin, Ann Arbor, Mich., one to Mr. F. S. Hines, Indianapolis, Ind., and one to Mrs. A. F. Martin, Denver, Col.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Bonnie Charlie—Bonnie Kate whelps. A pair of black, white and tan cocker spaniels, whelped Sept. 11, 1882, by Mr. J. F. Kirk, Toronto, Can., to Mr. J. McMillan of the same place.

Toronto Beau—Negress II, whelp. Solid liver spaniel dog, whelped Sept. 2, 1882, by Mr. J. F. Kirk, Toronto, Can., to Mr. A. A. Francis, Rochester, N. Y.

DEATHS.

☞ *See instructions at head of this column.*

Snipe. Liver pointer dog, 9yrs. old, owned by Mr. Jos. Bampfield, Niagara Falls, Ont.; run over by cars.

KENNEL MANAGEMENT.

D. A. W., Boston, Mass.—I have a fine bred setter dog, 14 months old, that I have lately purchased that is gun-shy. Is there anything I can do to overcome this fright? Ans. Read "Training vs. Breaking."

G. E. A., Cleveland, O.—1. Please inform me how to kill fleas on a setter pup, 2 months old, and the method used in training to drop to shot and wing. Ans. 1. See answer to L. Van D. last week. Read "Training vs. Breaking" for instruction in training dog.

G. A. H., Chester Depot, Vt.—1. I have a black Laverack setter bitch, 3½ years old. Would there be any objection to having her lined with a white and liver colored setter? 2. Please name some book, and the price of it, that would give me necessary information in regard to management and rearing puppies. Ans. 1. No, if you have no objection to the color.* 2. "The Management and Diseases of the Dog," by Woodroffe Hill. Price $2. We can furnish it.

R. W. T.—For the past 4 or 5 weeks my pointer, now about 2 years old, has been discharging considerable matter from his eyes and occasionally seems a little weak in the small of the back, otherwise he seems to be perfectly well, and eats all he can get. Can you tell me what ails him and how I shall treat the disease? Ans. If the eyes are inflamed dust into them twice a week some powdered calomel. To snap it off a camel's hair brush is an easy way of applying it. Use twice daily the following eye wash: Borax, 10 grains; rose water, 2 ounces. Keep the eyes free from matter. For the weakness in the back a pill containing 1 grain of nux vomica given after his dinner would be of service.

Persons wanting beautiful large watch dogs are referred to advertisement of Charles F. Kelly.—*Adv.*

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

Rifle and Trap Shooting.

RAPIDITY SHOOTING.

ONE of the most interesting matches of the past season at Creedmoor was that for the gold medal presented by Mr. Pierre Lorillard. It was intended to develop the art of rapid and accurate shooting, and from the scores shown it has brought out some very remarkable results. The conditions were very simple. It was made open to all comers, 200yds., any rifle with open sights, magazine guns to be used as single loaders. Competitors to take to the firing point not exceeding twenty cartridges. Entries, 50 cents each; re-entries allowed to the extent that time will permit. At sound of the bugle each competitor opens fire at his own target, and continues loading and firing until the bugle again sounds (sixty seconds after first signal). A deduction of 5 points will be imposed for each shot fired before the first signal; 2d, for each shot fired after the second signal; 3d, for each shot signaled on his target in excess of twenty. Triggers tested at the firing point.

The need of just such a gun as would naturally win in such a match is one of the recognized demands of modern army work. The real worth of a breech-loader increases in proportion as it can be loaded and fired with readiness. If the breech mechanism is so complicated, or the motions of loading so many and intricate that time is lost in getting a charge into a weapon, it loses much of its value and approaches nearer the old muzzle-loader. To rush to the other extreme, and make the work of the rifle entirely that of a repeater, employing the magazine at all times, is not desirable. The best weapon is one which is capable of use as a single-loader, either with or without the filled magazine, and which can by the simplest method be turned into a repeater. Such an arm appears to have been found in the successful weapon of the late Rapidity Match.

The Hotchkiss magazine rifle, once in the match, swept everything before it, and has given us some very satisfactory data by which to judge of the doings of other weapons under similar conditions. It has made a record for this minute firing, and shown what can be done, a score of 93 in a possible 100 means a quality of shooting which will make any national guardsman the recipient of the marksman's medal, and when this is done under the stress of the most rapid firing, it shows the more strongly how well adapted the arm is to this oftentimes most valuable style of shooting. Having a bronze shell, when the cartridge is merely dropped into it, and the one simple motion of bringing up the breech-lever closes the action, and cocks the piece ready for firing. There is no concession of a visible hammer to that notion of amateur soldiers and marksmen that the hammer is a matter of safety, whereas, in fact, all the risks are available, and show that a properly made hammerless rifle is far more reliable and safe than one of the old style weapons.

The match has only served to warrant the excellent opinion held of the Hotchkiss Magazine rifle by qualified judges in the army service. The Hotchkiss is not a new weapon for the use of the regular army made a few years ago, the Hotchkiss was the only one chosen, and in the recent decision of the Magazine Gun Board, the Hotchkiss again appears, and will be issued for use in comparison with other rifles into the hands of the most actively engaged troops on the frontier. These same weapons were eligible in the Rapidity Match, but none of them held place with the Hotchkiss. The scores of the competitors below show what was accomplished under match conditions, but the weapon has been fired as much as thirty-two times in a minute as a single-loader. Judged by all the requisites which the best military opinion of to-day fix for a soldier's weapon, this rifle holds its own with the best and leads the line. It has crowded out many former favorites, and bids fair to become the standard weapon of

the United States Army which is to-day the best provided army in the world. The scores of the Rapidity Match stood:

Date.	Name.	Rifle.	No. shots Fired.	Score.

RANGE AND GALLERY.

AN INFANT PRODIGY.—Boston, Oct. 20, 1882.—Mr. John A. Lowell, the well-known art dealer of this city, has been spending the past eight months in European travel and visiting the studios of the Old World. Mr. Lowell being a true sportsman, found time to visit many of the gun clubs and shooting grounds of England, and in a recent letter to your correspondent, describes his visit to one of the numerous sportsmen's resorts near London as follows: "Yesterday being Saturday, I visited with a gentleman the South London Shooting and Cricket Grounds, where I saw hundreds of cricketers—I should say at least five hundred—and quite the majority of them had proper uniforms on, and the sight was very inspiring, and I longed to get a bat and have a good old-fashioned game. The proprietor of these private grounds at Norbiton is named Brown; everybody calls him "Governor," he is seventy years of age, and he is still on of the best shots in England, and the whole family, from the Governor down to the prodigy, Charlie Brown, his grandson, are a race of shooters. I was treated to a special exhibition of shooting both by the Governor and this little boy. He is not much more than a baby yet, less than eight years of age, and yet his shooting is beyond description almost. Fancy a little boy before you, very slight and slim even for an eight year older, and then fancy what sort of a gun he must use. With double and single barrel gun or rifle he is just as expert. The gun weighs about four pounds, 28-bore, uses a dram and a half of powder and three-eighths of an ounce of shot. And you think that little powder and so few shot he breaks glass balls with the best men of the day. He rarely missed balls thrown at him or from him, and not one yesterday that was thrown bounding along the lawn as you would throw a baseball; he was seen to smash it. His greatest feat was at the aquarium here, when he was shooting an engagement. He broke eighty-nine out of ninety-one glass balls one evening, I think the last day of the engagement. It is an old trick of many of the famous shots to hit pennies thrown into the air with either the rifle or shot gun. But to see such a little midget accomplish all these was truly wonderful. The Governor performed the feat of shooting pennies, and in fact, anything you may throw up, with a Snider military gun, which shoots a cartridge larger than our Springfield musket. Truly, he is a remarkable man. I would like to try my hand at shooting at a glass ball hanging by a string on an iron target with the Snider musket, sighted for 1000yds., and I found I hadn't lost all I knew, for after getting the range I broke ten in succession, not so very bad, but nothing compared with the work of the Browns."

MUNCHAUSEN AT PRACTICE.—Middlefield, N.Y.—*Editor Forest and Stream:* I have of late been practicing some with the revolver, but very little time to devote to shooting. I use a No. 38 seven shot Smith & Wesson. As a specimen for you to judge by, I give the result of the best day's work I can recollect. My first attempt was at a nine-inch circle thrown in the air by a companion at a distance of twenty-five feet. Out of seven consecutive shots I struck the circle five times. The next distance was 100 ft. at a six-inch circle; five consecutive shots fired all struck inside the circle. A two-ounce vial was then suspended by a string two feet long, and set swinging across the range, ten paces distant, and broken with the seventh shot. A common teacup was placed on the target stand at ten paces (30 feet) at the back of the shooter, and a mirror held before him. The cup was broken with the first shot by holding the weapon over the shoulder. At fifteen paces I will split an ash knife blade and a tack driven with four shots. Of course the shooting was all done without a rest. I write the above to you for the purpose of ascertaining if this is any more than average shooting, or is it as good as the shooting ordinarily done by amateurs.—AMERICUS.

BOSTON, Oct. 28.—The riflemen who assembled at Walnut Hill range to-day were favored with excellent weather for shooting. In the forenoon the wind indicated 9 o'clock, but in the afternoon it shifted to 6 o'clock. Some brilliant scores were made during the day. Appended are the best records:

Creedmoor Match.

MASSACHUSETTS MILITIA RIFLE ASSOCIATIONS.—The annual shoot of this body took place on the Framingham ranges, Friday, the 27th, and was well attended. The early portion of the day was a fair one for shooting, with a good light and the wind quite strong but moderately steady at one o'clock. Later the light improved, but the wind became very puffy and vacillating and occasioned considerable trouble, notwithstanding which the scores were remarkable for military rifles. Col. J. P. Kingsbury, of the Governor's staff, was executive officer, with Col. W. A. Barnicoft, Fifth Regiment, as assistant, and Col. A. C. Wellington, First Regiment, and Capt. F. N. Brown, First Brigade, performed the duties of the statistical department. The rules for the meeting were simple, providing for the off-hand shooting with the Springfield rifle, no wiping and no sighting shots. The prizes offered were as follows: For company teams—First prize, a silver cup, valued at $300, presented by the Providence Tool Company in 1875, to become the property of the company whose team shall make the highest score each year in three annual competitions. This prize has been won as follows: In 1875, by Company C, First Regiment (now C, Fifth Regiment) Infantry; in 1876, by Company A, First Corps of Cadets; in 1877 by Company A, Fifth Regiment Infantry; in 1878, by Company D, First Corps Cadets; in 1879, by Company A, Sixth Regiment Infantry; in 1880, by Company D, First Regiment Infantry; in 1881, by Company A, Sixth Regiment Infantry. The list of competitions included a company team match, an officers' match and a limited men's match. The scores ran as follows, ten shots per man being fired on the team matches, and five shots on the individual contests.

Co. A, Second Cadets	185
Co. G, Second Infantry	181
Co. D, First Infantry	178
Co. A, Sixth Infantry	170
Co. F, Sixth Infantry	169
Co. E, First Infantry	169
Co. D, Fifth Infantry	160

ALBANY, Oct. 19.—The matches at Rensselaerwyck to-day attracted all the off-hand shooters. The weather was all that could have been desired, and the marksmen were in good spirits. The first match was the third competition in the Sharpshooters' Match, which was shot on a Massachusetts target, at 200yds. The competition was won by C. H. Dennison. Scores were made as follows:

C H Dennison	*3	3	11	2	11	8	4	12	10	10—116
Charles H Gaus		10	12	10	11	9	10	11	12	10—107

Allowance.

At the conclusion of the Sharpshooters' Match, the eighth competition in the Maynard Match was called. Messrs. Geiger, Miles, and Fitch, double winners, were present, determined to carry off the prize and end the competition; but as the double winners were handicapped two points, there was a chance for some of the others to get a lucky score. The opening shots were good, and there was a prospect for a close match. Miles caught a couple of inners early in his score. Henry and Geiger caught outers, and in the seventh shot Geiger got credit for a miss on account of the bullet slipping down the barrel from the cartridge case and ruining his gun-barrel. Capt. Fitch only dropped out of the center ring, and closed with 45, winning the match and closing out the competition. Scores were made as follows:

Maynard Match—500yds. Off-hand.

Wm E Fitch	5	5	5	4	3	5	5	4	5	—45 *2—43
C H Gaus	4	4	5	3	2	5	5	4	5	—42
James I Miles	5	3	3	5	4	4	1	5	5	4—32—*2—40
B C Andrews	4	5	3	3	5	5	4	4	2	4—39
Leonard Geiger	5	2	5	2	5	4	4	0	3	4—35—*3—33

NEW ORLEANS, La.—There is much interest felt in shooting matters here, especially in connection with some very live rifle organizations. At the recent meeting of the Louisiana Military Rifle Association there was talk of many matches.

Capt. Fortier, who originated the idea of an international match between American and French teams, to be contested at the next celebration of the French fete of the 14th of July, said that he had done all he could to make it a success. He had consulted Viscount Paul d'Abzac, the French Consul General, and Mr. J. Gentile, the president of the French Committee of Thirty, who are both enthusiastic over the matter. Upon Capt. Fortier's suggestion it was agreed that Gen. Glynn, as major general of the militia, should be requested to address a letter to the French government upon the subject, and that the Governor, as commander-in-chief of the State, should forward the communication with his endorsement.

Major Arms presented the following communication:

KALAMAZOO, Mich., Oct. 10, 1882.

Wm. Arms, New Orleans, La.—Dear Sir—As, no doubt, there will be a great many visitors from Michigan to your city at next Mardi Gras, and probably the Kalamazoo Light Guards will participate in the festivities, accordingly I write this to see if a rifle match between a Michigan military team of six, eight or ten men, with a team of Louisiana marksmen could be arranged feasible at that time. We have a long winter coming on and our opportunities for practice will be very limited, besides in shooting over the snow the air is so rarified as to require very high elevations. However, if this proposition suits, will try and get up a team, as the idea meets with much favor. We are armed with the "Sharps-Borchard" like yourselves, so the match would be the men, not the guns. Hoping to hear from you, I remain yours, very respectfully, B. O. BUSH.

Upon motion of Mr. Gentile the communication was received, and Major Arms constituted a committee of one to answer it, stating that the Kalamazoo team can have a match.

Dr. W. E. Schuppert presented the following:

NEW ORLEANS, Oct. 20, 1882.

To the Louisiana Military Association.—Gentlemen—As the Hill trophy has been disposed of, and as my interest in the perfection of rifle shooting among our military is increased by the almost certainty of some of our marksmen being able to win a place on the American team next year if practice is continued, I have the honor to offer a handsome private silver military cup—to be shot for by your teams under your own rules, commencing the contest on Sunday, the 22d inst., or as soon after as your honorable body decides upon.

JOHN C. MEYER.

The offer was accepted, and upon motion of Mr. Fontaine it was agreed to immediately form teams and commence the shoot for the Meyer trophy. Captain Pierce promised a team of eight men from the Continentals, and Mr. Kerr and Capt. Fort er teams of the same number from the Washington Artillery and Louisiana Field Artillery respectively.

There will be a match every alternate Sunday, commencing the 29th Oct., both the Meyer cup and the Hepburn gun being shot for on the same Sundays, and the intervening Sundays reserved for practice; the scores by the men in the team shooting are to be counted in the individual match. The gun, provided the range is made known before the shooting commences. The Meyer cup is to be shot for at 200 and 500yds., 10 shots at each range. The Hepburn gun to be shot for, 10 shots at 200yds. only, individual shooting, and no preliminary practices. Each trophy to be won three times before being claimed by the winner.

It was also agreed that previous practice is to be limited to three shots at 500yds., and any one wanting more will be charged 25 cents a shot. Shooting at 200yds. must be believer shooting or 5 cents a shot. The entrance fee to the Hepburn gun shoot will be 50 cents extra for each competition, one score each Sunday and no re-entrance.

LEAVENWORTH, Kan., Oct. 27.—The army rifle contest at Fort Leavenworth closed to-day, the Atlantic division taking the first medal. The medals were presented to the winners to-day by Gen. Sherman, on the parade ground, before all the troops in the garrison.

WASHINGTON, Oct. 30.—The matches of the Columbia Rifle Association, shot over their range at Benning's the past season, have been well contested and have developed first-class skill at all the distances. The most popular of all the matches was the Season Military match, 200yds., off-hand, ordinary service rifle, 7 shots, a special prize for the highest aggregate of ten scores. The camp field glass donated by Mr. J. H. Steward, of London, Eng., captain to the association, has been awarded to Mr. W. L. Cash. The following are the five highest scores for this prize:

W L Cash	33	33	33	32	32	32	32	32	32	32—325
J S Miller	33	31	32	32	32	31	31	31	31	31—315
P J Lauritzen	33	32	32	31	31	31	31	31	31	30—313
W B Johnstone	33	32	31	41	31	31	31	35	30	30—310
J M Pollard	31	31	31	31	31	31	31	31	31	30—309

THE TRAP.

MIDWAY vs. JERSEY CITY HEIGHTS.

THE return match between these clubs took place, as advertised, at the grounds of the former club, Midwood, N. J., on the 25th ult., and proved, as was expected, a very interesting and exciting affair. It resulted, as the accompanying score will show, in a victory for the Midways. But in neither score is there much occasion for boasting—118 and 115 out of 175 killed is not very extra shooting; but they were not only good birds, but a strong wind directed from the score across the traps tended materially to reduce the tally, as in several instances hard-hit birds were carried away, to drop dead just out of bounds. The J. C. H. labored under great disadvantage. Upon the opening of the match Captain Heritage was much chagrined to discover that ten of his best and most reliable shots on the team had failed to put in an appearance, and he was obliged to fill up with what material he had, several of these members never having shot in a match before and but a few times at pigeons at all. It is to be regretted that some members of the J. C. H., and good shots at home, have the interest of the club so little at heart that they are unwilling to spend a day or a dollar when they could do both without detriment to their business or families. Some of the absent ones, we know, were unavoidably detained by business.

Well, the boys had a good time, were handsomely entertained by the Midways, were fairly worsted; but they do not despair. There will be one more match, and that at J. C. H. hops to be able to tell a different story. The following is the score—25 men each club, 7 birds each, 25 yards rise, both barrels:

Midway.		J. C. Heights.

WORCESTER, Mass., Oct. 27.—In place of the annual hunt followed by a bird supper, the Sportsman's Club met yesterday at their range, when sides were chosen and the contest was a glass ball shoot as well as clay pigeons. At noon a dinner was served near the range. In the afternoon there was miscellaneous shooting. The result was the total numbers of the two sides, the first-named time, each side fired and worn out. The record of the shooting to decide which side should pay for the dinner was as follows:

	Balls.	Clay pigeons.

WELLINGTON, Mass., Oct. 28.—At the regular shoot of the Malden Gun Club, at Wellington, this afternoon, the first event was the shooting off for the championship badge by the contestant who was not present at the shoot of last week, which resulted in his capturing it by a score of 19 out of a possible 20, and A. H. Jones takes the badge. The other events were taken as follows:

First event, 5 clay pigeons—J. Hopkins and F. Loring divided first, H. Bean second and D. H. Moore third.

Second event, 5 birds—D. H. Moore first, J. Hopkins and A. W. Adams divided second, and A. F. Jones third.

Third event, 5 birds—F. Loring and D. H. Moore divided first, A. W. Adams and H. Dean divided second, and J. Hopkins third.

Fourth event, at balls, was taken by Messrs. F. Loring, D. H. Moore and H. Dean, in order.

Fifth event, at balls—Messrs. Moore and Hopkins divided first, Loring second and Dean third.

Sixth event, five balls—J. Hopkins first. F. Loring second, and Messrs. Dean and Moore divided third.

Seventh event, novelty was won by Hopkins first, Moore second, and Dean third.

YOUNG BOGARDUS.—Selma, Ala., Oct. 18.—Eugene Bogardus, son of Capt. W. H. Bogardus, champion shot of the world, who, with his father, has been traveling with Adam Forepaugh's show for two years, giving exhibitions of fancy shooting during the past summer, fell off the rear car of the circus train soon after leaving Talladega, on Wednesday morning, and sustained terrible injuries, which will probably result in the death of the little lad in a few days. The accident occurred at 12 o'clock, and, once being known, the train was quickly stopped and backed a mile to where the unfortunate young man lay in a miserable condition. The train reached here at four o'clock this morning, and immediately on its arrival medical aid was secured and young Bogardus removed to the St. James Hotel, where his wounds were attended to as well as his weak and critical state would permit. From all accounts and circumstances it seems that he, with a companion, was standing on the steps of the car when a sudden lurch caused him to lose his hold and he precipitated to the ground. His injuries are all on the right side of his head, no other portion of his body having received even a scratch. Both jawbones are broken in several places, every tooth is out, his nose is broken in, and his eye is fearfully bruised and swollen. He is suffering from concussion of the brain, and up to a late hour last night had not once regained consciousness. The physicians pronounce his case hopeless.

Yachting and Canoeing.

A RUN AT SEA IN THE YAWL WHITE CAP, 50 TONS.

AT the outset of our two weeks' cruise, it was planned to get as much variety and novelty as possible out of it, and a straight run across Cape Cod Bay to Mt. Desert Rock from Salem Bay seemed a fitting opening of the voyage. On this course, the first land we sight after leaving Cape Ann is Monhegan Island, off Penobscot Bay, which we leave from fifteen to twenty miles to the southward, being about one hundred and five nautical miles from the Cape, and the next, Matinicus Rock Lights, some twenty miles further to the eastward, which are the only marks sighted until we reach Mt. Desert Rock, some twenty miles south of Mt. Desert Island, in the open ocean, and about one hundred and eighty-five miles from our point of departure. We had bent our cruising mizzen made of as heavy canvas as the mainsail and foresail, and conclude to carry the mizzen topmast, because, though having a total length of twenty-three feet, it is made of hollow seamless steel tubing, and weighs but sixty-five pounds. It may be remarked by the way that it is of about three times the strength of any wooden topmast of double the diameter, and also of greater elasticity. My friend Col. F. S. Hesseltine, of Boston, had been experimenting in amateur photography, and having a large camera, arranged to photograph the yawl. In shipping the last of our party on board, and preparing for this we occupied the morning of August 12 until about ten o'clock. At last the moorings were dropped, the jib and foresail run up, and we stood back and forth past the shore, until the Colonel signaled that he had completed his task.

We then turned our prow to the eastward, with a favoring breeze, and were off for the voyage. Our watches marked half past ten. With a moderate breeze we passed Baker's Island, Augustus and Eastern Point in succession, under all sail, and reached Cape Ann lights at a quarter past 12 M. Here I gave the course for Mt. Desert Rock to Mr. Kennison, the sailing master, and we headed to the eastward and left the land behind.

There is a pleasure in putting out into the open sea with a staunch and well appointed craft, that no shore sailing can ever supply. We feel that we cannot dash into some sheltering haven at the first brush of sea and wind we meet. We feel that every spar and shroud, and bolt, and rope and sail must hold against any possible strain or contingency. And that pleasure pervaded our company this day to the utmost as we began to drop Cape Ann below the horizon. The sky was quite overcast, and there was a peculiar chop to the sea under the moderate breeze, which our experience of Boston Bay led us means a tossing up between ending in storm or fair weather. All seems uncertain, and in that vague sense of expectation and the preparation required in anticipation of a change in the surrounding conditions of the voyage lies the romantic charm and the attractive excitement of cruising at sea. Aboard the White Cap no prospect of a change for the worse gave us no cause for fear. If such a well found, well built yacht as ours was not capable of braving the dangers of the deep no more could be asked of wood and iron fashioned by skilled and experienced hands. Well we knew that for her the iron work was planned under close supervision, and no charge of lack of strength could hold against it. With rigging ample for its duty, and sails for the worst of weather, with storm trysail of the stoutest canvas in the sail room below for serious emergencies, we feel prepared to cross old ocean himself without trepidation.

Perhaps a word concerning the crew is not out of place. We carry only two hands, a sailing master and a steward. The crew would have been far too small for the yacht while she was rigged as a schooner, but I find them all required while sailing as a yawl. The economy of the latter rig lies in the facility of handling the mainsail for all purposes, stowing, reefing or shortening sail, the whole sail being hoisted and all the time you wish at your command while the yacht keeps along on her course under headsail and mizzen.

Our course had been taken from the chart as N. E. by E. ¾ E., with Cape Ann as the point of departure. Our speed was nine knots through the water with the wind on the starboard quarter. At this rate we should see the flash of Monhegan light low down on the southwest horizon at midnight, the evening approaches. Every hand was to toll off the watches. Mr. Kennison took one seaman in his and I the second for the other watch. My watch at night fell from twelve until four A. M., which was to my liking, as I enjoy this nocturnal duty better than any other. All the afternoon we sped along finely with a gradually freshening breeze and rising sea. The clouds lowered in the sky with the sun struggling to break through occasionally without much success. First the jibtopsail came in, followed soon by the jib, the wind hauling further aft after so as to barely fill the foresail. The sea gave the yacht a heavy roll, checked only by the gafftopsail.

At last, about five P. M., it began to whistle ominously through the rigging, and the topsail was clewed down and stowed. This had no sooner been done than she began to scupper on either tack, while still driving along with undiminished speed. The sea now presented an imposing appearance. The rollers curled up after us in great seething masses, until we could see the green light through beneath their caps of sooty foam. Each moment we looked as though one would overwhelming our little vessel with an avalanche of waters over the stern. At every roll the foresail slats all the wind out of it, and threashes across the deck to windward with irresistible force. Steering was then no longer boy's play, and Mr. Kennison and myself relieved each other every half hour. We did not wish to run directly before the wind, for that would carry us too far to the northward, and we cannot allow her to broach too, because the great seas behind would sweep our decks. Fortunately forus we have the yawl rig to favor us. Had the White Cap been a sloop or a cutter, no power or quickness at the wheel could have held her on her course and kept her from broaching to. Even as a schooner it would have been quite a difficult task unless the mainsail were lowered. But our rig, as we long ago learned, enabled us to carry a weather helm, and prevent the yacht's broaching to by skill and quickness at the wheel.

The action of the yacht pleased us very much. On top of the heavy rollers a smart cross chop was running, caused by the tide over the Fishing Rips we were crossing. As the yacht rushed downward into a hollow of each great sea it looked as though she were going to scoop water over the rail forward; instead, however, she rose to the sea as quick as a duck and as dry as possible. Supper was set out as usual, and all but two of our party were proof against the ludicrous—to others—efforts to "keep up the appearances." The roll was sufficient to require dishes to be held from sliding first to windward and then to leeward, in spite of all table racks.

After supper it looked more threatening. Heavy black clouds had rolled up from the westward until the whole sky was dark. We gave up the last hope of a fine night, and housed the mainstopmast. It eased her rolling wonderfully, and no one can doubt the value of housing topmasts after such an experience as ours. One-half the roll of the vessel was prevented by taking the weight of the topmast off her.

As darkness settled down upon the sea, we concluded we were in for an ugly night. A haze obscured the horizon all around. Lightning flashed at intervals away in the northwest. Nothing but white foam could be seen over the sea, and we discussed the advisability of taking in our mainsail. Finally we concluded that we could easily do that at any time, and so preferred to hold on as long as possible.

There is something weird and uncanny in the aspect of sea and sky on such a night as this. A strange light, coming from no one quite knows where, enables us to see objects indistinctly. The gloomy, dark and threatening cloud overhead looks more black and threatening by several times. Every pursuing roller seems to rear its white crest higher and advance with an increased rush. The whistling of the wind through the rigging grows louder and piped at times into a vicious shriek. The lights of distant vessels appeared and disappeared in a strange, phantom-like way, and often their courses could not be made out with certainty.

At one bell (one o'clock, during Mr. Kennison's watch to enjoy the exhilarating experience. About midnight we commenced to keep a sharp lookout for Monkegan Light, but it was hazy and we could see nothing. The sky then lighted up a little, and the wind and sea dropped, but it was still a pretty rough night. About half-past two we suddenly saw the flash of Monkegan, bearing N. N. W., way down on the horizon, the haze having lifted for a few moments. I timed the flash by my watch and made certain of the identity. The satisfaction this afforded can only be understood by a navigator accustomed to reserving the high seas. We verified by the bearing our dead reckoning, that we had run 108 nautical miles in the twelve hours, and that we were not two miles out of our course. We knew there was no danger from rocks or shoals, and that the twin lights of Matinicus would soon be discerned ahead. I now relieved Mr. Kennison and took charge of the deck.

In about an hour, with the sea and wind moderating all the time, I discovered a trail of light to the northward, through the haze, which the night-glass resolved into Matinicus, just where we expected to pick it up. We passed it slowly, and the first faint light of dawn began to spread over sky and sea. Suddenly the wind freshened, and without warning two seas, coming apparently from considerably more abeam than the others, struck us on the starboard after quarter, and deluged the decks with water and foam. Meeting the yacht with the wheel, she held steady on her course, and I is put a good lookout for more seas of the same sort, but none came. I have speculated often, and in vain, on the cause of only two such waves, seemingly half as large again as all others around them. As daylight gained in the east we were once more dashing along at nine knots for Mt. Desert Rock, and by half-past four o'clock were abreast, but prevented by the haze from seeing it. I called Mr. Kennison for his watch, and turned in, only to be roused out at half-past six A.M., to pilot the yacht into Lunt's Harbor, a snug haven on the north side of Long Island, at the entrance to Blue Hill Bay and Southwest Harbor, through a fog that obscured every thing but the immediate shores of the island.

WHITE CAP, YAWL, 50 TONS, MR. DAVID HALL RICE, SALEM BAY Y. C.

At seven A. M. we dropped anchor, having run a little over 190 miles since noon the day before. After breakfast, the fog having lifted, we hove up, and in about an hour found ourselves in Southwest Harbor among a fleet of fishermen, who had run in to avoid the bad weather outside, and were waiting for it to moderate before venturing out. After this and other successful trials of my new rig I have determined to adopt it permanently, and believe that it is superior for average speed, comfort and handiness to any other in use. Some slight modifications in details may receive attention, but I am satisfied that the yawl is pre-eminently the cruiser's rig. It is needless to add that we were all charmed with our little sea boat, and that in the future the White Cap hopes to do up sea cruising more extensively.

DAVID HALL RICE.
BOSTON, MASS.

FOUR FOR THE CUTTERS, TWO FOR THE SLOOPS.

THIS season has certainly been the most important in the annals of American yachting. It has witnessed the rise of the cutter from obscurity to the pinnacle of success, and in the extraordinary performance of the Bedouin, in the recent Seawanhaka races, a definite and bright future for cutters in these waters has been quite assured.

It is quite true, that out of three matches, the prize went twice to the opposing sloop Gracie, and, *prima facie*, our reasoning may not seem to be correct. It is the business of a critic, however, to reach his conclusions by more than a mere scanning of the finish. That, as all well know, may be influenced by a variety of extraneous causes having no relation to the merits of the yachts themselves. Accidents, slants, improper management, tides, etc., may snatch in an unfortunate moment well deserved laurels from one, and bestow them upon a subject entitled thereto in law, but not upon actual merit. We propose, therefore, to examine conscientiously the import of the three races held under the auspices of the Seawanhaka Corinthian Y. C., an organization which, it is almost needless to say, has assumed first rank in New York waters, so far as enterprise and intelligent management are concerned, and in the solicitude the club has always exhibited for the furtherance of the meritorious side of the sport.

The races, of course, resolved themselves into a battle of type, the contest between sloop and cutter having assumed dimensions overshadowing all other issues. So powerful has the influence of the cutter in the community become at the present day, that it is difficult to realize that the whole question of type in its modern aspect is only three years old, and that on the side of the cutter the contest has been waged by a single journal, pitted against all hands, with such marked success, that a move which, at its outset, was ridiculed as a crazy chimera of FOREST AND STREAM, has, at this day, assumed proportions of deep international interest, and set going crowds of scribes, to some of whom this fight of FOREST AND STREAM has been a godsend as the means of obtaining a livelihood. It has come to this. The poor, despised cutter, kicked and cuffed by the press, laughed at by the verdants whose claims to yachting experience were of the meanest description, the cutter, we were told, any American sloop could sail round as though at anchor, the cutter which "was all wrong" in hull and rig, at this early day has developed into the pivotal point of yachting interests on this continent. That pivot has swung in her favor in the recent races with such unquestioned force that henceforth the cutter requires no leading strings, no more coddling on the part of FOREST AND STREAM, the progenitor of the type in America. Hereafter the cutter's case can rest on her merits, for those merits have now been proven sufficient to insure her popularity in these waters and among men who, a few years ago, thought anyone taking her part seriously demented. On the influence of Bedouin's brilliant performance we propose to say more upon another occasion. We will now turn to the races.

To estimate the performance of Gracie vs. Bedouin, one very important fact should not be lost sight of. Without that in mind a comparison would be without value. It is this. On the one side we have a sloop, picked out for her speed by the process of natural selection from a larger fleet of similar vessels. Further, this sloop, the Gracie, has had years of time and thousands, even tens of thousands of dollars spent upon her in bringing her by a system of gradual tentative approaches to her present high state of perfection. She is one out of hundreds, an exception to the rule. On the other hand, by what sort of a cutter has she been opposed in the Bedouin? By the best vessel out of a fleet? By a vessel upon which large sums have been spent in processes of refinement? By a vessel in the very best state of preparation? By a vessel tooled by a crew and shaken down in their berths, and steered by an old hand in these waters? Not a bit of it; nothing of the kind. The Gracie was opposed by a hap-hazard random cutter, a boat which, for aught any one knows, may be a slow ship in a fleet of her own breed, a new and untried production, without a dollar spent for improvements, her best time still unknown, her gear stiff and raw, her sails half stretched, her crew new to one another, her skipper an amateur hand taking probably his first trick at the helm aboard a large cutter in a match, the American contingent green as grass at cutter rig and fittings—that is the kind of a cutter which met and conquered the crack sloop of America.

Quite true it is at some claim one or at most two other sloops in America the least tridle better than the Gracie under some circumstances, but this is by no means admitted, as a glance over the records in other journals will show, and if Gracie must really yield the palm to others, it is by very narrow margin, as likely to go in her favor as against her, and the rank of being our second best cannot be denied upon any pretences. To beat the second sloop in America, with all in the latter's favor, and to beat her with an untried cutter and raw crew, is glory enough for the day, and settles once for all the superior speed of the genuine cutter. Given equal chances, and the representative of new ideas would thrash a Gracie hand over fist, three matches out of four. This is the import of the recent Seawanhaka races, for in every one of the three matches Bedouin would have scored by several minutes but for extraneous causes, which gave her opponent what she cannot take by intrinsic merit of sailing. The wind, the sea, the course, one and all could not have been made to order by Gracie herself to suit the sloop any better. There was a lop the first day, quite hollow on the bay, but it blew only a topsail breeze for Bedouin, and the sea would not have prevented ten-tonners from making excellent weather. Smooth-water tars have described this day as rough and stormy because ugly looking overhead, and old Prob, at Washington lost his reckoning and had warning signals hoisted, when there was nothing to give warning of. The weather was moderate. That is the proper description. If it was not the best for sloops, it certainly was no better for cutters. If it was too much for Gracie's topsail at times, it was not too much for the Bedouin, and the sloop shortened sail for the very good reason that beam cannot carry on as long as lead, in spite of the existing prejudices of verdants to the contrary. For carrying sail lead won the day in so marked a manner in these races that we trust the last has been heard about the value of beam on that score.

The second and third day, however, both wind and sea were the most favorable the shoal drafts could have picked in a season. They were like the mild balmy days in the first week in July, fair, with a pretty little breeze blowing off shore, days which must have sent a glow of hopeful expectation to the butterfly yachts in the fleet after their round defeat at the real business of their first meet. All three days there was a vast amount of reaching, of sliding down wind and little honest work at turning. Now on a reach Gracie is incomparably the best ever loaded with a single stick in our waters, and we confess, high as our expectations ran, the way in which Bedouin managed to hold fleet Gracie down wind appeared to us most astonishing. In their present trim, Gracie gave evidence of being about 2 in. or 250 in. faster on a 20 mile slide than her opponent with due advantage of tricing up her board. But what Bedouin's best trim shall have been got and she is smarter with her sails, even this difference may disappear. As it is, the raw cutter proved herself able to hold Gracie down wind better than any other sloop in America, enough for the beginning of a career of success, an enviable record in the future. But the cutter exhibited incontestible superiority in all the windward work there was. The very first day's race stamped her as the most weatherly yacht of her class in America and she sustained that reputation in the subsequent trials though the prize went to the sloop through a slant the second fight, and through bad handling in the third.

In rounding the lightship during the first of the matches Gracie steered wide as a snap in the steering-box caught the skipper's ear, and before venturing to bring his vessel by the wind it was necessary to ascertain what damage had been done. This proved immaterial, one of the arms of the gear having cracked, and if the damage got no more serious, nothing would interfere with putting the sloop through to the finish at her best. Nothing further happened, and the accident had no other influence upon the result than letting the cutter take the lead by a neat squeeze around the outer mark. No sooner had both hauled on the wind than Bedouin commenced to show Gracie a clean pair of heels in to the Hook, the sloop finding more wind than she wanted in spite of her beam and clewing down topsail and lowering outer jib in consequence. From the Hook in to the Spit it was a beam wind nearly, and from the Spit home a nose-ender. At last Bedouin found the game she wanted, and turned away from the sloop in a manner to call forth the admiration of the spectators aboard the committee steamer. At this business the cutter soaked out from the sloop no less than 10m., though the distance was scarce eight miles, winning as she liked and proving the fallacy of hoping to equal her to windward in a breeze with a yacht of the old school persuasion, no matter how good her reputation.

The second day's race, 30 miles to leeward and return in a smooth sea and moderate breeze, was much a repetition, so far as it developed the qualities of the yachts. Down wind to the leeward mark Gracie outran the cutter between 2 and 3 minutes, though Bedouin was steered rather wild and went clear to the southward of her course by mistake. But for this the run down would have been near an even thing. No sooner had they tufted around and got sheets flat than the cutter soaked up on the sloop in such style that as they crossed on opposite tacks it was for some time a question of doubt as to who would weather, when, Bedouin being on the port tack, she was obliged to give way to the other. On this one leg the cutter had regained the 3m. 40s. lost in the run out. Surely this was astonishing. But Bedouin was evidently not being sailed for all she was worth. Her professional skipper was at the stick but now was sailed a rap full. For all this it looked as though she would be an

easy winner and dispose of her adversary by 6 or 7 minutes, when in an unlucky moment, the wind being uncertain, the cutter went off to the southward, leaving Gracie to tack into the Long Island shore. The sloop found a jolly good streak and went along with her lee rigging smoking, while the cutter was hauling for more of the heavily out to sea, and so it came to pass that by sheer good luck Gracie landed the prize which at one time appeared to be within the other's grasp, an apt illustration of the old saying, "There is many a slip," etc.

Skirted saw them once again in light weather and smooth sea. The course was triangular with very little bearing. The first angle was reached by Bedouin in the lead, though she started fifth boat, 2m. 27s. later than Gracie. This entire amount she made up in the few short and long legs necessary, for the third time giving evidence that she could twist and turn from Gracie like the nervous play. In then a stretch on the wind with Bedouin doing best until she attempted to set a jib topsail. The hands on the bowsprit bungled, and allowing the bunt of the sail to get away from them while snapping on the hooks, made a wretched back sail of it for a long time, allowing Gracie to slip by to windward like a steamboat and fetch the second angle, marked by the lightship, with a lead of 3m. and 6s. This was bad business, but the fault of the green American hands and head of the cutter, as it was the fault of the third mate, in spots at which the cutter held her own, doing vastly better running than any other sloop in America by comparison with the Gracie. Then the second round commenced. This was much a repetition of the first, the sloop coming home in 6m. 8s. less time than the cutter, and handing the purse by 2m. 3s. after allowances applied.

Summing up, we stand stand face to these facts. Those who judge superficially by the award of the prizes will assume Grace a small trifle the better boat under the circumstances. Those who take all things into due consideration will arrive at the palpable conclusion without the least compunction. For our part we have no hesitation in proclaiming our belief that the cutter Bedouin has proven herself the fastest single-sticker in America, blow high or blow low, and we are prepared to answer for this opinion by her record next season.

This broad fact has, at all events, been settled. Practically the cutter has demonstrated herself, even under the most adverse surroundings, as explained in the foregoing, equal in speed to the best of our sloops. The sum total between them is nominal, at most. This ends the great battle of type, for with equal speed conceded in our own weather and waters, the cutter will be granted a place in the fleet, since no informed persons have ever questioned her superiority to the sloop on the counts of greater safety, handiness, range, and accommodation. With the introduction of large displacement, lead ballast and first-class build and equipment, the supposed greater first cost of the cutter disappears. Her excess in draft has been proven in practice much of a bugbear, for though the choice of raising the board is an undoubted advantage to the sloop in exceptional cases, the latter, in her normal condition, with at least half her board down, draws more water than the cutter, to say nothing of the rapid displacement of the board by the keel altogether now going on even among sloops.

In regard to the lessons to be drawn by yacht builders from Bedouin's performance we will have more to say some other time. In the smaller class the sloop Fanita was badly outsailed on the first day, and is likely to fall lower and lower next season, and in the other two races Oriva, a cutter of second rank in speed among cutters, disposed of her upon each occasion, though by small margins only. This is, however, a radical victory, remembering that Fanita is the smartest sloop of her size ever produced in America. Fanita's rig was most palpably inferior to the double headsail and low hoist of the cutter's, and it is not likely many more yachts will be spared after the ancient dogmas that sloop represents. She was the "wettest" boat in the fleet, and spite of all her fame and beam dove into it up a her shoulders and picked up green water by the hogshead which deluged her fore and aft. Little remains to be said of the actual racing after the foregoing explanations.

First Race, Oct. 24.—Course from the Narrows around Buoy No. 10 on Southwest Spit, then out around lightship and return same course, finishing at Buoy 15, off West Bank. Sailing Committee, Messrs. Louis F. Bayard, Francis O. De Luze, Walter L. Suydam, Alex. H. Stevens and S. Nelson White, aboard the steamer Bartram. Wind fresh N. N. E., backing to N. by E., and moderating toward latter part of race. Tide strong ebb, moderate sea, with chop on Sandy Hook Bar.

Bedouin	10 53 05	12 50 35	4 05 05	5 12 00	5 10 08

SECOND CLASS.

Oriva	10 53 54	12 51 37	4 14 45	5 22 00	5 22 00
Valkyr	10 55 03	12 57 23	4 36 10	5 41 10	5 36 25
Fanita	10 55 00	12 54 45	4 22 01	5 27 01	5 22 15

Third Race, Oct. 28.—Course triangular, sail twice over, start from Buoy 5 of Sandy Hook to Whistling Buoy, E. ½ S., 3¾m.; thence around lightship, S. E. ½ S., 3¾m., and return to the Hook Buoy, N. W. by W. ½ W., Tm.; total distance, 23m. Wind light to moderate E.N.E.; tide first of ebb; sea smooth. Committee as before.

FIRST CLASS—FIRST ROUND.

	Start.	Buoy.	Lightship.	Home.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Gracie	10 45 54	11 29 40	11 53 28	12 47 28
Bedouin	10 48 13	11 29 35	11 56 34	12 50 33

SECOND ROUND.

Gracie	12 47 23	1 28 00	2 04 20	3 06 19
Bedouin	12 50 38	1 32 15	2 11 50	3 12 15

The elapsed time of Gracie is 4:20:23, of Bedouin 4:24:03. Corrected time of Gracie 4:20:23, and of Bedouin 4:22:40.

SECOND CLASS—FIRST ROUND.

	Start.	Buoy.	Lightship.	Home.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Oriva	10 46 34	11 30 50	11 57 36	12 55 55
Valkyr	10 46 34	11 34 15	12 03 50	——
Fanita	10 47 24	11 33 00	11 59 17	1 00 48

SECOND ROUND.

Oriva	12 58 25	1 43 00	2 20 55	3 26 19
Fanita	1 00 48	1 45 30	2 22 27	3 29 14

Elapsed time of Oriva 4:39:45, of Fanita 4:41:50. Corrected time of Oriva 4:33:45, of Fanita 4:40:00. Valkyr did not finish, but withdrew, her sails being old and baggy and no club topsail aboard. She was not in condition to race in light weather. The summary of races won foots up four for the cutters and two for the sloops. The cutter Valkyr has a small centerboard lift, long with a drop of 8ft., the board going through the lead keel.

NEW CUTTER'S TO BE BUILT.—Lawley & Son of South Boston, report a lively demand for deep drafts, mostly of moderate tonnage. They will have their hands full all winter building cutters, besides a large amount of other work. A vast fleet of keel yachts from 10 to 40 tons was turned out in the East last year, but this winter we look for still livelier times. In fact many builders will have to turn work away from their doors through sheer incapacity to keep pace with the demand. With the popularization of safe and able cutters, yachting in America appears to have opened a fresh chapter with redoubled vigor.

HALF AND HALF.—Poillons have launched the new cutter-rigged yacht for Mr. Morris Ketchum, Jr. In hull she is a duplicate of the centerboard sloop Elephant, with a longer counter. In rig a thoroughbred. Load line, 33ft. 6in.; extreme beam across deck, 11ft.; depth, 8ft.; draft, 12ft.; ballast, 8 tons inside lead. Likely to be fast in smooth water and moderate winds, but not in a sea or fresh breeze, judging by Fanita's recent races.

SINGLE HAND YACHTS.

[CONTINUED.]

RIDING lights may be made more trustworthy by introducing an ordinary lamp chimney inside the globe, thereby obviating the chance of blowing out; but care must be taken to regulate the draft suitably, or the chimney may quickly turn black with soot from the flame. A watch tackle consisting of a regular luff purchase, having two double blocks, is often handy on board for heavy heaving, such as breaking out the anchor, for a masthead purchase, for stretching new lines and for a preventer shroud or stay. Iron blocks take up least room and are less liable than any to trouble than wooden shells. The iron blocks generally should have flat cheeks rather than open frame work, as the latter are apt to foul with the gear. In selecting them have especial regard to the hook, which should be stout and larger at the bend than elsewhere, to prevent straightening under the weak spot in most small blocks. Also prefer as large a center pin as can be found. These pins should be looked after occasionally, for if soft, they wear away quickly, and breakage is certain to occur when least expected. Be careful to help reeve the ropes, as hooks used about the rigging suffer from the same complaint, nearly all the makes tapering rapidly from eye to end on account of each pair being split from one piece of round bar iron and "upsetting" the eye. Sister-hooks are a great saving of blows, requiring more labor than manufacturers are willing to bestow upon such work. Sister-hooks ought never to be used on any part of the standing rigging, nor where heavy strains are applied, but large solid hooks should be chosen, as they will help themselves to prevent accidents. Hooks are always better than either the foregoing. Their pins should be turned home with a marlin spike through the hole in the head as hard as possible, and, if necessary, a lock pin driven through the projecting screw end, or else keep an eye on them to detect unscrewing before it is too late and the shackle pin drops out.

The cooking gear is much a matter of personal fancy. Those who are very fastidious in their alimentary tastes or experienced and quick at concocting savory dishes may indulge in a regular oil stove, with frying pan, kettle, coffee pot and all. The latter apparatus may, with such provisions, provide a regular restaurant menu, with soups, entrees and courses according to his heart's desire. The stove should be of cast iron, not of sheet iron or tin, and it must also have completely enclosed sides. The stove article has only a perforated disk for the top of the reservoir, but will not serve at sea, owing to the danger of the oil slopping over. A small valve in a raised seat or neck in the closed bottom permits any gases generated while frying pan, kettle, or pot is being heated to escape harmlessly no danger from that source. There is in the market a "hot blast" iron stove of suitable kind which can be obtained for $3.50, and two or three dollars more will purchase all the necessary fittings. Enameled ware is, of course, handy, but one of the latter will very rapidly. Fresh provisions and meats from shore can be mastered with the above appliance, and it is only a question of inclination and knowledge with the cook how extensive a meal he chooses to prepare. Beefsteak, chops, bacon, ham, fish, oysters or clams, potatoes may be fried or boiled, and stewed, while pickles and relish help the appetite amazingly. And to his surprise he will soon discover himself quite equal to supplying his actual wants from the stove.

Under any circumstances our experience in small yachts has been the less fuss, made over the preparation of a meal the better. Almost every port you put into boasts of reasonable hotel accommodations, and an occasional raid ashore for standard forage will assist in making plain grub aboard for a day or two at a time go a long ways toward keeping it satisfying and wholesome. Be moderate in small boats, to limit our ambition in the culinary line to a small alcohol stove of sufficient power and the production of hot water. With canned goods, prepared "chips," and relishes in the way of sardines, pickles, potted delicacies, fruit and bread from ashore, only the water is necessary to give life to a spread of kindly variety, and far in advance of what is at the command of the great mass of humanity ashore. It takes but a few minutes to prepare such a repast; there are no greasy pots or pans to scour, no exasperating interval of twenty minutes between the table and the cozy, crowded cabin air, and fewer chances of mishaps as the climax of Bridget's art is approached. Moreover, there are no dishes to break out, wash and stow, for with a combination tool, containing knife, fork and spoon, the original of the pocket-piece, the edibles are attacked direct without demanding the intermediate transfer to the multitudinous devices of an intricate civilization ashore. Hot water is raised, a portion poured off into the coffee-pot; soup, having a substantial meat basis is warmed up, or eggs boiled, cold meat sliced up with the pocket-knife, bread broken out of the box as you have need, some warm vegetables added as a second course, and the feast rounded off with relishes, dessert and fruit as required.

The lamp is put out, empty tins tossed overboard, the combination tool passed into the pocket and finis—a jolly square meal at the least expense in time and trouble, and a pipe smoked to the stem while your cooking stove enthusiast has barely got his mixtures prepared preparatory to complicating matters, with his cranky stove with pots, pans and fragile crockery all causing anxiety and an ardent wish for a half dozen pair of hands at every roll to a steamer's swell, and every time the little bark takes a header into the swell tumbling in. If plates and dishes are desirable which cannot be altogether dispensed with, we should recommend those made of compressed wood pulp or veneer. They cost less than a cent a piece, and can be thrown into the sea after the meal, thereby saving the annoyance of washing up dishes at a cost no greater than the breakage to be expected among a supply of c ins. A mug or two and rubber drinking vessel take the place of tumblers and glasses. In his grub as in his ship the chief problem the single-hand tar must grapple with is how to get the most out of the least, and think his task can be solved most readily by recourse to the alcohol lamp.

Some patent affairs have been devised from time to time to supplant the alcohol stove, but never with much success. McGregor in his memorable single hand voyage down the British Channel and across to Boulogne, tells us of a "petroleum lamp," in which the flame bursts forth with great vigor for a while and then subsides, but the efforts made by members of the New York Canoe Club to reach satisfactory results with the contrivance have one and all miserably failed. The lamp is a bad one, much crockery ware is smashed, cannot be relied upon for definite effect, its burst of flame is short-lived, erratic and not under control, always going off at the wrong moment.

A few words of caution will not come amiss while upon this subject. The lamp should be strong and of brass; a special place to hold it while in operation must be provided, and the tins containing food should be the smallest procurable, to avoid any waste. All articles should be of the very best brands and procured only from grocers above suspicion, even if their prices seem high. Before heating, punch or cut an opening in the top of the can, or an explosion may plaster your cabin with bean soup in a disagreeable fashion, and scald the doctor besides. A can-opener is as essential to the single-hand cruiser as a corkscrew to the longshore sporting character. For relishes and side dishes pick out articles which will keep for a few days without spoiling. Laxatives, such as syrup, prunes, apple-sauce, and fruit, should be freely partaken of, especially when starting out. The natural tendency is to preserve empty cans in the locker for some future use. That use seldom turns up, and the ship soon becomes a trap full of rattling bottles and obstructions. Toss everything overboard you have no definite purpose for at once. In mid weather preparing the meal should be done in the cockpit. A table is provided in the cuddy as a table. Never deposit anything on the deck outside, and never leave anything standing up which is liable to fall over and spill.

Ice is a necessary item in the supply, and for its accommodation a refrigerator locker can easily be fitted. The locker should be lined with zinc and a piece of flannel or blanket used to enclose the ice. In this way a small five to ten pound lump will keep an astonishing length of time. The drawer hauls out into the cabin for convenience, but may be pushed back under the cockpit when not in use, or the top of the cockpit while underway.

With a little method, we have found it quite possible to live in this style at less than fifty cents a day or four dollars a week, oil, wick and tobacco included. Another dollar covers newspapers, paint, etc., for the yacht, and writing materials, and the sixth dollar keeps you in seagoing togs. Show us the summer resort, the boarding house or hash factory where equally good living can be obtained at such nominal cost, with salt breezes, ozone-laden, cool nights, sound sleep, a vigorous appetite, hardy muscle and brawn, a liver without bile, clear conscience, and where peace with all the world reigns serene and Paradise, we opine, would have to take a back seat.

There is a word to be said about such a common article as water. Fill up the tank whenever opportunity offers. Do not wait till the well runs dry, or you may be left in the lurch some day in a broiling sun, with "water, water everywhere and not a drop to drink," unless that good luck which seldom deserts the lone tar afloat should unearth from below a long forgotten Bass or its plebian substitute in lager.

For berthing have a cushion made stuffed with deer's hair or artificial material which will not rot. Cover the cushion, not with reps or carpet, but with blue or brown leather made for such purpose, much like that to be found on carriage seats. Such covering soaks no water, nor does it mildew or become musty. In a small boat things will get damp occasionally, and leather cushions can be dried with a swab or towel in an instant. If filled with deer's hair they possess great buoyancy and may serve as life preservers. The blanket should be of good quality so that it will not part with its fuzz or wool. A nickel-plate Ansonia clock is a useful and ornamental article, and if you choose to follow the weather, a circular aneroid barometer may be procured to match at a cost of $6. The hand lead need not weigh over five or six pounds, with six to ten fathoms of cotton line attached. The simplest way of marking is to turn an overhand knot in the line for each fathom up to five, then begin on the second series of knots. Cheese is ought to be handy to most places of the ground likely to be gone over, and detail harbor charts, at least for all ports difficult to enter. The rest may be navigated by a government book known as "Sailing Directions," or by extracts therefrom published by private enterprise to be had from navigation stores in New York and Boston. Take notice of the variations of the compass marked on the charts, and when the bearings of a prominent object can be taken therefrom compare with the bearings by your own compass. It is not likely we will ever be in any of the yacht ports unless the ballast should exercise some influence upon the needle. The difference found is denominated "deviation," and when steering a course correction or allowance must be made if the error of the needle is of practical moment.

On this subject the amateur had best consult an elementary work on navigation. We can recommend the book of H. W. Rosser, to be had for a dollar or two from Van Nostrand, 37 Murray street, N. Y., or from Little & Brown, Washington street, Boston. Also note the line within which the soundings are to be taken in feet. Buy only the very latest editions corrected by the Hydrographic Office in Washington to date. For the Sound and Eastern coast, an excellent volume has been published by the government containing charts and explicit sailing directions, which can be purchased for $4.

A roll of charts is notoriously rebellious and evinces a dislike for inspection, the sheets curling up in obstreperous fashion. The single-hand sailor has seldom more than one hand to spare at a time, and to facilitate the examination of charts the following method will be found very advisable. Cut the large charts up into lengths of say two feet and insert them in a tight frame covered with glass. In this shape the chart is protected from the weather and can be set up on the floor of the locker right to hand for inspection, but when laying off on a cruise take a small paint brush and with blue water color trace a line about an eighth of an inch wide around the shoals, rocks and fathom curve, so that the eye may take in the lay of the bottom and danger at a general inspection. The usual lights and buoys may be brought into prominence by red and umber in the same way. With the frame before you, it needs only a hand lantern held close to the glass at night to give your inquiry an answer which could not otherwise be got at without leaving the helm and burying down below. The hand or deck lantern should have a canvas cover to shade the light from the eyes and only to be lifted as wanted.

A really serviceable compass is rather an expensive item in the outfit. A poor or unreliable compass is worse than none at all, and in small craft the ordinary box compass is the best, but only if nothing in America but the customary "boat compass," which serves the purpose very well, however. They can be had of T. S. & J. D. Negus, Water street, near Burling slip. Some arrangement in the way of screw sockets should be adopted so that the case may be secured in a dead fore and aft line in the cockpit. It matters not if the binnacle be placed one side of the midship line of the yacht, so that a line through the center of the card and the "rubber's point" marked inside on the metal case be truly parallel to the keel.

[TO BE CONTINUED.]

CONCERNING YAWLS.

Editor Forest and Stream:

After having given the yawl rig a thorough trial on my yacht of fifty tons, I have arrived at the following:

I find that the yacht will sail closer to the wind than any schooner can, especially in a sea, and that she carries her mizzenmast as well as any other spar. For sailing in ordinary weather a 16ft. gaff on the mizzenmast is used. The Bermuda mizzen does not set as well as one with a gaff, by the wind, and it requires a longer spar, which is a disadvantage to be of the same area. The mizzen is not only held in place by two shrouds on a side, but is held forward by a vertical stay attached to a 1½in. eyebolt, 8in. forward of foot of mast, going down through everything. This stay is like the forward one of a catboat's mast, and as the mizzenmast is not cut with a 6in. curve or sweep forward, the stay has a powerful hold on it. I also have a forward preventer and an after one for mizzenmast, the latter hauling out to end of bumpkin.

By these means I am able to secure the mizzenmast more firmly than any other spar, and have it carry all the sail I can crowd on. It is 38ft. from deck. For light summer weather an arrangement with topmast to mizzen will give a yawl more sail than can be got on a cutter. As a seaboat she is incomparably superior to the latter in ease of handling sails, being also superior to a schooner as a seaboat because the absence of the foremast renders her more buoyant forward as well as handier canvas.

CRUISER.

A. C. A. CANOES AT LAKE GEORGE, 1882.

THE following is from a series of letters published in the Toronto *Mail*, by Mr. Robert Tyson, of the Toronto Canoe Club;

I will endeavor to give some idea of the various classes of canoes at the meeting of the association, mentioning number, description and rig, what types are most in favor, etc. I will try hard not to be too wearisomely statistical in doing this.

THE SHADOW MODEL.

First in order comes the well-known and well-tried Shadow, of which there were at least twelve or fourteen representatives, in wood. Five or six of these are from New York, all lapstreak. I will take the New York Dot as a typical boat. She is 14ft. 4in. long, 30in. beam, sits low in the water, "canoe fashion," and perhaps 26in. at the gunwale. The decking and open cockpit are of the usual dimensions. She carries no centerboard, but has a rockered keel, either two or four inches at its greatest depth. Her racing rig is two balance lugsails, the mainsail set with the mast at the mizzen about twenty feet. For cruising she would carry a total area of probably sixty feet in all. Her lines are designed primarily for sailing, but with a view also to easy paddling. Mr. James Everson, of Williamsburg, New York state, is the Dot's builder, and he owns the only built original Shadow for its designer, Mr. Alden, and the Dot was his second one. Mr. Whitlock's Wrath is the only Shadow I know of which carries a centerboard.

Then there are four or five Racine Shadows, all of 28in. beam. The method of construction of the Racine Company has been often described. Some of the owners of these Shadows tell me that they would rather have them from two to four inches more beam, so as to be better for sailing, or two inches less, so as to make better paddlers. They are too much of a compromise between a sailing and a paddling canoe.

THE PRINCESS.

The Princess model, designed by Commodore Longworth, should next be mentioned as a tried and successful sailing rival to the Shadow. Of this model there are two in Cincinnati men, and one or two with other canoeists. The Princess has a flatter and longer floor than the Shadow, with the widest part a little forward of midships. Her lines are somewhat fuller. She has more sheer, and is generally shaped with a view to good sailing powers, while not so much so as to prevent the free use of the paddle. Her dimensions are: Length, 14ft.; beam, 31in. just above the water line, and 30in. on deck; 10in. deep at bow, 13½in. at stern, and 11in. to crown of deck at midships—all outside measurements. The cockpit is 28in. wide forward, and 16 aft. The "dagger" centerboard used by the Cincinnati Canoe Club is very simple, and has some good points. The trunk and centerboard are curved. The curve is downward from forward to aft, so that when the board is down the part of it in the water is well aft of the trunk, enabling the trunk to be placed further forward than it otherwise would be. The curved board is lifted out and in like an ordinary straight "slip-keel." It is not convenient to work a very heavy board by this arrangement, and the board will lift clear up if it strikes an obstacle. One or two of the New York canoes are fitted with this centerboard. I don't know who originated it.

MR. TREDWEN'S "PEARL."

The largest of the sailing canoes are those of the Pearl type, which this year was represented for the first time at an A. C. A. meeting. There were three—Mr. Wm. Whitlock's Ripple, from New York, fifteen feet long by thirty-one inches beam; and Boreas and Isabel, of Toronto, each fourteen feet long by thirty-three inches beam. The Pearls are the only canoes that carry "sailing flaps," which are con-

trivances to enable the skipper to get well out to windward while sitting low down. Their centerboards and tackle are very complete and efficient. They have been very successful as racers in England and in local club races on this continent. In New York recently Mr. Oulin's new Pearl, the Tramp, won the challenge cup of the New York Canoe Club from the hitherto invincible Dot, manned by Comodore Vaux, one of the most expert and daring sailors in the A. C. A. The owners of the Toronto Pearls find them most comfortable cruisers, and splendid boats to windward. Like some other sailing canoes, they can comfortably carry passengers besides the skipper, so that he can take out his wife or sweetheart for a sail when he wants to—and she also. The only builders in North America who have turned out Pearls are W. P. Stephens, of New York; John Clindining, Toronto; and H. Aykroyd, Toronto.

THE NAUTILUS.

The old Nautilus model, distinguished by its great sheer and good all-round qualities, was well represented. Five or six were present, including the famous paper canoe Maria Theresa, 16ft. by 28in., in which Mr. H. Bishop paddled and rowed from Troy, N. Y., along the Atlantic coast to Florida—one of the longest and most adventurous canoe voyages on record, the story of which is most pleasantly told in "The Voyage of the Paper Canoe." Mr. Bishop scandalized some of the orthodox canoeists by using oars on this long trip, but he has now returned to his first love, and uses only the paddle. I had the pleasure of seeing the sailboat Mayeta, which he used from Quebec to Troy, in the first part of the voyage, and also the "smeakbox," in which Mr. Bishop traveled from Pittsburgh down the Ohio and Mississippi and along the Gulf of Mexico to Florida. It is a queer-looking, beamy craft, 11ft. beam by only 12ft. long. Mr. Bishop is a delightable traveling geographer, and has a collection of 800 charts and maps in an upper room of his pretty house on the shore of Lake George.

All the Nautilus canoes at the meet were of the older type. Mr. Baden Powell's more recent sailing models, with heavy centerboard, were not represented.

A NEW ENGLAND CANOE.

Captain Kendall, a tall, stalwart New Englander from St. Johnsbury, Vermont, had a canoe on the island which deserves notice as an efficient sailing cruiser of a light and simple type. He built her himself. She is smooth outside and weighs 96 pounds. Dimensions, 14ft. long, 31t. beam, 9in. deep at gunwale amidships, 12in. at crown of deck amidships, 15in. deep forward, 13in. aft, cockpit 22in. wide. He carries no ballast nor centerboard, depends on beam for stability under sail, uses leeboards, has a simple balance lug mainsail of 47ft. area, with 20ft. sprit mizzen, and, alas! uses oars instead of paddle. The canoe is much like two or three that have been built by Harry Hodson, of Toronto, but is larger and has not so much flare from the bilge as Mr. Hodson's. Her dimensions bar her from the A. C. A. races.

Next come the lighter canoes, designed primarily for paddling. A noteworthy feature is the introduction since last year of a new model,

THE "STELLA MARIS,"

by Mr. J. H. Rushton, of Canton, N. Y., which has become so popular that at least half a dozen canoes of this model were at the meeting, and I heard of others which were not present. This little "star of the sea" well deserves her popularity. She is designed especially for paddling, but is fitted with two small lateen sails, and can sail well on occasion. She is very fast under paddle, and is a remarkably handsome little craft. Her dimensions are:—Length, 14ft.; beam, 26in.; depth from gunwale to garboard streak amidships, 8¾in.; curve of deck (numbers), 3in.; keel, 1¾in.; depth at bow, with keel, 16in.; depth at stern, 14¾in. She is fitted with a locking-up arrangement by which the cockpit can be completely covered with hatches, and securely fastened, thus protecting the canoeist's stores from pilferers if he has to leave his canoe in a strange place. The Stella Maris is well suited for cruising on rivers and small lakes, and will stand a great deal of rough weather for such a little craft. The first canoe of this type was built especially for the Rev. C. E. Woodman, of New York.

Canoeists generally owe a debt of gratitude to Mr. Rushton for the practical way in which he has worked up and developed several of the most useful and popular types of canoes, especially when, as he says, "there is very little money in it." There is so much fitting and special work about decked canoes that they are not nearly so profitable to build as the open rowboats.

THE ROB ROYS.

Perhaps no canoe is so well known by name as the "Rob Roy," immortalized by J. Macgregor, of transatlantic fame, and there is a large tendency in the popular mind to consider all decked canoes as "Rob Roys." What the name really means is a light canoe built almost entirely for paddling, with very little sheer. Approximate dimensions, 13 or 14ft. long, 26in. beam, and 8 or 9in. deep. W. P. Stephens, of New York, has built some excellent Rob Roys for New York canoeists, and Mr. Rushton makes a boat of this type well known to canoeists as "The American Traveling Canoe." The Racine Company's "St. Paul" is another variety of the Rob Roy type. From fourteen to sixteen or more Rob Roys were at Lorna island, including four St. Pauls.

OTHER TYPES OF CANOES.

Canoes built of canvas, stretched over wooden ribs and battens, are a cheap and serviceable craft, and they were well represented at the meet by ten or a dozen specimens of various builds, from shadow to Rob Roy.

Finally, there is the open Peterboro' canoe, so familiar to the Canadian eye; four or five of these were present.

In addition to the foregoing, there were probably a score at least of canoes varying from the foregoing types, or which I had not an opportunity of classifying. The total will thus be 75 or 80 A. C. A. canoes gathered at the island camp, and this agrees with Secretary Nelde's estimate.

Cartridge Groover, 75cts., E. Redmond, Rochester, N. Y.—*Adv.*

WHAT PUTTY CAN DO.—A gentleman who built a schooner last spring was pestered with a plethora of critics, each of whom knew just how the schoonor should have been built, and felt himself at liberty to air his views. The owner got a pailful of putty and kept it in the mould-loft. Every time one of those wiseacres of the so-called "practical" kind came along with valuable suggestions he was at once referred to the putty, told to help himself, and give shape to his ideas and show them to the company present. Thereupon critics became very scarce indeed.

AMERICA CUP.—Now that Bedouin's sailing has shown our present sloops unable to hold the America Cup against an Al cutter like Aumasoma, it becomes all the more important to offer even terms to foreigners for that trophy or accept their charge of intentional sharp practice, and allow the cup to remain, as at present, a butt of broad ridicule among foreign yachtsmen. A correspondent writing from Liverpool says the cup is a regular laughing-stock on the Mersey.

NEW YORK YACHT CLUB.—At the last meeting resolutions were passed appointing a committee to report upon the desirability of procuring headquarters and anchorage in near-by waters. The club has long been in need of a house, and it has been something of a wonder that action had not been taken long ago.

STEERED BY HER OWNER.—*Editor Forest and Stream:* In your account of Tuesday's race of the S. Y. C. you state that the Bedouin was sailed throughout by her sailing-master, Captain Petrick. This needs correction, in justice to her owner, Mr. Rogers, a true Corinthian, who had charge of the helm all day, and never let go the stick till the home mark was passed.—SEAWANHAKA.

BIG ONES.—The extraordinary success of the noble cutter Bedouin has induced others to cross the Rubicon. Two big ships like her will be built in New York this winter and a 15 or 20 ton clipper in Boston. Others remain to be heard from. It would not surprise us to see more than a score of fine ships of the cutter persuasion laid down for an early launch in spring.

NOT A HORSE MARINE.—Skipper Baker, of the Gracie, was accused by a horse marine, reporting for the *World*, of lowering his jib and then easing main-sheet to keep that sloop on her course in the recent Seawanhaka matches. We are asked to say that Baker is not such an idiot, and did nothing of the kind. The yarn seems to be a pure fabrication.

REAL YACHTING.—The 15-ton cutter Sonata started July 2 from Brightlingsea, sailed to Inverness in five days, through Caledonia Canal, then down the west coast of Great Britain, and to home port in thirty days—distance 1,402 miles, and not a penny paid for pilotage. Sonata is 38ft. load line, 10.4ft. beam, and 6.3ft. draft.

LIVONIA.—This schooner known to both European and American waters while the property of Mr. Ashbury, was sold at auction recently to satisfy a mortgage of the present owner. Few bidders were at the sale and the fine schooner was knocked down for $15,000 to a well-known British yachtsman.

SAFE SAILING BOATS.—We are requested to state that F. Joiner, of Glen's Falls, N. Y., will send photos of his specialties described in these columns by mail upon receipt of $1.

DAUNTLESS.—Mr. Colt's schooner recently left Bordeaux, France, for a cruise in the Mediterranean. All on board reported well and enjoying the sea cruising amazingly.

CHROMOS NO LONGER WANTED.—A prominent yard in the East writes us that the present demand is entirely for keels, with all or nearly all ballast outside.

FISHCULTURE IN SCOTLAND.

WE make the following extracts from the Dundee *Advertiser* of Oct. 6. No doubt, the Fishery described is a large and a fine one, but we doubt the statement that it is the finest in the world. Our cousins of the British Islands do not seem to be up in all the modern appliances of fishculture, and those familiar with the subject will be apt to regard hatching on glass grilles as a little behind the age, as well as the gravel on which the eggs are afterward placed. The article says:

Howietoun Fishery, the property of Sir James Ramsay Gibson Maitland, is situated about four miles south from Stirling. The ponds have been laid out on ground beside the burn of Sauchie, from which the water supply is obtained. Their construction was begun in 1874, and the idea of their formation was first suggested in 1873 in course of a difference about some trout originating between Sir James Maitland and the Mr. Frank Buckland.

Fishculture, under the fostering care of Sir James Maitland, has made wonderful progress within the last ten years, and nothing proves this more conclusively than a contrast of the old-fashioned hatching grounds and processes at Stormontfield with the improved methods adopted at Howietoun. Hatching the ova in wooden boxes was the plan pursued at Stormontfield, but hatching on tubular glass grilles is an immense improvement on this system, and at this moment the new and spacious hatching houses at Howietown are capable of incubating, and do incubate, from eight to ten million ova per annum. The proprietor is now in a position to stock all the rivers in Scotland successfully and with certainty, because what is done at Howietoun is done to a large extent by nature, and no better pattern than nature gives has yet been discovered or ever will be.

The new system is much more expensive than the old, but it is much more satisfactory, and the opinion of Sir James is that if the fisheries of Scotland are to be improved, the work must be done on a commercial scale. This is the object he has had in view in spending many thousands of pounds at Howietoun, and if he can prove that his work is likely to become a commercial success, as everything at present promises it will be, he will have accomplished a great deal for Scotland. His transactions are already on a scale of great magnitude, and the demand for young trout is taxing the supply. To give an idea of the size of the fishery at Howietoun, it may be noted that the enclosed grounds are eleven acres in extent; that three horses a week are killed to provide food for the trout, and this in addition to large quantities of clams imported from Newhaven.

Approaching the Fishery from the main road, the first places to which the visitor is taken are the hatching houses. Great expense has been lavished on these. They are supplied with water gathered from springs in the neighborhood. The stonework of the largest house, which has cost over £3,000, is strong sloping and substantial, and the floors are of asphalte. In this house there are 180 tanks, each 7 feet 6 inches long, and each capable of containing twenty thousand ova. During the year as many as from eight to ten million of trout ova, weighing one ton, are incubated here. All eggs are eyed on glass grilles, experience having shown, as we have elsewhere stated, that the strongest embryos and the healthiest fry are obtained by this method. So soon as the embryo is sufficiently formed the practice is too lay the ova down in gravel reeds contiguous to small streams falling into the rivers or lochs to be stocked. A sall unimpregnated eggs are removed before being despatched from the Fishery, no loss occurs from byssus, and all the expense and trouble of artificial hatching are avoided.

After inspecting the hatching houses the visitor returns to the main road, and a short distance down crosses the Sanchie Burn, which at this point is tapped, and feeds the ponds with the water necessary for breeding purposes. Here the inspection of the ponds proper begins, and the first thing that strikes the visitor is a little water-wheel, which, by an ingenious arrangement, keeps constantly in motion a series of levers, attached to the outer ends of which are perforated boxes containing prepared food for the young fry. The motion imparted to the boxes shakes out the food, and it is curious to watch the thousands of tiny fishes swarming about and devouring the food as it is shaken from the moving boxes.

Our space forbids quoting more than the following on the *Salvelinus fontinalis*, the article further says: The first of the ponds contains thousands of fry of our Lochleven trout, and a handful taken out with a net shows them to be in prime condition—fat, plump, and healthy, and stronger looking and more lively than their companions in the next pond, the young of the American brook trout, which, however, are fine fish, and promise to become a specialty of Howietoun. The Fontinalis, also known as charr, come from New Hampshire. Anglers will be sorry to learn that they are not good risers, as they generally feed at the bottom on the water flea (*Daphnia pulex*).

Their general introduction into this country was at one time regarded as very improbable owing to the expense of transit; but at Howietoun they have been carefully reared, until now any number of ova, fry, and young fish can be supplied from the parent stock. They are specially adapted for reservoirs, where animalculæ have to be cleared out, and it was humorously suggested by one of our party that instead of spending thousands of pounds in filtering operations at Monikie and Crombie, the Dundee Water Commissioners should spend a few pounds in stocking the ponds at these places with Fontinalis, thereby obviating the necessity of having a filter at all.

When the meat is thrown in among these youngsters the peculiarity of their "rising" is at once observable. They come from the bottom straight up with a rush, as if they were arrows shot from a bow, seize the bait, and descend again with lightning-like rapidity. In angling for the Fontinalis with fly there would be no necessity for the angler to strike. The fish, if it was in a taking mood, would hook itself, and all the angler would have to do would be to cast the lure within seizing distance. They come up to feed, but not with nearly the same rush and avidity as the Loch Leveners. Several were taken out with the net, and a brief examination before their return to the water showed that they were of fine shape, and beautifully colored and spotted. One peculiarity is their teeth, which are small, and of mesh-like formation, something like the mouth of the whale.

Something every sportsman should have is one of the dogskin leather jackets advertised by Wm. Read & Sons, Boston, Mass. See advertisement in another column.—*Adv.*

FINE HAND-MADE REELS.

All these reels are made with best quality screws, so that they can be taken apart if necessary. Any of these reels may have either clicks or drags added, or be nickeled at 50 cents for each addition.

DISCOUNT TO THE TRADE ONLY.

Orders received from persons residing in cities in which the dealers keep a full line of our goods will not be filled at any price.

ABBEY & IMBRIE, 48 Maiden Lane, New York.

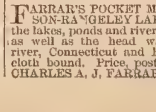
REMINGTON No. 2.

Single-Barrel Shot-Gun, Only $10.00.

This is the cheapest and best gun in the market, steel barrels, 28 or 32in. long, 16-gauge, American walnut stock, fine finish throughout. Weight 6¾lbs., Brass or Paper Shells; center fire. Every gun warranted.

E. G. KOENIG, 875 Broad Street, Newark, N. J.

Pencils, Holders, Cases, Etc.

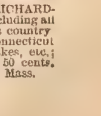


THE CALLI-GRAPHIC PEN.

A GOLD PEN and RUBBER HOLDER, containing ink for several days' writing. Can be carried in the pocket. Always ready for use. A luxury to persons who care to preserve their individuality in writing.

MABIE, TODD & BARD,
180 BROADWAY, NEW YORK.

Send for Price-List.



Our Goods are Sold by First Class Dealers

Oil-Tanned Moccasins,

For Hunting, Fishing, Canoeing, Snow-shoeing, etc. They are easy to the feet and very durable. Made to order in a variety of styles, and warranted the *genuine article*. Send for price list. MARTIN S. HUTCHINGS, Dover, N. H. P. O. Box 393. Bradford & Anthony, Boston, H. C. Squires, N. Y. City, Principal Agents.

The Hunting Sight.

LYMAN'S PATENT COMBINATION GUN SIGHT

Makes a Sporting Rifle perfect. Send for circular containing full description. Address,

WILLIAM LYMAN,
Middlefield, Conn.

FARRAR'S POCKET MAP OF THE RICHARDSON-RANGELEY LAKES REGION, including all the lakes, ponds and rivers of that famous country as well as the head waters of the Connecticut river, Connecticut and Parmachenee Lakes, etc.; cloth bound. Price, post-paid, by mail, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

DOGSKIN LEATHER JACKETS.

A SPLENDID GARMENT.

Our Own Pattern and Selection of Skins a Specialty.

TOTALLY UNLIKE ANY OTHER IN THE MARKET.

Impervious to wind and water. Soft and pliable as a kid glove. Lined with flannel. Not shrunk or injured by water. A complete protection to sportsmen, or any one exposed to cold or wet. Entirely waterproof and windproof. We have furnished many of these to Chesapeake, Currituck, and other clubs, and they are in great demand, not only for shooting, but a driving jacket worn under the coat. They have side and breast pockets, double breasted and finely stitched. Brown Grass Colors. Our own pattern, and very different from the common leather jackets of poorer quality leather, which latter becomes stiff after wetting. For sleighing and driving they are much used. These finest skins allow a free use of the arms in shooting and driving, being more pliable than the ordinary quality.

A Quality, of the finest and softest skin, - $18 00 **B Quality, not as soft, - - - $15 00**

☞We take the entire product of the Manufacturers of above Finest Jackets, and this make cannot be obtained elsewhere in this country.☜

Other makes as are commonly in the market we have, and can furnish at less prices, as $10.00 and $12.00, etc., but they are not as pliable skins nor as nicely made.

Send measurement around chest. Will be sent by mail prepaid, on receipt of price.

☞These must not be confounded with the many Leather Jackets advertised and sold. We will at any time send on approval, and if not found superior to others and entirely satisfactory, they can be returned at our expense and money refunded. During the past fall and winter we had difficulty in filling our orders, and it is advisable to order before cold weather. For ordinary use of driving and walking in cold weather, worn under the overcoat, they make a handsome garment, and are much used. We have lately received the finest skins we have imported for years.

CAUTION.—Our firm name, WM. READ & SONS, Boston, is stenciled in side right pocket of each of our best jackets.

Send amount and we will send by mail, or have your local dealer order one for you.

NOTICE.

JAMES PURDEY & SONS,

OF 287 & 289 (late 314½) OXFORD ST., LONDON,

Gun manufacturers, by special appointments to Her Majesty the Queen, H. R. H., the Prince of Wales, and the most noted shots of Europe, give notice that on January 1st, 1883, they will remove to the new and large manufactory they are now building, and that after that date their address will be

Audley House, South Audley Street, London.

They take this opportunity to inform American sportsmen that they have patented **A NEW REBOUNDING HAMMERLESS GUN**, which, after the most careful practical trials and severe tests, they confidently reccommend as by far

THE BEST AND HAMMERLESS

ONLY PERFECT GUN MADE.

Its advantages are STRENGTH, SIMPLICITY, SAFETY AND FREEDOM FROM MISFIRES. JAMES PURDEY & SONS will only make one quality of gun for the United States, viz.: THE BEST. Guns take about five months to make, and can be ordered direct from the makers, or through the agencies of SCHUYLER & DUANE, 189 Broadway, New York, and JOS. C. GBUBB & CO., 712 Market street, Philadelphia.

N. B.—Messrs. Purdey & Sons are prepared to sell the rights, or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States.

KNAPP & VAN NOSTRAND

Poultry and Game,

289 & 290 WASHINGTON MARKET,
New York.

Consignments of all kinds of Game solicited.

WE CHARGE NO COMMISSION.

We accept consignments. Allow market price day of arrival, and send checks every Tuesday for all invoices of previous week.

CAMP LIFE IN THE WILDERNESS.—SECOND edition now ready. This story describes the trip of a party of Boston gentlemen to the Richardson-Rangeley lakes. It treats of "camp life," indoors and out is amusing, instructive and interesting; 224 pages, 12 illustrations. Price 25 cents. By mail, postpaid, 30 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.

J. PALMER O'NEIL & CO.,

68 Fifth Avenue, Pittsburgh, Pa.

AGENTS IN THE UNITED STATES FOR THE

Westley Richards Hammerless Gun.

Manufactured by WESTLEY RICHARDS & CO., London, England. (Established 1820.)

INVENTORS AND SOLE OWNERS OF THE ANSON & DEELEY HAMMERLESS LOCK WITH AUTOMATIC SAFETY BOLT.

Making the Safest, Simplest and Most Durable Breech-Loading Gun to-day in Use.

SAFEST, because the triggers are effectually bolted whenever the lever is moved to open or close the gun. SIMPLEST, because the lock contains fewer pieces (only four) than any other gun. MOST DURABLE, because the four parts are very strong, and the swivel and bridle—the weakest parts in the ordinary lock—is entirely dispensed with.

The Anson & Deeley hammerless lock has been subjected to the severest test, having been fired EIGHTY THOUSAND times in a wear and tear trial without cleaning, and without showing any evidence of wear. The Anson & Deeley action is made in its perfection by Westley Richards & Co.

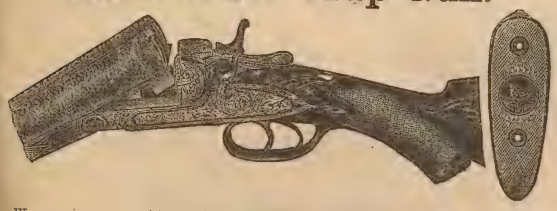
From every quarter unsolicited come testimonials of the excellence of these guns. We quote a few extracts:

"The Westley Richards Hammerless Gun excels any gun that I have ever used."—GEORGE W. BROWN, Conneautville, Pa.

"The action is simply perfect; there is no possibility of accidental discharge."—E. J. CARPENTER, Cincinnati, O.

"The Hammerless Westley Richards works to a charm, and brings the ducks right out of the sky."—CHARLES J. CLARKE, Winnows Point Shooting Club.

"The little seven-pound Westley Richards Hammerless Gun, purchased from you last summer, has given entire satisfaction. For hard shooting, easy manipulation, and perfect safety, it cannot be excelled. I used but three drams of powder and one ounce of shot throughout the entire season, killing my birds as clean in September as first of October."—ALEX. REYNOLDS, JR., Kittaning, Pa.



"The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun to buy a Westley Richards Hammerless."—PATRICK HENRY, Clarksville, Tenn.

"I find perfect ease in manipulating the gun, and absolute safety secured from accidental discharge by the automatic safety bolt, which never fails to go to safety when the lever is moved to open or close the gun. You know how prejudiced I have been against hammerless guns. Well, I am thoroughly subdued, and I unhesitatingly say it is 'the gun of the future.'"—I. R. STAYTON, Secretary Allegheny County Sportsmen's Association.

"I feel as if I ought to let you know how the 10-bore, 9¼lbs., 30in. Westley Richards Hammerless works. At the target with four and a quarter drams of Orange Lightning powder No. 6, and one and a quarter ounces No. 8 shot, I can get over 400 pellets in a 30-inch circle, 40 measured yards, every time, with beautiful distribution and wonderful penetration. With the same charge of powder and one and a quarter ounces No. 5, it is sure death to ducks at fifty yards every time. I made two successive shots at single mallards sitting on the water at 76 and 83 yards, and killed both times, and this with the above light load in paper shells. A mallard flying at 50 yards drops as if struck by lightning. Let me thank you for having furnished me what I have so long been looking for, i. e., a gun that suited me in every way. I've got it now and money cannot buy it."—F. W. COTTLE, Lincoln, Ill.

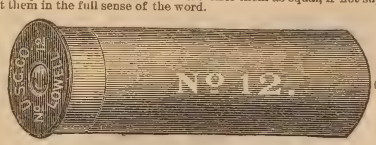
We have just received a large invoice of these matchless weapons in all grades and gauges, including the smaller bores, 14, 16 and 20-gauge, and can fill all orders promptly, or will import to special order without extra charge. Our stock of Fine Goods is *without exception* the largest in this country. Constantly on hand, bargains in fine second-hand guns with hammers. New catalogue now ready containing illustrations and prices of all new and useful implements.

The Parker Trap Gun.

We are now prepared to supply the **Parker "Trap Gun,"** for which we are sole agents. These guns have top lever, extension rib, rebounding locks, large strikers and pistol grip. They are simply superb. The Parker Trap Gun should not be confounded with the regular Parker top lever guns, which, although excellent guns, do not approach the Trap for close, hard shooting. Every genuine Parker Trap Gun has the rubber butt plate with a flying pigeon beautifully embossed upon it, as shown in the above cut.

We have a small remnant of Webley's heavy ducking guns, mostly 10-bore, of various qualities, at about half price. Address

O. Box 1114. H. & D. FOLSOM, 15 Murray St., New York.



[ESTABLISHED 1869.]

UNITED STATES CARTRIDGE COMPANY,

LOWELL, MASS.

Our paper shot shells are made with great care upon new and improved machinery, and the paper is subjected to a process that renders the shells waterproof, pliable, and capable of withstanding large charges of powder without bursting, and are reloadable from four to ten times, if desired. They also keep their smooth shape stiff, inside and out. We offer them as equal, if not superior, to any other makes, and warrant them in the full sense of the word.

PAPER AND BRASS SHOT SHELLS.

ROSEWOOD LOADERS, CAP EXTRACTORS AND RECAPPERS.

Rim Fire and Central Fire Cartridges for Pistols and Rifles.

POCKET RELOADING TOOLS FOR ANY CALIBRE. PRIMERS AND BULLETS FOR RELOADING. "THE RICE SHELL EXTRACTORS." BENCH CLOSERS, Etc., Etc.

31 Wall Street, New York City, N. Y.

The Parker Gun.

Again Victorious at the late Exposition at

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 300 competitors. Send for Catalogue.

Show Rooms: 97 CHAMBERS ST., N. Y. PARKER BROS., Meriden, Conn.

WILLIAM READ & SONS.

DEALERS IN FINE GUNS, 13 FANEUIL HALL SQUARE, BOSTON.

AGENTS FOR

W. & C. SCOTT & SON.

Furnished by us to Capt. Bogardus who for years has used none other than the SCOTT GUN, and won with it the championship of the World.

None genuine unless bearing the full address, W. & C. SCOTT & SON.

Their New Gun.

$85.00 With Latest Improvements.

Description.—Top snap, double bolt, extension rib, pistol stock, rebounding locks, snap fore stock, large solid strikers, low hammers when cocked, horn butt plate, Damascus barrels, choke bored. 20-bores, 5½ to 6lbs.; 16-bores, 6½ to 7lbs.; 12-bores, 7 to 9lbs.; 10-bores, 8 to 11lbs.

To meet a want for a really fine, good breech-loader at a medium cost, Messrs. Scott & Son have now put this gun into the market at above price (a great reduction from the figure such quality has hitherto been offered at), and the demand thus far shows that it is thoroughly appreciated.

Every Gun Warranted in Shooting and Sent on Trial.

Scott's Hammerless, with Crystal Apertures and Block Safety Attachmemt, All Sizes, Constantly in Stock.

If to be sent C. O. D. on trial, inclose in every case $3.00 as a deposit for expressage in case gun is not taken, which, if too much, we will return the difference. If you send whole amount with order, we will include at no charge, a waterproof gun case; and if gun does not suit on receipt, you can exchange, or we will return your money on return of gun, less expressage. Hence there is no risk in inclosing whole amount.

SEND STAMP FOR OUR GUN CIRCULARS AND SECOND-HAND LIST.

THE TWO BEST GUNS IN THE WORLD.

Harrington & Richardson Hammerless

Is the highest achievement of American gun enterprise. The workmanship is equal to the finest London Premier guns, and the fitting is closer, every part being made by machinery to a gauge. For close hard shooting nothing in the world can excel them. In every respect equal to imported hammerless guns costing twice the money. They are made on the Anson & Deeley patent, and the work is inspected Mr. Deeley. The rubber butt plate is of the most exquisite design, and all the lines are in the finest taste. Size—12-gauge, 7¼ to 8¼lbs.

No. 1, Laminated steel barrels, outline engraving.....$100 00
No. 2, Damascus barrels, good scroll engraving, selected stocks.....150 00
No. 3, Same as No. 2, but finer in all points.....$200 00
No. 4, Premier quality, every part made with the most scrupulous care, and most exquisite finish, 300 00

The Daly Gun

Has been in the market for ten years, and has the largest sale of any strictly first-class gun in the country. Hundreds have been in the hands of professional hunters for years, and are as sound to-day as when they were bought. C. R. Shelton, manufacturer of auxiliary rifle barrels, New Haven, Ct., has shot one over 20,000 times in showing his invention, and it is sound as a dollar and hasn't had one cent of repairs. Here is a sample testimonial: Jefferson, Texas, Aug. 19, 1882. "The Charles Daly Gun I bought in 1880 is the most perfect gun I ever saw. A microscope cannot detect the slightest flaw in the fitting. I have shot it 2,000 times and the action is as strong and tight as when received. The gun is a beauty and the admiration of all my friends.—WM. T. WARE.

No. 42, Scott Action, Damascus barrels, bar rebounding locks, pistol grip, patent fore and extension rib.....10 and 12 g. $80 00
53, Same as No. 42, with Purdy double bolt and horn butt plate.....10 and 12 g. 90 00
55, Same as No. 53, with 3 pin locks and engraved mountings and ornamental rubber butt.....10, 12, 16 and 20 g. 100 00
60, Same style as No. 55, fine laminated steel or Damascus barrels, fine engraving and chequering, first-class workmanship.....10 and 12 g. 130 00
100 "Diamond Quality."—The most superbly finished gun in the market, every part of the finest quality and most elegant workmanship, and equal in every respect to the finest London Guns, 10 and 12 g. 200 00

Wanted.

WANTED.—LIVE WILD RABBITS. H. W. HUNTINGTON, 77 Division avenue, Brooklyn, N. Y. nov2,1t

For Sale.

TO SPORTSMEN.

For Sale.—Four or five islands containing upwards of four hundred and fifty acres, situated in what is called the Back Bay of Currituck Sound, all within three hundred yards of the main island, having over five miles water front, with boats and decoys, also one portable house suitable for six or eight persons, with mattresses, cooking utensils and stove, cutlery and crockery, where there is plenty of swan, geese, canvas backs, red heads, sprig tails, ball pates and widgeons, black and all other kinds of fresh water ducks. It is the best snipe ground in the vicinity. I have started over two hundred in two hours within a half mile of my house on the main island the first of December; they are there all winter, and ducks from October to April. The best sporting ground in the United States; a grand place for a club or a hotel. Price $2,000 cash. I will be at the Manston House, Norfolk, Va., on Monday, the 26th day of November next, and show parties the grounds at Currituck Sound. If not disposed of at that time it will be sold to the highest bidder. For further particulars address A. ARKERSON, No. 12 Park st., Cambridgeport, Mass.

P. S.—Convenient to stores and steamboats. oct12,4t

Sportsmen's Goods.

THE BEST

DOGSKIN LEATHER JACKETS

AND

"BOSTON SHOOTING SUIT."

Dogskin Leather Jackets, windproof, flannel-lined, pliable, durable, indespensible! We are importers and manufacturers, and can supply the very best leather jacket or vest that is made.

Last season we sold nearly one thousand jackets at retail alone. This season we have manufactured very largely *to supply the trade.* Send for samples of material and special circular, with rule for self-measure. These leather jackets and vests are supplied in either *black* or *tan colors.* To all who are exposed to the inclemency of the weather, to sportsmen, drivers, brakemen and professional men, they are highly to be recommended!

The "BOSTON SHOOTING SUIT," which is shown in our illustration, is the standard suit for sportsmen in America. It is made from waterproofed duck, and is practically indestructible.

Special circulars descriptive of this suit, with samples, can be had by any one who sends address.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

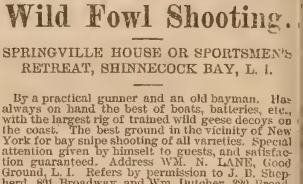
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1883, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.



During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

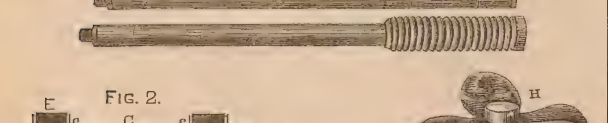
Climax Gun Cleaner.



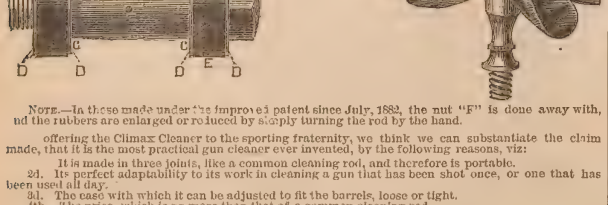


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In these made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

Kay's Chip
—OR—
EXPANSIVE SHOT CONCENTRATOR,
With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.
By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.
100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.
Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

N. M. MUZZY,
45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

Ammunition, etc.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale at our office.

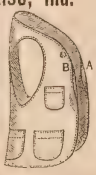
SIMPLE and DURABLE.

Rebounding Lock.
Choke-Bore Barrels

For close, hard shooting excels all others. Extra heavy guns for ducks a specialty. Send stamp for circular. C. S. SHATTUCK, Manufacturer, Hatfield, Mass.



Hollabird Shooting & Fishing Suits

Unequalled in Convenience Style or Workmanship.

Write for circular to

UPTHEGROVE & McLELLAN, Valparaiso, Ind.

THIS ☞ is our Skeleton Coat and Game Bag. "A" and "B" show entrances into game bag. This coat has seven pockets besides the game pockets. It is dead grass color; can be worn over or under a common coat. Weighs but fifteen ounces; is unequalled for warm weather shooting. Send breast measure and we will mail it to you for $2.00.

JOSEPH GILLOTT'S STEEL PENS

SOLD BY ALL DEALERS THROUGHOUT THE WORLD
GOLD MEDAL PARIS EXPOSITION—1878.

VICTORIA

PALE SHERRY.

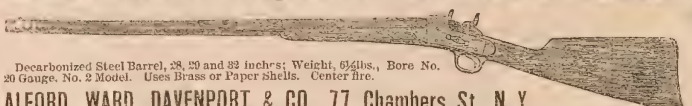
An extremely delicate Wine. Neither Very Dry or Sweet.

$5 50 Per Gallon.
$15 00 Per Dozen.

Charles Bellows,
AGENT AND IMPORTER OF WINES, SPIRITS, etc.
50 Broad Street, New York.

FARNHAM'S

Automatic Trombone Field Whistle



No Strings or pockets. Tone changeable. All brass, nickeled, with moulded rubber holder, hands and fingers free, for $1.00, postpaid. One whistle with holder and three parts, assorted sizes, my Lever Fasteners, adapted to sportsmen's gloves. Illustrated circular free. Address FRANK GUNN FARNHAM, Inventor and Manufacturer, White Mills, Pa.

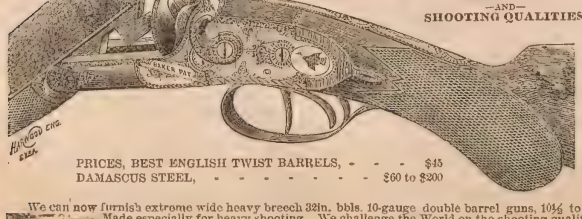
WM. ESTER & CO.,
IMPORTERS OF SKINS
and Manufacturers of

FINE FURS,

Seal Dolmans, Sacques, Silk Garments,
Robes, Gloves, Caps, &c.
4 WEST 14TH STREET,
NEW YORK.

The Remington Breech-Loading Gun.

Decarbonized Steel Barrel, 28, 29 and 32 inches; Weight, 6¼lbs., Bore No. 20 Gauge. No. 2 Model. Uses Brass or Paper Shells. Center fire.



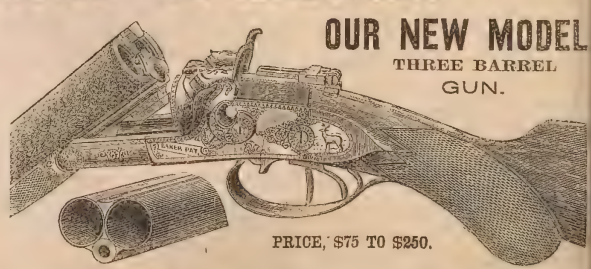
ALFORD, WARD, DAVENPORT & CO., 77 Chambers St., N. Y.

Simple, Safe, Effective,
NONE BETTER.
Price $10.
Reference—The WITNESS. Every Gun Warranted.

THE BAKER GUNS.

OUR DOUBLE GUN.

The Best Gun made for
DURABILITY
—AND—
SHOOTING QUALITIES.



PRICES, BEST ENGLISH TWIST BARRELS, - - - - $45
DAMASCUS STEEL, - - - - - - - - - $60 to $200

We can now furnish extreme wide heavy breech 32in. bbls. 10-gauge double barrel guns, 10¼ to 12lbs., without extra charge. Made especially for heavy shooting. We challenge the World on the shooting qualities of these guns

OUR NEW MODEL

THREE BARREL
GUN.

PRICE, $75 TO $250.

This gun is light and compact, from 9 to 10lbs. weight. The rifle is perfectly accurate.

L. C. SMITH, Maker, Syracuse, N. Y.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 9, 1882.

VOL. XIX.—No. 15. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS.

Advertisements of an approved character only inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Address all communications,

RIFLE PRACTICE IN 1882.

WITH the many matches to be shot on Thanksgiving Day the rifle shooting and target practice season of 1882 will practically close. It has been a comparatively active season, and the year ends with a much more general knowledge on the subject. It has not been a year of uninterrupted successes, and it will be remembered as the time when an American international team suffered its first defeat before the butts. That defeat, in all its bearings, has been thoroughly discussed in these columns, and, so far as possible, the blame has been placed where it rightly belonged. That there was a blunder somewhere was evident in the lamentably weak showing made by the home team. It was an ignoble defeat; but it has a value in showing us how one-sided our practice has been, and wherein we are as deficient in shooting knowledge as we were a decade ago. If American prestige on the range is to be sustained, it must be by all-round marksmanship. The work of riflemen abroad must be studied, imitated and improved upon. The match showed us, in the strongest way, that our rifle-makers had neglected entirely to inform themselves of what was doing in Great Britain in the making up of long-range military rifles. The American team was put in the match with weapons which must have raised a quiet laugh of contempt on the part of the Britishers, and meantime those members of the National Guard who gave their effort as competitors found themselves handicapped by this failure of the so-called managers of the match.

Apart from this lapse, a glance over the work of the scores of ranges is a satisfactory one. Hundreds of marksmen have found in the effort of the shooting match a most enjoyable out-door sport. This view of target practice has not been as general as it should be, and it is a fact worthy of note that when a man has once tasted the pleasures of keen competition before the butts—has found that every personal effort toward a better physical condition has yielded a result in more bullseyes—he rarely gives up shooting entirely. Business may crowd out the chance of much practice—time may not be spared; but with a few personal scores well memorized, the ex-marksman is always ready to compare later work with his own, and rejoice as he sees the difficulties of shooting overcome and work nearer and nearer perfection accomplished. The purely amateur character of rifle practice has been well sustained during the year. This is as it should be. While there is rivalry, keen competition, and an uncertainty of result, there is not that element of chance which invites the poolbox and the betting gentleman. Prizes, with the discrimination they afford, may be necessary to bring out the best effort in range shooting, and this is now a pretty generally acknowledged fact: but, fortunately, the spirit of gain stops there. It is to the credit of American rifle shooting that the record is the great thing aimed at, and that it is the rarest thing in the world to hear any discussion of what such and such a winning place may bring in spoils. How best to make a good score is more thought of than what such a score will bring in cash or kind.

The season has shown in a shooting way both the strength and weakness of the National Guard of the country. Where a rational, not overdone, system of rifle practice has been put in force, it has yielded good fruit in a general spread of the ability to handle a rifle. Without martinets in charge, it is possible to get a vast deal of real work out of these volunteer bodies, but pushed ever so little beyond a certain point and a spirit of opposition is roused which renders the whole system a failure. This is particularly true of the rifle-shooting part of a militia man's duty. He may be coaxed to do a great deal of work at a conveniently located and properly conducted range, but a system of harsh orders forcing the men to present themselves before the butts at inconvenient times results in a little wild shooting, a disregard of any instruction and an entire loss of that healthy co-operation and desire for good work, which alone can bring out the best results before the target.

The records show, too, that a great majority of the States have as yet no National Guard, or if any organization does exist, it is a non-shooting one; and therefore a non useful one, for a soldier who cannot shoot is a useless anomaly. It is not desirable that the National Guard, which was intended to be truly national, should become unduly developed in various sections. The military spirit should be kept alive in every part of the country and a general knowledge of arms is one of the best guarantees of a continued peace. Not until a general organization throughout the country of a well-armed militia shall permit the stirring up of a spirit of rivalry, will the best results in marksmanship be secured. Then it will come without any harsh orders, or rather in spite of them. Sectional pride of the most healthy sort may then be appealed to, and for the mere honor of winning many will enter the lists, give time and effort to their preparatory drill and practice and create a fund of experience from which arm makers and arm users may draw freely.

In the regular army the past year has witnessed the bringing together of the best marksmen of the various divisions, and the spirit of emulation and rivalry has worked out most excellent results. The army of to-day, viewed from a shooter's standpoint, is completely transformed from the army of a dozen years ago. Civilians have taught the military men how to shoot, and a proper regard to the fitness of things and popular sentiment on the matter have impelled officers and men on until now it is doubtful whether for the ranges covered by the weapons in their hands, our regulars are not the equals in ability to shoot of any army in the world. Upon the whole, then, the year 1882 has been a healthy one in a shooting sense. We have had a salutary knock down; have learned that there are points in rifle shooting where we are weak; have held our own in those styles of shooting which we have cultivated, and generally by the extension of rifle shooting have opened the way for more general and better work in the future.

ELECTION DAY was improved by the duck shooters, who made the most of the holiday, and came home at night more or less well pleased with the count. The day was a fair one as far as its weather conditions went, but the fowl were shy. Those who went out Monday found better shooting. That day is usually regarded as a favorable one for duck-shooting, since the birds not having been disturbed on the Sabbath, do not fly so wild.

TOTAL ABSTINENCE.—Look not upon the fly when it is delicately cast upon the water. Such is the rule of practice of a New York business man, who refrained from attending the angler's tournament because he feared an acute attack of the "angling fever," something which his business interests he thought would not allow.

NEW JERSEY'S NEW COMMISSIONER.—Gov. Ludlow, of New Jersey, has appointed Richard S. Jenkins, Esq., of Camden, to succeed the late Dr. B. P. Howell, as member of the Board of Commissioners of Fisheries of that State. This is an exceptionally good appointment, and cannot fail to give satisfaction both in and out of the State. Mr. Jenkins is Prosecutor of the Pleas of Camden county, and has been for many years a leader of the county bar, and though he has not heretofore given especial attention to the fishing interests of the State, he is well known as a gentleman of culture and scientific attainments, and he will not fail to heartily co-operate with his colleagues, Messrs. Anderson and Morford, in furthering the very important fishing interests of New Jersey. Our only objections to Mr. Jenkins as Fish Commissioner are that he adheres to the damnable heresy that a boiled shad is better than a planked shad, and that he is half inclined to believe that a weakfish can be properly cooked in the sun on the lid of a champagne basket! When his associates have cured him of these wretched heresies, he will prove a valuable acquisition to the army of quiet, unselfish but persistent men who are devoting themselves to the culture, propagation and protection of fish, and whose work will be appreciated and enjoyed for many years after they have passed away.

A TRAMP FOR PLEASURE AND STUDY.—The third annual "Summer Tramp," under the personal direction of Prof. David S. Jordan, of the Indiana University, will leave New York about the tenth of June next. It will be largely composed of students of the University, and the party will be limited to thirty, about one-half of which will be ladies. They will go through Scotland, Norway, Germany, Italy, Switzerland, France, and back by way of England, reaching home early in September. The trip will not be expensive, and will afford a fine chance for those who like to see those countries at their leisure to join the party and do some of the most interesting parts of the old world on foot. Information can be obtained from Prof. Jordan at the University at Bloomington, Indiana.

A "GAME" DOG.—Punning is said to be a form of mental disease. The latest victim of the punster's insanity is the owner of a magnificent setter dog. The other day he was out shooting with his punning friend; and dilating upon the merits of a valued dog, he insisted that there was no gamier animal in the world—"He's game, every inch of him." Whereupon the friend, remarking that he was after "game," blazed away, and lodged the greater part of a charge of No. 10's in the dog's hide. The dog did not wait to be put into the game bag, but disappeared in the direction of home; and at last accounts the sportsman and the horrible punster were locked in a death struggle in the snow.

INCONGRUITIES.—There is no written confession of faith, nor stringent rules of conduct to which a man must subscribe before he may be admitted to the fraternity of those who delight in rod and gun and the wonderful out-of-door world to which they lead. It follows that there are numerous and amusing incongruities in the commonly accepted tenets of the sportsman's creed. He who scorns to shoot a quail on the ground does not hesitate to pick off the grouse from the limb where it has "treed;" while another, who holds up his hands and turns up his eyes in righteous horror at the grouse-treer's practices, does not scruple to blaze away into a flock of wildfowl at rest on the water.

FOX HUNTING is no new thing in this vicinity, but having been recently revived as a popular pastime at some of the fashionable summer resorts, the sport is attracting public attention. There has been a great deal of more or less nonsensical correspondence in the daily papers about the alleged cruelty of the practice. An exception to this intemperate style of writing appeared the other day in the *Herald*, and it is altogether so sensible that we have transferred it to our columns.

AS SHOWN by the entries published in our Kennel columns, there is promise of a very large meeting at the Eastern Field Trials meeting in North Carolina next week. The quality of the dogs entered is such as should insure a fine exhibition of running. Reports are to the effect that birds are abundant on the grounds, and that it is to be hoped that there may be no annoying lack of game when the dogs are down

The Sportsman Tourist.

"NUTMEGGERS" ON THE OTTAWA.

FOURTH PAPER.

MINER and Brady came up from Bissett's Creek, and joined the rest of our party at the settlement or village of Mattawa, Wednesday afternoon, October 4. We took our baggage to the hotel, were assigned rooms and took dinner. After so long a sojourn in a log cabin we hardly knew how to appear at a hotel dinner table, but we soon discovered that it was a very plain log hotel, and that the dinner was plainer still, being composed of bread, hash and tea. This was a little plainer than our last luxurious dinners in camp had prepared us for, but the fifty or sixty lumbermen who sat down with us seemed to think it all right, so we joined in, concluding that "while in Rome we had better do as Romans do."

After this sumptuous repast, we went out to view the town. The village of Mattawa must be seen, stayed in, dined in and slept in to be appreciated. No description can do it justice. It is the roughest and most rocky place for a village to grow that the most active mind can picture; we should as soon think of planting choice flower seeds in a keg of nails, as of starting and expecting to see a village thrive here. But here it is for all that, and a tremendously busy place too, with three or four hundred lumbermen arriving and departing daily at this season of the year. Stores, hotels and liquor shops transact the business of the place, and there are some very smart, active business men in it. The streets are perfectly impassable, except in a narrow roadbed where the rocks and stones have been moved to one side. In some portions of the village plank walks have been built; no attempt was made to prepare the ground, but the walks are laid over and above the rocks and depressions in the ground's surface.

Pigs, dogs, geese and drunken Indians roam the streets with all their native freedom and privileges.

Mattawa being at the junction of the Mattawa and Ontario rivers, the only settlement in this section, and the present terminus of the Canada Pacific road (though construction trains are now run nearly out to Lake Nippissing), it naturally becomes the general headquarters for lumbermen, and they arrive in hundreds every day at this season of the year. They stop over night at the hotels, leaving the following morning in canoes for the lumber camps located away up the Ottawa and its tributaries. This being the last chance to spend money until they come down the river in the spring, they use it freely until the last penny is gone, and then get trusted if they can. The Mattawa merchants do a large trade with them in clothing, moccasins, tobacco, etc. It is surprising to find such immense stocks of goods away back here in the wilderness as some of the stores carry. Until the advent of the railroad this year all goods have had to be canoed up the river, at great trouble and expense.

Mattawa must be a perfect paradise to some people, for they need never feel it necessary to dodge around a corner to avoid meeting the sheriff or tax collector. The place is not incorporated as a town, borough, village or anything else. It is merely a gathering of settlers and Indians; consequently there are no taxes, no town officers, no laws, no one to attend to affairs concerning the public, no one to see that roads and bridges are kept passable, and every man is at liberty to say and do what he pleases. We shall never again hear a man boasting of the "freedom and liberty" of the United States without wishing to suggest that he include the village of Mattawa.

I said that the lumbermen "put up" at the hotels over night, but they never think of undressing or going to bed. The whole lower floor of our hotel was given up to them. Blankets were spread down, and the men stretched out in rows, side by side, thirty or forty in a room. As we passed through to our rooms that night we had to walk over their prostrate forms. A good share of them were hooting and yelling; some swearing in French, some in mixed French, Indian and English, and some in pure United States; some kneeling in prayer, others chanting and "counting their beads," others clinking and throwing boots and bottles about the room. The confusion of tongues at the Tower of Babel happened somewhat previous to our time, but after spending one night at a Mattawa hotel, we can realize and pretty thoroughly understand about what kind of a hubbub they had at the "Old Tower."

We visted the Hudson Bay fort or trading post (located on a point of land on the north shore of the Mattawa River), where we made the acquaintance of Mr. Rankin, the general superintendent of all the forts in Ontario and Ottawa River district. Mr. Rankin's whole life since his boyhood days has been spent among the Indians at the different posts throughout Ontario and the great Northwest. He is a gentleman of culture and refinement, notwithstanding his long severance from civilization. He very courteously showed us all about the premises, pointing out many valuable and interesting relics and curiosities. We noticed one pair of moose horns with twenty-three points, five feet spread, and weighing over seventy-five pounds.

It was also our good fortune to meet, further down the river, Mr. Cotter, the superintendent of all the trading posts about Hudson Bay, and the north. He is a Scotchman by birth, and twenty-seven years ago, while in his "teens," he came over from London, in one of the Hudson's Bay Company's vessels. The first four years he was stationed at a post in the northern part of the bay among the Esquimaux. The last twenty-three years he has been stationed at Moose Factory (the name of the trading post at the mouth of the Moose River, in the lower part of the bay.) When we met him he was just making a visit to Montreal on business for the company. Four Indians took him in a canoe from Moose Factory up the Abbitibee River to the height of land dividing Hudson's Bay Factory from Ontario, here a half mile carry took them across into the Ottawa. A rapid run of four days down the Ottawa brought him to Mattawa. We held a long and interesting conversation with him, during which we learned many valuable facts about the country, the Hudson's Bay Fur Company, and other subjects of interest. I was so interested in his conversation and intelligent statements about the Hudson's Bay Company that I am tempted to give a brief history of the company and its workings, as obtained from Mr. Cotter, Mr. Rankin, and others whom it was our good fortune to meet.

It may appear somewhat statistical for these columns, but I give it with the hope that it may serve to refresh the memory of those who are well informed, and that it may be of interest and lead to further study by those who have never given the subject any attention or thought. It is the oldest and richest corporation in the world, but the field of its operations is so far removed from civilization, that comparatively little is known or thought about it by the masses. The minute details are the interesting part of this subject, but of course these columns will not admit of giving them, but should it ever be your good fortune to meet Mr. Cotter, or Mr. Rankin, I can assure you of a long, interesting and instructive conversation, which cannot help but awaken a desire to sometime visit and see for one's own self the active field of operations.

The company was organized and chartered in 1671, under the reign of King Charles II., Prince Rupert holding a controlling interest in the company. It being known at this time that the country about Hudson's Bay was rich in fur-bearing animals, Prince Rupert, by reason of his connection with the king, was able to obtain a pretty strong charter, giving the company the exclusive and only right for two hundred years, to all the land then or to be discovered, within the entrance of Hudson's Bay. They went in, established posts, and opened up trade with the Esquimaux and Indians. Their efforts were very successful and immensely profitable. They kept gradually establishing new posts further inland, and through the great northwest territory, until they claimed, and held by their charter, all the land whose waters drained towards and into Hudson's Bay. This whole territory was then known as Rupert's Land. The expense of keeping up these trading posts, so far north of civilization, has always been enormous, but the receipts of furs and skins has been so large as to fully warrant all outlays, and undoubtedly it stands to-day by far the richest company in the known world, as it is the oldest.

London has always been their headquarters. I was unable to learn the original or present capital stock of the company. The par value of its shares is £17, and they are now selling at 38. It would be next to impossible to obtain anything like a correct estimate of the actual wealth of the company to-day. At the time of the confederation or union of the provinces, the Dominion government bought out the charter and rights of the Hudson Bay Company for the sum of fifteen hundred thousand dollars, the company reserving ten acres about every one of their trading posts, certain specified plots here and there, and one-twentieth of all the land remaining throughout the whole North. The most valuable land about the city of Winnipeg was held by the company. A vessel is annually sent out from London loaded with provisions, guns, ammunition, traps, and all kinds of supplies and materials for trading with the Indians. She enters the bay sometime during June or July, the only month in the year when the ice will admit of a vessel passing through. She brings the only mail received during the summer months. After unloading her cargo she returns to London loaded with furs and skins. Only two other mails are received during the year. These are carried up the Ottawa River and down on the other side by Indians on snow shoes. A second vessel is sent around to Van Couver's Island, where all furs from the different trading posts in British Columbia and the whole Pacific slope are gathered and shipped by this vessel direct to London.

Furs for all stations in the Ottawa River district and the lower provinces are forwarded to Montreal for shipment. After the stock is all received at the warehouses in London, the furs are sorted, baled, and numbered according to quality, species, and grade. The whole stock is then disposed of at an auction sale, this sale being attended by all the large fur dealers of the world.

The Jews from Leipsic figure largely and buy in enormous quantities. The sale usually lasts about three days, and is of such magnitude that the price of furs for the coming year throughout the world is governed by it. Mr. Cotter says that in all his twenty-seven years' experience, he has never had any serious trouble with the Indians, although he rather prefers the Esquimaux to deal with.

All Indians about the Ottawa River district where we have visited are Algonquins, but about Hudson's Bay they are called the Swampy Crees. When a young Indian starts in the hunting and trapping business, the company always trusts him with an outfit of gun, amunition, traps, and all necessary accoutrements. The guns furnished are of English make; smooth bore, carrying a large ball, and calculated more especially for use at short range.

The hunting trips taken by the Indians usually last from two to three months, when they return to the station from which they procured their outfit and dispose of their furs upon the best terms they can make. The company, having the entire monopoly, I suspect that the poor Indian must be content with pretty small prices, and must accept pretty high prices for the goods he receives in exchange. After the bargain is made, the first business of course is to pay up for the outfit, after which they receive the balance due them in goods, or else a credit from which to draw their future supplies, no ready money being required to do business at Hudson's Bay. The Indian who has made a successful hunt and a good bargain, can draw provisions enough and clothing enough so as to be able to spend a season of luxurious indolence. The lazy or unsuccessful ones must keep on hunting, or fall back upon their rich relations, for luxuries beyond fish, moose and bear meat, or walrus blubber, or if he happens to have no rich relations at a convenient distance, his wife doubtless cuts down expenses by pressing over and retrimming her last year's hat and buying unreserved seats at the opera. Oh, yes, there are lots of ways in which the faithful and devoted wife of a poor Indian can reduce expenses and keep up outside appearances with the neighbors, and allow her dear husband to stride about the wigwam with majestic indolence and a full stomach.

The company have always been very strict to see that every promise made an Indian is honorably, faithfully and certainly fulfilled, in consequence of which, although they at times establish and allow insignificant prices for their furs, the Indians are their firm friends, and never cause trouble or serious disturbance. Thus pointing out to the United States government that the red man is human, after all, and possesses but the white man's sensibilities, feelings and resentments, and that broken promises and solemn treaties means bloodshed and a standing army of Indian fighters, while a strict fulfillment and a little exercise of the golden rule, under similar circumstances, means "Peace on earth, good will towards men," quite as much in the Indian wigwam as in the white man's sanctury.

Mr. Cotter says that he believes large game and fur-bearing animals to be just as plenty at the present time through the northern part of Ontario as about Hudson's Bay. A great many furs are brought in to the company's station at Mattawa, and the stores about the village are getting in the way of buying them of the Indians. The proprietor of one little store told me that he took in over seven hundred beaver skins last winter. But to return to our party at Mattawa. The Indian (Jawbone by name) whom we were about engaging as guide being indisposed, Dorsey and Rendell took a canoe and paddled up the river about three miles, to an Indian cabin, where they engaged Jawbone's brother Alexion to start up the river with us early the next morning. In honor of the engagement he went immediately down to the village and got beastly drunk.

We spent the remainder of the afternoon in looking about the place, watching the departure of canoes up the river, etc. The last thing we heard upon retiring, was, that our "noble red man" had been pitched out of a store into the street, where he lay as inanimate as a bag of meal, but he presented himself to us next morning somewhat improved, yet we dare not risk him, so we employed another Indian (Joe), but we finally concluded to take Alexion along also, as he had the reputation of being a good guide, as soon as we could get him out of the reach of liquor.

Upon computing the days necessary to make the proposed trip up the river, it was found that two of our party had business at home, which would require their attention before the return trip could be made, so with feelings of regret that the old adage "business before pleasure," could not be reversed, they bade good bye to the comrades, and started homeward, intending to spend a few days in visiting places of intererest on the line, but it is my purpose in this letter to follow only the fortunes of the party up the river. A supply of flour and necessary provisions having been procured, a start was made in two canoes at 9:30.

Those who have never taken a canoe voyage with a drunken Indian as propeller and pilot cannot thoroughly appreciate our situation, and had we not been taught by former experience something about handling a canoe, this would have been a risky voyage. As it was we proceeded until noon without serious mishap, and by this time Alex had worked off the effects of whisky, until he seemed more like himself again.

After dinner we worked through and around a succession of falls and rapids about a mile in length. At the upper falls we found a fleet of lumbermen's boats and canoes anchored to the rocks. The men were busily unloading and portaging around. One batteaux was manned by sixteen men, and, the captain said, had on board ten tons of pork, flour and provisions. All this, of course, had to be carried around. The boat was then hauled over the falls by ropes. Above here we found smooth sailing for quite a distance, but another obstacle, worse than falls and rapids, here presented itself. Our Indians had in some way procured whisky of the lumbermen we passed, and were rapidly becoming intoxicated again. We were completely disgusted with them and would have been glad to have sold out all our "right and title" to them for a half pint of peanuts. We held a consultation, at which it was decided that we must give up our trip to Lake Temichtemung, as the river was too large, rocky and dangerous to attempt going up with drunken guides, and we knew it would be impossible to keep them sober, as we should be liable to meet lumbermen and other Indians all the way up, so we decided to strike into a small river a few miles beyond and go to Menwin Lake. We had heard much about its fine trout fishing, excellent hunting, and grand and picturesque scenery. We managed to get most of our supplies into one canoe and both Indians into the other. We then told them we proposed to "paddle our own canoe for Menwin Lake," and we should politely advise and urge them to "go to thunder," "the bottom of the river," or "anywhere else they saw fit" (such language, perhaps, is not necessary, and may seem out of place in these columns, but at the time it was made use of it seemed quite necessary and just as appropriate as a prayer at a funeral). In the mean time we informed them where they could find us if they survived this "drunk" and became sober enough to paddle on after us.

A few miles beyond we overtook a Norwegian lumberman with a drunken Indian in his canoe. The Indian would not keep still and kept upsetting the boat. They were in shallow water, so that there was no danger; but the lumberman became fearfully excited, and threatened to shoot him. At the next upset he drew his revolver and would have carried out his threat had it not been prevented by two other lumbermen. We paddled on until, just at night, we came in sight of the mouth of the river we were to go up (the river has no name as we could learn). The waters of this river fall into the Ottawa over a precipice about one hundred feet in height. The northern or eastern bank of the Ottawa from the Mattawa up is very precipitous.

A short distance above the falls a Canadian Frenchman has built a log house and small sawmill. Neither the Frenchman, his wife, nor the six men working for him could speak a word of English, nor we a word of French; but while they were trying to make out what we wanted, we drank a pan of milk which happened to be conveniently near. We stopped over night with them. The evening's entertainment consisted of pantomimes acted in three different languages. The acting was very fine and brought applause, but the audience were too stupid to understand all of it. We started again early in the morning, after hiring our landlord to haul us across a mile and a half carry, where we put into the river and went on again. At 9:30 we were surprised (I came near telling a falsehood by saying pleased) to see our two "noble red men" put in an appearance. Instead of being full of whisky now, they were full of penitence, so we received them back like "prodigal sons." We passed through two or three small lakes. Upon the shores of one of them Joe pointed out where he killed and dressed off three large moose only a short time before.

Upon halting for dinner we found that we had left on the lower carry a bag containing flour, butter and crackers, but after taking an inventory of what remained, we concluded not to go back for it, but to push on for Menwin Lake, and send the Indians back next day. The river above here is very rapid, and for a long distance the Indians waded along shore and drawed the canoes. After about three hours more of carrying, paddling and wading, we arrived at the foot of Menwin Lake. It is very beautiful, and totally unlike any lake we ever saw before. It takes upon itself the form of a devil fish, with narrow points of land running far out into the lake, and narrow arms of the lake extending far in among the dark recesses of the mountains. The shores rise abruptly, and, in some places, dark, towering cliffs, hundreds of feet above, almost overhang the water. The scenery that unfolds itself to view, as we pass point after point, is grand in the extreme. We never saw anything equal to it, and we were so wrapped in wonder that it was a long time before we discovered that our lazy Indians had taken advantage of the situation, and were moving the canoes along at only a snail's pace. The shadows on the water and a glance up-

ward told us that we must hasten, or dark night would overtake us before we could reach the camp our Indians said we would find near the upper end of the lake.

B. G. A.

OTTAWA RIVER, Ontario, Oct. 6, 1882.

BITS OF FLORIDA EXPERIENCE.

THIRD PAPER.

DEER hunting is growing poorer each year in Florida, as must naturally ensue where there is no game law. There has never been a game law there with the exception of one year, and then the natives made such complaint that it prevented them from providing themselves with fresh meat, that the Solon at Tallahassee made haste to repeal it, so it was said. I don't think the observation of the law has harmed the feelings of any native or caused any scarcity of venison in the cabin. I suppose it is true that the cow boys of the more southern counties rely greatly on venison for fresh meat, and the observation of the law might have compelled them to consume more salt pork and fish, but that would not have been great hardship. If the statute makers thought it was they might have excepted two or three counties down in the tag end of the State, where nothing grows excepting wild cattle, game and cow boys.

Deer and turkeys are shot in almost any month of the year, the former certainly are every month, and the latter would be if they could be found during nesting season, but then they retire into impassable swamps. Dogs will find deer at any time. Turkeys are of not so much importance to the native. I know of one hunter in Orange county who is in the woods four-fifths of the time. He hunts with dogs and kills more deer than any other man in the county. He is not such a wonderful shot, and wounds more than he kills, but being out all the time, and knowing all about the deer, he kills great numbers. He spoils the hunting for any one else. Such as he are ruining the sport in Florida. I saw him coming in from a two days' trip last winter with four deer. He said he got seventeen shots. He and all natives believe implicitly in the moon business, that deer and fish feed four times in twenty-four hours, viz., "moon up, moon down, and south moon above and below," as they express it. Deer in that State are considerably smaller than at the North, as are quail and gray squirrels. The rutting season begins in November. I have found bucks so tired after their all night's run that they had dropped down in the open pine woods within five minutes' walk of my house.

In September the black-jack acorns are ripe and begin to fall from the trees. Then the deer leave the hamaks at night and resort to the pine woods, in which, singly or in greater numbers, black-jacks are found, and wander all night in search for acorns, returning at daybreak to the deeper solitudes of the hamaks. At such times, in the dark of the moon, I had sport fire hunting. Some years elapsed after I went to that State before I learned to enjoy it. I knew of neighbors going out with fire-pan and "light-wood" knots and tramping half the night through; but I could see no sport in it. I didn't fan y carrying a gun, fire-pan, hatchet, and light'd knots, wandering around in the darkness and stumbling over logs and running the risk of stirring up some rattler. But, in some way, my attention was called to the Boudren lamp, and I procured one. The only way I could use it was on my shoulder. I put three pieces of wood together in form of a windlass handle, the longest arm down my left breast and passing through a loop in a leather belt, the next longest arm resting on my shoulder, and a short upright supporting, in a socket, the lamp; a small strap passing over the long arm, right shoulder, and under left arm, kept the apparatus in position. By turning the face of the lamp to the left of front a certain distance, it shone just where I aimed when my gun came up. I well remember the first night I used the lamp. I had never shot a deer by firelight, though I had been out with those who had, and had been told how it was done. I took the lamp, adjusted it on my shoulder, and jokingly told my wife I was going for venison. I was nearer right than I dreamed, for in three-quarters of an hour I had a fine doe on the kitchen porch. I found her feeding, and walking up until I "parted" her eyes, I drove eight buckshot out of the load of twelve through her chest at about forty yards. She was dead when I reached her. I shot a Parker, 12-32-8½, the finest shooter of all sizes of shot I ever handled, and which would put eight out of twelve buckshot into a two-foot square at fifty yards every load with either barrel. If American guns were only as thoroughly tested at the factory as English, what a fine thing it would be; but until they are, American makers cannot hope to compete with reliable English in dealing with sportsmen who value their lives. All guns should have such stamps as would be a guaranty of safety to the purchaser.

After I had indulged some time in fire hunting, I grew to be very fond of it. There was something fascinating in roaming the silent woods with only trees and stars for company. I enjoyed the pleasant voices of the night, excepting when on divers times a pair of huge owls opened their unearthly racket above my head very unexpectedly. It was not the common "Hoo, hoo-hoo, hoo-hoo-a-h," but a series of demoniac and blood-curdling laughs and cat calls which caused chills to chase up and down my back, and my hair to rise for a brief season.

One night, when the wind was right, I had perched myself in a leaning black oak near a bay from which deer nightly emerged, coming from the flat woods beyond out on to the pine hills. The moon was nearly full. A light breeze came from the flat woods. The sky was perfectly clear, and the night was just comfortable. I had sat there watching for deer, straining my ears for the slightest sound, for two hours. I heard foxes bark, the odoriferous perfume of a skunk permeated the chambers of my nostrils, the ubiquitous mosquito heeded not the oil and carbolic acid with which I had anointed me the frogs croaked in the bay, and a 'possum wandered past in search for supper.

As the dew fell and the shadows from the pines lengthened, an owl, with stealthy flight, came and perched on a pine above and in front of me. Another took position on a tree to my left. I could see the one in front turning his head and endeavoring to make out what there was in the oak that never had been there before. He stepped along on the limb, reached down as far as he could, cocked his head this way and that, but he couldn't make it out. Then he asked his partner what his opinion was, and he got it straight. She abused me in the most shameless manner. She scolded and cat-called, and hooted and gave vent to her feelings most abominably. Then she flew over to her old man and they gave me a duett in some key, fortissimo, and when they had exhausted their repertoire, which took some time, and scared all the deer out of the neighborhood, they flew off some distance and da-capoed. I descended and repaired to my welcome couch sans deer.

There were a few old bucks in the neighborhood that had been fire-hunted until they knew all about it. You might catch the gleam of their eyes once and then they bade you good night with a succession of snorts that were ludicrous and tantalizing. Occasionally they would stop after a few bounds and give you their eyes, but if you followed they stopped no more.

I went out one night, taking my woolen and rubber blankets, for the deer varied their hours for leaving the hamak, and I thought I would camp with them one night, taking a round at intervals. I deposited my blankets at the foot of a leaning oak, whose branches protected from the dew, and hunted until half past eleven o'clock. Not a shine. I laid down, put out my lamp, covered myself and was soon asleep. During my sleep I turned over, and was awakened by a loud snort; I was wide awake enough instantly, but the blanket was over my head, the lamp out and the night pitch dark. I knew I could not get a shot at the old buck, so I laid quietly. Soon I moved a little; snort, snort, snort again, with a bound or two. I could see the old fellow as plainly as though it had been daylight, standing there gazing with mingled fear, consternation and curiosity at that bundle on the ground. I threw off the blanket suddenly, and sat up. If ever a deer was astonished, I suspect it was that one, and the way he blew his trumpet and left there was funny enough.

Suppose we take a fire hunt some night and learn something of it by experience. We will wait until the moon rises; about eleven o'clock, as that gives the deer time to feed along through the flat woods and get out on the pine hills by nine. At eight we get out the gun, lamp and cartridges and get ready. I discarded the Boudren lamp and got a Ferguson, which is much lighter, weighing but a pound, and burning a mixture of kerosene and lard oil, which is far better than pure kerosene, which is liable to go out if one stumbles.

We don our rig, put shells in our vest pockets, where we can handle them quickly, see that our knife is sharp, that our match box is well filled, and leaving the house, pass through the orange grove, and thence into the woods. It is a calm, star-lit night; there is just a breath of air from the east, so we make quite a detour to get to the proper place to hunt up wind.

As we go we must choose some object to aim at until we get the lamp in position to shine just where we want it when the gun comes up. We keep our course by the north star or Pleiades, and passing through a piece of open pine woods reach a bay which we skirt until a road is crossed, when we turn square east and pay strict attention to business. Deer feed here and it is about time they were somewhere around. As we walk slowly along avoiding making a noise and keeping the light turning from side to side so as to cover as great space as possible. Suddenly a covey of quail spring from under our very feet and whir away into the darknes . Our hearts go pit-a-pat for a moment and a chilly sensation pervades us, so totally unexpectedly does it happen. The air is damp and chill from the flat woods and bays, and laden with the odor of the fragrant deer tongue. A steamer puffs on the distant St. Johns and some belated travelers chatting pass on a neighboring road. A couple of sparks on the ground at a little distance attract attention and you walk up to find a 'possum sitting gazing curiously at the light, grinning with wide open mouth. He is knocked on the head with a light-wood knot and left, probably to crawl off in a few moments. An occasional bird frightened from its retreat on the ground flutters aimlessly away upward. Or it may be that a 'coon out foraging sees the light on the border of a bay and paces away with a squealing whine that is laughable.

But, hold! There are eyes near the ground. Don't you see? There, under that oak. There are more and more. Can it be deer? Of course not, for you observe the eyes shine white and are too far apart. You see also the horns, don't you? They are cows, lying down, and at our approach rise, gaze wonderingly and hasten away. A cow's horns can generally be seen as soon as the eyes.

We come now to a scrub where I have frequently found deer.

Look sharp now as we pass a thicket of turkey oak.

There! Didn't I seem a gleam yonder as of a live coal, a single spark?

No! I was mistaken; the imagination sometimes plays pranks at such times. But, yes! I do see it. It's a deer. Yonder! Look! Now it moves a few steps as if suspicious. Now it is stationary again. It resembles a single live coal glowing amid the darkness, and is about a hundred yards distant.

Your gun is cocked at once, and keeping your light steadily fixed on that coal, you walk stealthily, steadily, straight toward it. Twenty paces are covered. The coal elongates into a bar of light. A few more paces and the bar divides, and two coals appear close together. At from forty to fifty paces the coals are just far enough apart to cover a deer's eyes. There stands the deer with glowing orbs gazing straight at you, and there is not a second to lose, for he will be off in a moment; but don't be hasty. Draw your gun swiftly but firmly to your shoulder, cover the eyes, drop a little so as to see the eyes plainly, and pull.

The report reverberates through the woods; the smoke hangs in a cloud, and you listen with all your ears, slipping a fresh cartridge in. No sound. The light is turned a moment to see if eyes can be found in the vicinity, and then you walk up to where the deer stood. What is that light object yonder? Can it be; it is, as sure as guns, a deer. There he lies, a fine buck stretched out, with his head thrown back and eyes glazed already.

Do you feel a bit proud, and do you wonder what the folks will say in the morning when you suggest that broiled venison would be about the thing?

Sometimes the deer is wounded, and goes off on two legs and two stumps, as did a buck I shot one morning just before day-break. But I got between him and the hamak, and waiting until light I went back, jumped him from his cover in the edge of a pond and grassed him.

I have shot them and had them go away without sign, when I was sure I struck them, and next morning find them not far away dead. Occasionally on a long stroll a person gets lost, but that is no hardship where the weather is not severe and light wood is plentiful. It rather adds to the sport to camp impromptu in the midst of game. S.

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

Natural History.

BIRD MIGRATION IN THE MISSISSIPPI VALLEY.

FROM OBSERVATIONS COLLATED BY W. W. COOKE.

Editor Forest and Stream:

The following notes on the birds of the Mississippi Valley were sent me by different observers in answer to a letter asking them to send a list of winter residents and date of first arrival of migrants last spring. These notes are from twelve stations, all in the Mississippi Valley. As many more promised to contribute, but after sending a little found they could not spare the time necessary and stopped, while the notes of one more observer, Mr. Widmann, have already been published in FOREST AND STREAM.

It was not expected that much would be done the first year; in fact, the number of notes received is greater than I looked for. Still the work has not been without value, and I think each observer is better prepared by this summer's work to give a fuller record next spring.

I did not commence the work early enough last spring. The birds were already on the move before the records were commenced. I should like to have next year's work commenced now, and trace the birds into their winter quarters, keep watch of them while there, and note the first signs of migration next spring. In this work a great deal can be done by one person, as will be seen by Mr. Widmann's notes, which I consider the perfection of "spring notes." How much more could be accomplished, and how much more valuable the records would be, if we could have, all over this great Valley of the Interior, a half hundred or more ornithologists continually watching the movements of our birds.

I should like to hear by postal from anyone in the Mississippi valley who is willing to aid in the work this winter and next spring. Even if they have not time to be on the lookout for the rarer birds, yet all can note the movements of our common birds, the study of whose doings will serve as a foundation for more intelligent study of the other species.

In tabulating the notes, I have given each station a number, as follows: Station No. 1. (1) is at Fayetteville, Ark., and the observer Prof. F. L. Harvey; (2) is Kansas City, Mo., Geo. E. Stillwell; (3) is Manhattan, Kan., C. P. Blachly; (4) is Luter, Morgan co., Ill., Dr. S. Griffin; (5) is Petersburg, Ill., E. H. Hamilton; (6) is Carthage, Ill., W. S. Baker; (7) is Vesta, Neb., H. A. Kline; (8) is Grinnell, Ia., L. Jones; (9) is Ames, Ia., Prof. F. E. L. Beal; (10) is Racine, Wis., Dr. P. R. Hoy; (11) is Minneapolis, Minn., J. Roberts; (12) is White Earth, Becker co., Minn., W. W. Cooke. The following abbreviations have been used: R., resident; W. R., winter resident; W. S., winter sojourner; N. N., numerous and noisy. Where a date alone is given it means the first time the bird was observed at that station; thus wood thrush (2) 3, 13, means that Mr. Stillwell saw the wood thrush for the first time March 13.

Hoping that this our attempt to enlarge our knowledge of the interesting subject of migration will find favor in the eyes of brother ornithologists, I remain yours respectfully,

W. W. COOKE.

JEFFERSON, Wis., Oct. 15, 1882.

Hylocichla mustelina—Wood Thrush.—(3) 3, 18; (3) 5, 1; (9) 5, 18; (11) 4, 7; (12) 5, 21.

Hylocichla fuscescens—Wilson's Thrush.—(12) 5, 20.

Hylocichla alicia—Gray-Cheeked Thrush.—(12) 5, 19.

Hylocichla ustulata swainsoni—Olive-Backed Thrush.—(12) 5, 19.

Hylocichla unalascæ pallasi—Hermit Thrush.—(4) 5, 14; (12) 5, 21.

Merula migratoria—Robin.—(1) W. R. in open winters; (2) 3, 1; (3) R., 2, 28, more plentiful and singing cheerfully; (4) 2, 1-6, nesting 4, 23; nearly full feathered 5, 7; (5) 2, 20; (6) 3, 10; (7) 3, 18, becoming plentiful; (8) 3, 1; (9) 3, 16, a few nearly every winter; (10) 2, 13; (11) 4, 1, building 5, 9; (12) 4, 2, eggs 5, 22.

Mimus polyglottus—Mocking Bird.—(3) 2, 28, nesting 5, 4; (4) 4, 27.

Galeoscoptis carolinensis—Catbird.—(2) 4, 26; (3) 5, 4, nesting; (4) 4, 27; (6) 4, 25; (9) 5, 6; (12) 5, 11, eggs 6, 10.

Harporhynchus rufus—Brown Thrasher.—(1) 3, 17; (2) 3, 13; (3) 4, 7; (4) 3, 27, nearly full feathered 5, 7; (5) 3, 28; (6) 4, 4; (9) 4, 19; (10) 4, 19; (11) 4, 16; (12) 4, 16, eggs 5, 22.

Sialia sialis—Bluebird.—(1) W. R.; (2) W. R., flocks from the South 3, 25; (3) R., by 2, 28 has become more plentiful and singing cheerfully; 3, 3, common and preparing to pair; (4) 2, 1-6, nearly full feathered 5, 7; (5) 2, 20; (6) 3, 22; (7) 3, 18, becoming plentiful; (8) 3, 1; (9) 3, 9, a few; (10) 2, 14; (11) 3, 31, building 5, 1; (12 5, 13.

Sialia mexicana—Californian Bluebird.—(3) 5, 4, nesting.

Polioptila cærulea—Bluegray Gnatcatcher.—(2) 4, 31; (3) 4, 12; (6) 4, 7.

Regulus calendula—Ruby-Crowned Kinglet.—(3) 4, 19; (4) 3, 21, N. N. 4, 13; (11) 4, 3; (12) 5, 5, 1881.

Regulus satrapa—Golden-Crowned Kinglet.—(9) 4, 29.

Lophophanus bicolor—Tufted Titmouse.—(3) 3, 16, saw a pair; (4) W. R.

Parus atricapillus—Black-Capped Chickadee.—Resident at all stations; (3) young 5.

Parus hudsonicus—Hudsonian Chickadee.—(10) W. R. rare.

Sitta carolinensis—White-Bellied Nuthatch.—Resident at all stations; (9) nearly gone 4, 20.

Sitta canadensis—Red-Bellied Nuthatch.—(4) W. R.; (11) R., not common in winter; (12) have never seen the bird in winter, but have good authority for saying that a few remain.

Certhia familiaris rufa—Brown Creeper.—(2) W. R.; (3) seen 3, 15; (4) 4, 13; W. R. nearly gone 4, 20; (11) remains in mild winters 4, 1, 1881; (12) 4, 20, 1881.

Thryothorus ludovicianus—Carolina Wren.—(3) 5, 26.

Troglodytes aedon—House Wren.—(2) 3, 25; (3) 4, 17; (4) 4, 15; (8) 4, 30; (9) 5, 4; (12) 5, 11.

Troglodytes aedon parkmanni—Western House Wren.—(2) 3, 25.

Anorthura troglodytes hyemalis—Winter Wren.—(4) 3, 31; (12) 5, 11.

Telmatodytes palustris—Long-Billed Marsh Wren.—(3) 5, 26; (12) 5, 14.

Anthus ludovicianus—American Titlark.—(3) 3, 3; (4) 3, 19;

Acocorys Sprague—Sprague's Titlark.—(2) 3, 20.

Mniotilta varia—Black and White Creeper.—(3) 4, 21; (6) 4, 24; (9) 5, 21; (11) 5, 11; (12) 5, 3, 1881.

Protonotaria citrea—Prothonotary Warbler.—(3) 5, 5, nest 5, eggs 6, 9.

Helminthophaga ruficapilla—Nashville Warbler.—(12) 5, 28.

Helminthophaga peregrina—Tennessee Warbler.—(12) 5, 22.

Helminthophaga celata—Orange-Crowned Warbler.—(3) 4, 27, abundant 5. 1; (12) 5, 14.

Dendroica æstiva—Summer Yellow Bird.—(3) 4, 22; (9) 5, 5; (11) 5, 9; (12) 5, 14; N. N., 5, 17, eggs 6. 9.

Setophaga ruticilla—Redstark.—(3) 4, 27; (9) 5, 10; (11) 5, 11; (12) 5, 23; N. N. 5, 27.

Dendroica cærulescens—Black-Throated Blue Warbler.—12) 5, 16, 1881.

Dendroica coronata—Yellow-Rump Warbler.—(3) 4, 17; (6) 4, 26 to 5, 3; (11) 4, 4; (12) 4, 17.

Dendroica blackburniæ—Blackburnian Warbler.—(11) 5, 8; (12) 5, 24.

Dendroica striata—Black-Poll Warbler.—(11) 5, 8; (12) 5, 24.

Dendroica pennsylvanica—Chestnut-Sided Warbler.—(6) 4, 26 to 5, 3; (11) 5, 11; 5, 24.

Dendroica maculosa—Black and Yellow Warbler.—(12) 5, 9, 1881.

Dendroica palmarum—Red-Poll Warbler.—(6) 4, 26 to 5, 2; (11) 5, 4; (12) 5, 3.

Siurus auricapillus—Golden-Crowned Thrush.—(11) 5, 6; (12) 5, 18.

Siurus motacilla—Large-Billed Water Thrush.—(3) 4, 21, again 4, 24.

Siurus nævius—Small-Billed Water Thrush.—(12) 5, 20.

Oporornis formosa—Kentucky Warbler.—(3) 5, 4.

Geothlypis trichas—Maryland Yellow Throat.—(3) 5, 1; (12) 5, 23.

Icteria virens—Yellow-Breasted Chat.—(3) nesting 5, 22, full 5, 3; (4) 5, 17.

Myiodioctes pusillus—Black-Capped Yellow Warbler.—(11) 5, 7; (12) 5, 14.

Vireosylvia olivacea—Red-Eyed Vireo.—(12) 5, 24.

Vireosylvia gilva—Warbling Vireo.—(3) 4, 27.

Lanivireo flavifrons—Yellow-Throated Vireo.—(3) 5, 4; (12) 5, 30.

Vireo noveboracensis—White-Eyed Vireo.—(3) 5, 6; (12) 5, 24.

Vireo belli—Bell's Vireo.—(3) 5, 2.

Lanius borealis—Great Northern Shrike.—(1) W. R. scarce; (3) W. S.; (9) W. R.; (10) W. R.; (11) found in mild winters, 4, 2; (12) W. R. in thick wooded swamps. First seen on prairie, 4, 21.

Lanius ludovicianus—Logger-Headed Shrike.—(2) W. R.; (6) 3, 26, N. N. 4, 4.

Ampelis garrulus—Northern Waxwing.—(3) W. S.; (4) W. S. rather rare; (9) The Bohemian visits this locality in abundance about once in five or six years. The last time in '79-80; (10) W. R. abundant; (11) W. R.; (12) W. R. seen 2, 14.

Ampelis cedrorum—Cedar Waxwing.—(2) W. R., collected in flocks and moved north Feb. 21-24; (3) 5, 26; (4) W. R., flocks came the first week in February; (9) W. R., one flock '80-81 on authority of a taxidermist of Boone; (11) 2, 7; (12) 5, 24.

Progne subis—Purple Martin.—(1) 3, 4; (2) 3, 6; (3) 3, 17; 4) 3, 9, N. N., 3, 15; (5) 3, 30; (6) 4, 2; (9) 4, 3; (10) 4, 26; (12) 4, 19.

Petrochelidon lunifrons—Cliff Swallow.—(3) nesting 5, 26; (9) 4, 20; (12) 4, 26.

Hirundo erythrogastra—Barn Swallow (4) 4, 20; (10) 4, 17; (12) have not seen one during three years residence.

Tachycineta bicolor—White-Bellied Swallow.—(3) 5, 6; (4) 5, 5; (11) 4, 29.

Cotile riparia—Bank Swallow.—(2) 3, 24; (9) 5, 20; (12) 4, 26.

Stelgidopteryx serripennis—Rough-Winged Swallow.—(11) 5, 7.

Pyranga rubra—Scarlet Tanager.—(2) 4, 10; (3) 5, 5; (4) 4, 24; (12) 5, 21, 1881 almost rare.

[TO BE CONCLUDED.]

PINE GROSBEAKS IN CONFINEMENT.

Editor Forest and Stream:

The extremely interesting biography of the pine grosbeak (*Platycola enucleator*) which appears in your issue of Nov. 2, calls to mind a delightful article on this species in captivity, which you published, I think, during the winter of 1880. My file of FOREST AND STREAM is incomplete, so that I cannot give the exact date. Can you not republish that sketch and thus confer a favor on an ORNITHOLOGIST.

BOSTON, Mass., Nov 4., 1882.

The sketch alluded to was published in our issue of March 18, 1880, and was as follows:

Yesterday I saw three of these beautiful birds industriously picking up their dinner in a patch of weeds. They were quite tame, and I drove within twenty feet of them, and paused quite a while to observe and admire them, as they are old friends of mine. Four years ago they were quite plenty in this vicinity, and a large flock of them came regularly every morning to feast upon some frozen apples that hung on a tree within ten feet of my window. They were very tame, and sang so sweetly that I determined to capture some of them if possible. Fixing a slipnoose upon the end of a fishpole I succeeded in roping in a pair of them; the male was a young one, and the female I judged to be two or three years old. There was an old male in the flock, gorgeous with his beautiful scarlet plumage, that I tried very hard to capture; but he was too wary for me. I got the noose over his head several times, but he would twist out of it with scarcely an effort, and never move from his perch nor cease his cheerful song. He always appeared glad to see me, and to be quite interested in my experiments; he would nod and wink at me in the most knowing manner in the world, but, in spite of my best efforts, he preserved his liberty, and after a few days I saw him no more.

The pair that I had captured I placed in a large breeding cage that was about three feet square. They did not appear to be at all alarmed, but took kindly to their new home and at once commenced eating, and in less than an hour they were twittering and singing, happy and contented. For many weeks they appeared to thoroughly enjoy themselves, and became so tame that when I let them out in the room they would fearlessly alight upon my head or shoulder and feed from my hand. I never saw such beautiful feathered pets; they kept almost a constant song from an early dawn until every one in the house had retired for the night. Their song was not loud, but very sweet and musical.

We were all very happy in their companionship until, alas! one fatal day, inspired by my evil genius, I brought home a newly made kingbird's nest and carefully placed it in one corner of their cage, and all of us gathered around to see what they would do. The male did not pay much attention to it, but after a cursory glance settled down on his perch and resumed his song. The female from the first appeared to be very much interested; her eyes glistened, and her head kept bobbing and turning, and as soon as the nest was in place she hopped up and perched upon its edge and critically examined every portion of it. She appeared very much pleased, and with a low expressive chirp alighted upon the perch, and with many knowing nods and smirks and pretty little ruffling of her feathers, she sidled up to her companion, all the while talking and crooning in her most silvery accents, and throwing her wing over him lovingly nestled close to his side, and in dulcet tones, with drooping head was sweetly murmuring the "old, old story," when he—the heartless brute—awkwardly backed out from her loving embrace, and nonchalantly walking over to the feed dish commenced eating. With a plaintive chirp she followed him up and ardently pressed her suit, but when she approached him he would retreat, and after several trials with no better result, he took refuge in one corner behind the bath dish. Then, with a despairing glance at the loved nest overhead, with each particular feather standing on end, and with a harsh, discordant croak that plainly said r-r-r-evenge, she went for him tooth and nail, and whacked and banged him round until, fearing for his life, I interfered and made her desist. No sooner did I take my hand from the cage than this incarnate fury pitched into him again, and I was obliged to separate them.

After a week of solitary confinement, during which neither of them uttered a single note of song, I returned him to the cage with her. No sooner had I shut the door than, with dilated eyes and open mouth, this virago went for him again and knocked him clear across the cage. I picked up a little stick and struck her two or three times and made her leave him. He had been very meek and forbearing up to this time, not making the least show of resistance; but no sooner did he see the effect of my punishment upon her than he boldly asserted his manhood and bravely sailed in and gave her a thrashing that completely subdued her.

There was no quarreling after this. She sulked and moped in her corner, refusing food and drink, and a few days after we found her dead, a victim of blighted affection. After she was gone a change came over the male; he uttered no sound save a mournful chirp, and appeared to miss his companion sadly. He gradually pined away, and in less than two weeks we "laid him gently by her side." I do not propose to adorn my simple tale with a moral, but cannot forbear expressing the hope, dear reader, that neither your end nor mine may be like this. SHADOW.

SPRINGFIELD, Mass., Jan. 15.

BREEDING QUAIL IN CONFINEMENT.—Boiling Springs, Pa., Nov. 3.—I have read the articles in your paper in regard to breeding quail in confinement, and I would like to tell you what we are doing in this part of the world toward it. Mr. Jacob Spath had a cock and two hen birds confined in a room about ten feet square, and raised from twenty-four eggs four birds that are now as tame as chickens. He believes that the reason he did not raise more was that both hens occupied the same nest and were often fighting each other. He fed them nothing but screenings. Next year he intends to raise them on a larger scale; he is going to raise their nests off of the ground, as in confinement the birds fly up. I think this will demonstrate that quail can be bred in confinement.—ED. STAYMAN.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

A MOOSE MONOLOGUE.

AS I take great pleasure in reading hunting and fishing excursions in the FOREST AND STREAM, and the old proverb is that example is better than precept, I now put in my paddle, since it is not fair to sit in the bow and shoot all the time (no genuine practical hunter use oars).

About ten years ago I was lumbering in the forest of Nova Scotia in company with John Harlow and Wm. H. Mayo on Bear River, which empties into Digby Basin, on the opposite side of Bay of Fundy from St. Johns, N. B. Bear River village is about four miles up the river. They have a custom house there, also a custom house officer, with a head clerk, and a clerk's devil, or, as they call him, "tide waiter." The principal business of these three for a week after I arrived with my canvas canoe was to find out what the duty on that craft would be. But finally, after sending to Col. Veats, in Digby, some ten miles away, they came to the conclusion it would only be two dollars and fifty cents, as I had lived there as a neighbor five years.

The height of my ambition had always been a moose hunt in September. The method of calling moose is as follows: Find an open, dry bog back in the forest some fifteen miles from any settlers. Make a horn of birch bark similar to an old-fashion tin dinner horn, and then just at dark sit down in the middle of the bog (it wants two hunters to be successful), then take your bark horn and imitate the noise made by a cow moose, and if there is a moose within hearing of the horn he will come out on the bog. The first full moon in September is the best and only time in the year to hunt with the horn. By listening to the advice of John Harlow I missed two falls, by being too late. There was always "some business to do this week; but next week we will go," was his cry. I had determined not to be late on this occasion, so I said, "John, are you ready to go moose hunting with me next Monday."

"No, Hi, I cannot go Monday, but if you will wait until Wednesday I will go then. I have some work to do on Copland's house; shall get it done by Wednesday."

"Now, John Harlow, that was just the way last year, and you know how we tramped around in them wet bogs with cloudy sky; wind blowed all night, and we did not get any moose meat. You cannot play that on me this year. If you can't go Monday, I will try Obediah Parker."

"How are you, Obediah, what are you doing down under this old sawmill? Hallo, Thomas Sparr, you here, too? I suppose you are learning the millwright's trade with Obediah? I say, I am going after a moose Monday, and Harlow cannot go, and I want one of you to go."

"Well, Hiram, we both want to go, but Franklin Rice would not let us leave this mill all tore to pieces; anyhow, if the water should rise in the river it would take the dam away, so we cannot go."

"Tom Sparr, do you know where John Iles is? I am going to try him; I guess he will go."

"Hiram, if I could not get anybody but Iles, I would stay at home."

"I want you to understand I am going Monday if I live and have to go alone, and without any gun, axe or knife; yes, sir."

"Good morning, Mr. Iles; how is it, are you troubled with the moose fever this fall?"

"Wal, yes; I should like to call up another moose about like the one Jim Morehouse and I got last fall."

"Mr. Iles, I come over to see if you would go with me next Monday. I am going back to the old moose ground by the way of Uncle Joe Clark's."

"Where is Harlow that he don't go?"

"Oh, he cannot go until Wednesday, and I told him I would not put it off one day longer."

"Wal, Mr. Mayo, I can't go Monday, but I will go Tuesday. Old Uncle Billy Harris wanted me to go with him next week. He says if he could kill one more moose, he would be satisfied; you know old 'Squire Billy Harris, he is about seventy."

"Yes, I know him, but I never went with a crowd and got any game yet; so I will go home and take my choreboy, Bill, about fifteen years old, to carry the axe, and we will go on our own hook. Yes, sir."

"Mary, I have been the rounds, trying to get somebody to go moose hunting with me Monday, and everybody is busy; so I am going to take little Bill Iles to carry an axe, and go alone. Bill, where is my light axe? I want you to go over to Harden Chute's store and get me one and a half pounds of powder and a box of waterproof caps, while I take old Sweepstakes apart and clean her. Come, come; if I am going to paddle this canoe, just part your hair on the other side or keep that tobacco on the other side of your mouth, because it steers hard when you are over on one side; so keep still, and we shall find game a little further up the stream. Patience is everything, especially when you get into a place that is so lonesome it makes you think it was the last place ever made on earth; then is the time an old hunter keeps his eyes and ears open for large game.
